tented ice [OCEANOGR] A type of pressure ice formed when ice is pushed up vertically, producing a flat-sided arch with a cavity between the raised ice and the water beneath.

tenterhook [TEXT] One of the nails used to hold fabric on a frame (tenter) so that alterations in the original measurements can be corrected.

tenthmeter *See* angstrom.

Tenthredinidae [INV ZOO] A family of hymenopteran insects in the superfamily Tenthredinoidea including economically important species whose larvae are plant pests.

Tenthredinoidea [INV ZOO] A superfamily of Hymenoptera in the suborder Symphyla.

tentillum [INV ZOO] A contractile branch of a tentacle containing many nematocysts in certain siphonophores.

tenting [OCEANOGR] The vertical displacement upward of ice under pressure to form a flat-sided arch with a cavity beneath.

Tenuipalpidae [INV ZOO] A small family of mites in the suborder Trombidiformes.

TEP *See* triethyl phosphate.

tepary bean [BOT] *Phaseolus acutifolius* var. *latifolius*. One of the four species of beans of greatest economic importance in the United States.

tepee butte [GEOGR] A tepeelike hill or knoll, especially one of soft material capped by more resistant rock.

tepee structure [GEOL] A disharmonic sedimentary structure consisting of a fold that resembles an inverted depressed V in cross section.

tepetate *See* caliche.

tephigram [METEOROL] A thermodynamic diagram designed by Napier Shaw with temperature and logarithm of potential temperature as coordinates; isobars are gently curved lines and the chart is rotated so that pressure increases downward; vapor lines and saturation adiabats are curved; on this chart, energy is proportional to the area enclosed by the curve representing the process.

tephra [GEOL] Denotes all pyroclastics of a volcano.

tephrite [PETR] A group of basaltic extrusive rocks composed chiefly of calcic plagioclase, augite, and nepheline or leucite, with some sodic sanidine.

Tephritidae [INV ZOO] The fruit flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Acalyptratae.

tephrochronology [GEOL] The dating of different layers of volcanic ash for the establishment of a sequence of geologic and archeologic occurrences.

tephroite [MINERAL] Mn_2SiO_4 An olivine mineral that occurs with zinc and manganese minerals.

tequila [FOOD ENG] A distilled spirit that is Mexican in origin; obtained by the natural fermentation of the sweet sap of the agave plant and the distillation of the fermentation product.

tera- [MATH] A prefix representing 10^{12}, which is 1,000,000,000,000 or a million million. Abbreviated T.

terahertz [PHYS] A unit of frequency, equal to 10^{12} hertz, or 1,000,000 megahertz. Abbreviated THz.

teraohm [ELEC] A unit of electrical resistance, equal to 10^{12} ohms, or 1,000,000 megohms. Abbreviated TΩ.

teraohmmeter [ENG] An ohmmeter having a teraohm range for measuring extremely high insulation resistance values.

T-E ratio *See* temperature-efficiency ratio.

teratocarcinoma [MED] A teratoma with carcinomatous elements.

teratogen [MED] An agent causing formation of a congenital anomaly or monstrosity.

teratogenesis [MED] The formation of a fetal monstrosity.

teratoid adenocystoma *See* mesonephroma.

teratology [MED] The science of fetal malformations and monstrosities.

teratoma [MED] A true neoplasm composed of bizarre and chaotically arranged tissues that are foreign embryologically as well as histologically to the area in which the tumor is found.

teratophobia [PSYCH] An abnormal fear of deformed people and pregnant women.

Teratornithidae [PALEON] An extinct family of vulturelike birds of the Pleistocene of western North America included in the order Falconiformes.

terawatt [PHYS] A unit of power, equal to 10^{12} watts, or 1,000,000 megawatts. Abbreviated TW.

terbacil [ORG CHEM] $C_9H_{13}ClN_2O_2$ A colorless, crystalline compound with a melting point of 175–177°C; used as an herbicide to control weeds in sugarcane, apples, peaches, citrus, and mints. Also known as 3-*tert*-butyl-5-chloro-6-methyluracil.

terbia *See* terbium oxide.

terbium [CHEM] A rare-earth element, symbol Tb, in the yttrium subgroup of group III, atomic number 65, atomic weight 158.924.

terbium chloride [INORG CHEM] $TbCl_3 \cdot 6H_2O$ Water- and alcohol-soluble, hygroscopic, colorless, transparent prisms; anhydrous form melts at 588°C.

terbium nitrate [INORG CHEM] $Tb(NO_3)_3 \cdot 6H_2O$ A colorless, fire-hazardous (strong oxidant) powder, soluble in water; melts at 89°C.

terbium oxide [INORG CHEM] Tb_2O_3 A slightly hygroscopic, dark-brown powder soluble in dilute acids, absorbs carbon dioxide from air. Also known as terbia.

terbumeton [ORG CHEM] $C_{10}H_{19}N_5$ A colorless, crystalline compound with a melting point of 123–124°C; slightly soluble in water; used as a postemergence herbicide for citrus and apple orchards, vineyards, and forests. Also known as 2-*tert*-butylamino-4-ethylamino-6-methoxy-*S*-triazine.

terbutol [ORG CHEM] The common name for the herbicide 2,6-di-*tert*-butyl-*p*-tolylmethylcarbamate; used as a selective preemergence crabgrass herbicide for turf.

terbutryn [ORG CHEM] $C_{13}H_{19}N_5S$ A colorless powder with a melting point of 104–105°C; used for weed control for wheat, barley, and grain sorghum. Also known as 2-*tert*-butylamino-4-ethylamino-6-methylthio-*S*-triazine.

terbutylhylazine [ORG CHEM] $C_9H_{16}N_5Cl$ A white solid with a melting point of 177–179°C; used as a preemergence herbicide. Also known as 2-*tert*-butylamino-4-chloro-6-ethylamino-*S*-triazine.

tercentesimal thermometric scale *See* approximate absolute temperature.

Terebellidae [INV ZOO] A family of polychaete annelids belonging to the Sedentaria which are chiefly large, thick-bodied, tubicolous forms with the anterior end covered by a matted mass of tentacular cirri.

Terebratellidina [PALEON] An extinct suborder of articulate brachiopods in the order Terebratulida in which the loop is long and offers substantial support to the side arms of the lophophore.

Terebratulida [INV ZOO] An order of articulate brachiopods that has a punctate shell structure and is characterized by the possession of a loop extending anteriorly from the crural bases, providing some degree of support for the lophophore.

Terebratulidina [INV ZOO] A suborder of articulate brachiopods in the order Terebratulida distinguished by a short V- or W-shaped loop.

Teredinidae [INV ZOO] The pileworms or shipworms, a family of bivalve mollusks in the subclass Eulamellibranchia distinguished by having the two valves reduced to a pair of small plates at the anterior end of the animal.

terephthalic acid [ORG CHEM] $C_6H_4(COOH)_2$ A combustible white powder, insoluble in water, soluble in alkalies, sublimes above 300°C; used to make polyester resins for fibers and films and as an analytical reagent and poultry-feed additive. Also known as benzene-*para*-dicarboxylic acid; *para*-phthalic acid; TPA.

terephthaloyl chloride [ORG CHEM] $C_6H_4(COCl)_2$ Colorless needles with a melting point of 82–84°C; soluble in ether; used in the manufacture of dyes, synthetic fibers, resins, and pharmaceuticals. Also known as 1,4-benzenedicarbonyl chloride.

terete [BOT] Of a stem, cylindrical in section, but tapering at both ends.

tergite [INV ZOO] The dorsal plate covering a somite in arthropods and certain other articulate animals.

tergum [INV ZOO] A dorsal plate of the operculum in barnacles.

terlinguaite [MINERAL] Hg_2OCl A sulfur yellow to greenish-yellow, monoclinic mineral consisting of an oxychloride of mercury.

term [SPECT] A set of $(2S+1)(2L+1)$ atomic states belonging to a definite configuration and to definite spin and orbital angular momentum quantum numbers S and L.

terminal [ARCH] The ornamental finish, decorative element, or termination of an object, item of construction, or structural part. [COMPUT SCI] A site or location at which data can leave or enter a system. [ELEC] **1.** A screw, soldering lug, or other point to which electric connections can be made. Also known as electric terminal. **2.** The equipment at the end of a microwave relay system or other communication channel. **3.** One of the electric input or output points of a circuit or component.

terminal area [ELECTR] The enlarged portion of conductor material surrounding a hole for a lead on a printed circuit. Also known as land; pad.

terminal bar [CYTOL] One of the structures formed in certain epithelial cells by the combination of local modifications of contiguous surfaces and intervening intercellular substances; they become visible with the light microscope after suitable staining and appear to close the spaces between the epithelial cells of the intestine at their free surfaces.

terminal block [COMMUN] A cluster of five captive screw terminals at which a telephone pair terminates; the center terminal is for the ground wire, and two other terminals are used for the tip and ring wires.

terminal board [ELEC] An insulating mounting for terminal connections. Also known as terminal strip.

terminal box [ELEC] An enclosure which includes, mounts, and protects one or more terminals or terminal boards; it may include a cover and such accessories as mounting hardware, brackets, locks, and conduit fittings.

terminal bud [BOT] A bud that develops at the apex of a stem. Also known as apical bud.

terminal clearance capacity [ENG] The amount of cargo or personnel that can be moved through and out of a terminal on a daily basis.

terminal control area [NAV] A control area or a portion thereof normally situated at the confluence of air-traffic service routes in the vicinity of one or more major airfields.

terminal cutout pairs [ELEC] Numbered, designated pairs brought out of a cable at a terminal.

terminal endocarditis *See* verrucous endocarditis.

terminal equipment [COMMUN] **1.** Assemblage of communications-type equipment required to transmit or receive a signal on a channel or circuit, whether it be for delivery or relay. **2.** In radio relay systems, equipment used at points where intelligence is inserted or derived, as distinct from equipment used to relay a reconstituted signal. **3.** Telephone and teletypewriter switchboards and other centrally located equipment at which wire circuits are terminated.

terminal forecast [METEOROL] An aviation weather forecast for one or more specified air terminals.

terminal guidance [NAV] Guidance of a craft from an arbitrary point, at which midcourse guidance ends, to the destination.

terminal hair [ANAT] One of three types of hair in man based on hair size, time of appearance, and structural variations; the larger, coarser hair in the adult that replaces the vellus hair.

terminal leg *See* terminal stub.

terminal moraine [GEOL] An end moraine that extends as an arcuate or crescentic ridge across a glacial valley; marks the farthest advance of a glacier. Also known as marginal moraine.

terminal nerve [ANAT] Either of a pair of small cranial nerves that run from the nasal area to the forebrain, present in most vertebrates; the function is not known.

terminal operations [ENG] The reception, processing, and staging of passengers; the receipt, transit storage, and marshaling of cargo; the loading and unloading of ships or aircraft; and the manifesting and forwarding of cargo and passengers to destination.

terminal pair [ELEC] An associated pair of accessible terminals, such as the input or output terminals of a device or network.

terminal phase [ORD] The period of flight of a missile between the end of midcourse guidance and impact.

terminal pressure [ENG] A pressure drop across a unit when the maximum allowable pressure drop is reached, as for a filter press.

terminal repeater [COMMUN] **1.** Assemblage of equipment designed specifically for use at the end of a communications circuit, as contrasted with the repeater designed for an intermediate point. **2.** Two microwave terminals arranged to provide for the interconnection of separate systems, or separate sections of a system.

terminal room [COMMUN] In telephone practice, a room associated with a central office, private branch exchange, or private exchange, which contains distributing frames, relays, and similar apparatus, except that mounted in the switchboard section.

terminal sinus [EMBRYO] The vascular sinus bounding the area vasculosa of the blastoderm of a meroblastic ovum. Also known as marginal sinus.

terminal station [COMMUN] Receiving equipment and associated multiplex equipment used at the ends of a radio-relay system.

terminal strip *See* terminal board.

terminal stub [ELEC] Piece of cable that comes with a cable terminal for splicing into the main cable. Also known as terminal leg.

terminal unit [MECH ENG] In an air-conditioning system, a unit at the end of a branch duct through which air is transferred or delivered to the conditioned space.

terminal velocity [FL MECH] The velocity with which a body moves relative to a fluid when the resultant force acting on it (due to friction, gravity, and so forth) is zero. [PHYS] The maximum velocity attainable, especially by a freely falling body, under given conditions.

terminal vertex [MATH] A vertex in a rooted tree that has no successor. Also known as leaf.

terminal very-high-frequency omnirange [NAV] A low-power very-high-frequency omnidirectional radio range intended to furnish service in the local area (about 30-mile, or 48-kilometer, radius).

terminal voltage [ELEC] The voltage at the terminals connected to the source of electricity for an electric machine.

terminated line [ELEC] Transmission line terminated in a resistance equal to the characteristic impedance of the line, so there is no reflection and no standing waves.

terminating [ELEC] Closing of the circuit at either end of a line or transducer by connecting some device thereto; terminating does not imply any special condition such as the elimination of reflection.

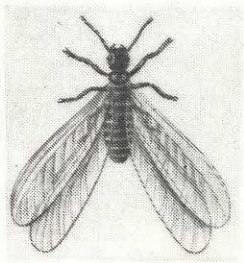
termination [ELECTROMAG] **1.** Load connected to a transmission line or other device; to avoid wave reflections, it must match the characteristic of the line or device. **2.** In waveguide technique, the point at which energy flowing along a waveguide continues in a nonwaveguide mode of propagation.

terminator [ASTRON] The line of demarcation between the dark and light portions of the moon or planets.

terminator codon [GEN] A codon that acts as a stopping point in the code sequence for protein synthesis.

Termitaphididae [INV ZOO] The termite bugs, a small family of Hemiptera in the superfamily Aradoidea.

TERMITE



Winged female termite of the reproductive caste.

termitarium [INV ZOO] A termites' nest.

termite [INV ZOO] A soft-bodied insect of the order Isoptera; individuals feed on cellulose and live in colonies with a caste system comprising three types of functional individuals: sterile workers and soldiers, and the reproductives. Also known as white ant.

termite shield [BUILD] A strip of metal, usually galvanized iron, bent down at the edges and placed between the foundation of a house and a timber floor, around pipes, and other places where termites can pass.

termiticole [ECOL] An organism that lives in a termites' nest.

Termitidae [INV ZOO] A large family of the order Isoptera which contains the higher termites, representing 80% of the species.

termitophile [ECOL] An organism that lives in a termites' nest in a symbiotic association with the termites.

Termopsidae [INV ZOO] A family of insects in the order Isoptera composed of damp wood-dwelling forms.

term splitting [QUANT MECH] The separation of the energies of the states in a term; in the Russell-Saunders case this is produced by the spin-orbit interaction.

ternary [SCI TECH] Consisting of three, as in a three-phase (that is, ternary) liquid system.

ternary alloy [MET] An alloy composed of three principal elements.

ternary code [COMMUN] Code in which each code element may be any one of three distinct kinds or values.

ternary compound [CHEM] A molecule consisting of three different types of atoms; for example, sulfuric acid, H_2SO_4.

ternary diagram [PETR] A triangular diagram that graphically depicts the composition of a three-component mixture or ternary system.

ternary expansion [MATH] The numerical representation of a real number relative to the base 3, the digits determined by how the given number can be written in terms of powers of 3.

ternary incremental representation [COMPUT SCI] A type of incremental representation in which the value of the change in a variable is defined as $+1$, -1, or 0.

ternary notation [MATH] A system of notation using the base of 3 and the characters 0, 1, and 2.

ternary pulse code modulation [COMMUN] Pulse code modulation in which each code element may be any one of three distinct kinds or values.

ternary system [CHEM] Any system with three nonreactive components; in liquid systems, the components may or may not be partially soluble.

ternate [BOT] Composed of three subdivisions, as a leaf with three leaflets.

terne [MET] A lead alloy having a composition of 10–20% tin and 80–90% lead; used to coat iron or steel surfaces.

terneplate [MATER] A sheet of iron or steel coated with a lead-tin alloy; used chiefly for roofing.

Ternifine man [PALEON] The name for a fossil human type, represented by three lower jaws and a parietal bone discovered in France and thought to be from the upper part of the middle Pleistocene.

terpane *See* menthane.

terpene [ORG CHEM] $C_{10}H_{16}$ A moderately toxic, flammable, unsaturated hydrocarbon liquid found in essential oils and plant oleoresins; used as an intermediate for camphor, menthol, and terpineol.

terpene alcohol [ORG CHEM] A generic name for an alcohol related to or derived from a terpene hydrocarbon, such as terpineol or borneol.

terpene hydrochloride [ORG CHEM] $C_{10}H_{16}\cdot HCl$ A solid, water-insoluble material melting at 125°C; used as an antiseptic. Also known as artificial camphor; dipentene hydrochloride; pinene hydrochloride; turpentine camphor.

terpenoid [ORG CHEM] Any compound with an isoprenoid structure similar to that of the terpene hydrocarbons.

***para*-terphenyl** [ORG CHEM] $(C_6H_5)_2C_6H_4$ A combustible, toxic liquid boiling at 405°C; crystals are used for scintillation counters; polymerized with styrene to make plastic phosphor. Also known as 1,4-diphenylbenzene.

terpineol [ORG CHEM] $C_{10}H_{17}OH$ A combustible, colorless liquid with a lilac scent, derived from pine oil, soluble in alcohol, slightly soluble in water, boils at 214–224°C; used in medicine, perfumes, soaps, and disinfectants, and as an antioxidant, a flavoring agent, and a solvent; isomeric forms are alpha-, beta- and gamma-.

terpin hydrate [ORG CHEM] $CH_3(OH)C_6H_9C(CH_3)_2OH\cdot H_2O$ Combustible, efflorescent, lustrous white prisms soluble in alcohol and ether, slightly soluble in water; melts at 116°C; used for pharmaceuticals and to make terpineol. Also known as dipentene glycol.

terpinolene [ORG CHEM] $C_{10}H_{16}$ A flammable, water-white liquid insoluble in water, soluble in alcohol, ether, and glycols, boils at 184°C; used as a solvent and as a chemical intermediate for resins and essential oils.

terpinyl acetate [ORG CHEM] $C_{10}H_{17}OOCCH_3$ A combustible, colorless, liquid slightly soluble in water and glycerol, soluble in water, boils at 220°C; used in perfumes and flavors.

terpolymer [ORG CHEM] A polymer that contains three distinct monomers; for example, acrylonitrile-butadiene-styrene terpolymer, ABS.

terra [ASTRON] A bright upland or mountainous region on the surface of the moon, characterized by a lighter color than that of a mare, a relatively high albedo, and a rough texture formed by large intersecting or overlapping craters.

terra alba [MATER] Pure white uncalcined gypsum, used as a filler in paper and paints and as a nutrient in growing yeast.

terrace [BUILD] **1.** A flat roof. **2.** A colonnaded promenade. **3.** An open platform extending from a building, usually at ground level. [GEOL] **1.** A horizontal or gently sloping embankment of earth along the contours of a slope to reduce erosion, control runoff, or conserve moisture. **2.** A narrow coastal strip sloping gently toward the water. **3.** A long, narrow, nearly level surface bounded by a steeper descending slope on one side and by a steeper ascending slope on the other side. **4.** A benchlike structure bordering an undersea feature.

terraced pool [GEOGR] A shallow, rimmed pool on the surface of a reef.

terracette [GEOL] A small steplike form developed on the surface of a slumped soil mass along a steep grassy incline.

terrachlor *See* pentachloronitrabenzene.

terracing *See* contour plowing.

terra-cotta [MATER] A brownish-orange clay used in the production of high-quality earthenware, vases, and statuettes, and for tile floors and roofing.

terrain-avoidance radar [NAV] Airborne radar which provides a display of terrain ahead of a low-flying aircraft to permit horizontal avoidance of obstacles.

terrain clearance indicator *See* absolute altimeter.

terrain echoes *See* ground clutter.

terrain-following radar [NAV] Airborne radar which provides a display of terrain ahead of a low-flying aircraft to permit manual control, or signals for automatic control, to maintain constant altitude above the ground.

terrain profile recorder *See* airborne profile recorder.

terrain sensing [ENG] The gathering and recording of information about terrain surfaces without actual contact with the object or area being investigated; in particular, the use of photography, radar, and infrared sensing in airplanes and artificial satellites.

terra japonica *See* gambir.

terral levante [METEOROL] A land breeze of Spain and Brazil, sometimes a northwest squall of foehn character.

terra miraculosa *See* bole.

Terramycin [MICROBIO] Trade name for the antibiotic oxytetracycline.

terrane [GEOL] A rock formation, a cluster of rock formations, or the general area of outcrops.

terrapin [VERT ZOO] Any of several North American tortoises in the family Testudinidae, especially the diamondback terrapin.

terra rossa [GEOL] A reddish-brown soil overlying limestone bedrock.

terrazzo [MATER] A mosaic flooring surface made by embedding marble or granite chips in mortar, allowing the mortar to harden, and then grinding and polishing the surface.

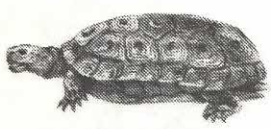
terrestrial [SCI TECH] Of or pertaining to the earth.

terrestrial coordinates *See* geographical coordinates.

terrestrial electricity [GEOPHYS] Electric phenomena and properties of the earth; used in a broad sense to include atmospheric electricity. Also known as geoelectricity.

terrestrial environment [GEOGR] The earth's land area, including its man-made and natural surface and subsurface fea-

TERRAPIN



Diamondback terrapin (*Malaclemys terrapin*).

tures, and its interfaces and interactions with the atmosphere and the oceans.

terrestrial equator *See* astronomical equator.

terrestrial frozen water [HYD] Seasonally or perennially frozen waters of the earth, exclusive of the atmosphere.

terrestrial gravitation [GEOPHYS] The effect of gravitational attraction of the earth.

terrestrial guidance *See* terrestrial-reference guidance.

terrestrial magnetism *See* geomagnetism.

terrestrial meridian *See* astronomical meridian.

terrestrial planet [ASTRON] One of the four small planets near the sun (Earth, Mercury, Venus, and Mars).

terrestrial radiation [GEOPHYS] Electromagnetic radiation originating from the earth and its atmosphere at wavelengths determined by their temperature. Also known as earth radiation; eradiation.

terrestrial-reference flight [NAV] A flight with guidance by means of some terrestrial phenomena such as the magnetic or gravitational field.

terrestrial-reference guidance [NAV] Long-range missile guidance in which the control system of the missile reacts to magnetic, gravitational, or other properties of the earth. Also known as terrestrial guidance.

terrestrial refraction [OPTICS] Any refraction phenomenon observed in the light originating from a source lying within the earth's atmosphere; this is applied only to refraction caused by inhomogeneities of the atmosphere itself, not, for example, to that caused by ice crystals suspended in the atmosphere.

terrestrial scintillation [OPTICS] A generic term for scintillation phenomena observed in light that reaches the eye from sources lying within the earth's atmosphere. Also known as atmospheric boil; atmospheric shimmer; optical haze.

terrestrial sediment [GEOL] A sedimentary deposit on land above tidal reach.

terrestrial telescope [OPTICS] Any telescope which produces an erect image.

terrestrial triangle [NAV] A triangle on the surface of the earth, especially the navigational triangle.

Terrier [ORD] A U.S. Navy surface-to-air guided missile using beam-rider guidance and having a range of about 10 miles (16 kilometers).

terrigenous sediment [GEOL] Shallow marine sedimentary deposits composed of eroded terrestrial material.

territoriality [ZOO] A pattern of behavior in which one or more animals occupy and defend a definite area or territory.

terry cloth [TEXT] An extremely absorbent woven or knitted cotton fabric, covered with loops on one or both sides.

tert- [ORG CHEM] $(R_1R_2R_3C—)$ Abbreviation for tertiary; trisubstituted methyl radical with the central carbon attached to three other carbons.

tertian malaria *See* vivax malaria.

Tertiary [GEOL] The older major subdivision (period) of the Cenozoic era, extending from the end of the Cretaceous to the beginning of the Quaternary, from 70,000,000 to 2,000,000 years ago.

tertiary air [MECH ENG] Combustion air added to primary and secondary air.

tertiary alcohol [ORG CHEM] A trisubstituted alcohol in which the hydroxyl group is attached to a carbon that is joined to three carbons; for example, *tert*-butyl alcohol.

tertiary amine [ORG CHEM] R_3N A trisubstituted amine in which the hydroxyl group is attached to a carbon that is joined to three carbons; for example, trimethylamine, $(CH_3)_3N$.

tertiary carbon atom [ORG CHEM] A carbon atom bonded to three other carbon atoms with single bonds.

tertiary circulation [METEOROL] The generally small, localized atmospheric circulations, represented by such phenomena as local winds, thunderstorms, and tornadoes.

tertiary creep [MET] Creep strain occurring at an accelerating rate leading to fracture.

tertiary crushing [MIN ENG] **1.** The preliminary breaking down of run-of-mine ore and sometimes coal. **2.** The third stage in crushing, following primary and secondary crushing.

tertiary grinding [MIN ENG] The third-stage grinding in a ball mill when a particularly fine grinding of ore is needed.

tertiary hydrogen atom [ORG CHEM] A hydrogen atom that is bonded to a tertiary carbon atom.

tertiary mercuric phosphate *See* mercuric phosphate.

tertiary pyroelectricity [SOLID STATE] The polarization due to temperature and gradients and corresponding nonuniform stresses and strains when the crystal is heated nonuniformly; found in pyroelectric and nonpyroelectric crystals, that is, crystals which have no polar directions. Also known as false pyroelectricity.

tertiary sodium phosphate *See* trisodium phosphate.

tertiary storage [COMPUT SCI] Any of several types of computer storage devices, usually consisting of magnetic tape transports and mass storage tape systems, which have slower access times, larger capacity, and lower cost than main storage or secondary storage.

tertiary structure [BIOCHEM] The characteristic three-dimensional folding of the polypeptide chains in a protein molecule.

tertiary winding *See* stabilized winding.

Tesaar lens [OPTICS] An anastigmatic lens made up of a negative lens at the aperture stop with two positive lenses, one in front and the other in back; the last positive lens is a cemented doublet.

teschemacherite [MINERAL] $(NH_4)HCO_3$ A colorless to white or yellowish, orthorhombic mineral consisting of ammonium bicarbonate; occurs as compact, crystalline masses.

teschenite [PETR] A granular hypabyssal rock composed principally of calcic plagioclase, augite, and sometimes hornblende, with some brotite and analcime.

tesla [ELECTROMAG] The International System unit of magnetic flux density, equal to one weber per square meter. Symbolized T.

Tesla coil [ELECTROMAG] An air-core transformer used with a spark gap and capacitor to produce a high voltage at a high frequency.

tessara [MATER] A small rectangular piece of ceramic tile, stone, or other material used in a mosaic design.

Tessaratomidae [INV ZOO] A family of large tropical Hemiptera in the superfamily Pentatomoidea.

tessellate [BOT] Marked by a pattern of small squares resembling a tiled pavement.

test [IND ENG] A procedure in which the performance of a product is measured under various conditions. [INV ZOO] A hard external covering or shell that is calcareous, siliceous, chitinous, fibrous, or membranous. [PETRO ENG] A procedure for the analysis of current, potential and ultimate product flow, and pressure-decline properties of various types of petroleum reservoirs.

testa [BOT] A seed coat. Also known as episperm.

Testacellidae [INV ZOO] A family of pulmonate gastropods that includes some species of slugs.

test ammunition [ORD] **1.** In a general sense, any ammunition used, or intended to be used, for test purposes. **2.** Specifically, ammunition prepared for testing firearms.

test-bed [AERO ENG] A base, mount, or frame within or upon which a piece of equipment, especially an engine, is secured for testing.

testboard [ELEC] Switchboard equipped with testing apparatus, arranged so that connections can be made from it to telephone lines or central-office equipment for testing purposes.

test chamber [AERO ENG] The test section of a wind tunnel. [ENG] A place, section, or room having special characteristics where a person or object is subjected to experimental procedures, as an altitude chamber.

test clip [ELEC] A spring clip used at the end of an insulated wire lead to make a temporary connection quickly for test purposes.

test data [COMPUT SCI] A set of data developed specifically to test the adequacy of a computer run or system; the data may be actual data that has been taken from previous operations, or artificial data created for this purpose.

test firing [AERO ENG] The firing of a rocket engine, either live or static, with the purpose of making controlled observations of the engine or of an engine component.

test flight [AERO ENG] A flight to make controlled observations of the operation or performance of an aircraft or a rocket, or of a component of an aircraft or rocket.

test function [MATH] An infinitely differentiable function of several real variables used in studying solutions of partial differential equations.

test hole [MIN ENG] A drill hole or shallow excavation to assess an ore body or to obtain rock samples to determine their structural and physical characteristics.

testicular hormone [BIOCHEM] Any of various hormones secreted by the testes.

TERRIER

USS *England*, a frigate of the Leahy class, fires a Terrier. *(Official U.S. Navy photograph)*

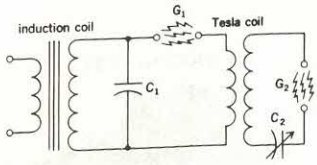
TESLA COIL



Circuit diagram of Tesla coil. G_1 and G_2 are spark gaps, C_1 is capacitor, C_2 is variable capacitor. The coils and C_1 act as a resonant circuit to produce high-frequency oscillation. Current in secondary (right-hand winding) of Tesla coil is both high-voltage and high-frequency.

testing level [ELEC] Value of power used for reference represented by 0.001 watt working in 600 ohms.

testis [ANAT] One of a pair of male reproductive glands in vertebrates; after sexual maturity, the source of sperm and hormones.

test jack [ELEC] **1.** Appearance of a circuit or circuit element in jacks for testing purposes. **2.** In recent practice, a jack multipled with the switchboard operating jack.

test lead [ELEC] A flexible insulated lead, usually with a test prod at one end, used for making tests, connecting instruments to a circuit temporarily, or making other temporary connections.

test of hypothesis [STAT] A rule for rejecting or accepting a hypothesis concerning a population which is based upon a given sample of data.

test of significance [STAT] A test of a hypothetical population property against a sample property where an acceptance interval is used as the rule for rejection.

test oscillator *See* signal generator.

testosterone [BIOCHEM] $C_{19}H_{28}O_2$ The principal androgenic hormone released by the human testis; may be synthesized from cholesterol and certain other sterols.

test pack [COMPUT SCI] A deck of punch cards that contains both a computer program and test data for carrying out a test run of the program.

test pattern [COMMUN] A chart having various combinations of lines, squares, circles, and graduated shading, transmitted from time to time by a television station to check definition, linearity, and contrast for the complete system from camera to receiver. Also known as resolution chart.

test pile [CIV ENG] A pile equipped with a platform on which a load of sand or pig iron is placed in order to determine the load a pile can support (usually twice the working load) without settling.

test pit [CIV ENG] An open excavation used to obtain soil samples in foundation studies.

test point [ELEC] A terminal or plug-in connector provided in a circuit to facilitate monitoring, calibration, or troubleshooting.

test prod [ELEC] A metal point attached to an insulating handle and connected to a test lead for convenience in making a temporary connection to a terminal while tests are being made. Also known as prod.

test program *See* check routine.

test reactor [NUCLEO] A nuclear reactor designed to test the behavior of materials and components under the neutron and gamma fluxes and temperature conditions of an operating reactor.

test routine *See* check routine.

test run [COMPUT SCI] The performance of a computer program to check that it is operating correctly, by using test data to generate results that can be compared with expected answers.

test section [AERO ENG] The section of a wind tunnel where objects are tested to determine their aerodynamic characteristics.

test set [ELECTR] A combination of instruments needed for servicing a particular type of electronic equipment.

test specimen *See* tensile bar.

test stand [AERO ENG] A stationary platform or table, together with any testing apparatus attached thereto, for testing or proving engines and instruments.

Testudinata [VERT ZOO] The equivalent name for Chelonia.

Testudinellidae [INV ZOO] A family of free-swimming rotifers in the suborder Flosculariacea.

Testudinidae [VERT ZOO] A family of tortoises in the suborder Cryptodira; there are about 30 species found on all continents except Australia.

test well [PETRO ENG] A well to determine the presence of petroleum oil and its potential commercial value in terms of abundance and accessibility.

tetanolysin [BIOCHEM] A hemolysin produced by *Clostridium tetani*.

tetanophobia [PSYCH] An abnormal fear of tetanus.

tetanospasmin [BIOCHEM] A neurotoxin elaborated by the bacterium *Clostridium tetani* and which is responsible for the manifestations of tetanus.

tetanus [MED] An infectious disease of humans and animals caused by the toxin of *Clostridium tetani* and characterized by convulsive tonic contractions of voluntary muscles; infection commonly follows dirt contamination of deep wounds or other injured tissue. Also known as lockjaw.

tetanus antitoxin [IMMUNOL] A serum containing antibodies that neutralize tetanus toxin.

tetanus toxoid [IMMUNOL] Detoxified tetanus toxin used to produce active immunity against tetanus.

tetany [MED] A state of increased neuromuscular irritability caused by a decrease of serum calcium, manifested by intermittent numbness and cramps or twitchings of the extremities, laryngospasm, bizarre behavior, loss of consciousness, and convulsions.

tetany of the newborn [MED] A temporary increase of neuromuscular irritability during the first two months of life, especially in infants who are premature, are delivered by cesarean section, or receive an exchange transfusion, or in twins.

TETD *See* tetraethylthiuram disulfide.

Tethinidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalyptratae.

Tethys [ASTRON] A satellite of the planet Saturn having a diameter of about 1300 kilometers. [GEOL] **1.** A sea which existed for extensive periods of geologic time between the northern and southern continents of the Eastern Hemisphere. **2.** A composite geosyncline from which many structures of the present Alpine-Himalayan orogenic belt were formed.

tetraamylbenzene [ORG CHEM] $(C_5H_{11})_4C_6H_2$ A colorless liquid with a boiling range of 320–350°C; used as a solvent.

Tetrabranchia [INV ZOO] A subclass of primitive mollusks of the class Cephalopoda; *Nautilus* is the only living form and is characterized by having four gills.

tetrabromobisphenol A [ORG CHEM] $(C_6H_2Br_2OH)_2C(CH_3)_2$ An off-white powder with a melting point of 180–184°C; soluble in methanol and ether; used as a flame retardant for plastics, paper, and textiles.

***sym*-tetrabromoethane** *See* acetylene tetrabromide.

tetrabromophthalic anhydride [ORG CHEM] $C_6Br_4C_2O_3$ A pale yellow, crystalline solid with a melting point of 280°C; used as a flame retardant for paper, plastics, and textiles.

tetrabutylthiuram monosulfide [ORG CHEM] $[(C_4H_9)_2NCS]_2S$ A brown liquid, soluble in acetone, benzene, gasoline, and ethylene dichloride; used as a rubber accelerator.

tetrabutyltin [ORG CHEM] $(C_4H_9)_4Sn$ A colorless or slightly yellow, oily liquid with a boiling point of 145°C; soluble in most organic solvents; used as a stabilizing agent and rust inhibitor for silicones, and as a lubricant and fuel additive.

tetrabutyl titanate [ORG CHEM] $Ti(OC_4H_9)_4$ A combustible, colorless to yellowish liquid soluble in many solvents, boils at 312°C, decomposes in water; used in paints, surface coatings, and heat-resistant paints. Abbreviated TBT. Also known as butyl titanate; titanium butylate.

tetrabutyl urea [ORG CHEM] $(C_4H_9)_4N_2CO$ A liquid with a boiling point of 305°C; used as a plasticizer.

tetracaine hydrochloride [ORG CHEM] $C_{15}H_{24}O_2N_2 \cdot HCl$ Bitter-tasting, water-soluble crystals melting at 148°C; used as a local anesthetic. Also known as amethocaine hydrochloride; decicaine; pontocaine.

tetracene *See* naphthacene.

Tetracentraceae [BOT] A family of dicotyledonous trees in the order Trochodendrales distinguished by possession of a perianth, four stamens, palmately veined leaves, and secretory idioblasts.

tetrachlorobenzene [ORG CHEM] $C_6H_2Cl_4$ Water-insoluble, combustible white crystals that appear in two forms: 1,2,3,4-tetrachlorobenzene which melts at 47°C and is used in chemical synthesis and in dielectric fluids; and 1,2,4,5-tetrachlorobenzene which melts at 138°C and is used to make herbicides, defoliants, and electrical insulation.

***sym*-tetrachlorodifluoroethane** [ORG CHEM] CCl_2FCCl_2F A white, toxic liquid with a camphor aroma, soluble in alcohol, insoluble in water, boils at 93°C; used for metal degreasing.

2,4,4′,5-tetrachlorodiphenyl sulfide [ORG CHEM] $C_{12}H_6Cl_4S$ White crystals with a melting point of 87°C; slightly soluble in water; used as a miticide for mite eggs.

***sym*-tetrachloroethane** [ORG CHEM] $CHCl_2CHCl_2$ A colorless, corrosive, toxic liquid with a chloroform scent, soluble in alcohol and ether, slightly soluble in water, boils at 147°C; used as a solvent, metal cleaner, paint remover, and weed killer. Also known as acetylene tetrachloride.

tetrachloroethylene *See* perchloroethylene.

2,4,5,6-tetrachloroisophthalonitrile *See* chlorothalonil.

tetrachloromethane *See* carbon tetrachloride.

tetrachlorophenol [ORG CHEM] C_6HCl_4OH Either of two

toxic compounds: 2,3,4,6-tetrachlorophenol comprises brown flakes, soluble in common solvents, melting at 70°C, and is used as a fungicide; 2,4,5,6-tetrachlorophenol is a brown solid, insoluble in water, soluble in sodium hydroxide, has a phenol scent, melts at about 50°C, and is used as a fungicide and for wood preservatives.

tetrachlorophthalic acid [ORG CHEM] $C_6Cl_4(CO_2H)_2$ Colorless plates, soluble in hot water; used in making dyes.

tetrachlorophthalic anhydride [ORG CHEM] $C_6Cl_4(CO)_2O$ A white powder with a melting point of 254–255°C; slightly soluble in water; used in the manufacture of dyes and pharmaceuticals and as a flame retardant for epoxy resins.

4,5,6,7-tetrachlorophthalide *See* rabicide.

tetrachloroquinone *See* chloranil.

tetrachlorothiophene [ORG CHEM] C_4Cl_4S A yellow-white solid with a melting point of 29°C; insoluble in water; used as a nematicide and fumigant for tobacco. Abbreviated TCTP.

tetrachlorvinphos [ORG CHEM] $C_{10}H_9Cl_4O_4P$ An off-white, crystalline compound with a melting point of 94–97°C; used as an insecticide to control houseflies, chicken mites, lice, screwworms, and hornflies. Also known as 2-chloro-1-(2,4,5-trichlorophenyl)vinyl dimethylphosphate.

Tetracorallia [PALEON] The equivalent name for Rugosa.

tetracosane [ORG CHEM] $C_{24}H_{50}$ Combustible crystals insoluble in water, soluble in alcohol, melts at 52°C; used as a chemical intermediate.

Tetractinomorpha [INV ZOO] A heterogeneous subclass of Porifera in the class Demospongiae.

tetracyanoethylene [ORG CHEM] $(CN)_2C{:}C(CN)_2$ A member of the cyanocarbon compounds; colorless crystals with a melting point of 198–200°C; used in dye manufacture.

tetracycline [MICROBIO] **1.** Any of a group of broad-spectrum antibiotics produced biosynthetically by fermentation with a strain of *Streptomyces aureofaciens* and certain other species or chemically by hydrogenolysis of chlortetracycline. **2.** $(C_{22}H_{24}O_8N_2)$ A broad-spectrum antibiotic belonging to the tetracycline group of antibiotics; useful because of broad antimicrobial action, with low toxicity, in the therapy of infections caused by gram-positive and gram-negative bacteria as well as rickettsiae and large viruses such as psittacosis-lymphogranuloma viruses.

tetrad [CYTOL] A group of four chromatids lying parallel to each other as a result of the longitudinal division of each of a pair of homologous chromosomes during the pachytene and later stages of the prophase of meiosis.

tetradactylous [VERT ZOO] Having four digits on a limb.

tetrad analysis [GEN] A method of genetic analysis possible in fungi, algae, bryophytes, and orchids in which the four products of an individual cell which has gone through meiosis are recovered as a group; it provides more direct and complete information regarding segregation and recombination mechanisms than is possible to obtain from meiotic products collected at random.

***n*-tetradecane** [ORG CHEM] $C_{14}H_{30}$ A combustible, colorless, water-insoluble liquid boiling at 254°C; used as a solvent and distillation chaser and in organic synthesis.

1-tetradecanol *See* myristyl alcohol.

1-tetradecene [ORG CHEM] $CH_2{:}CH(CH_2)_{11}CH_3$ A combustible, colorless, water-insoluble liquid boiling at 256°C; used as a solvent for perfumes and flavors and in medicine. Also known as α-tetradecylene.

tetradecylamine [ORG CHEM] $C_{14}H_{29}NH_2$ A white solid with a melting point of 37°C; soluble in alcohol and ether; used in making germicides.

α-tetradecylene *See* 1-tetradecene.

tetradecyl mercaptan [ORG CHEM] $CH_3(CH_2)_{13}SH$ A combustible liquid with a boiling point of 176–180°C; used for processing synthetic rubber. Also known as myristyl mercaptan.

tetradentate ligand [INORG CHEM] A chelating agent which has four groups capable of attachment to a metal ion. Also known as quadridentate ligand.

tetradic [MATH] An operator that transforms one dyadic into another.

tetradifon [ORG CHEM] $C_{12}H_6Cl_4O_2S$ A colorless, crystalline compound with a melting point of 145–146°C; used to control mites on fruits, vegetables, cotton, and ornamentals. Also known as *S-para*-chlorophenyl-2,4,5-trichlorophenyl sulfone.

tetrad of Fallot *See* tetralogy of Fallot.

tetradymite [MINERAL] Bi_2Te_2S A pale steel-gray mineral that usually occurs in foliated masses in auriferous veins; has metallic luster, hardness of 1.5–2 on Mohs scale, and specific gravity of 7.2–7.6.

tetraethanolammonium hydroxide [ORG CHEM] $(HOCH_2CH_2)_4NOH$ A white, water-soluble, crystalline solid with a melting point of 123°C; used as a dye solvent and in metal-plating solutions.

tetraethylammonium chloride [ORG CHEM] $(C_2H_5)_4NCl$ Colorless, hygroscopic crystals with a melting point of 37.5°C; soluble in water, alcohol, acetone, and chloroform; used in medicine. Abbreviated TEAC. Also known as TEA chloride.

tetraethylammonium hexafluorophosphate [ORG CHEM] $(C_2H_5)_4NPF_6$ A water-soluble solid with a melting point of 255°C; used for bactericides and fungicides.

tetra-(2-ethylbutyl)silicate [ORG CHEM] $[(C_2H_5)C_4H_8O]_4Si$ A colorless liquid with a boiling point of 238°C at 50 mmHg (6660 newtons per square meter); used as a lubricant and hydraulic fluid.

tetraethyl dithionopyrophosphate [ORG CHEM] $(C_2H_5O)_4P_2OS_2$ A toxic, combustible liquid with a boiling point of 138°C, soluble in alcohol; used as an insecticide. Abbreviated TEDP.

***O,O,O,O*-tetraethyldithiopyrophosphate** *See* sulfotepp.

tetraethylene glycol [ORG CHEM] $HO(C_2H_4O)_3C_2H_4OH$ A combustible, hygroscopic, colorless, water-soluble liquid, boils at 327°C; used as a nitrocellulose solvent and plasticizer and in lacquers and coatings. Abbreviated TEG.

tetraethylene glycol dimethacrylate [ORG CHEM] A colorless to pale straw-colored liquid with a boiling point of 200°C at 1 mmHg (133.32 newtons per square meter); soluble in styrene and some esters and aromatics; used as a plasticizer.

tetraethylenepentamine [ORG CHEM] $C_8H_{23}N_5$ A toxic, viscous liquid with a boiling point of 333°C and a freezing point of −30°C; soluble in water and organic solvents; used as a motor oil additive, in the manufacture of synthetic rubber, and as a solvent for dyes, acid gases, and sulfur.

tetraethyllead [ORG CHEM] $Pb(C_2H_5)_4$ A highly toxic lead compound that, when added in small proportions to gasoline, increases the fuel's antiknock quality. Abbreviated TEL.

***O,O,O′,O′*-tetraethyl *S,S′*-methylene bisphosphorodithioate** *See* ethion.

tetraethylpyrophosphate [ORG CHEM] $C_8H_{20}O_7P_2$ A hygroscopic corrosive liquid miscible with although decomposed by water, and miscible with many organic solvents; inhibits the enzyme acetylcholinesterase; used as an insecticide in place of nicotine sulfate.

tetraethylthiuram disulfide [ORG CHEM] $[(C_2H_5)_2NCS]_2S_2$ A light gray solid with a melting range of 65–70°C; soluble in carbon disulfide, benzene, and chloroform; used as a fungicide and insecticide. Abbreviated TETD; TTD. Also known as bis(diethylthiocarbamyl)disulfide; disulfram.

tetraethylthiuram sulfide [ORG CHEM] $[(C_2H_5)_2NCS]_2S$ A dark brown solid with a boiling range of 225–240°C; used in pharmaceutical ointments and as a fungicide and insecticide. Also known as bis(diethylthiocarbamyl)sulfide.

tetrafluoroethylene [ORG CHEM] $F_2C{:}CF_2$ A flammable, colorless, heavy gas, insoluble in water, boils at 78°C; used as a monomer to make polytetrafluoroethylene polymers, for example, Teflon. Also known as perfluoroethylene; TFE.

tetrafluorohydrazine [INORG CHEM] F_2NNF_2 A colorless liquid or gas with a calculated boiling point of −73°C; used as an oxidizer in rocket fuels.

tetrafluoromethane *See* carbon tetrafluoride.

tetragonal lattice [CRYSTAL] A crystal lattice in which the axes of a unit cell are perpendicular, and two of them are equal in length to each other, but not to the third axis.

tetragonal trisoctahedron *See* trapezohedron.

tetragonal tristetrahedron *See* deltohedron.

tetrahedral symmetry [PHYS] Having the same rotation symmetries as a regular tetrahedron.

tetrahedrite [MINERAL] $(Cu,Fe,Zn,Ag)_{12}Sb_4S_{13}$ A grayish-black mineral crystallizing in the isometric system as tetrahedrons and occurring in massive or granular form; luster is metallic, hardness is 3.5–4 on Mohs scale, and specific gravity is 4.6–5.1; an important ore of copper. Also known as fahlore; gray copper ore; panabase; stylotypite.

tetrahedron [CRYSTAL] An isometric crystal form in cubic crystals, in the shape of a four-faced polyhedron, each face of which is a triangle. [MATH] A four-sided polyhedron.

TETRACYCLINE

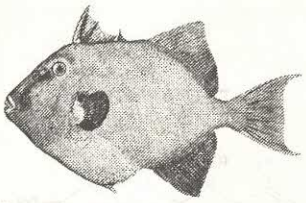
	R_1	R_2	R_3
Tetracycline	H	H	CH_3
Chlortetracycline	Cl	H	CH_3
Oxytetracycline	H	OH	CH_3
6-Demethyl tetracycline	H	H	H
7-Chloro-6-demethyl tetracycline	Cl	H	H

Chemical structural relationships of the tetracyclines (def. 1).

TETRAHEDRITE

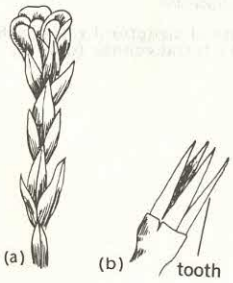
Tetrahedrite crystals from Bobes, Romania. *(Specimen from Department of Geology, Bryn Mawr College)*

TETRAODONTIFORMES



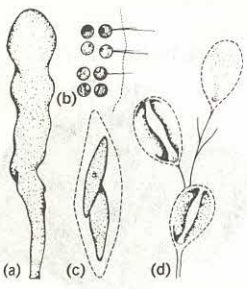
Gray triggerfish *(Balistes capriscus)*, a representative species of the order Tetraodontiformes. *(After G. B. Goode, Fishery Industries of the United States, sect. 1, 1884)*

TETRAPHIDALES



Tetraphis pellucida, a representative species of the order Tetraphidales. *(a)* Gemmiferous branch. *(b)* Enlarged peristome. *(From W. H. Welch, Mosses of Indiana, Ind. Dep. Conserv., 1957)*

TETRASPORALES



Members of Tetrasporales. *(a) Tetraspora*, habit of a gelatinous thallus; *(b)* arrangement of cells with pseudocilia. *(c) Elakatothrix*, simple colony. *(d) Chlorangium*, an attached, dendroid colony.

tetrahexahedron [CRYSTAL] A form of regular crystal system with four triangular isosceles faces on each side of a cube; there are altogether 24 congruent faces.

1,2,3,4-tetrahydrobenzene *See* cyclohexene.

tetrahydro-3,5-dimethyl-2*H*-1,3,5-thiadiazine-6-thione *See* dazomet.

tetrahydrofuran [ORG CHEM] C_4H_8O A clear, colorless liquid with a boiling point of 66°C; soluble in water and organic solvents; used as a solvent for resins and in adhesives, printing inks, and polymerizations. Abbreviated THF.

tetrahydrofurfuryl acetate [ORG CHEM] $C_7H_{12}O_3$ A colorless liquid with a boiling point of 194–195°C; soluble in water, alcohol, ether, and chloroform; used for flavoring.

tetrahydrofurfuryl alcohol [ORG CHEM] $C_4H_7OCH_2OH$ A hygroscopic, colorless liquid, miscible with water, boils at 178°C; used as a solvent for resins, in leather dyes, and in nylon. Also known as tetrahydrofurfuryl carbinol.

tetrahydrofurfurylamine [ORG CHEM] $C_4H_7OCH_2NH_2$ A colorless to light yellow liquid with a distillation range of −150 to 156°C; used for fine-grain photographic development and to accelerate vulcanization.

tetrahydrofurfuryl carbinol *See* tetrahydrofurfuryl alcohol.

tetrahydrofurfuryl oleate [ORG CHEM] $C_{23}H_{42}O_3$ A colorless liquid with a boiling point of 240°C at 2 mmHg (266.64 newtons per square meter); used as a plasticizer.

tetrahydrofurfuryl phthalate [ORG CHEM] $C_6H_4(CO\text{-}OCH_2C_4H_7O)_2$ A colorless liquid with a melting point below 15°C; used as a plasticizer.

tetrahydrolinalool [ORG CHEM] $C_{10}H_{21}OH$ A colorless liquid with a floral odor, used in perfumery and flavoring. Also known as 3,7-dimethyl-3-octanol.

tetrahydro-*para*-methoxyquinoline *See* thalline.

tetrahydronaphthalene [ORG CHEM] $C_{10}H_{12}$ A colorless, oily liquid that boils at 206°C, and is miscible with organic solvents; used as an intermediate in chemical synthesis and as a solvent.

tetrahydro-1,4-oxazine *See* morpholine.

***N*-(tetrahydro-2-oxo-3-thienyl)acetamide** *See N*-acetylhomocysteinethiolactone.

tetrahydro-*para*-quinanisol *See* thalline.

tetrahydrothiophene-1,1-dioxide *See* sulfolane.

tetrahydroxyadipic acid *See* mucic acid.

4,6,3′,4′-tetrahydroxyaurone *See* aureusidin.

tetrahydroxy butane *See* erythritol.

3′,4′,5,7-tetrahydroxyflavanone *See* eriodictyol.

Tetrahymenina [INV ZOO] A suborder of ciliated protozoans in the order Hymenostomatida.

tetraiodoethylene [ORG CHEM] $I_2C{:}CI_2$ Light yellow crystals with a melting point of 187°C; soluble in organic solvents; used in surgical dusting powder and antiseptic ointments, and as a fungicide. Also known as iodoethylene.

tetraiodofluorescein [ORG CHEM] $C_{20}H_8O_5I_4$ A yellow, water-insoluble, crystalline compound; used as a dye. Also known as pyrosin.

tetraisopropylthiuram disulfide $[(CH_3CH_3CH)_2NCS]_2S_2$ A tan powder with a melting range of 95–99°C; soluble in benzene, chloroform, and gasoline; used as a rubber accelerator.

tetrakis(hydroxymethyl)phosphonium chloride [ORG CHEM] $(HOCH_2)_4PCl$ A crystalline compound made from phosphine, formaldehyde, and hydrochloric acid; used as a flame retardant for cotton fabrics. Abbreviated THPC.

tetralite *See* tetryl.

tetralogy of Fallot [MED] A congenital abnormality of the heart consisting of pulmonary stenosis, defect of the interventricular septum, hypertrophy of the right ventricle, and overriding or dextroposition of the aorta. Also known as tetrad of Fallot.

Tetralophodontinae [PALEON] An extinct subfamily of proboscidean mammals in the family Gomphotheridae.

tetramer [ORG CHEM] A polymer that results from the union of four identical monomers; for example, the tetramer C_8H_8 forms from union of four molecules of C_2H_2.

tetramerous [BIOL] Characterized by or having four parts.

tetramethrin [ORG CHEM] $C_{20}H_{25}NO_4$ A light yellow powder with a melting point between 65 and 80°C; used to control houseflies, cattle insects, pests in stored products, and garden pests. Also known as 1-cyclohexene-1,2-dicarboximidomethyl-2,2-dimethyl-3-(2-methylpropenyl) cyclopropanecarboxylate.

tetramethyldiaminobenzophenone [ORG CHEM] $[(CH_3)_2NC_6H_4]_2CO$ White to greenish, crystalline leaflets with a melting point of 172°C; soluble in alcohol, ether, water, and warm benzene; used in the manufacture of dyes. Also known as Michler's ketone.

tetramethyldiene *See* cyclobutadiene.

tetramethylene *See* cyclobutane.

$\Delta^{1,3}$-tetramethylene *See* cyclobutadiene.

tetramethylene bis(methanesulfonate) *See* busulfan.

tetramethylene dichloride *See* 1,4-dichlorobutane.

tetramethylene glycol *See* 1,4-butylene glycol.

tetramethylene sulfone *See* sulfolane.

tetramethylethylenediamine [ORG CHEM] $(CH_3)_4N_2(CH_2)_2$ A colorless liquid with a boiling point of 121–122°C; soluble in organic solvents and water; used in the formation of polyurethane, as a corrosion inhibitor, and for textile finishing agents.

tetramethyllead [ORG CHEM] $Pb(CH_3)_4$ An organic compound of lead that, when added in small amounts to motor gasoline, increases the antiknock quality of the fuel; not widely used.

tetramethylolmethane *See* pentaerythritol.

tetramethylsilane [ORG CHEM] $(CH_3)_4Si$ A colorless, volatile, toxic liquid with a boiling point of 26.5°C; soluble in organic solvents; used as an aviation fuel.

***O,O,O′,O′*-tetramethyl *O,O′*-thiodi-*para*-phenylene phosphorothioate** [ORG CHEM] $C_{16}H_{20}O_6S_3P_2$ A brown, viscous liquid with a melting point of 30°C; insoluble in water; used as a larvicide for mosquitos, black flies, and midges.

tetramethylthiuram monosulfide [ORG CHEM] $[(CH_3)_2NCS]_2S$ A yellow powder with a melting point of 104–107°C; soluble in acetone, benzene, and ethylene dichloride; used as a rubber accelerator, fungicide, and insecticide. Also known as bis(dimethylthiocarbamyl)sulfide.

tetramethylurea [ORG CHEM] $C_5H_{12}N_2O$ A liquid that boils at 176.5°C, and is miscible in water and organic solvents; used as a reagent and solvent.

tetranitromethane [ORG CHEM] $C(NO_2)_4$ A powerful oxidant; toxic, colorless liquid with a pungent aroma, insoluble in water, soluble in alcohol and ether, boils at 126°C; used in rocket fuels and as an analytical reagent.

Tetranychidae [INV ZOO] The spider mites, a family of phytophagous trombidiform mites.

Tetraodontiformes [VERT ZOO] An order of specialized teleost fishes that includes the triggerfishes, puffers, trunkfishes, and ocean sunfishes.

Tetraonidae [VERT ZOO] The ptarmigans and grouse, a family of upland game birds in the order Galliformes characterized by rounded tails and wings and feathered nostrils.

tetraphenylboron sodium *See* sodium tetraphenylborate.

tetraphenyltin [ORG CHEM] $(C_6H_5)_4Sn$ A white powder with a melting point of 225–228°C; soluble in hot benzene, toluene, and xylene; used for mothproofing.

Tetraphidaceae [BOT] The single family of the plant order Tetraphidales.

Tetraphidales [BOT] A monofamilial order of mosses distinguished by scalelike protonema and the peristomes of four rigid, nonsegmented teeth.

tetraphosphorus trisulfide *See* phosphorus sesquisulfide.

Tetraphyllidea [INV ZOO] An order of small tapeworms of the subclass Cestoda characterized by the variation in the structure of the scolex; all species are intestinal parasites of elasmobranch fishes.

tetraploidy [CYTOL] The occurrence of related forms possessing in the somatic cells chromosome numbers four times the haploid number.

tetrapod [VERT ZOO] A four-footed animal.

Tetrapoda [VERT ZOO] The superclass of the subphylum Vertebrata whose members typically possess four limbs; includes all forms above fishes.

tetrapotassium pyrophosphate *See* potassium pyrophosphate.

tetrapropylene *See* dodecane.

Tetrarhynchoidea [INV ZOO] The equivalent name for Trypanorhyncha.

tetrasodium pyrophosphate *See* sodium pyrophosphate.

Tetrasporales [BOT] A heterogeneous and artificial assemblage of colonial fresh-water and marine algae in the division Chlorophyta.

tetraspore [BOT] One of the haploid asexual spores of the red algae formed in groups of four.

tetraterpene [ORG CHEM] A class of terpene compounds that contain isoprene units; best known are the carotenoid pigments from plants and animals, such as lycopene, the red coloring matter in tomatoes.

tetratohedral crystal [CRYSTAL] A crystal which has one quarter of the maximum number of faces allowed by the crystal system to which the crystal belongs.

tetraxon [INV ZOO] A type of sponge spicule with four axes.

tetrazene [ORG CHEM] $H_2NC(NH)_3N_2C(NH)_3NO$ An explosive, colorless to yellowish solid practically insoluble in water and alcohol; used as an explosive initiator and in detonators.

tetrazolium blue *See* blue tetrazolium.

Tetrigidae [INV ZOO] The grouse locusts or pygmy grasshoppers in the order Orthoptera in which the front wings are reduced to small scalelike structures.

tetrode [ELECTR] A four-electrode electron tube containing an anode, a cathode, a control electrode, and one additional electrode that is ordinarily a grid.

tetrode junction transistor *See* double-base junction transistor.

tetrode thyratron [ELECTR] A thyratron with two control electrodes. Also known as gas tetrode.

tetrode transistor [ELECTR] A four-electrode transistor, such as a tetrode point-contact transistor or double-base junction transistor.

tetrodotoxin [BIOCHEM] $C_{11}H_{17}N_3O_8$ A toxin that blocks the action potential in the nerve impulse.

tetrol *See* furan.

tetrose [BIOCHEM] Any of a group of monosaccharides that have a four-carbon chain; an example is erythrose, $CH_2OH\cdot(CHOH)_2\cdot CHO$.

tetryl [ORG CHEM] $(NO_2)_3C_6H_2N(NO_2)CH_3$ A yellow, water-insoluble, crystalline explosive material melting at 130°C; used in explosives and ammunition. Also known as *N*-methyl-*N*,2,4,6-tetranitroaniline; methylpicrylnitramine; tetralite.

tetrytol [MATER] A high-explosive mixture of tetryl and trinitrotoluene (TNT) in any of several proportions which permit melt loading.

Tettigoniidae [INV ZOO] A family of insects in the order Orthoptera which have long antennae, hindlegs fitted for jumping, and an elongate, vertically flattened ovipositor; consists of the longhorn or green grasshopper.

Teuthidae [VERT ZOO] The rabbitfishes, a family of perciform fishes in the suborder Acanthuroidei.

Teuthoidea [INV ZOO] An order of the molluscan subclass Coleoidea in which the rostrum is not developed, the prostracum is represented by the elongated pen or gladus, and ten arms are present.

TE wave *See* transverse electric wave.

Tex [TEXT] A unit of fiber fineness assessed by the weight in grams of 1000 meters of yarn; the lower the number the finer the yarn.

TEX *See* Telex.

Texas fever [VET MED] A tick-borne infectious disease of cattle caused by the parasite *Babesia annulatus* which invades erythrocytes; characterized by fever, hemoglobinuria, and splenomegaly.

Texas tower [ENG] A radar tower built in the sea offshore, to serve as part of an early-warning radar network; it resembles offshore oil derricks in the Gulf of Mexico.

text [COMMUN] The part of a message that conveys information, excluding bits or characters needed to facilitate transmission of the message.

text-editing system [COMPUT SCI] A computer program, together with associated hardware, for the on-line creation and modification of computer programs and ordinary text.

textile [MATER] A material made of natural or man-made fibers and used for the manufacture of items such as clothing and furniture fittings.

textile microbiology [MICROBIO] That branch of microbiology concerned with textile materials; deals with microorganisms that are harmful either to the fibers or to the consumer, and microorganisms that are useful, as in the retting process.

textile oil [MATER] A specially compounded oil used to condition raw textile fibers, yarn, and fabric for manufacturing and finishing operations.

textile printing [TEXT] The specialized dyeing of restricted areas on fabrics; involves the preparation of printing paste, the development and fixing of color, and the addition of a thickening agent to confine paste applications to desired areas on the goods.

textile softener [MATER] A chemical that attaches molecularly to textile fibers with the polar (charged) end of the cation oriented toward the fiber and the fatty tail exposed to give a feeling of softness to the fabric.

text-to-speech synthesizer [ENG ACOUS] A voice response system that provides an automatic means to take a specification of any English text at the input and generate a natural and intelligible acoustic speech signal at the output by using complex sets of rules for predicting the needed phonemic states directly from the input message and dictionary pronunciations.

Textulariina [INV ZOO] A suborder of foraminiferan protozoans characterized by an agglutinated wall.

texture [GEOL] The physical nature of the soil according to composition and particle size. [PETR] The physical appearance or character of a rock; applied to the megascopic or microscopic surface features of a homogeneous rock or mineral aggregate, such as grain size, shape, and arrangement.

textured yarn [TEXT] A generic designation for continuous-filament manufactured yarns which are processed to give them a hand and appearance distinct from untreated yarn.

TFE *See* tetrafluoroethylene.

th *See* thermie.

Th *See* thorium.

thalamus [ANAT] Either one of two masses of gray matter located on the sides of the third ventricle and forming part of the lateral wall of that cavity.

thalassemia [MED] A hereditary form of hemolytic anemia resulting from a defective synthesis of hemoglobin: thalassemia major is the homozygous state accompanied by clinical illness, and thalassemia minor is the heterozygous state and may not have evident clinical manifestations. Also known as Mediterranean anemia.

thalassic [OCEANOGR] Of or pertaining to the smaller seas.

Thalassinidea [INV ZOO] The mud shrimps, a group of thin-shelled, burrowing decapod crustaceans belonging to the Macrura; individuals have large chelate or subchelate first pereiopods, and no chelae on the third pereiopods.

thalassocratic [GEOL] **1.** Pertaining to a thalassocraton. **2.** Referring to a period of high sea level in the geologic past.

thalassocraton [GEOL] A craton that is part of the oceanic crust.

thalassophile element [GEOCHEM] An element that is relatively more abundant in sea water than in normal continental waters, such as sodium and chlorine.

thalassophobia [PSYCH] An abnormal fear of the sea.

Thalattosauria [PALEON] A suborder of extinct reptiles in the order Eosuchia from the Middle Triassic.

Thaliacea [INV ZOO] A small class of pelagic Tunicata in which oral and atrial apertures occur at opposite ends of the body.

thalidomide [PHARM] $C_{13}H_{10}N_2O_4$ A drug used as a sedative and hypnotic; may produce teratogenic effects when administered during pregnancy.

thalline [ORG CHEM] $C_9H_6N(OCH_3)H_4$ Colorless rhomboids soluble in water and melting at 40°C. Also known as tetrahydro-*para*-methoxyquinoline; tetrahydro-*para*-quinanisol.

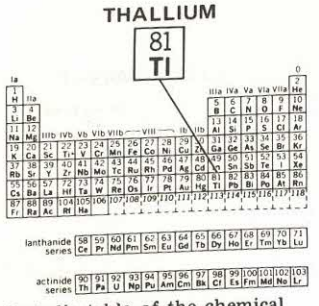
thallium [CHEM] A metallic element in group III, symbol Tl, atomic number 81, atomic weight 204.37; insoluble in water, soluble in nitric and sulfuric acids, melts at 302°C, boils at 1457°C. [MET] Bluish-white metal with tinlike malleability, but a little softer; used in alloys.

thallium acetate [ORG CHEM] $TlOCOCH_3$ Toxic, white, deliquescent crystals, soluble in water and alcohol, melts at 131°C; used as an ore-flotation solvent and in medicine.

thallium-beam clock [HOROL] A device similar to a cesium-beam clock, but using a beam of thallium atoms instead of cesium; advantages over cesium are reduced sensitivity to magnetic fields and a higher frequency; the beam, however, is much harder to detect and deflect.

thallium bromide [INORG CHEM] TlBr A toxic, yellowish powder soluble in alcohol, slightly soluble in water, melts at 460°C; used in infrared radiation transmitters and detectors. Also known as thallous bromide.

thallium carbonate [INORG CHEM] Tl_2CO_3 Toxic, shiny, colorless needles soluble in water, insoluble in alcohol, melts at



Periodic table of the chemical elements showing the position of thallium.

272°C; used as an analytical reagent and in artificial gems. Also known as thallous carbonate.

thallium chloride [INORG CHEM] TlCl A white, toxic, light-sensitive powder, slightly soluble in water, insoluble in alcohol, melts at 430°C; used as a chlorination catalyst and in medicine and suntan lamps. Also known as thallous chloride.

thallium hydroxide [INORG CHEM] $TlOH \cdot H_2O$ Toxic yellow, water- and alcohol-soluble needles, decomposes at 139°C; used as an analytical reagent. Also known as thallous hydroxide.

thallium iodide [INORG CHEM] TlI A toxic, yellow powder, insoluble in alcohol, slightly soluble in water, melts at 440°C; used in infrared radiation transmitters and in medicine. Also known as thallous iodide.

thallium monoxide [INORG CHEM] Tl_2O A black, toxic, water- and alcohol-soluble powder, melts at 300°C; used as an analytical reagent and in artificial gems and optical glass. Also known as thallium oxide; thallous oxide.

thallium nitrate [INORG CHEM] $TlNO_3$ Colorless, toxic, fire-hazardous crystals soluble in hot water, insoluble in alcohol, melts at 206°C, decomposes at 450°C; used as an analytical reagent and in pyrotechnics. Also known as thallous nitrate.

thallium oxide *See* thallium monoxide.

thallium sulfate [INORG CHEM] Tl_2SO_4 Toxic, water-soluble, colorless crystals melting at 632°C; used as an analytical reagent and in medicine, rodenticides, and pesticides. Also known as thallous sulfate.

thallium sulfide [INORG CHEM] Tl_2S Lustrous, toxic, blue-black crystals insoluble in water, alcohol, and ether, soluble in mineral acids, melts at 448°C; used in infrared-sensitive devices. Also known as thallous sulfide.

Thallobionta [BOT] One of the two subkingdoms of plants, characterized by the absence of specialized tissues or organs and multicellular sex organs.

thallofide cell [ELECTR] A photoconductive cell in which the active light-sensitive material is thallium oxysulfide in a vacuum; it has maximum response at the red end of the visible spectrum and in the near infrared.

Thallophyta [BOT] The equivalent name for Thallobionta.

thallospore [BOT] A spore that develops by budding of hyphal cells.

thallotoxicosis [MED] Poisoning due to ingestion of thallium or its derivatives.

thallous bromide *See* thallium bromide.

thallous carbonate *See* thallium carbonate.

thallous chloride *See* thallium chloride.

thallous hydroxide *See* thallium hydroxide.

thallous iodide *See* thallium iodide.

thallous nitrate *See* thallium nitrate.

thallous oxide *See* thallium monoxide.

thallous sulfate *See* thallium sulfate.

thallous sulfide *See* thallium sulfide.

thallus [BOT] A plant body that is not differentiated into special tissue systems or organs and may vary from a single cell to a complex, branching multicellular structure.

thalweg [GEOGR] The middle of the principal navigable waterway which serves as a boundary between two states. [GEOL] **1.** A line connecting the lowest points along a stream bed or a valley. Also known as valley line. **2.** A line crossing all contour lines on a land surface perpendicularly. [HYD] Water seeping through the ground below the surface in the same direction as a surface stream course.

THAM *See* tromethamine.

thanatocoenosis [PALEON] The assemblage of dead organisms or fossils that occurred together in a given area at a given moment of geologic time. Also known as death assemblage; taphocoenosis.

thanatology [MED] The study of the phenomenon of somatic death.

Thanetian [GEOL] A European stage of geologic time; uppermost Paleocene, above Montian, below Ypresian of Eocene.

Thaumaleidae [INV ZOO] A family of orthorrhaphous dipteran insects in the series Nematocera.

Thaumastellidae [INV ZOO] A monospecific family of the Hemiptera assigned to the Pentatomorpha found only in Ethiopia.

Thaumastocoridae [INV ZOO] The single family of the hemipteran superfamily Thaumastocoroidea.

Thaumastocoroidea [INV ZOO] A monofamilial superfamily of the Hemiptera in the subdivision Geocorisae which occurs in Australia and the New World tropics.

Thaumatoxenidae [INV ZOO] A family of cyclorrhaphous dipteran insects in the series Aschiza.

thaw [CLIMATOL] A warm spell during which ice and snow melt, as a January thaw.

thaw house [ENG] A small building that is designed for thawing frozen dynamite and which is capacious enough for a supply of thawed dynamite for a day's work.

thawing [ENG] Warming dynamite, to reduce risk of premature explosion. [MIN ENG] Working permanently frozen ground by pumping water at a temperature of from 50 to 60°F (10 to 15.5°C) through pipes down into the frozen gravel.

thawing index [CLIMATOL] The number of degree days, above and below 32°F, between the lowest and highest points on the cumulative degree-days time curve for one thawing season.

thawing season [CLIMATOL] The period of time between the lowest point and the succeeding highest point on the time curve of cumulative degree days above and below 32°F.

thaw pipe [MIN ENG] A string of pipe drilled into a string of drill rods that is frozen in a borehole in permafrost, through which water is circulated to thaw the ice and free the drill rods.

Theaceae [BOT] A family of dicotyledonous erect trees or shrubs in the order Theales characterized by alternate, exstipulate leaves, usually five petals, and mostly numerous stamens.

Theales [BOT] An order of dicotyledonous mostly woody plants in the subclass Dilleniidae with simple or occasionally compound leaves, petals usually separate, numerous stamens, and the calyx arranged in a tight spiral.

theater of operations [ORD] Portion of a theater of war necessary for military operations, either offensive or defensive, pursuant to an assigned mission, and for the administration incident to such military operation.

theater of war [ORD] That area of land, sea, and air which is, or may become, involved directly in the operation of war.

theater stock level [ORD] Quantity of supplies authorized by the U.S. Army to be maintained in a theater of operations as stock on hand ready for issue.

theater television [ELECTR] A large projection-type television receiver used in theaters, generally for closed-circuit showing of important sport events.

thebaine [PHARM] $C_{19}N_{21}NO_3$ A white, crystalline alkaloid derived from opium; melting point is 193°C; soluble in alcohol and ether; used in medicine. Also known as *para*-morphine.

theca [ANAT] The sheath of dura mater which covers the spinal cord. [BOT] **1.** A moss capsule. **2.** A pollen sac. [HISTOL] The layer of stroma surrounding a Graafian follicle. [INV ZOO] The test of a testate protozoan or a rotifer.

theca folliculi [HISTOL] The capsule surrounding a developing or mature Graafian follicle; consists of two layers, theca interna and theca externa.

Thecanephria [INV ZOO] An order of the phylum Brachiata containing a group of elongate, tube-dwelling tentaculate, deep-sea animals of bizarre structure.

thecate [BIOL] Having a theca.

Thecideidina [PALEON] An extinct suborder of articulate brachiopods doubtfully included in the order Terebratulida.

Thecodontia [PALEON] An order of archosaurian reptiles, confined to the Triassic and distinguished by the absence of a supratemporal bone, parietal foramen, and palatal teeth, and by the presence of an antorbital fenestra.

Thelastomidae [INV ZOO] A family of nematode worms in the superfamily Oxyuroidea.

thematic apperception test [PSYCH] A projective psychological test using a set of pictures suggesting life situations from which the subject constructs a story; designed to reveal to the trained interpreter some of the dominant drives, emotions, sentiments, complexes, and conflicts of personality. Abbreviated TAT.

Themis [ASTRON] An asteroid with a diameter of roughly 225 kilometers, mean distance from the sun of 3.138 astronomical units, and C-type surface composition.

thenar [ANAT] The ball of the thumb.

thenardite [MINERAL] Na_2SO_4 A colorless, grayish-white, yellowish, yellow-brown, or reddish, orthorhombic mineral consisting of sodium sulfate.

thenyl [ORG CHEM] $C_4H_3SCH_2$— An organic radical based on methylthiophene; thus thenyl alcohol is also known as thiophenemethanol.

theobroma oil *See* cocoa butter.

theobromine [ORG CHEM] $C_7H_8N_4O_2$ A toxic alkaloid found in cocoa, chocolate products, tea, and cola nuts; closely related to caffeine. Also known as 3,7-dimethylxanthine.

theodolite [OPTICS] An optical instrument used in surveying which consists of a sighting telescope mounted so that it is free to rotate around horizontal and vertical axes, and graduated scales so that the angles of rotation may be measured; the telescope is usually fitted with a right-angle prism so that the observer continues to look horizontally into the eyepiece, whatever the variation of the elevation angle; in meteorology, it is used principally to observe the motion of a pilot balloon.

theophobia [PSYCH] Abnormal fear of a deity or of divine punishment.

Theophrastaceae [BOT] A family of tropical and subtropical dicotyledonous woody plants in the order Primulales characterized by flowers having staminodes alternate with the corolla lobes.

theophylline [ORG CHEM] $C_7H_8N_4O_2 \cdot H_2O$ Alkaloid from tea leaves; bitter-tasting white crystals slightly soluble in water and alcohol, melts at 272°C; used in medicine.

theorem [MATH] A proven mathematical statement.

theorem of corresponding states [STAT MECH] A theorem stating that two substances which have the same reduced temperature and the same reduced pressure have the same reduced volume.

theoretical air [ENG] The amount of air theoretically required for complete combustion.

theoretical cutoff frequency [ELEC] Of an electric structure, a frequency at which, disregarding the effects of dissipation, the attenuation constant changes from zero to a positive value or vice versa.

theoretical draft [FL MECH] Draft in a ducted space, neglecting flow losses due to fluid friction.

theoretical physics [PHYS] The description of natural phenomena in mathematical form.

theoretical plate [CHEM ENG] A distillation column plate or tray that produces perfect distillation (that is, produces the same difference in composition as that existing between a liquid mixture and the vapor in equilibrium with it); the packed-column equivalent of a theoretical plate is the HETP, or height (of packing) equivalent to a theoretical plate.

theoretical relieving capacity [MECH ENG] The capacity of a theoretically perfect nozzle calculated in volumetric or gravimetric units.

theory [MATH] The collection of theorems and principles associated with some mathematical object or concept. [SCI TECH] An attempt to explain a certain class of phenomena by deducing them as necessary consequences of other phenomena regarded as more primitive and less in need of explanation.

theory of antecedent conflicts [PSYCH] A theory that the effects of an emotionally disturbing event in adult life may be greatly multiplied through the conditioning or sensitizing effects of the vicissitudes of early life.

theory of equations [MATH] The study of polynomial equations from the viewpoint of solution methods, relations among roots, and connections between coefficients and roots.

theory of games *See* game theory.

theralite [PETR] A dark-colored, visibly crystalline rock composed chiefly of pyroxene with smaller amounts of calcic plagioclase and nepheline.

therapeutic abortion [MED] Abortion performed when pregnancy jeopardizes the health or life of the mother.

Therapsida [PALEON] An order of mammallike reptiles of the subclass Synapsida which first appeared in mid-Permian times and persisted until the end of the Triassic.

Therberg system [IND ENG] A system of categorizing hand movements that is used in the standard motion-and-time analysis technique.

therblig *See* elemental motion.

therblig chart [IND ENG] An operation chart with the suboperations divided into basic motions, all designated with appropriate symbols.

Therevidae [INV ZOO] The stiletto flies, a family of orthorrhaphous dipteran insects in the series Brachycera.

Theria [VERT ZOO] A subclass of the class Mammalia including all living mammals except the monotremes.

Theridiidae [INV ZOO] The comb-footed spiders, a family of the suborder Dipneumonomorphae.

therm [THERMO] A unit of heat energy, equal to 10^5 international table British thermal units, or approximately 1.055×10^8 joules.

thermal [METEOROL] A relatively small-scale, rising current of air produced when the atmosphere is heated enough locally by the earth's surface to produce absolute instability in its lower layers. [THERMO] Of or concerning heat.

thermal agitation [SOLID STATE] Random movements of the free electrons in a conductor, producing noise signals that may become noticeable when they occur at the input of a high-gain amplifier. Also known as thermal effect.

thermal ammeter *See* hot-wire ammeter.

thermal analysis [ANALY CHEM] Any analysis of physical or thermodynamic properties of materials in which heat (or its removal) is directly involved; for example, boiling, freezing, solidification-point determinations, heat of fusion and heat of vaporization measurements, distillation, calorimetry, and differential thermal, thermogravimetric, thermometric, and thermometric titration analyses. Also known as thermoanalysis. [MET] Determining transformations in a metal by observing the temperature-time relationship during uniform cooling or heating; phase tranformations are indicated by irregularities in a smooth curve.

thermal-arrest calorimeter [ENG] A vacuum device for measurement of heats of fusion; a sample is frozen under vacuum and allowed to melt as the calorimeter warms to room temperature.

thermal aureole *See* aureole.

thermal barrier [AERO ENG] A limit to the speed of airplanes and rockets in the atmosphere imposed by heat from friction between the aircraft and the air, which weakens and eventually melts the surface of the aircraft. Also known as heat barrier.

thermal battery [ELEC] **1.** A combination of thermal cells. Also known as fused-electrolyte battery; heat-activated battery. **2.** A voltage source consisting of a number of bimetallic junctions connected to produce a voltage when heated by a flame.

thermal belt [ECOL] Any one of several possible horizontal belts of a vegetation type found in mountainous terrain, resulting primarily from vertical temperature variation. Also known as thermal zone.

thermal black [CHEM] A type of carbon black made by a thermal process using natural gas; used in the rubber industry.

thermal blooming [OPTICS] The phenomenon of self-defocusing in certain weakly absorbing media; it is prominent, for example, in the propagation of high-power infrared laser beams through the atmosphere.

thermal bond [NUCLEO] A thermally conductive bond, providing maximum transfer of heat, as between nuclear-reactor fuel and its protective cladding.

thermal breeder reactor [NUCLEO] A breeder reactor in which the fission chain reaction is sustained by thermal neutrons.

thermal bulb [ENG] A device for measurement of temperature; the liquid in a bulb expands with increasing temperature, pressuring a spiral Bourdon-type tube element and causing it to deform (unwind) in direct relation to the temperature in the bulb.

thermal burn [MED] Tissue reaction to or injury resulting from application of heat.

thermal capacitance [THERMO] The ratio of the entropy added to a body to the resulting rise in temperature.

thermal capacity *See* heat capacity.

thermal cell [ELEC] A reserve cell that is activated by applying heat to melt a solidified electrolyte.

thermal charge *See* entropy.

thermal climate [CLIMATOL] Climate as defined by temperature, and divided regionally into temperature zones.

thermal column [NUCLEO] A column of moderating material extending through the shield into the reflector of a nuclear reactor, used to provide a source of thermal neutrons for research purposes.

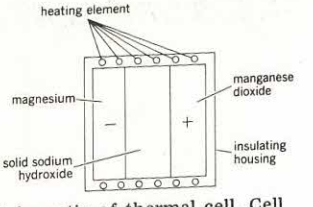
thermal compressor [MECH ENG] A steam-jet ejector designed to compress steam at pressures above atmospheric.

thermal conductance [THERMO] The amount of heat transmitted by a material divided by the difference in temperature of the surfaces of the material. Also known as conductance.

thermal conductimetry [THERMO] Measurement of thermal conductivities.

thermal conductivity [THERMO] The heat flow across a sur-

THERMAL CELL



Schematic of thermal cell. Cell is activated when heat from heating element melts sodium hydroxide.

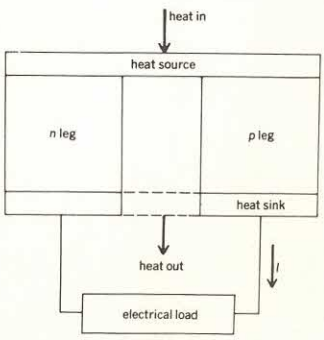
face per unit area per unit time, divided by the negative of the rate of change of temperature with distance in a direction perpendicular to the surface. Also known as heat conductivity.

thermal conductivity cell *See* katharometer.

thermal conductivity gage [ENG] A pressure measurement device for high-vacuum systems; an electrically heated wire is exposed to the gas under pressure, the thermal conductivity of which changes with changes in the system pressure.

thermal convection [METEOROL] Atmospheric currents, predominantly vertical, arising from the release of gravitational visibility; commonly produced by solar heating of the ground; the cause of convective (cumulus) clouds. Also known as free convection; gravitational convection. [THERMO] *See* heat convection.

THERMAL CONVERTER



Simple thermal converter. One leg is *n*-type semiconductor material, the other is *p*-type material.

thermal converter [ELECTR] A device that converts heat energy directly into electric energy by using the Seebeck effect; it is composed of at least two dissimilar materials, one junction of which is in contact with a heat source and the other junction of which is in contact with a heat sink. Also known as thermocouple converter; thermoelectric generator; thermoelectric power generator; thermoelement.

thermal coulomb [THERMO] A unit of entropy equal to 1 joule per kelvin.

thermal cracking [CHEM ENG] A petroleum refining process that decomposes, rearranges, or combines hydrocarbon molecules by the application of heat, without the aid of catalysts.

thermal cross section [NUCLEO] The cross section of a thermal neutron.

thermal cutout [ELEC] A heat-sensitive switch that automatically opens the circuit of an electric motor or other device when the operating temperature exceeds a safe value.

thermal cutting [MET] A group of processes to sever metals by melting or by chemical reaction of oxygen with the metal at elevated temperatures.

thermal degradation [CHEM] Molecular deterioration of materials (usually organics) because of overheat; can be avoided by low-temperature or vacuum processing, as for foods and pharmaceuticals.

thermal detector *See* bolometer.

thermal diffusion [PHYS CHEM] A phenomenon in which a temperature gradient in a mixture of fluids gives rise to a flow of one constituent relative to the mixture as a whole. Also known as thermodiffusion.

thermal diffusivity *See* diffusivity.

thermal drift [ELECTR] Drift caused by internal heating of equipment during normal operation or by changes in external ambient temperature.

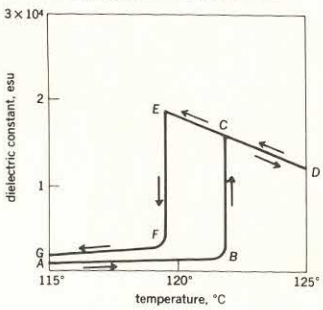
thermal effect *See* thermal agitation.

thermal efficiency [CHEM ENG] In a tube-and-shell heat-exchange system, the ratio of the actual temperature range of the tube-side fluid (inlet versus outlet temperature) to the maximum possible temperature range. [THERMO] *See* efficiency.

thermal-efficiency index *See* temperature-efficiency index.

thermal-efficiency ratio *See* temperature-efficiency ratio.

THERMAL HYSTERESIS



Plot of dielectric constant versus temperature for a single crystal of barium titanate, showing thermal hysteresis. On heating, dielectric constant was observed to follow path *ABCD*, and on cooling path *DCEFG*. *(After M. E. Drougard and D. R. Young, Phys. Rev., 95:1152–1153, 1954)*

thermal electromotive force [PHYS] An electromotive force arising from a difference in temperature at two points along a circuit, as in the Seebeck effect.

thermal emissivity *See* emissivity.

thermal energy [NUCLEO] Energy which is characteristic for thermal neutrons at room temperature, about 0.025 electron volt.

thermal equator *See* heat equator.

thermal equilibrium [THERMO] Property of a system all parts of which have attained a uniform temperature which is the same as that of the system's surroundings.

thermal excitation [ATOM PHYS] The process in which atoms or molecules acquire internal energy in collisions with other particles.

thermal expansion [PHYS] The dimensional changes exhibited by solids, liquids, and gases for changes in temperature while pressure is held constant.

thermal expansion coefficient [PHYS] The fractional change in length or volume of a material for a unit change in temperature.

thermal exposure [ORD] The total normal component of thermal radiation striking a given surface throughout the course of a detonation.

thermal farad [THERMO] A unit of thermal capacitance equal to the thermal capacitance of a body for which an increase in entropy of 1 joule per kelvin results in a temperature rise of 1 kelvin.

thermal flame safeguard [MECH ENG] A thermocouple located in the pilot flame of a burner; if the pilot flame is extinguished, an elective circuit is interrupted and the fuel supply is shut off.

thermal flasher [ELEC] An electric device that opens and closes a circuit automatically at regular intervals because of alternate heating and cooling of a bimetallic strip that is heated by a resistance element in series with the circuit being controlled.

thermal flux *See* heat flux.

thermal gasoline [MATER] Gasoline produced in petroleum refineries by thermal processes, for example, thermal cracking and thermal reforming.

thermal gradient [GEOPHYS] The rate of temperature change with distance; for example, its increase with depth below the surface of the earth.

thermal henry [THERMO] A unit of thermal inductance equal to the product of a temperature difference of 1 kelvin and a time of 1 second divided by a rate of flow of entropy of 1 watt per kelvin.

thermal high [METEOROL] A high resulting from the cooling of air by a cold underlying surface, and remaining relatively stationary over the cold surface.

thermal horsepower [ELEC] Electrical motor horsepower as determined by current readings from a thermal-type ammeter; will be higher than load horsepower determined from kilowatt-input methods. Also known as true motor load.

thermal hysteresis [THERMO] A phenomenon sometimes observed in the behavior of a temperature-dependent property of a body; it is said to occur if the behavior of such a property is different when the body is heated through a given temperature range from when it is cooled through the same temperature range.

thermal imagery [ELECTR] Imagery produced by measuring and recording electronically the thermal radiation of objects.

thermal inductance [THERMO] The product of temperature difference and time divided by entropy flow.

thermal instability [FL MECH] The instability resulting in free convection in a fluid heated at a boundary.

thermal instrument [ENG] An instrument that depends on the heating effect of an electric current, such as a thermocouple or hot-wire instrument.

thermal ionization *See* Saha ionization.

thermal jet [METEOROL] A region in the atmosphere where isotherms or thickness lines are closely packed; therefore, a region of very strong thermal wind.

thermal-liquid system [CHEM ENG] A system with a special liquid that acts as a heat sink or heat source (for example, steam, hot water, mercury, Dowtherm, molten salts, or mineral oils); used for process heating and cooling.

thermal-loss meter *See* heat-loss flowmeter.

thermal low [METEOROL] An area of low atmospheric pressure due to high temperatures caused by intensive heating at the earth's surface; common to the continental subtropics in summer, thermal lows remain stationary over the area that produces them, their cyclonic circulation is generally weak and diffuse, and they are nonfrontal. Also known as heat low.

thermal magnon [SOLID STATE] A magnon with a relatively short wavelength, on the order of 10^{-6} centimeter.

thermal mapper *See* line scanner.

thermal metamorphism [PETR] Metamorphism that results from temperature-controlled and induced chemical reconstitution of preexisting rocks, with little influence of pressure. Also known as thermometamorphism.

thermal microphone [ENG ACOUS] Microphone depending for its action on the variation in the resistance of an electrically heated conductor that is being alternately increased and decreased in temperature by sound waves.

thermal neutron [NUCLEO] One of a collection of neutrons whose energy distribution is identical with or similar to the Maxwellian distribution in the material in which they are found; the average kinetic energy of such neutrons at room temperature is about 0.025 electron volt. Also known as slow neutron.

thermal noise [ELECTR] Electric noise produced by thermal agitation of electrons in conductors and semiconductors. Also known as Johnson noise; resistance noise.

thermal noise generator [ELECTR] A generator that uses

the inherent thermal agitation of an electron tube to provide a calibrated noise source.

thermal ohm [THERMO] A unit of thermal resistance equal to the thermal resistance for which a temperature difference of 1 kelvin produces a flow of entropy of 1 watt per kelvin. Also known as fourier.

thermal photography *See* thermography.

thermal polymerization [CHEM ENG] A thermal, petroleum refining process used to convert light hydrocarbon gases into liquid fuels; paraffinic hydrocarbons are cracked to produce olefinic material which is concurrently polymerized by heat and pressure to form liquids, the product being known as polymer gasoline.

thermal potential difference [THERMO] The difference between the thermodynamic temperatures of two points.

thermal power plant [ENG] A facility to produce electric energy from thermal energy released by combustion of a fuel or consumption of a fissionable material.

thermal printer [GRAPHICS] A nonimpact printer in which characters are formed by heating selected elements of a 5×7 or 7×9 dot matrix that is in contact with heat-sensitive paper.

thermal probe [ENG] An instrument which measures the heat flow from ocean bottom sediment. [MECH ENG] A calorimeter in a boiler furnace which measures heat absorption rates.

thermal process [CHEM ENG] Any process that utilizes heat, without the aid of a catalyst, to accomplish chemical change; for example, thermal cracking, thermal reforming, or thermal polymerization.

thermal pulse [NUCLEO] The radiant power versus time pulse from a nuclear weapon detonation.

thermal pulse method [SOLID STATE] A method of measuring properties of insulating and conducting crystals, in which a heat pulse of known duration is measured after propagating through a crystal; the pulse can be generated by directing a laser pulse at an absorbing film evaporated onto one face of the crystal, and detected by a thin-film circuit on the other face.

thermal quality of snow *See* quality of snow.

thermal radiation *See* heat radiation.

thermal reactor [CHEM ENG] A device, system, or vessel in which chemical reactions take place because of heat (no catalysis); for example, thermal cracking, thermal reforming, or thermal polymerization. [NUCLEO] A nuclear reactor in which fission is induced primarily by neutrons of such low energy that they are in substantial thermal equilibrium with the material of the core.

thermal reforming [CHEM ENG] A petroleum refining process using heat (but no catalyst) to effect molecular rearrangement of a low-octane naphtha to form high-octane motor gasoline.

thermal regenerative cell [ELEC] Fuel-cell system in which the reactants are regenerated continuously from the products formed during the cell reaction.

thermal relay [ELEC] A relay operated by the heat produced by current flow.

thermal relief [ENG] A valve or other device that is preset to open when pressure becomes excessive due to increased temperature of the system.

thermal resistance [ELECTR] *See* effective thermal resistance. [THERMO] A measure of a body's ability to prevent heat from flowing through it, equal to the difference between the temperatures of opposite faces of the body divided by the rate of heat flow. Also known as heat resistance.

thermal resistivity [THERMO] The reciprocal of the thermal conductivity.

thermal resistor [ELEC] A resistor designed so its resistance varies in a known manner with changes in ambient temperature.

thermal Rossby number [FL MECH] The nondimensional ratio of the inertial force due to the thermal wind and the Coriolis force in the flow of a fluid which is heated from below.

thermal runaway [ELECTR] A condition that may occur in a power transistor when collector current increases collector junction temperature, reducing collector resistance and allowing a greater current to flow, which, in turn, increases the heating effect.

thermal scattering [SOLID STATE] Scattering of electrons, neutrons, or x-rays passing through a solid due to thermal motion of the atoms in the crystal lattice.

thermal shield [NUCLEO] A high-density heat-conducting portion of a shield placed close to the reflector of a nuclear reactor to absorb thermal neutrons, gamma rays, beta rays, and x-rays, whose absorption in the outer shield would generate excessive heat.

thermal spraying [MET] Spraying finely divided particles of powder or droplets of atomized metal wire or rod for coating a substrate.

thermal spring [HYD] A spring whose water temperature is higher than the local mean annual temperature of the atmosphere.

thermal steering [METEOROL] The steering of an atmospheric disturbance in the direction of the thermal wind in its vicinity; equivalent to steering along thickness lines; for this purpose the thermal wind is usually taken from the earth's surface to a level in the middle troposphere.

thermal stratification [HYD] Horizontal layers of differing densities produced in a lake by temperature changes at different depths.

thermal stress [MECH] Mechanical stress induced in a body when some or all of its parts are not free to expand or contract in response to changes in temperature.

thermal stress cracking [MECH] Crazing or cracking of materials (plastics or metals) by overexposure to elevated temperatures and sudden temperature changes or large temperature differentials.

thermal structure [PETR] A distinct structural pattern, such as a dome or anticline, defined by the arrangement of metamorphic zones of increasing grade.

thermal switch [ELEC] A temperature-controlled switch. Also known as thermoswitch.

thermal telephone receiver [ENG ACOUS] A thermophone used as a telephone receiver.

thermal tide [METEOROL] A variation in atmospheric pressure due to the diurnal differential heating of the atmosphere by the sun; so-called in analogy to the conventional gravitational tide.

thermal titration *See* thermometric titration.

thermal transducer [ENG] Any device which converts energy from some form other than heat energy into heat energy; an example is the absorbing film used in the thermal pulse method.

thermal tuning [ELEC] The process of changing the operating frequency of a system by using controlled thermal expansion to alter the geometry of the system.

thermal utilization factor [NUCLEO] The probability that a thermal neutron which is absorbed is absorbed usefully, as in a fissionable material.

thermal value [THERMO] Heat produced by combustion, usually expressed in calories per gram or British thermal units per pound.

thermal volt *See* kelvin.

thermal vorticity [METEOROL] The vorticity of a thermal wind.

thermal vorticity advection [METEOROL] The advection or transport of the thermal vorticity by the thermal wind, in analogy to the advection of the vorticity by the wind.

thermal wattmeter [ENG] A wattmeter in which thermocouples are used to measure the heating produced when a current is passed through a resistance.

thermal wave [CRYO] *See* temperature wave. [SOLID STATE] A sound wave in a solid which has a short wavelength.

thermal wind [METEOROL] The mean wind-shear vector in geostrophic balance with the gradient of mean temperature of a layer bounded by two isobaric surfaces.

thermal wind equation [METEOROL] An equation for the vertical variation of the geostrophic wind in hydrostatic equilibrium which may be written $-(\partial \mathbf{V}/\partial p) = (R/pf)\mathbf{k} \times \nabla_p T$, where $\mathbf{V}$ is the vector geostrophic wind, p the pressure (used here as the vertical coordinate), R the gas constant for air, f the Coriolis parameter, $\mathbf{k}$ a vertically directed unit vector, and ∇_p the isobaric del operator.

thermal x-rays [ELECTROMAG] The electromagnetic radiation, mainly in the soft (low-energy) x-ray region.

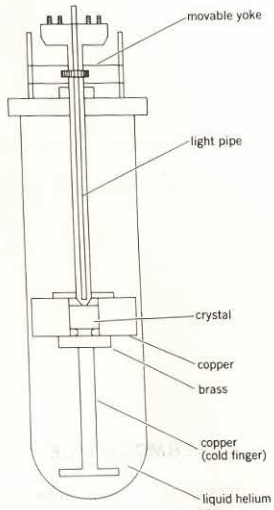
thermal zone *See* thermal belt.

thermic boring [ENG] Boring holes into concrete by means of a high temperature, produced by a steel lance packed with steel wool which is ignited and kept burning by oxyacetylene or other gas.

thermic fever *See* sunstroke.

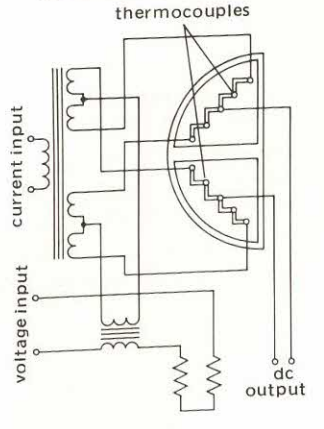
thermie [THERMO] A unit of heat energy equal to the heat energy needed to raise 1 tonne of water from 14.5°C to 15.5°C at a constant pressure of 1 standard atmosphere; equal to 10^6

THERMAL PULSE METHOD



Apparatus for measuring heat pulses at various temperatures, showing components. Laser pulse propagates down light pipe onto absorbing film on face of crystal, and heat pulse propagates through crystal. *(From R. J. von Gutfeld and A. H. Nethercot, in W. P. Mason, ed., Physical Acoustics, vol. 5, 1969)*

THERMAL WATTMETER



Circuit diagram of thermal wattmeter used in commercial power measurements. Thermocouples are placed in the semicylindrical structure, which is divided into two compartments designed to limit cooling by convection.

fifteen-degrees calories or $(4.1855 \pm 0.0005) \times 10^6$ joules. Abbreviated th.

thermion [ELECTR] A charged particle, either negative or positive, emitted by a heated body, as by the hot cathode of a thermionic tube.

thermionic [ELECTR] Pertaining to the emission of electrons as a result of heat.

thermionic cathode *See* hot cathode.

thermionic converter [ELECTR] A device in which heat energy is directly converted to electric energy; it has two electrodes, one of which is raised to a sufficiently high temperature to become a thermionic electron emitter, while the other, serving as an electron collector, is operated at a significantly lower temperature. Also known as thermionic generator; thermionic power generator; thermoelectric engine.

thermionic current [ELECTR] Current due to directed movements of thermions, such as the flow of emitted electrons from the cathode to the plate in a thermionic vacuum tube.

thermionic detector [ELECTR] A detector using a hot-cathode tube.

thermionic diode [ELECTR] A diode electron tube having a heated cathode.

thermionic emission [ELECTR] **1.** The outflow of electrons into vacuum from a heated electric conductor. Also known as Edison effect; Richardson effect. **2.** More broadly, the liberation of electrons or ions from a substance as a result of heat.

thermionic fuel cell [ELECTR] A thermionic converter in which the space between the electrodes is filled with cesium or other gas, which lowers the work functions of the electrodes, and creates an ionized atmosphere, controlling the electron space charge.

thermionic generator *See* thermionic converter.

thermionic power generator *See* thermionic converter.

thermionics [ELECTR] The study and applications of thermionic emission.

thermionic triode [ELECTR] A three-electrode thermionic tube, containing an anode, a cathode, and a control electrode.

thermionic tube [ELECTR] An electron tube that relies upon thermally emitted electrons from a heated cathode for tube current. Also known as hot-cathode tube.

thermionic work function [ELECTR] Energy required to transfer an electron from the fermi energy in a given metal through the surface to the vacuum just outside the metal.

thermistor [ELECTR] A resistive circuit component, having a high negative temperature coefficient of resistance, so that its resistance decreases as the temperature increases; it is a stable, compact, and rugged two-terminal ceramiclike semiconductor bead, rod, or disk. Derived from thermal resistor.

thermit *See* thermite.

thermite [MATER] A fire-hazardous mixture of ferric oxide and powdered aluminum; upon ignition by a magnesium ribbon, it reaches a temperature of 4000°F (2200°C), sufficient to soften steel; used for industrial purposes or as an incendiary bomb. Also spelled thermit.

thermit process [MET] An exothermic reaction when heating finely divided aluminum on a metal oxide causing reduction of the oxide.

thermit welding [MET] Welding with molten iron which is obtained by igniting aluminum and an iron oxide in a crucible, whereby the aluminum floats to the top of the molten metal and is poured off.

thermoacoustic array [ACOUS] A sound source consisting of a light beam (usually a laser beam) modulated at the frequency of the sound to be generated; the resulting sound has its maximum value in a direction perpendicular to the axis of the light beam, and its directivity pattern has no side lobes.

thermoacoustic effect *See* optoacoustic effect.

Thermoactinomyces [MICROBIO] A genus of bacteria in the family Micromonosporaceae; single spores form on aerial and substrate mycelia; optimum growth is at temperatures between 45 and 60°C.

thermoammeter [ENG] An ammeter that is actuated by the voltage generated in a thermocouple through which is sent the current to be measured; used chiefly for measuring radio-frequency currents. Also known as electrothermal ammeter; thermocouple ammeter.

thermoanalysis *See* thermal analysis.

thermobalance [ANALY CHEM] An analytical balance modified for thermogravimetric analysis, the measurement of weight changes associated with the transformations of matter when heated.

thermochemical calorie *See* calorie.

thermochemistry [PHYS CHEM] The measurement, interpretation, and analysis of heat changes accompanying chemical reactions and changes in state.

thermocline [GEOPHYS] **1.** A temperature gradient as in a layer of sea water, in which the temperature decrease with depth is greater than that of the overlying and underlying water. Also known as metalimnion. **2.** A layer in a thermally stratified body of water in which such a gradient occurs.

thermocoagulation [MED] Destruction of tissue by means of electrocautery or a high-frequency current.

thermocompression bonding [ENG] Use of a combination of heat and pressure to make connections, as when attaching beads to integrated-circuit chips; examples include wedge bonding and ball bonding.

thermocompression evaporator [MECH ENG] A system to reduce the energy requirements for evaporation by compressing the vapor from a single-effect evaporator so that the vapor can be used as the heating medium in the same evaporator.

thermocouple [ENG] A device consisting basically of two dissimilar conductors joined together at their ends; the thermoelectric voltage developed between the two junctions is proportional to the temperature difference between the junctions, so the device can be used to measure the temperature of one of the junctions when the other is held at a fixed, known temperature, or to convert radiant energy into electric energy.

thermocouple ammeter *See* thermoammeter.

thermocouple converter *See* thermal converter.

thermocouple pyrometer *See* thermoelectric pyrometer.

thermocouple vacuum gage [ENG] A vacuum gage that depends for its operation on the thermal conduction of the gas present; pressure is measured as a function of the voltage of a thermocouple whose measuring junction is in thermal contact with a heater that carries a constant current; ordinarily, used over a pressure range of 10^{-1} to 10^{-3} millimeter of mercury.

thermocyclogenesis [METEOROL] A theory of cyclogenesis by G. Stüve, in which the disturbance is initiated in the stratosphere and is reflected in the development of a disturbance in the lower troposphere.

thermodiffusion *See* thermal diffusion.

thermoduric bacteria [MICROBIO] Bacteria which survive pasteurization, but do not grow at temperatures used in a pasteurizing process.

thermodynamic cycle [THERMO] A procedure or arrangement in which some material goes through a cyclic process and one form of energy, such as heat at an elevated temperature from combustion of a fuel, is in part converted to another form, such as mechanical energy of a shaft, the remainder being rejected to a lower temperature sink. Also known as heat cycle.

thermodynamic equation of state [THERMO] An equation that relates the reversible change in energy of a thermodynamic system to the pressure, volume, and temperature.

thermodynamic equilibrium [THERMO] Property of a system which is in mechanical, chemical, and thermal equilibrium.

thermodynamic function of state [THERMO] Any of the quantities defining the thermodynamic state of a substance in thermodynamic equilibrium; for a perfect gas, the pressure, temperature, and density are the fundamental thermodynamic variables, any two of which are, by the equation of state, sufficient to specify the state. Also known as state parameter; state variable; thermodynamic variable.

thermodynamic potential [THERMO] One of several extensive quantities which are determined by the instantaneous state of a thermodynamic system, independent of its previous history, and which are at a minimum when the system is in thermodynamic equilibrium under specified conditions.

thermodynamic potential at constant volume *See* free energy.

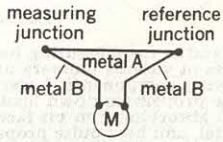
thermodynamic principles [THERMO] Laws governing the conversion of energy from one form to another.

thermodynamic probability [THERMO] Under specified conditions, the number of equally likely states in which a substance may exist; the thermodynamic probability Ω is related to the entropy S by $S = k \ln \Omega$, where k is Boltzmann's constant.

thermodynamic process [THERMO] A change of any property of an aggregation of matter and energy, accompanied by thermal effects.

thermodynamic property [THERMO] A quantity which is

THERMOCOUPLE



Thermocouple circuit for measuring metal temperatures. Voltmeter M measures voltage developed between the junctions.

either an attribute of an entire system or is a function of position which is continuous and does not vary rapidly over microscopic distances, except possibly for abrupt changes at boundaries between phases of the system; examples are temperature, pressure, volume, concentration, surface tension, and viscosity. Also known as macroscopic property.

thermodynamics [PHYS] The branch of physics which seeks to derive, from a few basic postulates, relationships between properties of matter, especially those which are affected by changes in temperature, and a description of the conversion of energy from one form to another.

thermodynamic system [THERMO] A part of the physical world as described by its thermodynamic properties.

thermodynamic temperature scale [THERMO] Any temperature scale in which the ratio of the temperatures of two reservoirs is equal to the ratio of the amount of heat absorbed from one of them by a heat engine operating in a Carnot cycle to the amount of heat rejected by this engine to the other reservoir; the Kelvin scale and the Rankine scale are examples of this type.

thermodynamic variable *See* thermodynamic function of state.

thermoelasticity [PHYS] Dependence of the stress distribution of an elastic solid on its thermal state, or of its thermal conductivity on the stress distribution.

thermoelectric converter [ELECTR] A converter that changes solar or other heat energy to electric energy; used as a power source on spacecraft.

thermoelectric cooler [ENG] An electronic heat pump based on the Peltier effect, involving the absorption of heat when current is sent through a junction of two dissimilar metals; it can be mounted within the housing of a device to prevent overheating or to maintain a constant temperature.

thermoelectric cooling [ENG] Cooling of a chamber based on the Peltier effect; an electric current is sent through a thermocouple whose cold junction is thermally coupled to the cooled chamber, while the hot junction dissipates heat to the surroundings. Also known as thermoelectric refrigeration.

thermoelectric effect *See* thermoelectricity.

thermoelectric engine *See* thermionic converter.

thermoelectric generator *See* thermal converter.

thermoelectric heating [ENG] Heating based on the Peltier effect, involving a device which is in principle the same as that used in thermoelectric cooling except that the current is reversed.

thermoelectricity [PHYS] The direct conversion of heat into electrical energy, or the reverse; it encompasses the Seebeck, Peltier, and Thomson effects but, by convention, excludes other electrothermal phenomena, such as thermionic emission. Also known as thermoelectric effect.

thermoelectric junction *See* thermojunction.

thermoelectric laws [ENG] Basic relationships used in the design and application of thermocouples for temperature measurement; for example, the law of the homogeneous circuit, the law of intermediate metals, and the law of successive or intermediate temperatures.

thermoelectric material [ELECTR] A material that can be used to convert thermal energy into electric energy or provide refrigeration directly from electric energy; good thermoelectric materials include lead telluride, germanium telluride, bismuth telluride, and cesium sulfide.

thermoelectric nuclear battery [NUCLEO] A low-voltage battery in which a heat source, consisting of a radioactive isotope such as polonium-210, is hermetically sealed in a strong, dense capsule, and a series of thermocouples are alternately connected thermally, but not electrically, to the heat source and the outer surface of the capsule.

thermoelectric power generator *See* thermal converter.

thermoelectric properties [PHYS] Properties of materials associated with thermoelectricity, namely, the electromotive force generated in the Seebeck effect, the heat generated or absorbed in the Peltier and Thomson effects, and the influence of magnetic fields upon these quantities.

thermoelectric pyrometer [ENG] An instrument which uses one or more thermocouples to measure high temperatures, usually in the range between 800 and 2400°F (425 and 1315°C). Also known as thermocouple pyrometer.

thermoelectric refrigeration *See* thermoelectric cooling.

thermoelectric series [MET] A series of metals arranged in order of their thermoelectric voltage-generating ratings with respect to some reference metal, such as lead.

thermoelectric solar cell [ELECTR] A solar cell in which the sun's energy is first converted into heat by a sheet of metal, and the heat is converted into electricity by a semiconductor material sandwiched between the first metal sheet and a metal collector sheet.

thermoelectric thermometer [ENG] A type of electrical thermometer consisting of two thermocouples which are series-connected with a potentiometer and a constant-temperature bath; one couple, called the reference junction, is placed in a constant-temperature bath, while the other is used as the measuring junction.

thermoelectromotive force [ELEC] Voltage developed due to differences in temperature between parts of a circuit containing two or more different metals.

thermoelectron [ELECTR] An electron liberated by heat, as from a heated filament. Also known as negative thermion.

thermoelement *See* thermal converter.

Thermofor catalytic cracking [CHEM ENG] A proprietary, petroleum refining process with a continuously moving bed of catalyst; used to crack heavy petroleum fractions into lighter, gasoline-range liquids, and the product is known as crackate or cat crackate.

Thermofor catalytic reforming [CHEM ENG] A proprietary, petroleum refining process with a continuously moving bed of catalyst; used to rearrange low-octane naphtha molecules to produce high-octane motor gasoline, and the product is known as reformate.

Thermofor continuous percolation [CHEM ENG] A proprietary petroleum refinery clay-treating adsorbent process, used to stabilize and decolorize lubricants and waxes.

thermoforming [ENG] Forming of thermoplastic sheet by heating it and then pulling it down onto a mold surface to shape it.

thermogalvanic corrosion [MET] Corrosion associated with the passage of an electric current in which the anode and cathode are at different temperatures, the anode usually being the colder of the two.

thermogalvanometer [ENG] Instrument for measuring small high-frequency currents by their heating effect, generally consisting of a direct-current galvanometer connected to a thermocouple that is heated by a filament carrying the current to be measured.

thermograd probe [ENG] An instrument that makes a record of temperature versus depth as it is lowered to the ocean floor, and measures heat flow through the ocean floor.

thermogram [ENG] The recording made by a thermograph.

thermograph [ENG] An instrument that senses, measures, and records the temperature of the atmosphere. Also known as recording thermometer. [OPTICS] A far-infrared image-forming device that provides a thermal photograph by scanning a far-infrared image of an object or scene.

thermograph correction card [ENG] A table for quick and accurate correction of the reading of a thermograph to that of the more accurate dry-bulb thermometer at the same time and place.

thermography [ENG] A method of measuring surface temperature by using luminescent materials: the two main types are contact thermography and projection thermography. [GRAPHICS] **1.** A photocopying process in which the original copy is placed in contact with a transparent sheet and is exposed to infrared rays; heat from carbon or a metallic compound in the text ink then causes a chemical change in a substance laminated between the transparent sheet of paper and a white waxy back. **2.** Photography that uses radiation in the long-wavelength far-infrared region, emitted by objects at temperatures ranging from −170°F (−112°C) to over 300°F (149°C). Also known as thermal photography.

thermogravimetric analysis [ANALY CHEM] Chemical analysis by the measurement of weight changes of a system or compound as a function of increasing temperature.

thermogravitational column [CHEM ENG] A device in which thermal diffusion results from the countercurrent flow of hot and cold material, thus increasing the separation of materials in a solution by the formation of a concentration gradient (difference). Also known as Clausius-Dickel column.

thermohaline [OCEANOGR] Pertaining to the joint activity of salinity and temperature in the oceans.

thermohaline convection [OCEANOGR] Vertical water movement observed when sea water, due to conditions of decreasing temperature or increasing salinity, becomes heavier than the water beneath it.

thermointegrator [ENG] An apparatus, used in studying

THERMOELECTRIC NUCLEAR BATTERY

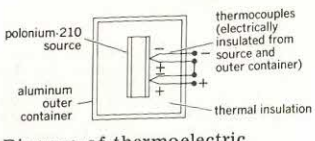


Diagram of thermoelectric nuclear battery.

soil temperatures, for measuring the total supply of heat during a given period; it consists of a long nickel coil (inserted into the soil by an attached rod) forming a 100-ohm resistance thermometer and a 6-volt battery, the current used being recorded on a galvanometer; a mercury thermometer can be used.

thermoisopleth [CLIMATOL] An isopleth of temperature; specifically, a line on a climatic graph showing the variation of temperature in relation to two coordinates.

thermojet [AERO ENG] Air-duct-type engine in which air is scooped up from the surrounding atmosphere, compressed, heated by combustion, and then expanded and discharged at high velocity.

thermojunction [ELECTR] One of the surfaces of contact between the two conductors of a thermocouple. Also known as thermoelectric junction.

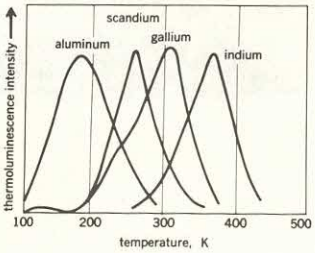
thermojunction battery [ELEC] Nuclear-type battery which converts heat into electrical energy directly by the thermoelectric or Seebeck effect.

thermokarst topography [GEOL] An irregular land surface formed in a permafrost region by melting ground ice.

thermokinetic analysis [ANALY CHEM] A type of enthalpimetric analysis which uses kinetic titrimetry; involves rapid and continuous automatic delivery of a suitable titrant, under judiciously controlled experimental conditions with temperature measurement; the end points obtained are converted by mathematical procedures into valid stoichiometric equivalence points and used for determining reaction rate constants.

thermoluminescence [ATOM PHYS] **1.** Broadly, any luminescence appearing in a material due to application of heat. **2.** Specifically, the luminescence appearing as the temperature of a material is steadily increased; it is usually caused by a process in which electrons receiving increasing amounts of thermal energy escape from a center in a solid where they have been trapped and go over to a luminescent center, giving it energy and causing it to luminesce.

THERMOLUMINESCENCE



Plot of thermoluminescence intensity as a function of temperature in several zinc sulfide phosphors, each of which contains traces of copper, giving rise to luminescent centers, and different trivalent ions (as indicated), giving rise to traps. Curves reach a maximum and then decrease as traps are emptied.

thermomagnetic effect [PHYS] An electrical or thermal phenomenon occurring when a conductor or semiconductor is placed simultaneously in a temperature gradient and a magnetic field; examples are the Ettingshausen-Nernst effect and the Righi-Leduc effect.

thermomechanical effect *See* fountain effect.

thermometal [MET] A bimetallic strip which, on temperature change, deflects because of differences in the coefficients of expansion of the two bonded metals.

thermometamorphism *See* thermal metamorphism.

thermometer [ENG] An instrument that measures temperature.

thermometer anemometer [ENG] An anemometer consisting of two thermometers, one with an electric heating element connected to the bulb; the heated bulb cools in an airstream, and the difference in temperature as registered by the heated and unheated thermometers can be translated into air velocity by a conversion chart.

thermometer bird [VERT ZOO] The name applied to the brush turkey, native to Australia, because it lays its eggs in holes in mounds of earth and vegetation, with the heat from the decaying vegetation serving to incubate the eggs.

thermometer-bulb liquid-level meter [ENG] Detection of liquid level by temperature measurement changes using an immersed bulb-type thermometer.

thermometer frame [ENG] A frame designed to hold two or more reversing thermometers; such a frame is often attached directly to a Nansen bottle.

thermometer screen *See* instrument shelter.

thermometer shelter *See* instrument shelter.

thermometer support [ENG] A device used to hold liquid-in-glass maximum and minimum thermometers in the proper recording position inside an instrument shelter, and to permit them to be read and reset.

thermometric analysis [PHYS CHEM] A method for determination of the transformations a substance undergoes while being heated or cooled at an essentially constant rate, for example, freezing-point determinations.

thermometric conductivity *See* diffusivity.

thermometric depth [OCEANOGR] The ocean depth, in meters, deduced from the difference between the paired protected and unprotected reversing thermometer readings; the unprotected reversing thermometer indicates higher temperature due to pressure effects on the instrument.

thermometric titration [ANALY CHEM] A titration in an adiabatic system, yielding a plot of temperature versus volume of titrant; used for neutralization, precipitation, redox, organic condensation, and complex-formation reactions. Also known as calorimetric titration; enthalpy titration; thermal titration.

thermometry [THERMO] The science and technology of measuring temperature, and the establishment of standards of temperature measurement.

thermomigration [ELECTR] A technique for doping semiconductors in which exact amounts of known impurities are made to migrate from the cool side of a wafer of pure semiconductor material to the hotter side when the wafer is heated in an oven.

Thermomonospora [MICROBIO] A genus of bacteria in the family Micromonosporaceae; aerial and substrate mycelia are formed; single spores are produced on aerial mycelia; thermophilic organisms, with optimum growth temperature between 45 and 55°C.

thermonatrite [MINERAL] $Na_2CO_3 \cdot H_2O$ A colorless to white, grayish, or yellowish, orthorhombic mineral consisting of sodium carbonate monohydrate; occurs as a crust or efflorescence.

thermonuclear [NUCLEO] Referring to any process in which a very high temperature is used to bring about the fusion of light nuclei, with the accompanying liberation of energy.

thermonuclear bomb *See* fusion bomb.

thermonuclear device [NUCLEO] A fusion bomb used for peaceful purposes, tests, or experiments.

thermonuclear reaction [NUC PHYS] A nuclear fusion reaction which occurs between various nuclei of light elements when they are constituents of a gas at very high temperature.

thermonuclear rocket [NUCLEO] A type of thermal engine utilizing nuclear fusion to heat a working fluid: deuterium, tritium, and lithium are possible fuels.

thermonuclear weapon [NUCLEO] A fusion bomb in the form of a packaged unit ready for transportation or use by military forces.

thermoperiodicity [BOT] The totality of responses of a plant to appropriately fluctuating temperatures.

thermophile [BIOL] An organism that thrives at high temperatures.

thermophobia [PSYCH] An abnormal fear of heat.

thermophone [ENG ACOUS] An electroacoustic transducer in which sound waves having an accurately known strength are produced by the expansion and contraction of the air adjacent to a strip of conducting material, whose temperature varies in response to a current input that is the sum of a steady current and a sinusoidal current; used chiefly for calibrating microphones.

thermopile [ENG] An array of thermocouples connected either in series to give higher voltage output or in parallel to give higher current output, used for measuring temperature or radiant energy or for converting radiant energy into electric power.

thermopile generator [ELEC] An electricity source powered by the heating of an electrical resistor that can be connected to a thermopile to generate small amounts of electric current.

Thermoplasma [MICROBIO] A genus of uncertain affiliation in the order Mycoplasmatales; pleomorphic cells grow at about 59°C.

thermoplastic insulation [MATER] Electrical insulation made of a thermoplastic material.

thermoplastic recording [ELECTR] A recording process in which a modulated electron beam deposits charges on a thermoplastic film, and application of heat by radio-frequency heating electrodes softens the film enough to produce deformation that is proportional to the density of the stored electrostatic charges; an optical system is used for playback.

thermoplastic resin [MATER] A material with a linear macromolecular structure that will repeatedly soften when heated and harden when cooled; for example, styrene, acrylics, cellulosics, polyethylenes, vinyls, nylons, and fluorocarbons.

thermopower [ELEC] A measure of the temperature-induced voltage in a conductor.

thermoreception [PHYSIO] The process by which environmental temperature affects specialized sense organs (thermoreceptors).

thermoreceptor [PHYSIO] A sense receptor that responds to stimulation by heat and cold.

thermoregulation [PHYSIO] A mechanism by which mammals and birds attempt to balance heat gain and heat loss in order

to maintain a constant body temperature when exposed to variations in cooling power of the external medium.

thermoregulator [ENG] A high-accuracy or high-sensitivity thermostat; one type consists of a mercury-in-glass thermometer with sealed-in electrodes, in which the rising and falling column of mercury makes and breaks an electric circuit.

thermorelay *See* thermostat.

thermoremanent magnetization [GEOPHYS] The permanent magnetization of igneous rocks, acquired at the time of cooling from the molten state.

Thermosbaenacea [INV ZOO] An order of small crustaceans in the superorder Pancarida.

Thermosbaenidae [INV ZOO] A family of the crustacean order Thermosbaenacea.

thermoscreen *See* instrument shelter.

thermosetting resin [MATER] A plastic that solidifies when first heated under pressure, and which cannot be remelted or remolded without destroying its original characteristics; examples are epoxies, malamines, phenolics, and ureas.

thermosiphon [MECH ENG] A closed system of tubes connected to a water-cooled engine which permit natural circulation and cooling of the liquid by utilizing the difference in density of the hot and cool portions.

thermosiphon reboiler [CHEM ENG] A liquid reheater (as for distillation-column bottoms) in which natural circulation of the boiling liquid is obtained by maintaining a sufficient liquid head.

thermosphere [METEOROL] The atmospheric shell extending from the top of the mesosphere to outer space; it is a region of more or less steadily increasing temperature with height, starting at 70 or 80 kilometers; the thermosphere includes, therefore, the exosphere and most or all of the ionosphere.

thermostat [ENG] An instrument which measures changes in temperature and directly or indirectly controls sources of heating and cooling to maintain a desired temperature. Also known as thermorelay.

thermostatic switch [ELEC] A temperature-operated switch that receives its operating energy by thermal conduction or convection from the device being controlled or operated.

thermosteric anomaly [OCEANOGR] Component of the specific volume anomaly for a parcel of sea water at a pressure of 1 atmosphere due to its temperature being other than the standard temperature of 0°C.

thermoswitch *See* thermal switch.

thermotaxis [BIOL] Orientation movement of a motile organism in response to the stimulus of a temperature gradient.

thermotherapy [MED] The treatment of disease by heat of any kind; involves the local or general application of heat to the body.

thermotropic liquid crystal [PHYS CHEM] A liquid crystal prepared by heating the substance.

thermotropic model [METEOROL] A model atmosphere used in numerical forecasting, in which the parameters are the height of one constant-pressure surface (usually 500 millibars) and one temperature (usually the mean temperature between 100 and 500 millibars).

thermovac evaporator [FOOD ENG] A type of vacuum evaporator used to remove moisture from foods for the purpose of preservation; temperature and velocities are minutely, accurately, and automatically controlled in all stages of the process.

thermovoltmeter [ENG] A voltmeter in which a current from the voltage source is passed through a resistor and a fine vacuum-enclosed platinum heater wire; a thermocouple, attached to the midpoint of the heater, generates a voltage of a few millivolts, and this voltage is measured by a direct-current millivoltmeter.

Thermus [MICROBIO] A genus of gram-negative, aerobic bacteria of uncertain affiliation; nonmotile rods and filaments that thrive at 70–72°C.

therophyte [ECOL] An annual plant whose seed is the only overwintering structure.

Theropoda [PALEON] A suborder of carnivorous bipedal saurischian reptiles which first appeared in the Upper Triassic and culminated in the uppermost Cretaceous.

Theropsida [PALEON] An order of extinct mammallike reptiles in the subclass Synapsida.

Thesium [BOT] The hymenium of the apothecium in lichens.

thesocyte [INV ZOO] An amebocyte in Porifera containing ergastic cytoplasmic inclusions.

theta antigen [IMMUNOL] A cell membrane constituent which distinguishes T cells from other lymphocytes.

theta functions [MATH] Complex functions used in the study of Riemann surfaces and of elliptic functions and elliptic integrals; they are:

$$\theta_1(z) = 2\sum_{n=0}^{\infty} (-1)^n q^{(n+\frac{1}{2})^2} \sin(2n+1)z$$

$$\theta_2(z) = 2\sum_{n=0}^{\infty} q^{(n+\frac{1}{2})^2} \cos(2n+1)z$$

$$\theta_3(z) = 1 + 2\sum_{n=1}^{\infty} q^{n^2} \cos 2z$$

$$\theta_4(z) = 1 + 2\sum_{n=1}^{\infty} (-1)^n q^{n^2} \cos 2nz$$

where $q = \exp \pi i\tau$, and τ is a constant complex number with positive imaginary part.

thetagram [THERMO] A thermodynamic diagram with coordinates of pressure and temperature, both on a linear scale.

theta pinch [PL PHYS] A device for producing a controlled nuclear fusion reaction, in which plasma in a long torus or skinny tube is confined by a magnetic field produced by current-carrying coils, and is shock-heated and compressed by pulses in this field to produce the high temperatures at which fusion reactions take place; the magnetic field is then sustained in order to maintain the plasma confinement.

theta polarization [ELECTROMAG] State of a wave in which the E vector is tangential to the meridian lines of some given spherical frame of reference.

theta rhythm [PSYCH] A brain rhythm having a frequency of about 4–7 hertz, and somewhat greater voltage than the alpha rhythm; thought to originate in the hippocampus.

theta-theta [NAV] The generic term for electronic navigation systems in which position is derived by calculations based on the bearing from two or more emitters located at different but accurately known positions.

Thévenin generator [ELEC] The voltage generator in the equivalent circuit of Thévenin's theorem.

Thévenin's theorem [ELEC] A valuable theorem in network problems which allows calculation of the performance of a device from its terminal properties only: the theorem states that at any given frequency the current flowing in any impedance, connected to two terminals of a linear bilateral network containing generators of the same frequency, is equal to the current flowing in the same impedance when it is connected to a voltage generator whose generated voltage is the voltage at the terminals in question with the impedance removed, and whose series impedance is the impedance of the network looking back from the terminals into the network with all generators replaced by their internal impedances. Also known as Helmholtz's theorem.

THF *See* tetrahydrofuran.

THI *See* temperature-humidity index.

thiabendazole [ORG CHEM] $C_{10}H_7N_3S$ A white powder with a melting point of 304–305°C; controls fungi on citrus fruits, sugarbeets, turf, and ornamentals, and roundworms of cattle and other animals. Also known as 2-(4-thiazolyl)-benzimidazole.

thiacetic acid *See* thioacetic acid.

thiadiazin *See* milneb.

thiamine [BIOCHEM] $C_{12}H_{17}ClN_4OS$ A member of the vitamin B complex that occurs in many natural sources, frequently in the form of cocarboxylase. Also known as aneurine; vitamin B_1.

thiamine hydrochloride [ORG CHEM] $C_{12}H_{17}\cdot ON_4S\cdot HCl$ White, hygroscopic crystals soluble in water, insoluble in ether, with a yeasty aroma and a salty, nutlike taste, decomposes at 247°C; the form in which thiamine is generally employed.

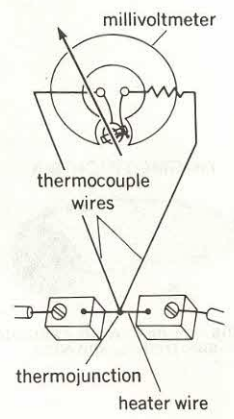
thiamine pyrophosphate [BIOCHEM] The coenzyme or prosthetic component of carboxylase; catalyzes decarboxylation of various α-keto acids. Also known as cocarboxylase.

thianaphthene [ORG CHEM] C_8H_6S A crystalline compound with a melting point of 32°C; soluble in organic solvents; used in the production of pharmaceuticals. Also known as benzothiofuran.

Thiaridae [INV ZOO] A family of freshwater gastropod mollusks in the order Pectinibranchia.

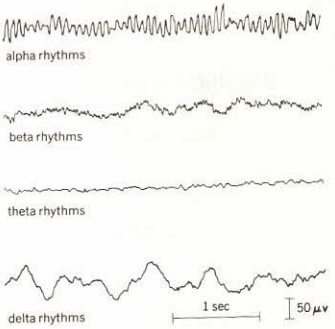
thiazole [ORG CHEM] C_3H_3NS A colorless to yellowish liquid with a pyridinelike aroma, slightly soluble in water, soluble in alcohol and ether; used as an intermediate for fungicides, dyes, and rubber accelerators.

THERMOVOLTMETER



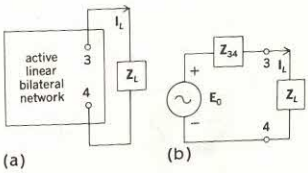
Elementary thermovoltmeter circuit. *(General Electric Co.)*

THETA RHYTHM



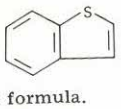
Electroencephalogram of brain rhythms taken from scalp leads on human subject.

THEVENIN'S THEOREM



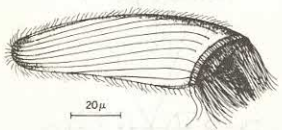
The theorem states that circuit to left of terminals 3 and 4 in *(a)* may be replaced by that in *(b)*. Impedance Z_L and current I_L are same in both cases. E_0 is voltage of voltage generator. Z_{34} is series impedance.

THIANAPHTHENE



Structural formula.

THIGMOTRICHIDA



Drawing of *Boveria*, an example of a thigmotrichid, showing ciliature.

thiazole dye [ORG CHEM] One of a family of dyes in which the chromophore groups are =C=N—, —S—C=, and used mainly for cotton; an example is primuline.

2-(4-thiazolyl)benzimidazole *See* thiabendazole.

thick-bedded [GEOL]AFåæPertaining to a sedimentary bed that ranges in thickness from 60 to 120 centimeters (2–4 feet).

thickened fuel *See* gelatinized gasoline.

thickened oil [MATER] Any oil to which a thickening agent has been added to increase viscosity or produce thixotropic properties; grease is a thickened oil.

thickener [ENG] A nonfilter device for the removal of liquid from a liquid-solids slurry to give a dewatered (thickened) solids product; can be by gravity settling or centrifugation.

thickening [CHEM ENG] The concentration of the solids in a suspension in order to recover a fraction with a higher concentration of solids than in the original suspension. [MIN ENG] Concentrating dilute slime pulp into a pulp containing a smaller percentage of moisture by rejecting the free liquid.

thicket *See* tropical scrub.

thick-film capacitor [ELEC] A capacitor in a thick-film circuit, made by successive screen-printing and firing processes.

thick-film circuit [ELECTR] A microcircuit in which passive components, of a ceramic-metal composition, are formed on a ceramic substrate by successive screen-printing and firing processes, and discrete active elements are attached separately.

thick-film resistor [ELEC] Fixed resistor whose resistance element is a film well over one-thousandth of an inch (over 25 micrometers) thick.

thickhead *See* bluetongue.

thickness [METEOROL] The vertical depth, measured in geometric or geopotential units, of a layer in the atmosphere bounded by surfaces of two different values of the same physical quantity, usually constant-pressure surfaces.

thickness chart [METEOROL] A type of synoptic chart showing the thickness of a certain physically defined layer in the atmosphere; it almost always refers to an isobaric thickness chart, that is, a chart of vertical distance between two constant-pressure surfaces.

thickness gage [ENG] A gage for measuring the thickness of a sheet of material, the thickness of an object, or the thickness of a coating; examples include penetration-type and backscattering radioactive thickness gages and ultrasonic thickness gages.

thickness line [METEOROL] A line drawn through all geographic points at which the thickness of a given atmospheric layer is the same. Also known as relative contour; relative isohypse.

thickness pattern [METEOROL] The general geometric distribution of thickness lines on a thickness chart. Also known as relative hypsography; relative topography.

thickness ratio [AERO ENG] The ratio of the maximum thickness of an airfoil section to the length of its chord.

thick-skinned structure [GEOL] Any large-scale structure, such as a fold or fault, believed to have originated as a result of basement movement beneath overlying rocks.

thick-tailed bushbaby [VERT ZOO] *Galago crassicaudatus*. A primate animal in the family Lorisidae; one of the six species of bushbaby, the thick-tailed bushbaby is more aggressive and solitary than the other species, and grows to over 1 foot (30 centimeters) in length with an equally long tail. Also known as great galago.

thick-thin chart *See* isentropic thickness chart.

thief [PETRO ENG] In the petroleum industry, a device that permits the taking of samples from a predetermined location in the liquid body to be sampled.

Thiele coordinates [CHEM ENG] A graphical method for calculating the solvent-free composition of two components being separated by solvent extraction.

Thiele-Geddes method [CHEM ENG] A method for the prediction of the product distribution from a multicomponent distillation system.

Thiele melting point apparatus [ANALY CHEM] A stirred, specially shaped test-tube device used for the determination of the melting point of a crystalline chemical.

Thiessen polygon method [METEOROL] A method of assigning areal significance to point rainfall values: perpendicular bisectors are constructed to the lines joining each measuring station with those immediately surrounding it; the bisectors form a series of polygons, each polygon containing one station; the value of precipitation measured at a station is assigned to the whole area covered by the enclosing polygon.

thigh [ANAT] The upper part of the leg, from the pelvis to the knee.

thigh circumference [ANTHRO] The measurement around the thigh of the left leg midway between the crotch and the knee when the subject is in a standing position.

thigmotaxis *See* stereotaxis.

Thigmotrichida [INV ZOO] An order of ciliated protozoans in the subclass Holotrichia.

thigmotropism *See* stereotropism.

thill *See* underclay.

thimerosal [ORG CHEM] $C_9H_9HgNaO_2S$ A light cream-colored, crystalline powder, soluble in water and alcohol; used as a topical antiseptic. Also known as sodium ethylmercurithiosalicylate.

thin [METEOROL] In aviation weather observations, the description of a sky cover that is predominantly transparent.

thin-bedded [GEOL] Pertaining to a sedimentary bed that ranges in thickness from 5 to 60 centimeters (2 inches to 2 feet).

thin film [ELECTR] A film a few molecules thick deposited on a glass, ceramic, or semiconductor substrate to form a capacitor, resistor, coil, cryotron, or other circuit component.

thin-film capacitor [ELEC] A capacitor that can be constructed by evaporation of conductor and dielectric films in sequence on a substrate; silicon monoxide is generally used as the dielectric.

thin-film circuit [ELECTR] A circuit in which the passive components and conductors are produced as films on a substrate by evaporation or sputtering; active components may be similarly produced or mounted separately.

thin-film cryotron [ELECTR] A cryotron in which the transition from superconducting to normal resistivity of a thin film of tin or indium, serving as a gate, is controlled by current in a film of lead that crosses and is insulated from the gate.

thin-film ferrite coil [ELECTROMAG] An inductor made by depositing a thin flat spiral of gold or other conducting metal on a ferrite substrate.

thin-film integrated circuit [ELECTR] An integrated circuit consisting entirely of thin films deposited in a patterned relationship on a substrate.

thin-film material [ELECTR] A material that can be deposited as a thin film in a desired pattern by a variety of chemical, mechanical, or high-vacuum evaporation techniques.

thin-film memory *See* thin-film storage.

thin-film resistor [ELEC] A fixed resistor whose resistance element is a metal, alloy, carbon, or other film having a thickness of about one-millionth inch (about 25 nanometers).

thin-film semiconductor [ELECTR] Semiconductor produced by the deposition of an appropriate single-crystal layer on a suitable insulator.

thin-film solar cell [ELECTR] A solar cell in which a thin film of gallium arsenide, cadmium sulfide, or other semiconductor material is evaporated on a thin, flexible metal or plastic substrate; the rather low efficiency (about 2%) is compensated by the flexibility and light weight, making these cells attractive as power sources for spacecraft.

thin-film storage [COMPUT SCI] A high-speed storage device that is fabricated by depositing layers, one molecule thick, of various materials which, after etching, provide microscopic circuits which can move and store data in small amounts of time. Also known as thin-film memory.

thin-film transducer [SOLID STATE] A film a few molecules thick, usually consisting of cadmium sulfide, evaporated on a crystal substrate, used to convert microwave radiation into hypersonic sound waves in the crystal.

thin-film transistor [ELECTR] A field-effect transistor constructed entirely by thin-film techniques, for use in thin-film circuits.

thin-layer chromatography [ANALY CHEM] Chromatographing on thin layers of adsorbents rather than in columns; adsorbent can be alumina, silica gel, silicates, charcoals, or cellulose.

thin lens [OPTICS] A lens whose thickness is small enough to be neglected in calculations of such quantities as object distance, image distance, and magnification.

thin list *See* loose list.

thin magnetic film [ELECTR] A data storage device consisting of a thin magnetic film of Permalloy deposited by vacuum evaporation or electrochemical deposition.

thinner [MATER] A liquid used to thin paint, varnish, cement, or other material to a desired consistency.

Thinocoridae [VERT ZOO] The seed snipes, family of South American birds in the order Charadriiformes.

thin-out [GEOL] Gradual thinning of a stratum, vein, or other body of rock until the upper and lower surfaces meet and the rock disappears.

thin-plate orifice [ENG] A thin-metal orifice sheet used in fluid-flow measurement in fluid conduits by means of differential pressure drop across the orifice.

thin section [GEOL] A piece of rock or mineral specifically prepared to study its optical properties; the sample is ground to 0.03-millimeter thickness then polished and placed between two microscope slides. Also known as section.

thin-skinned structure [GEOL] Any large-scale structure, such as a fold or fault, confined to and originating within a thin layer of rocks above a surface of décollement.

thio- [CHEM] A chemical prefix derived from the Greek *theion*, meaning sulfur; indicates the replacement of an oxygen in an acid radical by sulfur with a negative valence of 2.

thioacetamide [ORG CHEM] C_2H_5NS A crystalline compound with a melting point of 113–114°C; soluble in water and ethanol; used in laboratories in place of hydrogen sulfide.

thioacetic acid [ORG CHEM] CH_3COSH A toxic, clear-yellow liquid with an unpleasant aroma, soluble in water, alcohol, and ether, boils at 82°C; used as an analytical reagent and a lacrimator. Also known as ethanethiolic acid; thiacetic acid.

thioaldehyde [ORG CHEM] An organic compound that contains the —CHS radical and has the suffix -thial; for example, ethanethial, CH_3CHS.

thioallyl ether *See* allyl sulfide.

Thiobacillus [MICROBIO] A genus of gram-negative, chemolithotrophic bacteria; motile, rod-shaped cells obtain energy by metabolizing sulfur compounds, including elemental sulfur, sulfides, thiosulfate, polythionates, and sometimes thiocyanate; carbon dioxide is the sole carbon source.

Thiobacteriaceae [MICROBIO] Formerly a family of nonfilamentous, gram-negative bacteria of the suborder Pseudomonadineae characterized by the ability to oxidize hydrogen sulfide, free sulfur, and inorganic sulfur compounds to sulfuric acid.

Thiobacterium [MICROBIO] A genus of gram-negative, chemolithotrophic bacteria; rod-shaped cells containing sulfur granules and embedded in a gelatinous mass.

thiobarbiturate [PHARM] A derivative of thiobarbituric acid that differs from the barbiturates in the replacement of one oxygen atom by sulfur but resembles the barbiturates in its effects.

thiobarbituric acid [ORG CHEM] $C_6H_4N_2O_2S$ Malonyl thiourea, the parent compound of the thiobarbiturates; represents barbituric acid in which the oxygen atom of the urea component has been replaced by sulfur.

Thiocapsa [MICROBIO] A genus of bacteria in the family Chromatiaceae; cells are spherical, are nonmotile, do not have gas vacuoles, and contain bacteriochlorophyll *a* or *b* on vesicular or tabular photosynthetic membranes.

thiocarbamazine [PHARM] $C_{21}H_{17}AsN_2O_5S_2$ A white crystalline powder, freely soluble in dilute alkali; used in medicine as an amebicide. Also known as (*para*-ureidophenylarsylenedithio)di-*ortho*-benzoic acid; thiocarbamisin.

thiocarbamide *See* thiourea.

thiocarbamisin *See* thiocarbamazine.

thiocarbanil *See* phenyl mustard oil.

thiocarbanilide [ORG CHEM] $CS(NHC_6H_5)_2$ A gray powder with a melting point of 148°C; soluble in alcohol and ether; used for making dyes, and as a vulcanization accelerator and ore flotation agent. Also known as *N*,*N*′-diphenylthiourea; sulfocarbanilide.

thiocarbarsone [PHARM] $C_{11}H_{13}AsN_2O_5S_2$ A white crystalline powder, freely soluble in dilute alkali; used in medicine as an amebicide. Also known as (*para*-ureidophenylarsylenedithio)diacetic acid.

thiocresol [PHARM] $CH_3C_6H_4SH$ Of the three isomers, only *meta*-thiocresol is a liquid; all three have a boiling point of 195°C and are soluble in alcohol or ether; used as an antiseptic. Also known as toluenethiol; tolylmercaptan.

thiocyanate [INORG CHEM] A salt of thiocyanic acid that contains the —SCN radical; for example, sodium thiocyanate, NaSCN. Also known as rhodanate; rhodanide; sulfocyanate; sulfocyanide; thiocyanide.

thiocyanic acid [INORG CHEM] HSC:N A colorless, water-soluble liquid decomposing at 200°C; used to inhibit paper deterioration due to the action of light, and (in the form of organic esters) as an insecticide. Also known as rhodanic acid; sulfocyanic acid.

thiocyanide *See* thiocyanate.

thiocyanogen [INORG CHEM] NCSSCN White, light-unstable rhombic crystals melting at −2°C.

2-(thiocyanomethylthio)benzothiazole [ORG CHEM] $C_9H_7N_2S_2$ A fungicide used on barley, corn, oats, rice, wheat, and sorghum.

Thiocystis [MICROBIO] A genus of bacteria in the family Chromatiaceae; cells are spherical, are motile, do not have gas vacuoles, and contain bacteriochlorophyll *a* on vesicular internal membranes.

Thiodendron [MICROBIO] A genus of prosthecate bacteria; spirally twisted, vibrioid cells with thin "stalks" at one or both poles.

Thiodictyon [MICROBIO] A genus of bacteria in the family Chromatiaceae; cells are rod-shaped, are nonmotile, have gas vacuoles, and contain bacteriochlorophyll *a* on vesicular photosynthetic membranes.

thiodiethylene glycol *See* thiodiglycol.

thiodiglycol [ORG CHEM] $(CH_2CH_2OH)_2S$ A combustible, colorless, syrupy liquid soluble in water, alcohol, acetone, and chloroform, boils at 283°C; used as a chemical intermediate, textile-dyeing solvent, and antioxidant. Also known as dihyroxyethylsulfide; thiodiethylene glycol.

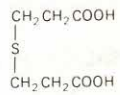
thiodiglycolic acid [ORG CHEM] $HOOCCH_2SCH_2COOH$ Combustible, colorless, water- and alcohol-soluble crystals melting at 128°C; used as an analytical reagent.

thiodihydracrylic acid *See* 3,3′-thiodiproprionic acid.

thiodipropionic acid *See* dilauryl thiodipropionate.

3,3′-thiodiproprionic acid [ORG CHEM] $(CH_2CH_2CO-OH)_2S$ A crystalline compound with a melting point of 134°C; soluble in hot water, acetone, and alcohol; used as an antioxidant for soap products and polymers of ethylene. Also known as diethyl sulfide 2,2′-dicarboxylic acid; thiodihydracrylic acid.

3,3′-THIODIPROPIONIC ACID



Structural formula.

thioethanolamine *See* 2-aminoethanethiol.

thioether [ORG CHEM] RSR A general formula for colorless, volatile organic compounds obtained from alkyl halides and alkali sulfides; the R groups can be the same, or different as in methylthioethane ($CH_3SC_2H_5$).

thioethyl alcohol *See* ethyl mercaptan.

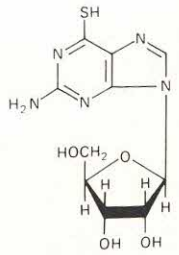
thioflavine T [ORG CHEM] $C_{16}H_{17}N_2Cl$ A yellow basic dye, used for textile dyeing and fluorescent sign paints.

thiofuran *See* thiophene.

thioglycolic acid [ORG CHEM] $HSCH_2COOH$ A liquid with a strong unpleasant odor; used as a reagent for metals such as iron, molybdenum, silver, and tin, and in bacteriology. Also known as mercaptoacetic acid.

thioguanosine [PHARM] $C_{10}H_{13}N_5O_4S$ The hemihydrate forms tiny tapered prisms which decompose at 224–227°C; used as an experimental antineoplastic agent.

THIOGUANOSINE



Structural formula.

2-thiohydantoin [ORG CHEM] $NHC(S)NHC(O)CH_2$ Crystals or a tan powder with a melting point of 230°C; used in the manufacture of pharmaceuticals, rubber accelerators, and copper-plating brighteners. Also known as glycolythiourea.

thioindigo [MATER] A group of sulfur dyes made by treating the appropriate organic compound with sodium sulfide; colors are fast to washing and light.

thiol *See* mercaptan.

thiolactic acid [ORG CHEM] $CH_3CH(SH)COOH$ An oil with a disagreeable odor; used in toiletry preparation. Also known as 2-mercaptopropionic acid; 2-thiolpropionic acid.

2-thiolpropionic acid *See* thiolactic acid.

thiomalic acid [ORG CHEM] $C_4H_6O_4S$ White crystals or powder with a melting point of 149–150°C; soluble in water, alcohol, and acetone; used as a sealer for fuel cells and machine and electrical parts, for caulking compounds, and as a propellant binder. Also known as mercaptosuccinic acid.

thionazin [ORG CHEM] $C_8H_{13}N_2O_3PS$ A liquid used as an insecticide and miticide for soil. Also known as *O*,*O*-diethyl-*O*-(2-pyrazinyl)phosphorothioate.

thionic acid [INORG CHEM] $H_2S_xO_6$, where *x* varies from 2 to 6. [ORG CHEM] An organic acid with the radical —CSOH.

thionyl bromide [ORG CHEM] $SOBr_2$ A red liquid boiling at 68°C (40 mm Hg). Also known as sulfinyl bromide.

thionyl chloride [INORG CHEM] $SOCl_2$ A toxic, yellowish to red liquid with a pungent aroma, soluble in benzene, decom-

poses in water and at 140°C; boils at 79°C; used as a chemical intermediate and catalyst. Also known as sulfur oxychloride; sulfurous oxychloride.

Thiopedia [MICROBIO] A genus of bacteria in the family Chromatiaceae; cells are spherical to ovoid, are characteristically arranged in flat sheets composed of tetrads, are nonmotile, have gas vacuoles, and contain bacteriochlorophyll *a* on vesicular or stack-lamellar photosynthetic membranes.

thiopental sodium [ORG CHEM] $C_{11}H_{17}O_2N_2NaS$ Yellow, water-soluble crystals with a characteristic aroma; used in medicine as a short-acting anesthetic. Also known as thiopentone sodium.

thiopentone sodium *See* thiopental sodium.

thiophanate [ORG CHEM] $C_{14}H_{18}N_4O_4S_2$ A tan to colorless solid that decomposes at 195°C; slightly soluble in water; used to control fungus diseases of turf. Also known as diethyl 4,4′-*O*-phenylene-bis(3-thioallophanate).

thiophene [ORG CHEM] C_4H_4S A toxic, flammable, highly reactive, colorless liquid, insoluble in water, soluble in alcohol and ether, boils at 84°C; used as a chemical intermediate and to make condensation copolymers. Also known as thiofuran.

thiophenol [ORG CHEM] C_6H_5SH A toxic, fire-hazardous, water-white liquid with a disagreeable aroma, insoluble in water, soluble in alcohol and ether, boils at 168°C; used to make pharmaceuticals. Also known as phenyl mercaptan.

thiophenylamine *See* phenothiazine.

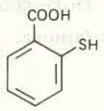
thiophile element *See* sulfophile element.

thiophosphoric anhydride *See* phosphorus pentasulfide.

Thioploca [MICROBIO] A genus of bacteria in the family Beggiatoaceae; filaments are composed of segments, and there are one to many filaments in a single sheath; cells usually contain sulfur granules.

Thiorhodaceae [MICROBIO] Formerly a family of bacteria in the suborder Rhodobacteriineae composed of the purple, red, orange, and brown sulfur bacteria; characterized as strict anaerobes which oxidize hydrogen sulfide and store sulfur globules internally.

THIOSALICYLIC ACID



Structural formula.

thiosalicylic acid [ORG CHEM] $HOOCC_6H_4SH$ A yellow solid with a melting point of 164–165°C; soluble in alcohol, ether, and acetic acid; used for making dyes. Also known as 2-mercaptobenzoic acid.

Thiosarcina [MICROBIO] A genus of bacteria in the family Chromatiaceae; cells are spherical to ovoid, forming cubical sarcina packets of 8–64 cells, are motile, do not have gas vacuoles, and contain bacteriochlorophyll *a*.

thiosemicarbazide [ORG CHEM] $NH_2CSNHNH_2$ A white, water- and alcohol-soluble powder melting at 182°C; used as an analytical reagent and in photography and rodenticides. Also known as aminothiourea.

thiosemicarbazone [PHARM] A class of chemical compounds used in treating tuberculosis; the most prominent member of the group is *para*-acetamidobenzaldehyde thiosemicarbazone.

thiosinamine *See* allylthiourea.

thiospinel [MINERAL] Any mineral with the spinel structure having the general formula AR_2S_4.

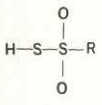
Thiospira [MICROBIO] A genus of gram-negative, chemolithotrophic bacteria; motile, spiral cells that have pointed ends and contain sulfur granules.

Thiospirillum [MICROBIO] A genus of bacteria in the family Chromatiaceae; cells are spiral-shaped, are motile, do not have gas vacuoles, and contain bacteriochlorophyll *a* on vesicular photosynthetic membranes.

thiostreptone [MICROBIO] A polypeptide antibiotic produced by a species of *Streptomyces* that crystallizes from a chloroform methanol solution; used in veterinary medicine.

thiosulfate [INORG CHEM] $M_2S_2O_3$ A salt of thiosulfuric acid and a base; for example, reaction of sodium hydroxide and thiosulfuric acid to produce sodium thiosulfate.

THIOSULFONIC ACID



Structural formula.

thiosulfonic acid [ORG CHEM] Name for a group of oxy acids of sulfur, with the general formula RS_2O_2H; they are known as esters and salts.

thiosulfuric acid [INORG CHEM] $H_2S_2O_3$ An unstable acid that decomposes readily to form sulfur and sulfurous acid.

Thiothrix [MICROBIO] A genus of bacteria in the family Leucotrichaceae; morphological features are as for the family; sulfur granules are deposited within the cells.

thiouracil [PHARM] $C_4H_4N_2OS$ A bitter-tasting white powder; used as an antithyroid drug that acts by interfering with thyroxine synthesis.

thiourea [ORG CHEM] $(NH_2)_2CS$ Bitter-tasting, white crystals with a melting point of 180–182°C; soluble in cold water and alcohol; used in photography and photocopying, as a rubber accelerator, and as an antithyroid drug in treating hyperthyroidism. Also known as thiocarbamide.

β-thiovaline *See* penicillamine.

Thiovulum [MICROBIO] A genus of gram-negative, chemolithotrophic bacteria; motile, round to ovoid cells containing sulfur granules.

2-thioxo-4-thiazolidinone *See* rhodanine.

thiram [ORG CHEM] $C_6H_{12}N_2S_4$ A colorless, crystalline solid with a melting point of 155–156°C; used to control fungus diseases of fruits, turf, and vegetables, and to protect fruit and other trees from grazers. Also known as bis(dimethylthiocarbamoyl)disulfide.

third-generation computer [COMPUT SCI] One of the general purpose digital computers introduced in the late 1960s; it is characterized by integrated circuits and has logical organization and software which permit the computer to handle many programs at the same time, allow one to add or remove units from the computer, permit some or all input/output operations to occur at sites remote from the main processor, and allow conversational programming techniques.

third harmonic [PHYS] A sine-wave component having three times the fundamental frequency of a complex signal.

third law of motion *See* Newton's third law.

third law of thermodynamics [THERMO] The entropy of all perfect crystalline solids is zero at absolute zero temperature.

third-order climatological station [CLIMATOL] As defined by the World Meteorological Organization, a station, other than a precipitation station, at which the observations are of the same kind as those at a second-order climatological station, but are not so comprehensive, are made once a day only, and are made at other than the specified hours.

third-order reaction [PHYS CHEM] A chemical reaction in which the rate of reaction is determined by the concentration of three reactants.

third rail [CIV ENG] The electrified metal rail which carries current to the motor of an electric locomotive or other railway car.

thirling *See* holing.

thirst [PHYSIO] A sensation, as of dryness in the mouth and throat, resulting from water deprivation.

thirteen temperature *See* annealing point.

thirty-day forecast [METEOROL] A weather forecast for a period of 30 days; as issued by the U.S. Weather Bureau, the forecast concerns expected departures of temperature and precipitation from normal.

thirty-two nucleus [METEOROL] An unidentified type of freezing nucleus which first becomes active when a supercooled cloud is cooled to about −32°C.

Thisbe [ASTRON] An asteroid with a diameter of about 200 kilometers, mean distance from the sun of 2.768 astronomical units, and C-type surface composition.

thistle [BOT] Any of the various prickly plants comprising the family Compositae.

thiuram [ORG CHEM] A chemical compound containing a R_2NCS radical; occurs mainly in disulfide compounds; the most common monosulfide compound is tetramethylthiuram monosulfide.

thixotropic clay [GEOL] A clay that weakens when disturbed and increases in strength upon standing.

thixotropy [PHYS CHEM] Property of certain gels which liquefy when subjected to vibratory forces, such as ultrasonic waves or even simple shaking, and then solidify again when left standing.

Thlipsuridae [PALEON] A Paleozoic family of ostracod crustaceans in the suborder Platycopa.

tholeiite [PETR] **1.** A group of basalts composed principally of plagioclase, pyroxene, and iron oxide minerals as phenocrysts in a glassy groundmass. **2.** Any rock in the group.

Thoma cavitation coefficient [MECH ENG] The equation for measuring cavitation in a hydraulic turbine installation, relating vapor pressure, barometric pressure, runner setting, tail water, and head.

Thomas converter [MET] A basic Bessemer converter; that is, one in which air is forced upward through holes in the bottom of the steel container which has a basic lining, usually dolomite, and which employs a basic slag.

Thomas cyclotron [NUCLEO] A circular particle accelerator

which operates like an ordinary cyclotron but employs a magnetic field that is variable in azimuth in such a way that cyclotron resonance at a fixed orbital frequency and radial and axial focusing can be maintained simultaneously.

Thomas-Fermi atom model [ATOM PHYS] A method of approximating the electrostatic potential and the electron density in an atom in its ground state, in which these two quantities are related by the Poisson equation on the one hand, and on the other hand by a semiclassical formula for the density of quantum states in phase space.

Thomas-Fermi equation [ATOM PHYS] The differential equation $x^{1/2}(d^2y/dx^2) = y^{3/2}$ that arises in calculating the potential in the Thomas-Fermi atom model; the physically meaningful solution satisfies the boundary conditions $y(0) = 1$ and $y(\infty) = 0$.

Thomas meter [ENG] An instrument used to determine the rate of flow of a gas by measuring the rise in the gas temperature produced by a known amount of heat.

Thomas precession [RELAT] The precession of a vector in an accelerated system, relative to an observer for whom the system has a given velocity and acceleration, when this vector appears to be constant to an observer attached to the system; this precession is the kinematical basis of one type of spin-orbit coupling.

Thomas-Reiche-Kuhn sum rule *See* f-sum rule.

Thompson submachine gun [ORD] Caliber-.45, air-cooled automatic weapon that can be carried and operated by one person.

thomsenolite [MINERAL] $NaCaAlF_6 \cdot H_2O$ A colorless to white, monoclinic mineral consisting of a hydrated aluminofluoride of sodium and calcium; it is dimorphous with pachnolite.

Thomson-Berthelot principle [PHYS CHEM] The assumption that the heat released in a chemical reaction is directly related to the chemical affinity, and that, in the absence of the application of external energy, that chemical reaction which releases the greatest heat is favored over others; the principle is in general incorrect, but applies in certain special cases.

Thomson bridge *See* Kelvin bridge.

Thomson coefficient [PHYS] The ratio of the voltage existing between two points on a metallic conductor to the difference in temperature of those points.

Thomson cross section [ELECTROMAG] The total scattering cross section for Thomson scattering, equal to $(8/3)\pi(e^2/mc^2)^2$, where e and m are the charge (in electrostatic units) and mass of the scattering particle, and c is the speed of light.

Thomson effect [PHYS] A thermoelectric effect in which heat flows into or out of a homogeneous conductor when an electric current flows between two points in the conductor at different temperatures, the direction of heat flow depending upon whether the current flows from colder to warmer metal or from warmer to colder.

Thomson formula [ELECTROMAG] **1.** The formula for the intensity of scattered electromagnetic radiation in Thomson scattering as a function of the scattering angle ϕ; the intensity is proportional to $1 + \cos^2 \phi$. **2.** A formula for the period of oscillation of a current when a capacitor is discharged. Also known as Kelvin's formula.

Thomson heat [PHYS] The heat generated or absorbed in the Thomson effect in a reversible manner when a current passes through a conductor in which there is a temperature gradient; it is proportional to the product of the current and the temperature gradient.

thomsonite [MINERAL] $NaCa_2Al_5Si_5O_{20} \cdot 6H_2O$ Snow-white zeolite mineral forming orthorhombic crystals and occurring in masses of radiating crystals; hardness is 5–5.5 on Mohs scale.

Thomson parabolas [ELECTROMAG] A pattern of parabolas which appear on a photographic plate exposed to a beam of ions of an element which has passed through electric and magnetic fields applied in the same direction normal to the path of the ions; each parabola corresponds to a different charge-to-mass ratio, and thus to a different isotope.

Thomson relations [PHYS] Equations in the study of thermoelectricity, relating the Peltier coefficient and the Thomson coefficient to the Seebeck voltage; they are derived by thermodynamics. Also known as Kelvin relations.

Thomson scattering [ELECTROMAG] Scattering of electromagnetic radiation by free (or very loosely bound) charged particles, computed according to a classical nonrelativistic theory: energy is taken away from the primary radiation as the charged particles accelerated by the transverse electric field of the radiation, radiate in all directions.

Thomson voltage [PHYS] The voltage that exists between two points that are at different temperatures in a conductor.

thonzylamine hydrochloride [PHARM] $C_{16}H_{22}N_4O \cdot HCl$ A white, crystalline powder with a melting point of 173–176°C; soluble in water, alcohol, and chloroform; used in medicine as an antihistamine.

Thor [ORD] A U.S. Air Force surface-to-surface intermediate-range ballistic missile using inertial guidance and having a range of about 2000 miles (3200 kilometers); it can carry nuclear warheads, and can be adapted for launching a satellite.

Thoracica [INV ZOO] An order of the subclass Cirripedia; individuals are permanently attached in the adult stage, the mantle is usually protected by calcareous plates, and six pairs of biramous thoracic appendages are present.

thoracic cavity *See* thorax.

thoracic duct [ANAT] The common lymph trunk beginning in the crura of the diaphragm at the level of the last thoracic vertebra, passing upward, and emptying into the left subclavian vein at its junction with the left internal jugular vein.

thoracic vertebrae [ANAT] The vertebrae associated with the chest and ribs in vertebrates; there are 12 in humans.

thoracoabdominal breathing [PHYSIO] The process of air breathing in reptiles, birds, and mammals that depends upon aspiration or sucking inspiration, and involves trunk musculature to supply pulmonary ventilation.

Thoracostomopsidae [INV ZOO] A family of marine nematodes in the superfamily Enoploidea, which have the stomatal armature modified to form a hollow tube.

Thoraeus filter [NUCLEO] A primary radiological filter of tin, combined with a secondary filter of copper to absorb the characteristic radiation of the tin and a third filter of aluminum to absorb the characteristic radiation of the copper; in the range of 200 to 400 kilovolts, such a filter hardens x-rays more efficiently than the usual combination of copper and aluminum.

thorax [ANAT] The chest; the cavity of the mammalian body between the neck and the diaphragm, containing the heart, lungs, and mediastinal structures. Also known as thoracic cavity. [INV ZOO] The middle of three principal divisions of the body of certain classes of arthropods.

thoreaulite [MINERAL] $SnTa_2O_7$ A brown, monoclinic mineral consisting of an oxide of tin and tantalum; occurs as rough, prismatic crystals.

thoria *See* thorium dioxide.

thorianite [MINERAL] ThO_2 A radioactive mineral that crystallizes in the isometric system, occurs in worn cubic crystals, is brownish black to reddish brown in color, and has resinous luster; hardness is 7 on the Mohs scale, and specific gravity is 9.7–9.8.

thoriated emitter *See* thoriated tungsten filament.

thoriated tungsten filament [ELECTR] A vacuum-tube filament consisting of tungsten mixed with a small quantity of thorium oxide to give improved electron emission. Also known as thoriated emitter.

Thorictidae [INV ZOO] The ant blood beetles, a family of coleopteran insects in the superfamily Dermestoidea.

thorite [MINERAL] $ThSiO_4$ A brownish-yellow to brownish-black and black radioactive mineral that is tetragonal in crystallization; hardness is about 4.5 on Mohs scale, and specific gravity is 4.3–5.4.

thorium [CHEM] An element of the actinium series, symbol Th, atomic number 90, atomic weight 232; soft, radioactive, insoluble in water and alkalies, soluble in acids, melts at 1750°C, boils at 4500°C. [MET] A heavy malleable metal that changes from silvery-white to dark gray or black in air; potential source of nuclear energy; used in manufacture of sunlamps.

thorium anhydride *See* thorium dioxide.

thorium carbide [INORG CHEM] ThC_2 A yellow solid melting at above 2630°C, decomposes in water; used in nuclear fuel.

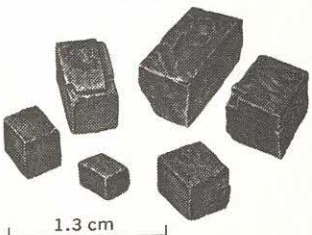
thorium chloride [INORG CHEM] $ThCl_4$ Hygroscopic, toxic colorless crystal needles soluble in alcohol, melts at 820°C, decomposes at 928°C; used in incandescent lighting. Also known as thorium tetrachloride.

thorium dioxide [INORG CHEM] ThO_2 A heavy, white powder soluble in sulfuric acid, insoluble in water, melts at 3300°C; used in medicine, ceramics, flame spraying, and elec-

THOR

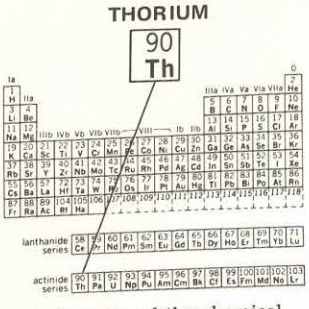
Thor missile photographed at 35 miles (56 kilometers) using 24-inch (61-centimeter) diameter, 500-inch (1270-centimeter) focal-length tracking telescope, driven by electrohydraulic servo system. *(U.S. Air Force)*

THORIANITE



Thorianite crystals from Balangoda, Ceylon. *(Specimens from Department of Geology, Bryn Mawr College)*

THORIUM



Periodic table of the chemical elements showing the position of thorium.

trodes. Also known as thoria; thorium anhydride; thorium oxide.

thorium fluoride [INORG CHEM] ThF_4 A white, toxic powder, melts at 1111°C; used to make thorium metal and magnesium-thorium alloys and in high-temperature ceramics.

thorium nitrate [INORG CHEM] $Th(NO_3)_4 \cdot 4H_2O$ Explosive white crystals soluble in water and alcohol, strong oxidizer; the anhydrous form decomposes at 500°C; used in medicine and as an analytical reagent.

thorium oxalate [ORG CHEM] $Th(C_2O_4)_2 \cdot 2H_2O$ A white, toxic powder soluble in alkalies and ammonium oxalate, insoluble in water and most acids, decomposes to thorium dioxide, ThO_2, above 300–400°C; used in ceramics.

thorium oxide *See* thorium dioxide.

thorium reactor [NUCLEO] A nuclear reactor in which thorium surrounds the central enriched uranium core to give breeder operation.

thorium series [NUCLEO] The series of nuclides resulting from the decay of thorium-232.

thorium sulfate [INORG CHEM] $Th(SO_4)_2 \cdot 8H_2O$ A white powder soluble in ice water, loses water at 42° and 400°C. Also known as normal thorium sulfate.

thorium tetrachloride *See* thorium chloride.

thorn [BOT] A short, sharp, rigid, leafless branch on a plant. [ZOO] Any of various sharp spinose structures on an animal.

thornback [VERT ZOO] *Raja clavata*. A ray found in European waters and characterized by spines on its back.

thornbush [ECOL] A vegetation class that is dominated by tall succulents and profusely branching smooth-barked deciduous hardwoods which vary in density from mesquite bush in the Caribbean to the open spurge thicket in Central Africa; the climate is that of a warm desert, except for a rather short intense rainy season. Also known as Dorngeholz; Dorngestrauch; dornveld; savane armée; savane épineuse; thorn scrub.

thorn forest [ECOL] A type of forest formation, mostly tropical and subtropical, intermediate between desert and steppe; dominated by small trees and shrubs, many armed with thorns and spines; leaves are absent, succulent, or deciduous during long dry periods, which may also be cool; an example is the caatinga of northeastern Brazil.

thorn scrub *See* thornbush.

thorogummite [MINERAL] A silicate mineral and chemical variant of thorium silicate, with similar properties; isostructural with thorite and zircon; it is deficient in silica and contains small amounts of OH in substitution for oxygen.

thoron [NUC PHYS] The conventional name for radon-220. Symbolized Tn.

thoroughfare [CIV ENG] **1.** An important, unobstructed public street or highway. **2.** A street going through from one street to another. **3.** An inland waterway for passage of ships usually not between two bodies of water.

Thorpe reaction [ORG CHEM] The reaction by which, in presence of lithium amides, α,ω-dinitriles undergo base-catalyzed condensation to cyclic iminonitriles, which can be hydrolyzed and decarboxylated to cyclic ketones.

thortveitite [MINERAL] $(Sc,Y)_2Si_2O_7$ A grayish-green mineral occurring in orthorhombic crystals; a source of scandium.

thou *See* mil.

thousandth mass unit [PHYS] A unit of energy equal to the energy equivalent of a mass of 10^{-3} atomic mass unit according to the Einstein mass-energy relation, that is, to the product of 10^{-3} atomic mass unit and the square of the speed of light; equal to approximately 1.49176×10^{-13} joule.

THPC *See* tetrakis(hydroxymethyl)phosphonium chloride.

thrashing [COMPUT SCI] An undesirable condition in a multiprogramming system, due to overcommitment of main memory, in which the various tasks compete for pages and none can operate efficiently.

thread [DES ENG] A continuous helical rib, as on a screw or pipe. [GEOL] An extremely small vein, even thinner than a stringer. [MIN ENG] A more or less straight line of stall faces, having no cuttings, loose ends, fast ends, or steps. [TEXT] A continuous strand formed by spinning and twisting together short strands of textile fibers.

thread blight [PL PATH] A fungus disease of a number of tropical and semitropical woody plants, including cocoa and tea, caused by species of *Pellicularia* and *Marasmius* which form filamentous mycelia on the surface of twigs and leaves.

thread contour [DES ENG] The shape of thread design as observed in a cross section along the major axis, for example, square or round.

thread count [TEXT] An index of the compactness of a fabric determined by counting the number of warp yarns and filling yarns in 1 square inch (6.4516 square centimeters) of fabric. Also known as cloth count.

thread cutter [MECH ENG] A tool used to cut screw threads on a pipe, screw, or bolt.

threadfin [VERT ZOO] Common name for any of the fishes in the family Polynemidae.

thread gage [DES ENG] A design gage used to measure screw threads.

threading die [MECH ENG] A die which may be solid, adjustable, or spring adjustable, or a self-opening die head, used to produce an external thread on a part.

threading machine [MECH ENG] A tool used to cut or form threads inside or outside a cylinder or cone.

thread-lace scoria [GEOL] Scoria whose vesicle walls have collapsed and are represented only by a network of threads.

thread plug [ENG] Mold part which shapes an internal thread onto a molded article; must be unscrewed from the finished piece.

thread plug gage [DES ENG] A thread gage used to measure female screw threads.

thread protector [ENG] A short-threaded ring to screw onto a pipe or into a coupling to protect the threads while the pipe is being handled or transported. Also known as pipe-thread protector.

thread rating [ENG] The maximum internal working pressure allowable for threaded pipe or tubing joints; important for pressure systems, chemical processes, and oil-well systems.

thread ring gage [DES ENG] A thread gage used to measure male screw threads.

thread waste [TEXT] The hard, thready waste left on bobbins or collected during operations such as spinning, twisting, and weaving.

three-address code [COMPUT SCI] In computers, a multiple-address code which includes three addresses, usually two addresses from which data are taken and one address where the result is entered; location of the next instruction is not specified, and instructions are taken from storage in preassigned order.

three-address instruction [COMPUT SCI] In computers, an instruction which includes an operation and specifies the location of three registers.

three-arm protractor [NAV] An instrument consisting essentially of a circle graduated in degrees, to which is attached one fixed arm and two arms pivoted at the center and provided with clamps so that they can be set at any angle to the fixed arm, within the limits of the instrument; used for finding a ship's position when the angles between three fixed and known points are measured. Also known as station pointer.

three-body problem [MECH] The problem of predicting the motions of three objects obeying Newton's laws of motion and attracting each other according to Newton's law of gravitation.

three-day fever *See* phlebotomus fever.

three-decibel coupler [ELECTROMAG] Junction of two waveguides having a common H wall; the two guides are coupled together by H-type aperture coupling; the coupling is such that 50% of the power from either channel will be fed into the other. Also known as Riblet coupler; short-slot coupler.

three-decision problem [STAT] A problem in which a choice must be made among three possible courses of action.

three-dimensional [SCI TECH] Giving the illusion of depth, in three dimensions.

three-dimensional display system [ELECTR] A radar display which shows range, azimuth, and elevation; for instance, a G display.

three-dimensional flow [FL MECH] Any fluid flow which is not a two-dimensional flow.

three-index symbols *See* Christoffel symbols.

three-input subtracter *See* full subtracter.

three-jaw chuck [DES ENG] A drill chuck having three serrated-face movable jaws that can grip and hold fast an inserted drill rod.

three-j number [QUANT MECH] A coefficient used in coupling eigenfunctions of two commuting angular momenta to form eigenfunctions of the total angular momentum; closely related to the Clebsch-Gordan coefficients. Also known as Wigner 3-*j* symbol.

three-junction transistor [ELECTR] A *pnpn* transistor having three junctions and four regions of alternating conductivity; the emitter connection may be made to the *p* region at the left, the base connection to the adjacent *n* region, and the collector connection to the *n* region at the right, while the remaining *p* region is allowed to float.

three-layer diode [ELECTR] A junction diode with three conductivity regions.

three-level laser [OPTICS] A laser involving three energy levels, one of which is the ground state; laser action usually occurs between the intermediate and ground states.

three-level maser [PHYS] A solid-state maser in which three energy levels are used; successful operation has been obtained with crystals of gadolinium ethyl sulfate and crystals of potassium chromecyanide at the temperature of liquid helium.

three-level subroutine [COMPUT SCI] A subroutine in which a second subroutine is called, and a third subroutine is called by the second subroutine.

threeling *See* trilling.

three-phase circuit [ELEC] A circuit energized by alternating-current voltages that differ in phase by one-third of a cycle or 120°.

three-phase current [ELEC] Current delivered through three wires, with each wire serving as the return for the other two and with the three current components differing in phase successively by one-third cycle, or 120 electrical degrees.

three-phase four-wire system [ELEC] System of alternating-current supply comprising four conductors, three of which are connected as in a three-phase, three-wire system, the fourth being connected to the neutral point of the supply, which may be grounded.

three-phase magnetic amplifier [ELECTR] A magnetic amplifier whose input is the sum of three alternating-current voltages that differ in phase by 120°.

three-phase rectifier [ELEC] A rectifier supplied by three alternating-current voltages that differ in phase by one-third of a cycle or 120°.

three-phase seven-wire system [ELEC] System of alternating-current supply from groups of three single-phase transformers connected in Y to obtain a three-phase, four-wire grounded neutral system of higher voltage for power, the neutral wire being common to both systems.

three-phase system [PHYS] Any physical system in which three distinct phases coexist; phases can be liquid, solid, vapor (gas), or three mutually insoluble liquids, or any combination thereof.

three-phase three-wire system [ELEC] System of alternating-current supply comprising three conductors between successive pairs of which are maintained alternating differences of potential successively displaced in phase by one-third cycle.

three-piece set [MIN ENG] A set of timber consisting of a cap and its two supportive posts.

three-plus-one address [COMPUT SCI] An instruction format containing an operation code, three operand address parts, and a control address.

three-ply [SCI TECH] Consisting of three distinct strands, layers, or veneers.

three-point bending [MET] Bending a piece of metal by placing the specimen on two supports and then applying a load on it between the supported ends.

three-point method [GEOL] A method used to determine the dip and strike of a structural surface from three points of varying elevation along the surface.

three-point problem [ENG] The problem of locating the horizontal position of a point of observation from the two observed horizontal angles subtended by three known sides of a triangle.

three-pulse cascaded canceler [ELECTR] A moving-target indicator technique in which two "two-pulse cancelers" are cascaded together; this improves the velocity response.

three-quarters hard [MET] A temper designation for various nonferrous metals, such as aluminum, copper, and magnesium alloys, expressing degree of hardness achieved by mechanical working.

three-shift cyclic mining [MIN ENG] A system of cyclic mining on a longwall conveyor face, with coal cutting on one shift, hand filling and conveying on the next, and ripping, packing, and advancement of the face conveyor on the third shift.

three-way switch [ELEC] An electric switch with three terminals used to control a circuit from two different points.

three-wire generator [ELEC] Electric generator with a balance coil connected across the armature, the midpoint of the coil providing the potential of the neutral wire in a three-wire system.

three-wire system [ELEC] System of electric supply comprising three conductors, one of which (known as the neutral wire) is maintained at a potential midway between the potential of the other two (referred to as the outer conductors); part of the load may be connected directly between the outer conductors, the remainder being divided as evenly as possible into two parts, each of which is connected between the neutral and one outer conductor; there are thus two distinct supply voltages, one being twice the other.

threonine [BIOCHEM] $CH_3CHOHCH(NH_2)COOH$ A crystalline α-amino acid considered essential for normal growth of animals; it is biosynthesized from aspartic acid and is a precursor of isoleucine in microorganisms.

thresher [AGR] A machine that separates grain or seeds from straw. Also known as threshing machine.

thresher shark [VERT ZOO] Common name for fishes in the family Alopiidae; pelagic predacious sharks of generally wide distribution that have an extremely long, whiplike tail with which they thrash the water, destroying schools of small fishes.

threshing machine *See* thresher.

threshold [BUILD] A piece of stone, wood, or metal that lies under an outside door. [ELECTR] In a modulation system, the smallest value of carrier-to-noise ratio at the input to the demodulator for all values above which a small percentage change in the input carrier-to-noise ratio produces a substantially equal or smaller percentage change in the output signal-to-noise ratio. [ENG] The least value of a current, voltage, or other quantity that produces the minimum detectable response in an instrument or system. [GEOL] *See* riegel. [MATH] A logic operator such that, if $P, Q, R, S, \ldots$ are statements, then the threshold will be true if at least N statements are true, false otherwise. [PHYS] The minimum level of some input quantity needed for some process to take place, such as a threshold energy for a reaction, or the minimum level of pumping at which a laser can go into self-excited oscillation. [PHYSIO] The minimum level of a stimulus that will evoke a response in an irritable tissue.

threshold contrast [OPTICS] The smallest contrast of luminance (or brightness) that is perceptible to the human eye under specified conditions of adaptation luminance and target visual angle. Also known as contrast sensitivity; contrast threshold; liminal contrast.

threshold depth *See* sill depth.

threshold detector [NUC PHYS] An element or isotope in which radioactivity is induced only by the capture of neutrons having energies in excess of a certain characteristic threshold value; used to determine the neutron spectrum from a nuclear explosion.

threshold dose [NUCLEO] The minimum radiation dose that will produce a detectable specified effect.

threshold element [COMPUT SCI] A logic circuit which has one output and several weighted inputs, and whose output is energized if and only if the sum of the weights of the energized inputs exceeds a prescribed threshold value.

threshold frequency [ELECTR] The frequency of incident radiant energy below which there is no photoemissive effect.

threshold illuminance [OPTICS] The lowest value of illuminance which the eye is capable of detecting under specified conditions of background luminance and degree of dark adaptation of the eye. Also known as flux density threshold.

threshold lights [NAV] Lights so placed as to indicate the longitudinal limits of that portion of a runway, channel, or landing path usable for landing.

threshold limit value [MED] The average concentration of toxic gas to which the normal person can be exposed without injury for 8 hours per day, 5 days per week for an unlimited period; differs slightly from maximum allowable concentration in that threshold limit value is an average concentration.

threshold of audibility [PHYSIO] The minimum effective sound pressure of a specified signal that is capable of evoking an auditory sensation in a specified fraction of the trials; the threshold may be expressed in decibels relative to 0.0002 microbar (2×10^{-5} pascal) or 1 microbar (0.1 pascal). Also known as threshold of detectability; threshold of hearing.

threshold of detectability *See* threshold of audibility.

threshold of feelings [PHYSIO] The minimum effective sound pressure of a specified signal that, in a specified fraction of trials, will stimulate the ear to a point at which there is a sensation of feeling, discomfort, tickle, or pain; normally expressed in decibels relative to 0.0002 microbar (2×10^{-5} pascal) or 1 microbar (0.1 pascal).

threshold of hearing *See* threshold of audibility.

threshold of reaction [PHYS] The minimum energy, for an incident particle or photon, below which a particular reaction does not occur.

threshold signal [ELECTROMAG] A received radio signal (or radar echo) whose power is just above the noise level of the receiver. Also known as minimum detectable signal.

threshold speed [ENG] The minimum speed of current at which a particular current meter will measure at its rated reliability.

threshold switch [ELECTR] A voltage-sensitive alternating-current switch made from a semiconductor material deposited on a metal substrate; when the alternating-current voltage acting on the switch is increased above the threshold value, the number of free carriers present in the semiconductor material increases suddenly, and the switch changes from a high resistance of about 10 megohms to a low resistance of less than 1 ohm; in other versions of this switch, the threshold voltage is controlled by heat, pressure, light, or moisture.

threshold treatment [CHEM ENG] The process of stopping a precipitation-type reaction at the threshold of precipitate formation; used in water-treatment reactions.

threshold value [CONT SYS] The minimum input that produces a corrective action in an automatic control system.

threshold velocity [GEOPHYS] The minimum velocity at which wind or water begins to move particles of soil, sand, or other material at a given place under specified conditions.

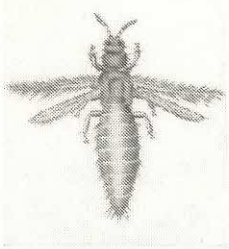
threshold voltage [ELECTR] **1.** In general, the voltage at which a particular characteristic of an electronic device first appears. **2.** The voltage at which conduction of current begins in a *pn* junction. **3.** The voltage at which channel formation occurs in a metal oxide semiconductor field-effect transistor. **4.** The voltage at which a solid-state lamp begins to emit light. [NUCLEO] The lowest voltage at which all pulses produced in a Geiger counter by any ionizing event are of the same size, regardless of the size of the initial ionizing event.

Threskiornithidae [VERT ZOO] The ibises, a family of long-legged birds in the order Ciconiiformes.

thribble [PETRO ENG] In drilling operations, a stand of pipe comprising three joints, each about 30 feet (9.4 meters) long.

thrip [INV ZOO] A small, slender-bodied phytophagous insect of the order Thysanoptera with suctorial mouthparts, a stout proboscis, a vestigial right mandible, and a fully developed left mandible, while wings may be present or absent.

THRIP



Flower thrip *(Frankliniella tritici)*, a common and widely distributed species of thrip, about 1 millimeter long, showing two pairs of long featherlike wings.

Thripidae [INV ZOO] A large family of thrips, order Thysanoptera, which includes the most common species.

throat [ANAT] The region of the vertebrate body that includes the pharynx, the larynx, and related structures. [BOT] The upper, spreading part of the tube of a gamopetalous calyx or corolla. [DES ENG] The narrowest portion of a constricted duct, as in a diffuser or a venturi tube; specifically, a nozzle throat. [ENG] **1.** The smaller end of a horn or tapered waveguide. **2.** The area in a fireplace that forms the passageway from the firebox to the smoke chamber.

throatable [DES ENG] Of a nozzle, designed to allow a change in the velocity of the exhaust stream by changing the size and shape of the throat of the nozzle.

throat balls *See* niter balls.

throat depth [MET] The distance from the center line of the electrodes or platens of a resistance welding machine to the nearest point of interference for flat work.

throat microphone [ENG ACOUS] A contact microphone that is strapped to the throat of a speaker and reacts directly to throat vibrations rather than to the sound waves they produce.

throat of fillet weld [MET] The thinnest part of a fillet weld, or the shortest distance from the root of a fillet weld to its face.

throat velocity *See* critical velocity.

thrombin [BIOCHEM] An enzyme elaborated from prothrombin in shed blood which induces clotting by converting fibrinogen to fibrin.

thrombinogen *See* prothrombin.

thromboangitis obliterans [MED] Thrombosis with organization and a variable degree of associated inflammation in the arteries and veins of the extremities, occasionally of the viscera, progressing to fibrosis about these structures and associated nerves, and complicated by ischemic changes in the parts supplied. Also known as Buerger's disease.

thrombocyte [HISTOL] One of the minute protoplasmic disks found in vertebrate blood; thought to be fragments of megakaryocytes. Also known as blood platelet; platelet.

thrombocythemia *See* thrombocytosis.

thrombocytopenia [MED] A condition characterized by a decrease in the absolute number of thrombocytes in the circulation.

thrombocytopenic purpura [MED] Hemorrhages in the skin, mucous membranes, and elsewhere associated with a decreased number of thrombocytes per unit volume of blood.

thrombocytosis [MED] A condition characterized by an increase in the absolute number of thrombocytes in the circulation. Also known as piastrenemia; thrombocythemia.

thromboembolectomy [MED] Surgical removal of an embolus that stems from a dislodged thrombus or part of a thrombus.

thromboembolism [MED] An embolism resulting from a dislodged thrombus or part of a thrombus.

thrombokinase [BIOCHEM] A proteolytic enzyme in blood plasma that, together with thromboplastin, calcium, and factor V, converts prothrombin to thrombin.

thrombophlebitis [MED] Inflammation of a vein associated with thrombosis.

thromboplastin [BIOCHEM] Any of a group of lipid and protein complexes in blood that accelerate the conversion of prothrombin to thrombin. Also known as factor III; plasma thromboplastin component (PTC).

thromboplastinogen *See* antihemophilic factor.

thrombosis [MED] Formation of a thrombus.

thrombotic thrombocytopenic purpura [MED] Thrombi in blood vessels associated with deposits of hyaline substances in the walls and with thrombocytopenia. Also known as Moschcowitz's disease.

thrombus [MED] A blood clot occurring on the wall of a blood vessel where the endothelium is damaged.

Throscidae [INV ZOO] The false metallic wood-boring beetles, a cosmopolitan family of the Coleoptera in the superfamily Elateroidea.

throttled flow [FL MECH] Flow which is forced to pass through a restricted area, where the velocity must increase.

throttle valve [MECH ENG] A choking device to regulate flow of a liquid, for example, in a pipeline, to an engine or turbine, from a pump or compressor.

throttling [AERO ENG] The varying of the thrust of a rocket engine during powered flight. [CONT SYS] Control by means of intermediate steps between full on and full off. [THERMO] An adiabatic, irreversible process in which a gas expands by passing from one chamber to another chamber which is at a lower pressure than the first chamber.

throttling bar [ORD] A wedge-shaped bar attached to the interior wall of a recoil cyclinder of a gun; a rectangular notch in the recoil piston moves over the bar, forming an aperture through which the recoil oil must flow; the aperture decreases during recoil until at the end of recoil it is completely closed, thus stopping the flow of liquid and bringing the recoiling tube to rest.

throttling calorimeter [ENG] An instrument utilizing the principle of constant enthalpy expansion for the measurement of the moisture content of steam; steam drawn from a steampipe through sampling nozzles enters the calorimeter through a throttling orifice and moves into a well-insulated expansion chamber in which its temperature is measured. Also known as steam calorimeter.

throttling groove [ORD] A groove of varying width or depth cut on the interior wall of some recoil cyclinders of a gun to control the passage of oil, hence controlling the recoil resistance.

throttling rod [ORD] A tapered rod attached to a recoil cylinder of a gun; the piston rod is hollow to receive the throttling rod during recoil, and oil is forced through the orifice around the throttling rod; as recoil proceeds, the larger section of the throttling rod comes into the throttling orifice until, at the end of recoil, the throttling rod nearly seals the throttling orifice, thus bringing the recoiling tube to rest.

throttling valve [ORD] Part of a variable recoil system of a gun, it is a spring-loaded valve through which recoil oil must

flow during recoil; as the gun is elevated, the spring pressure is increased by means of a control arm; the valve thus offers greater resistance to the flow of recoil oil and the length of recoil is reduced; in a similar manner, depressing the gun decreases the spring pressure of the valve, with less resistance to oil flow and hence greater length of recoil.

through arch [CIV ENG] An arch bridge from which the roadway is suspended as distinct from one which carries the roadway on top.

through bridge [CIV ENG] A bridge that carries the deck within the height of the superstructure.

through-feed centerless grinding [MECH ENG] A metal cutting process by which the external surface of a cylindrical workpiece of uniform diameter is ground by passing the workpiece between a grinding and regulating wheel.

through glacier [HYD] A two-ended glacier, consisting of two valley glaciers in a depression, flowing in opposite directions.

throughput [CHEM ENG] The volume of feedstock charged to a process equipment unit during a specified time. [COMMUN] A measure of the effective rate of transmission of data by a communications system. [COMPUT SCI] The productivity of a data-processing system, as expressed in computing work per minute or hour. [MIN ENG] The quantity of ore or other material passed through a mill or a section of a mill in a given time or at a given rate.

through repeater [ELECTR] Microwave repeater that is not equipped to provide for connections to any local facilities other than the service channel.

through street [CIV ENG] A street at which all cross traffic is required to stop before crossing or entering. Also known as throughway.

through transmission [ENG] An ultrasonic testing method in which mechanical vibrations are transmitted into one end of the workpiece and received at the other end.

through valley [GEOL] **1.** A depression eroded across a divide by glacier ice or meltwater streams. **2.** A valley excavated by a through glacier.

throughway *See* expressway; through street.

through weld [MET] A long weld made through the unbroken surface of one member to the other member in a lap or tree joint.

throw [GEOL] The vertical component of dip separation on a fault, or generally the amount of vertical displacement on any fault.

throwing [TEXT] The process of twisting and manipulating yarns to impart texture.

throwing power [MET] The ability of an electroplating solution to deposit metal uniformly on an irregularly shaped cathode.

throwout [MECH ENG] In automotive vehicles, the mechanism or assemblage of mechanisms by which the driven and driving plates of a clutch are separated.

throw-out spiral *See* lead-out groove.

thrush [MED] A form of candidiasis due to infection by *Candida albicans* and characterized by small whitish spots on the tip and sides of the tongue and the mucous membranes of the buccal cavity. Also known as mycotic stomatitis; parasitic stomatitis. [VET MED] A disease of the frog of a horse's foot accompanied by a fetid discharge.

thrust [GEOL] Overriding movement of one crystal unit over another. [MECH] The force exerted in any direction by a fluid jet or by a powered screw. [MECH ENG] The weight or pressure applied to a bit to make it cut. [MIN ENG] **1.** A crushing of coal pillars caused by excess weight of the superincumbent rocks, the floor being harder than the roof. **2.** The ruins of the fallen roof, after pillars and stalls have been removed.

thrust augmentation [AERO ENG] The increasing of the thrust of an engine or power plant, especially of a jet engine and usually for a short period of time, over the thrust normally developed.

thrust augmenter [AERO ENG] Any contrivance used for thrust augmentation, as a venturi used in a rocket.

thrust axis [AERO ENG] A line or axis through an aircraft or a rocket, along which the thrust acts; an axis through the longitudinal center of a jet or rocket engine, along which the thrust of the engine acts. Also known as axis of thrust; center of thrust.

thrust bearing [MECH ENG] A bearing which sustains axial loads and prevents axial movement of a loaded shaft.

thrust block *See* thrust nappe.

thrust coefficient *See* nozzle thrust coefficient.

thruster [AERO ENG] *See* nozzle thrust coefficient.

thrust fault [GEOL] A low-angle (less than a 45° dip) fault along which the hanging wall has moved up relative to the footwall. Also known as reverse fault; reverse slip fault; thrust slip fault.

thrust horsepower [AERO ENG] **1.** The force-velocity equivalent of the thrust developed by a jet or rocket engine. **2.** The thrust of an engine-propeller combination expressed in horsepower; it differs from the shaft horsepower of the engine by the amount the propeller efficiency varies from 100%. [NAV ARCH] The product of the speed of advance of a marine propeller through the water, in feet per second, and the thrust delivered by the propeller, in pounds, divided by 550.

thrust load [MECH ENG] A load or pressure parallel to or in the direction of the shaft of a vehicle.

thrust meter [ENG] An instrument for measuring static thrust, especially of a jet engine or rocket.

thrust moraine *See* push moraine.

thrust nappe [GEOL] The body of rock that makes up the hanging wall of a thrust fault. Also known as thrust block; thrust plate; thrust sheet; thrust slice.

Thrustor [MECH ENG] Trademark for a hydraulic device for applying a controllable force, as to a brake.

thrust output [AERO ENG] The net thrust delivered by a jet engine, rocket engine, or rocket motor.

thrust plate *See* thrust nappe.

thrust-pound [AERO ENG] A unit of measurement for the thrust produced by a jet engine or rocket.

thrust power [AERO ENG] The power usefully expended on thrust, equal to the thrust (or net thrust) times airspeed.

thrust reverser [AERO ENG] A device or apparatus for reversing thrust, especially of a jet engine.

thrust section [AERO ENG] A section in a rocket vehicle that houses or incorporates the combustion chamber or chambers and nozzles.

thrust sheet *See* thrust nappe.

thrust slice *See* thrust nappe.

thrust slip fault *See* thrust fault.

thrust terminator [AERO ENG] A device for ending the thrust in a rocket engine, either through propellant cutoff (in the case of a liquid) or through diverting the flow of gases from the nozzle.

thrust-weight ratio [AERO ENG] A quantity used to evaluate engine performance, obtained by dividing the thrust output by the engine weight less fuel.

thrust yoke [MECH ENG] The part connecting the piston rods of the feed mechanism on a hydraulically driven diamond-drill swivel head to the thrust block, which forms the connecting link between the yoke and the drive rod, by means of which link the longitudinal movements of the feed mechanism are transmitted to the swivel-head drive rod. Also known as back end.

thucolite [GEOL] Concentrations of carbonaceous matter in ancient sedimentary rocks.

thuja oil [MATER] An essential oil from white cedar leaves; pale-yellow, combustible oil with a camphor aroma, soluble in alcohol, ether, chloroform, carbon disulfide, and fixed oils; used in medicine, perfumery, and flavorings. Also known as arbor vitae oil.

Thule group [ASTRON] An accumulation of asteroids whose sidereal period of revolution is in the ratio ¾ with that of Jupiter.

thulia *See* thulium oxide.

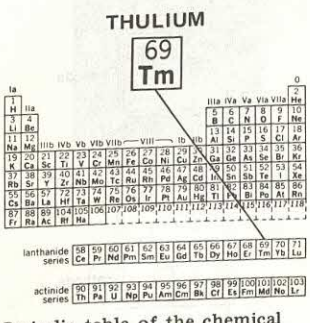
thulite [MINERAL] A pink, rose-red, or purplish-red variety of epidote that contains manganese; used as an ornamental stone.

thulium [CHEM] A rare-earth element, symbol Tm, group IIIB, of the lanthanide group, atomic number 69, atomic weight 168.934; reacts slowly with water, soluble in dilute acids, melts at 1550°C, boils at 1727°C; the dust is a fire hazard; used as x-ray source and to make ferrites.

thulium-170 [NUC PHYS] The radioactive isotope of thulium, with mass number 170; used as a portable x-ray source.

thulium chloride [INORG CHEM] $TmCl_3 \cdot 7H_2O$ Green, deliquescent crystals soluble in water and alcohol, melts at 824°C.

thulium oxalate [ORG CHEM] $Tm_2(C_2O_4)_3 \cdot 6H_2O$ A toxic, greenish-white solid, soluble in aqueous alkali oxalates, loses one water at 50°C; used for analytical separation of thulium from common metals.



Periodic table of the chemical elements showing the position of thulium.

THUMBSCREW

Drawing of thumbscrew showing flattened head. *(Reynolds Metals Co.)*

thulium oxide [INORG CHEM] Tm_2O_3 A white, slightly hygroscopic powder that absorbs water and carbon dioxide from the air, and is slowly soluble in strong acids; used to make thulium metal. Also known as thulia.

thumbscrew [DES ENG] A screw with a head flattened in the same axis as the shaft so that it can be gripped and turned by the thumb and forefinger.

thump [ENG ACOUS] Low-frequency transient disturbance in a system or transducer characterized audibly by the vocal imitation of the word.

Thunburg technique [BIOCHEM] A technique used to study oxidation of a substrate occurring by dehydrogenation reactions; methylene blue, a reversibly oxidizable indicator, substitutes for molecular oxygen as the ultimate hydrogen acceptor (oxidant), becoming reduced to the colorless leuco form.

thunder [GEOPHYS] The sound emitted by rapidly expanding gases along the channel of a lightning discharge.

thunderbolt [GEOPHYS] In mythology, a lightning flash accompanied by a material bolt or dart and which causes great damage; it is still used as a popular term for a single lightning discharge accompanied by thunder.

Thunderchief [AERO ENG] A United States supersonic, single-engine, turbojet-powered tactical fighter capable of delivering nuclear weapons as well as nonnuclear bombs and rockets; an all-weather attack fighter, it is also capable of close support for ground forces, and its range can be extended by in-flight refueling; it is equipped with the Sidewinder missile. Designated F-105.

thundercloud [METEOROL] A convenient and often used term for the cloud mass of a thunderstorm, that is, a cumulonimbus.

thunderhead *See* incus.

thundersquall *See* rainsquall.

thunderstorm [METEOROL] A convective storm accompanied by lightning and thunder and rain, rarely snow showers but often hail, and gusty squall winds at the onset of precipitation; the characteristic cloud is the cumulonimbus.

thunderstorm cell [METEOROL] The convection cell of a cumulonimbus cloud.

thunderstorm charge separation [GEOPHYS] **1.** The process by which the large electric field found within thunderclouds is generated. **2.** The processes by which particles bearing opposite electrical charges are given the charges and are transported to different regions of the active cloud.

thunderstorm day [METEOROL] An observational day during which thunder is heard at the station; precipitation need not occur.

Thunderstreak [AERO ENG] A United States one-man fighter also used for reconnaissance; it has a range of over 2000 miles (3200 kilometers) and a speed of over 600 miles (970 kilometers) per hour; the bomb load is 6000 pounds (2700 kilograms) of conventional or nuclear bombs, incendiary gel, or rockets, and there are six .50-caliber machine guns. Designated F-84.

thunk [COMPUT SCI] An additional subprogram created by the compiler to represent the evaluation of the argument of an expression in the call-by-name procedure.

Thunnidae [VERT ZOO] The tunas, a family of perciform fishes; there are no scales on the posterior part of the body, and those on the anterior are fused to form an armored covering, the body is streamlined, and the tail is crescent-shaped.

Thuringian [GEOL] A European stage of Upper Permian geologic time, above the Saxonian and below the Triassic.

Thurniaceae [BOT] A small family of monocotyledonous plants in the order Juncales distinguished by an inflorescence of one or more dense heads, vascular bundles of the leaf in vertical pairs, and silica bodies in the leaf epidermis.

Thylacinidae [VERT ZOO] A family of Australian carnivorous marsupials in the superfamily Dasyuroidea.

Thylacoleonidae [PALEON] An extinct family of carnivorous marsupials in the superfamily Phalangeroidea.

thylakoid [CYTOL] An internal membrane system which occupies the main body of a plastid; particularly well developed in chloroplasts.

Thylox process [CHEM ENG] The conversion of coke-oven-gas, hydrogen sulfide, into elemental sulfur by absorption in a solution of arsenious oxide and soda ash in water, then air-blowing to liberate the sulfur which can be skimmed off the solution.

THUNDERSTORM

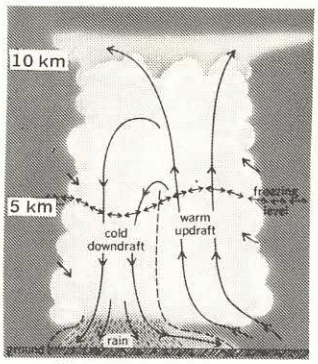


Diagram showing simplified circulation in a vertical section through a mature thunderstorm. *(After G. A. Suckstorff, H. R. Byers, and R. R. Braham, Jr.)*

THYRATRON

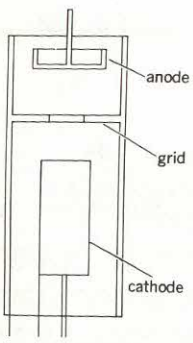

Diagram of construction of a negative-grid thyratron.

thyme [BOT] A perennial mint plant of the genus *Thymus*; pungent aromatic herb is made from the leaves.

thyme camphor *See* thymol.

Thymelaeceae [BOT] A family of dicotyledonous woody plants in the order Myrtales characterized by a superior ovary with a solitary ovule, and petals, if present, are scalelike.

thyme oil [MATER] An essential oil found in the flowers of the thymes *Thymus vulgaris* or *T. zygis*, a colorless to reddish-brown liquid with a sharp taste and pleasant aroma, soluble in alcohol, slightly soluble in water; used in medicine, perfumery, cosmetics, flavoring, and soap.

thymic aplasia [MED] Congenital absence of the thymus and of the parathyroids with deficient cellular immunity. Also known as Di George's syndrome.

thymic corpuscle [HISTOL] A characteristic, rounded, acidophil body in the medulla of the thymus; composed of hyalinized cells concentrically arranged about a core which is occasionally calcified. Also known as Hassal's body.

thymidine [BIOCHEM] $C_{10}H_{14}N_2O_5$ A nucleoside derived from deoxyribonucleic acid; essential growth factor for certain microorganisms in mediums lacking vitamin B_12 and folic acid.

thymidylic acid [BIOCHEM] $C_{10}H_{15}N_2O_8P$ A mononucleotide component of deoxyribonucleic acid which yields thymine, D-ribose, and phosphoric acid on complete hydrolysis.

thymine [BIOCHEM] $C_5H_6N_2O_2$ A pyrimidine component of nucleic acid, first isolated from the thymus.

thymocyte [HISTOL] A lymphocyte formed in the thymus.

thymol [ORG CHEM] $C_{10}H_{14}O$ A naturally occurring crystalline phenol obtained from thyme or thyme oil, melting at 515°C; used to kill parasites in herbaria, to preserve anatomical specimens, and in medicine as a topical antifungal agent. Also known as isopropyl-*meta*-cresol; thyme camphor.

thymol blue [ORG CHEM] $C_6H_4SO_2OC[C_6H_2(CH_3)(OH)CH(CH_3)_2]_2$ Brown-green crystals soluble in alcohol and dilute alkalies, insoluble in water, decomposes at 223°C; used as acid-base pH indicator. Also known as thymolsulfonphthalein.

thymol iodide [ORG CHEM] $[C_6H_2(CH_3)(OI)(C_3H_7)]_2$ A red-brown, light-sensitive powder with an aromatic aroma, soluble in ether and chloroform, insoluble in water; used in medicine and as a feed additive.

thymolphthalein [ORG CHEM] $C_6H_4COOC[C_6H_2(CH_3)(OH)CH(CH_3)_2]_2$ A white powder insoluble in water, soluble in alcohol and acetone, melts at 245°C; used in medicine and as an acid-base titration indicator.

thymolsulfonphthalein *See* thymol blue.

thymoma [MED] A usually benign primary tumor of the thymus composed principally of lymphocytic and epithelial cells in varying proportions.

thymopharyngeal duct [EMBRYO] The third pharyngobranchial duct; it may elongate between the pharynx and thymus.

***para*-thymoquinone** [ORG CHEM] $C_{10}H_{12}O_2$ Bright yellow crystals with a melting point of 45.5°C; soluble in alcohol and ether; used as a fungicide. Also known as 2-isopropyl-5-methylbenzoquinone.

thymus gland [ANAT] A lymphoid organ in the neck or upper thorax of all vertebrates; it is most prominent in early life and is essential for normal development of the circulating pool of lymphocytes.

thyratron [ELECTR] A hot-cathode gas tube in which one or more control electrodes initiate but do not limit the anode current except under certain operating conditions. Also known as hot-cathode gas-filled tube.

thyratron gate [ELECTR] In computers, an AND gate consisting of a multielement gas-filled tube in which conduction is initiated by the coincident application of two or more signals; conduction may continue after one or more of the initiating signals are removed.

thyratron inverter [ELECTR] An inverter circuit that uses thyratrons to convert direct-current power to alternating-current power.

thyrector [ELECTR] Silicon diode that acts as an insulator up to its rated voltage, and as a conductor above rated voltage; used for alternating-current surge voltage protection.

Thyrididae [INV ZOO] The window-winged moths, a small tropical family of lepidopteran insects in the suborder Heteroneura.

thyristor [ELECTR] A transistor having a thyratronlike characteristic; as collector current is increased to a critical

value, the alpha of the unit rises above unity to give high-speed triggering action.

thyrocalcitonin *See* calcitonin.

thyroglobulin [BIOCHEM] An iodinated protein found as the storage form of the iodinated hormones in the thyroid follicular lumen and epithelial cells.

thyroglossal cyst [MED] A cyst formed from the remnants of the thyroglossal duct.

thyroglossal duct [EMBRYO] A narrow temporary channel connecting the anlage of the thyroid with the surface of the tongue.

thyroid [PHARM] Dried and powdered thyroid gland which contains about 0.2% iodine in combination, especially as thyroxine, and is used therapeutically in the treatment of thyroid deficiencies.

thyroid cartilage [ANAT] The largest of the laryngeal cartilages in humans and most other mammals, located anterior to the cricoid; in man, forms the Adam's apple.

thyroidectomy [MED] Surgical removal of the thyroid gland.

thyroid gland [ANAT] An endocrine gland found in all vertebrates that produces, stores, and secretes the thyroid hormones.

thyroid hormone [BIOCHEM] Commonly, thyroxine or triiodothyronine, or both; a metabolically active compound formed and stored in the thyroid gland which functions to regulate the rate of metabolism.

thyroiditis [MED] Inflammation of the thyroid gland.

thyroid-stimulating hormone *See* thyrotropic hormone.

thyroprotein [BIOCHEM] A protein secreted in the thyroid gland, such as thyroxine.

Thyropteridae [VERT ZOO] The New-World disk-winged bats, a family of the Chiroptera found in Central and South America, characterized by a stalked sucking disk and a well-developed claw on the thumb.

thyrotoxic myopathy [MED] A chronic disease associated with hyperthyroidism resulting in muscular atrophy.

thyrotoxicosis *See* hyperthyroidism.

thyrotropic hormone [BIOCHEM] A hormone produced by the adenohypophysis which regulates thyroid gland function. Also known as thyroid-stimulating hormone (TSH).

thyrotropin [BIOCHEM] A thyroid-stimulating hormone produced by the adenohypophysis.

thyroxine [BIOCHEM] $C_{15}H_{11}I_4NO_4$ The active physiologic principle of the thyroid gland; used in the form of the sodium salt for replacement therapy in states of hypothyroidism or absent thyroid function.

thyrse [BOT] An inflorescence with a racemose primary axis and cymose secondary and later axes.

Thysanidae [INV ZOO] A family of hymenopteran insects in the superfamily Chalcidoidea.

Thysanoptera [INV ZOO] The thrips, an order of small, slender insects having exopterygote development, sucking mouthparts, and exceptionally narrow wings with few or no veins and bordered by long hairs.

Thysanura [INV ZOO] The silverfish, machilids, and allies, an order of primarily wingless insects with soft, fusiform bodies.

THz *See* terahertz.

Ti *See* titanium.

tiba [ORG CHEM] $C_7H_3I_3O_2$ A colorless solid with a melting point of 226–228°C; insoluble in water; used as a growth regulator for fruit. Also known as 2,3,5-triiodobenzoic acid.

tibia [ANAT] The larger of the two leg bones, articulating with the femur, fibula, and talus.

tibialis [ANAT] **1.** A muscle of the leg arising from the proximal end of the tibia and inserted into the first cuneiform and first metatarsal bones. **2.** A deep muscle of the leg arising proximally from the tibia and fibula and inserted into the navicular and first cuneiform bones.

tic douloureux *See* trigeminal neuralgia.

tick [COMMUN] A pulse broadcast at 1-second intervals by standard frequency and time broadcasting stations to indicate the exact time. [COMPUT SCI] A time interval equal to 1/60 second, used primarily in discussing computer operations. [INV ZOO] Any arachnid comprising Ixodoidea; a bloodsucking parasite and important vector of various infectious diseases of humans and lower animals.

tick-bite paralysis [VET MED] A flaccid paralysis in animals, and occasionally in humans, caused by a feeding tick attached to the body.

tick-borne typhus fever of Africa [MED] Any of several infections caused by *Rickettsia conori*, transmitted by ixodid ticks, and occurring in Africa and adjacent areas; includes boutonneuse fever, Marseilles fever, Kenya tick typhus fever, and South African tick-bite fever.

ticket converting [COMPUT SCI] The process of changing prepunched ticket stubs, 2.7 inches (6.9 centimeters) wide by 1 inch (2.5 centimeters) deep, into punched cards; the ticket is made up of a basic section and one or more stubs that are numerically prepunched and printed with identical information.

tick fever *See* Rocky Mountain spotted fever.

tickle [PHYSIO] A tingling sensation of the skin or a mucous membrane following light, tactile stimulation.

tickler coil [ELECTR] Small coil connected in series with the plate circuit of an electron tube and inductively coupled to a grid-circuit coil to establish feedback or regeneration in a radio circuit; used chiefly in regenerative detector circuits.

tick typhus *See* Rocky Mountain spotted fever.

tic polonga [VERT ZOO] *Vipera russellii*. A member of the Viperidae; one of the most deadly and most common snakes in India; it may reach a length of 5 feet (1.5 meters), is nocturnal in its habits, and pursues rodents into houses. Also known as Russell's viper.

tidal air [PHYSIO] That air which is inspired and expired during normal breathing.

tidal bore *See* bore.

tidal channel [OCEANOGR] A major channel followed by tidal currents, extending from the ocean into a tidal marsh or tidal flat.

tidal component *See* partial tide.

tidal constants [OCEANOGR] Tidal relations that remain essentially constant for any particular locality.

tidal constituent *See* partial tide.

tidal correction [GEOPHYS] A correction made in gravity observations to remove the effect of the earth's tides.

tidal current [OCEANOGR] The alternating horizontal movement of water associated with the rise and fall of the tide caused by the astronomical tide-producing forces.

tidal current chart [OCEANOGR] A chart showing by arrows and numbers the average direction and speed of tidal currents at a particular part of the current cycle.

tidal current tables [OCEANOGR] Tables issued annually which give daily predictions of the times of slack water and the times and velocities of the strength of flood and ebb currents for a number of reference stations, together with differences and constants for obtaining predictions at subordinate stations.

tidal cycle *See* tide cycle.

tidal datum [OCEANOGR] A level of the sea, defined by some phase of the tide, from which water depths and heights of tide are reckoned. Also known as tidal datum plane.

tidal datum plane *See* tidal datum.

tidal day [OCEANOGR] The interval between two consecutive high waters of the tide at a given place, averaging 24 hours and 51 minutes.

tidal delta [GEOL] A sand bar or shoal formed in the entrance of an inlet by the action of reversing tidal currents.

tidal difference [OCEANOGR] The difference in time or height of a high or low water at a subordinate station and at a reference station for which predictions are given in the tide tables; the difference applied to the prediction at the reference station gives the corresponding time or height for the subordinate station.

tidal energy [OCEANOGR] The energy in a tide flowing from a basin into an open sea.

tidal epoch *See* phase lag.

tidal excursion [OCEANOGR] The net horizontal distance over which a water particle moves during one tidal cycle of flood and ebb; the distances traversed during ebb and flood are rarely equal in nature, since there is usually a layered circulation in an estuary, with a net surface flow in one direction compensated by an opposite flow at depth.

tidal flat [GEOL] A marshy, sandy, or muddy nearly horizontal coastal flatland which is alternately covered and exposed as the tide rises and falls.

tidal frequency [OCEANOGR] The rate of travel, in degrees per day, of a component of a tide, the component being created by a particular juxtaposition of forces in the sun-earth-moon system.

tidal friction [OCEANOGR] The frictional effect of the tidal wave particularly in shallow waters that lengthens the tidal

THYSANURA

Firebrat, *Thermobia domestica* Packard, a species of Thysanura found in all areas of temperate climate.

epoch and tends to slow the rotational velocity of the earth, thus increasing very slowly the length of the day.

tidal glacier *See* tidewater glacier.

tidal harbor [OCEANOGR] A harbor affected by the tides, in distinction to a harbor in which the water level is maintained by caissons or gates.

tidal inlet [GEOL] A natural inlet maintained by tidal currents.

tidalite [GEOL] Any sediment transported and deposited by tidal currents.

tidal lights [NAV] Lights at the entrance of a harbor to indicate tide and tidal current conditions within the harbor.

tidal lock *See* entrance lock.

tidal marsh [GEOGR] Any marsh whose surface is covered and uncovered by tidal flow.

tidal platform ice foot [OCEANOGR] An ice foot between high and low water levels, produced by the the rise and fall of the tide.

tidal pool [OCEANOGR] An accumulation of sea water remaining in a depression on a beach or reef after the tide recedes.

tidal potential [OCEANOGR] Tidal forces expressed as components of a vector field.

tidal prism [OCEANOGR] The difference between the mean high-water volume and the mean low-water volume of an estuary.

tidal quay [CIV ENG] A quay in an open harbor or basin with sufficient depth to enable ships lying alongside to remain afloat at any state of the tide.

tidal range *See* tide range.

tidal scour [GEOL] Sea-floor erosion caused by strong tidal currents, resulting in removal of inshore sediments and formation of deep holes and channels. Also known as scour.

tidal stand *See* stand.

tidal volume [PHYSIO] The volume of air moved in and out of the lungs during a single normal respiratory cycle.

tidal water [OCEANOGR] Any water whose level changes periodically due to tidal action.

tidal wave [OCEANOGR] **1.** Any unusually high and generally destructive sea wave or water level along a shore. **2.** *See* tide wave.

tidal wind [METEOROL] A very light breeze which occurs in calm weather in inlets where the tide sets strongly; it blows onshore with rising tide and offshore with ebbing tide.

tide [OCEANOGR] The periodic rising and falling of the oceans resulting from lunar and solar tide-producing forces acting upon the rotating earth.

tide amplitude [OCEANOGR] One-half of the difference in height between consecutive high water and low water; half the tide range.

tide-bound [NAV] Referring to a vessel unable to proceed because of insufficient depth of water due to tidal action.

tide bulge *See* tide wave.

tide crack [OCEANOGR] A crack in sea ice, parallel to the shore, caused by the vertical movement of the water due to tides; several such cracks often appear as a family.

tide curve [OCEANOGR] Any graphic representation of the rise and fall of the tide; time is generally represented by the abscissas, and the height of the tide by the ordinates; for normal tides the curve so produced approximates a sine curve.

tide cycle [OCEANOGR] A period which includes a complete set of tide conditions or characteristics, such as a tidal day or a lunar month. Also known as tidal cycle.

tide gage [ENG] A device for measuring the height of a tide; may be observed visually or may consist of an elaborate recording instrument.

tide gate [CIV ENG] **1.** A restricted passage through which water runs with great speed due to tidal action. **2.** An opening through which water may flow freely when the tide sets in one direction, but which closes automatically and prevents the water from flowing in the other direction when the direction of flow is reversed.

tidehead [OCEANOGR] The inland limit of water affected by a tide.

tide hole [OCEANOGR] A hole made in ice to observe the height of the tide.

tide indicator [ENG] That part of a tide gage which indicates the height of tide at any time; the indicator may be in the immediate vicinity of the tidal water or at some distance from it.

tideland [GEOGR] Land which is under water at high tide and uncovered at low tide.

tide lock *See* entrance lock.

tide machine [ENG] An instrument that computes, sometimes for years in advance, the times and heights of high and low waters at a reference station by mechanically summing the harmonic constituents of which the tide is composed.

tidemark [OCEANOGR] **1.** A high-water mark left by tidal water. **2.** The highest point reached by a high tide.

tide notes [OCEANOGR] Notes included on nautical charts which give information on the mean range or the diurnal range of the tide, mean tide level, and extreme low water at key places on the chart.

tide pole [ENG] A graduated spar used for measuring the rise and fall of the tide. Also known as tide staff.

tide prediction [OCEANOGR] The mathematical process by which the times and heights of the tide are determined in advance from the harmonic constituents at a place.

tide-producing force [GEOPHYS] The slight local difference between the gravitational attraction of two astronomical bodies and the centrifugal force that holds them apart.

tide race [OCEANOGR] A strong tidal current or a channel in which such a current flows.

tide range [OCEANOGR] The difference in height between consecutive high and low waters. Also known as tidal range.

tide rips *See* rips.

tide-rode [NAV] Referring to a ship riding at anchor and heading into the tidal current.

tide signal [NAV] A visual signal displayed at the entrance of a harbor to indicate tidal conditions within the harbor.

tide staff *See* tide pole.

tide station [OCEANOGR] A place where observations of the tides are obtained.

tide table [OCEANOGR] A table giving daily predictions, usually a year in advance, of the times and heights of the tide for a number of reference stations.

tidewater [OCEANOGR] **1.** A body of water, such as a river, affected by tides. **2.** Water inundating land at flood tide.

tidewater glacier [HYD] A glacier that descends into the sea and usually has a terminal ice cliff. Also known as tidal glacier.

tide wave [OCEANOGR] A long-period wave associated with the tide-producing forces of the moon and sun, and identified with the rising and falling of the tide. Also known as tidal wave; tide bulge.

tideway [OCEANOGR] A channel through which a tidal current runs.

tidi-sound *See* time-division sound

tie [CIV ENG] One of the transverse supports to which railroad rails are fastened to keep them to line, gage, and grade. [ELEC] **1.** Electrical connection or strap. **2.** *See* tie wire. [ENG] A beam, post, rod, or angle to hold two pieces together; a tension member in a construction. [MIN ENG] A support for the roof in coal mines.

tieback [MIN ENG] **1.** A beam serving a purpose similar to that of a fend-off beam, but fixed at the opposite side of the shaft or inclined road. **2.** The wire ropes or stay rods that are sometimes used on the side of the tower opposite the hoisting engine, either in place of or to reinforce the engine braces.

tie bar [CIV ENG] **1.** A bar used as a tie rod. **2.** A rod connecting two switch rails on a railway to hold them to gage. [GEOL] *See* tombolo.

tie cable [ELEC] **1.** Cable between two distributing frames or distributing points. **2.** Cable between two private branch exchanges. **3.** Cable between a private branch exchange switchboard and main office. **4.** Cable connecting two other cables.

tied arch [CIV ENG] An arch having the horizontal reaction component provided by a tie between the skewbacks of the arch ends.

tied concrete column [CIV ENG] A concrete column reinforced with longitudinal bars and horizontal ties.

Tiedenmann's body [INV ZOO] One of the small glands opening into the ring vessel in many echinoderms in which amebocytes are produced.

tie-down diagram [ENG] A drawing indicating the prescribed method of securing a particular item of cargo within a specific type of vehicle.

tie-down point [ENG] An attachment point provided on or within a vehicle.

tie-down point pattern [ENG] The pattern of tie-down points within a vehicle.

tied rank [STAT] If two distinct observations have the same value, thus being given the same rank, they are said to be tied;

this presents difficulties in the Wilcoxon two-sample test, the sign test, and the Fisher-Irwin test.

tie line [COMMUN] **1.** A leased communication channel or circuit. **2.** *See* data link. [PHYS CHEM] A line on a phase diagram joining the two points which represent the composition of systems in equilibrium. Also known as conode.

tiemannite [MINERAL] HgSe A steel gray to blackish-lead gray mineral consisting of mercuric selenide; commonly occurs in massive form.

tie plate [CIV ENG] A metal plate between a rail and a tie to hold the rail in place and reduce wear on the tie. [MECH ENG] A plate used in a furnace to connect tie rods.

tie point [ELEC] Insulated terminal to which two or more wires may be connected.

tier array [ELECTROMAG] Array of antenna elements, one above the other.

tier building [CIV ENG] A multistory skeleton frame building.

tie rod [CIV ENG] A structural member used as a brace to take tensile loads. [ENG] A round or square iron rod passing through or over a furnace and connected with buckstays to assist in binding the furnace together. [MECH ENG] A rod used as a mechanical or structural support between elements of a machine. [MIN ENG] Vertical rods mounted in overlying horizontal shaft timbers.

tie trunk [ELEC] Telephone line or channel directly connecting two private branch exchanges.

Tietze extension theorem [MATH] A topological space X is normal if and only if every continuous function of a closed subset to $[0,1]$ has a continuous extension to all of X.

tie wire [ELEC] A short piece of wire used to tie an open-line wire to an insulator. Also known as tie.

TIF *See* telephone influence factor.

tiger [VERT ZOO] *Felis tigris*. An Asiatic carnivorous mammal in the family Felidae characterized by a tawny coat with transverse black stripes and white underparts.

Tiger [AERO ENG] A United States single-engine, single-seat, supersonic jet fighter designed for operating from aircraft carriers for the interception and destruction of enemy aircraft, and the support of troops ashore; armament consists of Sidewinders, cannons, and rocket packs. Designated F-11.

tiger beetle [INV ZOO] The common name for any of the bright-colored beetles in the family Cicindelidae; there are about 1300 species distributed all over the world.

tiger salamander [VERT ZOO] *Ambystoma tigrinum*. A salamander in the family Ambystomatidae, found in a variety of subspecific forms from Canada to Mexico and over most of the United States; lives in arid and humid regions, and is the only salamander in much of the Great Plains and Rocky Mountains.

tiger's-eye [MINERAL] A yellowish-brown crystalline variety of quartz; a translucent, fibrous, broadly chatoyant gemstone that may be dyed other colors.

tiger shark *See* sand shark.

tight [ENG] **1.** Unbroken, crack-free, and solid rock in which a naked hole will stand without caving. **2.** A borehole made impermeable to water by cementation or casing. [MECH ENG] **1.** Inadequate clearance or the barest minimum of clearance between working parts. **2.** The absence of leaks in a pressure system.

tight binding approximation [SOLID STATE] A method of calculating energy states and wave functions of electrons in a solid in which the wave function is assumed to be a sum of pure atomic wave functions centered about each of the atoms in the lattice, each multiplied by a phase factor; it is suitable for deep-lying energy levels.

tight coupling *See* close coupling.

tight fit [DES ENG] A fit between mating parts with slight negative allowance, requiring light to moderate force to assemble.

tight fold *See* closed fold.

tight ion pair [ORG CHEM] An ion pair composed of individual ions which keep their stereochemical configuration; no solvent molecules separate the cation and anion. Also known as contact ion pair; intimate ion pair.

tight sand [GEOL] A sand whose interstices are filled with finer grains of the matrix material, thus effectively destroying porosity and permeability. Also known as close sand.

TIG welding *See* tungsten–inert gas welding.

tilasite [MINERAL] $CaMg(AsO_4)F$ A gray, gray-violet, olive green, or apple green, monoclinic mineral consisting of a fluorarsenate of calcium and magnesium.

tile [MATER] **1.** A piece of fired clay, stone, concrete, or other material used ornamentally to cover roofs, floors, or walls. **2.** A hollow building unit made of burned clay or other material.

till [GEOL] Unsorted and unstratified drift consisting of a heterogeneous mixture of clay, sand, gravel, and boulders which is deposited by and underneath a glacier. Also known as boulder clay; glacial till; ice-laid drift.

till billow [GEOL] An undulating mass of glacial drift that is disposed in an irregular pattern with regard to the direction of movement of the ice.

tiller [NAV ARCH] A lever attached to the rudder of a boat or ship and used to turn the rudder from side to side, usually turned by hand in a boat and by mechanical devices in a ship.

Tilletiaceae [MYCOL] A family of fungi in the order Ustilaginales in which basidiospores form at the tip of the apibasidium.

tilleyite [MINERAL] $Ca_5(Si_2O_7)(CO_3)_2$ A white mineral consisting of a carbonate and silicate of calcium.

tillite [PETR] A sedimentary rock formed by lithification of till, especially pre-Pleistocene till.

Tillodontia [PALEON] An order of extinct quadrupedal land mammals known from early Cenozoic deposits in the Northern Hemisphere and distinguished by large, rodentlike incisors, blunt-cuspid cheek teeth, and five clawed toes.

tilloid [GEOL] A nonglacial till-like deposit. [PETR] A rock of uncertain origin which resembles tillite.

till plain [GEOL] An extensive, relatively flat area overlying a till.

till sheet [GEOL] A sheet, layer, or bed of till.

tilt [AERO ENG] The inclination of an aircraft, winged missile, or the like from the horizontal, measured by reference to the lateral axis or to the longitudinal axis. [ELECTROMAG] **1.** Angle which an antenna forms with the horizontal. **2.** In radar, the angle between the axis of radiation in the vertical plane and a reference axis which is normally the horizontal. [METEOROL] The inclination to the vertical of a significant feature of the circulation (or pressure) pattern or of the field of temperature or moisture; for example, troughs in the westerlies usually display a westward tilt with altitude in the lower and middle troposphere. [OPTICS] The angle between the plane of a photograph from a downward-pointing camera and the horizontal plane.

tilt angle [ELECTROMAG] The angle between the axis of radiation of a radar beam in the vertical plane and a reference axis (normally the horizontal).

tilt block [GEOL] A tilted fault block.

tilted iceberg [OCEANOGR] A tabular iceberg that has become unbalanced, so that the flat, level top is inclined.

tilted interface [GEOL] Oil-water interface in which water moves in a generally linear direction under an oil accumulation which is, for instance, in an anticline.

tilt error [NAV] The error caused by the propagation of signals over the tilted ionosphere reflecting layer or, in systems requiring reception over two or more widely separated locations, by the different heights of the ionosphere reflecting layer for the various transmissions.

tilting dozer [MECH ENG] A bulldozer whose blade can be pivoted on a horizontal center pin to cut low on either side.

tilting idlers [MECH ENG] An arrangement of idler rollers in which the top set is mounted on vertical arms which pivot on spindles set low down on the frame of the roller stool.

tilting mixer [MECH ENG] A small-batch mixer consisting of a rotating drum which can be tilted to discharge the contents; used for concrete or mortar.

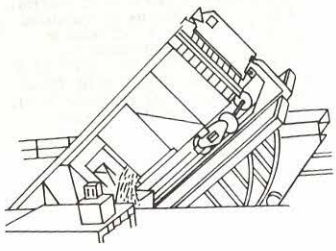
tilting-type boxcar unloader [CIV ENG] A mechanism that is used to unload material such as grain from a boxcar; the car, with its door open, is held by end clamps on the specialized piece of track and tilted 15% from the vertical and then tilted endwise 40% to the horizontal to discharge the material at one end of the car, and 40% in the opposite direction to discharge the material from the opposite end.

tiltmeter [ENG] An instrument used to measure small changes in the tilt of the earth's surface, usually in relation to a liquid-level surface or to the rest position of a pendulum.

tilt mold [MET] A mold that rotates from a horizontal to a vertical position during filling to reduce agitation and risk of dross entrapment.

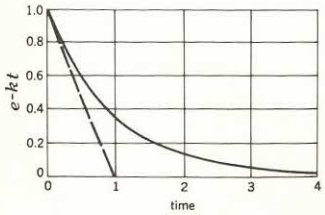
tilt/rotate code [ENG] A code that instructs a "golf ball"

TILTING-TYPE BOXCAR UNLOADER



Drawing of a tilting-type unloader. *(Link-Belt Co.)*

TIME CONSTANT



Graph of exponentially decreasing variable e^{-kt} (def. 2) as a function of time in time constants. Dotted line indicates variable that continues to decrease at same rate that exponential variable decreases at time $t = 0$.

printing element which angle of tilt and rotation is needed to print a given character.

tilt rotor [AERO ENG] An assembly of rapidly rotating blades on a vertical takeoff and landing aircraft, whose plane of rotation can be continuously varied from the horizontal to the vertical, permitting performance as helicopter blades or as propeller blades.

timber [MATER] Wood used for building, carpentry, or joinery.

timbered stope [MIN ENG] A stope made of square-set timbering or any of its variations.

timbering [MIN ENG] The timber structure used for supporting the faces of an excavation during the progress of construction.

timbering machine [MIN ENG] An electrically driven machine to raise and hold timber in place while the supporting posts are being set, the posts having been cut to desired length previously by the machine's power-driven saw.

timberline [ECOL] The elevation or latitudinal limits for arboreal growth. Also known as tree line.

timber mat [MIN ENG] Broken timber forming the roof of an ore deposit that is being extracted by a caving method, such as top slicing.

timber packer *See* pack builder.

timber puller [MIN ENG] A machine used to remove the timber supports in a mine.

timber trolley [MIN ENG] A carriage consisting of a timber or steel base, mounted on wheels, with U-shaped arms.

timber truck [MIN ENG] Any truck or car used for hauling timber inside of a mine.

timbre [ACOUS] That attribute of auditory sensation in terms of which a listener can judge that two sounds similarly presented and having the same loudness and pitch are dissimilar. Also known as musical quality.

time [PHYS] **1.** The dimension of the physical universe which, at a given place, orders the sequence of events. **2.** A designated instant in this sequence, as the time of day. Also known as epoch.

time-and-altitude azimuth [NAV] In celestial navigation, the azimuth derived by a computation in which meridian angle, declination, and altitude are parameters, the values of which are either known or assumed.

time and material contract [IND ENG] A contract providing for the procurement of supplies or services on the basis of direct labor hours at specified fixed hourly rates (which rates include direct and indirect labor, overhead, and profit), and material at cost.

time and motion study [IND ENG] Observation, analysis, and measurement of the steps in the performance of a job to determine a standard time for each performance. Also known as time-motion study.

time assignment speech interpolation [COMMUN] Modulation technique based on the fact that speech is never a continuous stream of information, but consists of a large number of short signals; therefore, the period between the speech signals is used for transmitting other data.

time-average holographic interferometry [OPTICS] The study of holograms of a vibrating surface which have been averaged over time; illumination of such a hologram yields an image of the surface on which are superimposed interference fringes which are contour lines of equal displacement of the surface, enabling vibrational amplitudes of the surface to be measured with precision.

time azimuth [NAV] In celestial navigation, the azimuth derived by a calculation in which the meridian angle, the polar distance (or declination), and the latitude are parameters, the magnitudes of which are either known or assumed.

time base [ELECTR] A device which moves the fluorescent spot rhythmically across the screen of the cathode-ray tube.

time-base generator *See* sweep generator.

time break [ENG] A distinctive mark shown on an exploration seismogram to indicate the exact detonation time of an explosive energy source.

time-change component [ENG] A component which because of design limitations or safety is specified to be rebuilt or overhauled after a specified period of operation (for example, an engine or propeller of an airplane).

time-code generator [ELECTR] A crystal-controlled pulse generator that produces a train of pulses with various predetermined widths and spacings, from which the time of day and sometimes also day of year can be determined; used in telemetry and other data-acquisition systems to provide the precise time of each event.

time constant [PHYS] **1.** The time required for a physical quantity to rise from zero to $1 - 1/e$ (that is, 63.2%) of its final steady value when it varies with time t as $1 - e^{-kt}$. **2.** The time required for a physical quantity to fall to $1/e$ (that is, 36.8%) of its initial value when it varies with time t as e^{-kt}. **3.** Generally, the time required for an instrument to indicate a given percentage of the final reading resulting from an input signal. Also known as lag coefficient.

time-controlled system *See* clock control system.

time-correlation [GEOL] A correlation of age or mutual time relations between stratigraphic units in separated areas.

time-current characteristics [ELEC] Of a fuse, the relation between the root-mean-square alternating current or direct current and the time for the fuse to perform the whole or some specified part of its interrupting function.

time curve *See* time front.

time delay [PHYS] The time required for a signal to travel between two points in a circuit or for a wave to travel between two points in space.

time-delay circuit [ELECTR] A circuit in which the output signal is delayed by a specified time interval with respect to the input signal. Also known as delay circuit.

time-delay fuse [ELEC] A fuse in which the burnout action depends on the time it takes for the overcurrent heat to build up in the fuse and melt the fuse element.

time-delay relay [ELEC] A relay in which there is an appreciable interval of time between energizing or deenergizing of the coil and movement of the armature, such as a slow-acting relay and a slow-release relay.

time-derived channel [COMMUN] Any of the channels which result from time-division multiplexing of a channel.

time diagram [ASTRON] A diagram in which the celestial equator appears as a circle, and celestial meridians and hour circles as radial lines; used to facilitate solution of time problems and other problems involving arcs of the celestial equator or angles at the pole, by indicating relations between various quantities involved; conventionally, the relationships are given as viewed from a point over the South Pole, in a westward direction or counterclockwise. Also known as diagram on the plane of the celestial equator; diagram on the plane of the equinoctial.

time dilation effect *See* slowing of clocks.

time-distance graph [AERO ENG] A graph used to determine the ground distance for air-route legs of a specified time interval; time-distance relationships are often simplified by considering air, wind, and ground distances for flight legs of 1-hour duration.

time-division data links [COMMUN] Radio communications which use time-division techniques for channel separation.

time-division multiplexing [COMPUT SCI] The interleaving of bits or characters in time to compensate for the slowness of input devices as compared to data transmission lines. [COMMUN] A process for transmitting two or more signals over a common path by using successive time intervals for different signals. Also known as time multiplexing.

time-division multiplier *See* mark-space multiplier.

time-division sound [COMMUN] A method under development, employing time-division multiplexing, which enables the audio signal of a television broadcast to be transmitted over the same channel as the video signal. Also known as tidi-sound.

time-division switching system [ELECTR] A type of electronic switching system in which input signals on lines and trunks are sampled periodically, and each active input is associated with the desired output for a specific phase of the period.

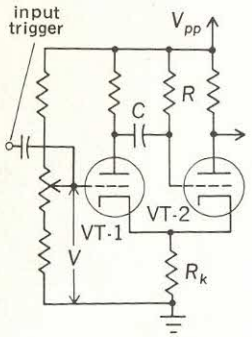
time-domain reflectometer [ELECTR] An instrument that measures the electrical characteristics of wideband transmission systems, subassemblies, components, and lines by feeding in a voltage step and displaying the superimposed reflected signals on an oscilloscope equipped with a suitable time-base sweep. Abbreviated TDR.

timed signal service [COMMUN] Radio communications service for the transmission of time signals of stated high precision, intended for general reception.

time factor *See* time scale.

time fire [ORD] Fire in which fuses are set to act after a fixed time interval and before impact.

TIME-DELAY CIRCUIT



Circuit diagram of a monostable multivibrator used as a time-delay circuit. A small input trigger pulse gives rise to output signals at the plates of vacuum tubes VT-1 and VT-2 whose duration is proportional to resistance R when product of R and capacitance C is held fixed. R_k = resistance of cathode lead; V_{pp} = plate supply voltage.

time formula [IND ENG] A formula to determine the standard time of an operation as a function of one or more variables in the operation.

time front [AERO ENG] A locus of points representing the maximum ground distances from a departure point that can be covered by an aircraft in a prescribed time interval. Also known as hour-out line; time curve.

time fuse [ENG] A fuse which contains a graduated time element to regulate the time interval after which the fuse will function.

time gate [ELECTR] A circuit that gives an output only during chosen time intervals.

time-height section [ELECTR] A facsimile trace of a vertically directed radar; specifically, a cloud-detection radar.

time-interval measurement [HOROL] A process that consists either in calculating the duration between two known epochs, or in counting the repetitions of a recurring phenomenon from an arbitrary starting point, as with an electronic digital-reading counter, which counts the cycles of an oscillator.

time-interval radiosonde *See* pulse-time-modulated radiosonde.

time-invariant system [CONT SYS] A system in which all quantities governing the system's behavior remain constant with time, so that the system's response to a given input does not depend on the time it is applied.

time lag [ORD] The amount by which the time of fall of a bomb, released under given conditions, would exceed that of an ideal bomb released under identical conditions. [PHYS] The time between a cause and a resultant effect, as between occurrence of a primary ionizing event and its count by a counter.

time-lapse photography [GRAPHICS] Motion picture photography in which a single frame is exposed at regular intervals; when the film is projected at normal speed, the action appears to be speeded up.

timelike vector [RELAT] A four vector in Minkowski space whose space component has a magnitude which is less than the magnitude of its time component multiplied by the speed of light.

time line [GEOL] **1.** A line that indicates equal geologic age in a correlation diagram. **2.** A rock unit represented by a time line.

time-mark generator [ELECTR] A signal generator that produces highly accurate clock pulses which can be superimposed as pips on a cathode-ray screen for timing the events shown on the display.

time measurement [HOROL] A process that consists in counting the repetitions of any recurring phenomenon and, if the interval between successive recurrences is sensible, in subdividing it.

time meridian [ASTRON] Any meridian used as a reference for reckoning time, particularly a zone or standard meridian.

time modulation [COMMUN] Modulation in which the time of occurrence of a definite portion of a waveform is varied in accordance with a modulating signal.

time-motion study *See* time and motion study.

time-multiplexing *See* multiprogramming; time-division multiplexing.

time-of-day clock [COMPUT SCI] An electronic device that registers the actual time, generally accurate to 0.1 second, through a 24-hour cycle, and transmits its reading to the central processing unit of a computer upon demand.

time of delivery [COMMUN] The time at which the addressee or responsible relay agency receipts for a message.

time of flight [MECH] Elapsed time in seconds from the instant a projectile or other missile leaves a gun or launcher until the instant it strikes or bursts. [PHYS] The elapsed time from the instant a particle leaves a source to the instant it reaches a detector.

time-of-flight mass spectrometer [SPECT] A mass spectrometer in which all the positive ions of the material being analyzed are ejected into the drift region of the spectrometer tube with essentially the same energies, and spread out in accordance with their masses as they reach the cathode of a magnetic electron multiplier at the other end of the tube.

time of origin [COMMUN] The time at which a message is released for transmission.

time of receipt [COMMUN] The time at which a receiving station completes reception of a message.

time of set [MATER] The time required for freshly mixed concrete to stiffen (initial set, about 1 hour) or to attain a minimum specified hardness (final set, about 10 hours); actual times vary with the type of cement used.

time on target [ORD] **1.** A method of firing on a target in which various artillery units time their fire so that all projectiles reach the target simultaneously. **2.** A measure of the ability of a fire-control system or gunner to keep a weapon aimed at a moving target or to keep a weapon mounted on a moving vehicle aimed at a target; a useful evaluation of stabilizers.

time over target [ORD] The time at which an aircraft or formation of aircraft arrives over a designated point for the purpose of conducting an air mission on a target.

time-phase [PHYS] Two disturbances are in time phase if they reach corresponding peak values at the same instants of time, though not necessarily at the same points in space.

time-pulse distributor [ELECTR] A device or circuit for allocating timing pulses or clock pulses to one or more conducting paths or control lines in specified sequence.

time quadrature [PHYS] **1.** Differing by a time interval corresponding to one-fourth the time of one cycle of the frequency in question. **2.** An integration over time.

time quantum *See* time slice.

time quenching [MET] Interrupted quenching in which the time in the quenching medium is controlled.

timer [ELECTR] A circuit used in radar and in electronic navigation systems to start pulse transmission and synchronize it with other actions, such as the start of a cathode-ray sweep. [ENG] **1.** A device for automatically starting or stopping a machine or other device. **2.** *See* interval timer. [MECH ENG] A device that controls timing of the ignition spark of an internal combustion engine at the correct time.

timer clock [COMPUT SCI] An electronic device in the central processing unit of a computer which times events that occur during the operation of the system in order to carry out such functions as changing computer time, detecting looping and similar error conditions, and keeping a log of operations.

time redundancy [COMPUT SCI] Performing a computation more than once and checking the results in order to increase reliability.

time reference scanning beam [NAV] **1.** A radio or radar beam which is swept to and fro over a sector of space and in such a manner that the interval between reception of successive pulses at an aircraft indicates the aircraft's altitude or azimuth. **2.** A system of ground equipment that generates such beams at microwave frequencies to furnish guidance to aircraft making microwave landings. Abbreviated TRSB.

time-resolved laser spectroscopy [SPECT] A method of studying transient phenomena in the interaction of light with matter through the exposure of samples to extremely short and intense pulses of laser light, down to subnanosecond or subpicosecond duration.

time reversal [PHYS] The replacement of the time coordinate t by its negative $-t$ in the equations of motion of a dynamical system; the time reversal operator, a symmetry operator for a quantum-mechanical system, contains also the complex conjugation operator and a matrix operating on the spin coordinate.

time-reversal reflection *See* optical phase conjugation.

time-rock unit *See* time-stratigraphic unit.

time scale [COMPUT SCI] The ratio of the time duration of an event as simulated by an analog computer to the actual time duration of the event in the physical system under study. Also known as time factor.

time separation [AERO ENG] The time interval between adjacent aircraft flying approximately the same path.

time series [STAT] A statistical process analogous to the taking of data at intervals of time.

time series analysis [MATH] The general study of mathematical systems or processes analogous to that of data taken at time intervals.

time-share [COMPUT SCI] To perform several independent processes almost simultaneously by interleaving the operations of the processes on a single high-speed processor.

time-shared amplifier [ELECTR] An amplifier used with a synchronous switch to amplify signals from different sources one after another.

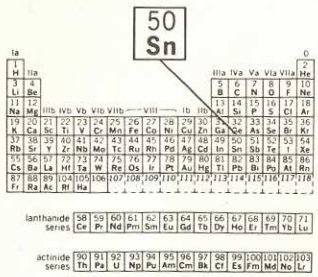
time-sharing [COMPUT SCI] The simultaneous utilization of a computer system from multiple terminals.

time sight [NAV] A common method for determining longitude by celestial observations; these observations are reduced by

TIMOTHY

Drawing of timothy *(Phleum pratense)* showing leafy stems and cylindrical inflorescence.

TIN



Periodic table of the chemical elements showing the position of tin.

TINNER'S RIVET

Head of tinner's rivet.

solving the navigational triangle for meridian angle and require known or assumed values for altitude, latitude, and declination; the meridian angle is converted to local hour angle and compared with Greenwich hour angle, and the latter is read from astronomical tables.

time signal [COMMUN] An accurate signal which is broadcast by radio and marks a specified time or time interval, used for setting timepieces and for determining their errors; in particular, a radio signal broadcast at accurately known times each day on a number of different frequencies by WWV and other stations.

time slice [COMPUT SCI] A time interval during which a time-sharing system is processing one particular computer program. Also known as time quantum.

time standard [HOROL] A recurring phenomenon, used as a reference for establishing a unit of time; the presently accepted standard is the second, defined to be 9,192,631,770 transitions between two specified hyperfine levels of the atom of cesium-133. [IND ENG] *See* standard time.

time-stratigraphic facies [GEOL] A stratigraphic facies based on the amount of geologic time during which deposition and nondeposition of sediment occurred.

time-stratigraphic unit [GEOL] A stratigraphic unit based on geologic age or time of origin. Also known as chronolith; chronolithologic unit; chronostratic unit; chronostratigraphic unit; time-rock unit.

time study [IND ENG] A work measurement technique, generally using a stopwatch or other timing device, to record the actual elapsed time for performance of a task, adjusted for any observed variance from normal effort or pace, unavoidable or machine delays, rest periods, and personal needs.

time switch [ENG] A clock-controlled switch used to open or close a circuit at one or more predetermined times.

time tick [COMMUN] A radio-broadcast time signal consisting of one or more short audible sounds or beats; in particular, one which is generated by an accurately controlled pulsed radio signal.

time-transgressive *See* diachronous.

time-varying system [CONT SYS] A system in which certain quantities governing the system's behavior change with time, so that the system will respond differently to the same input at different times.

time zone [ASTRON] To avoid the inconvenience of the continuous change of mean solar time with longitude, the earth is divided into 24 time zones, each about 15° wide and centered on standard longitudes, 0°, 15°, 30°, and so on; within each zone the time kept is the mean solar time of the standard meridian.

timing [MECH ENG] Adjustment in the relative position of the valves and crankshaft of an automobile engine in order to produce the largest effective output of power. [ORD] Adjustment of a small-arms weapon so that it will perform each function at a predetermined point in the cycle of operation.

timing-axis oscillator *See* sweep generator.

timing belt [DES ENG] A power transmission belt with evenly spaced teeth on the bottom side which mesh with grooves cut on the periphery of the pulley to produce a positive, no-slip, constant-speed drive. Also known as cogged belt; synchronous belt. [MECH ENG] A positive drive belt that has axial cogs molded on the underside of the belt which fit into grooves on the pulley; prevents slip, and makes accurate timing possible; combines the advantages of belt drives with those of chains and gears. Also known as positive drive belt.

timing belt pulley [MECH ENG] A pulley that is similar to an uncrowned flat-belt pulley, except that the grooves for the belt's teeth are cut in the pulley's face parallel to the axis.

timing error [COMPUT SCI] An error made in planning or writing a computer program, usually in underestimating the time that will be taken by input/output or other operations, which causes unnecessary delays in the execution of the program.

timing gears [MECH ENG] The gear train of reciprocating engine mechanisms for relating camshaft speed to crankshaft speed.

timing motor [ELEC] A motor which operates from an alternating-current power system synchronously with the alternating-current frequency, used in timing and clock mechanisms. Also known as clock motor.

timing relay [ELEC] Form of auxiliary relay used to introduce a definite time delay in the performance of a function.

timing signal [ELECTR] Any signal recorded simultaneously with data on magnetic tape for use in identifying the exact time of each recorded event.

Timken film strength [ENG] A test used on a gear lubricant to determine the amount of pressure the film of oil can withstand before rupturing.

Timken wear test [ENG] A test used on a gear lubricant to determine its abrasive effect on gear metals.

timothy [BOT] *Phleum pratense*. A perennial hay grass of the order Cyperales characterized by moderately leafy stems and a dense cylindrical inflorescence.

tin [CHEM] Metallic element in group IV, symbol Sn, atomic number 50, atomic weight 118.69; insoluble in water, soluble in acids and hot potassium hydroxide solution; melts at 232°C, boils at 2260°C. [MET] A lustrous silver-white ductile, malleable metal used in alloys, for solder, terneplate, and tinplate.

Tinamidae [VERT ZOO] The single family of the avian order Tinamiformes.

Tinamiformes [VERT ZOO] The tinamous, an order of South and Central American birds which are superficially fowllike but have fully developed wings and are weak fliers.

tin bisulfide *See* stannic sulfide.

tin bromide *See* stannic bromide; stannous bromide.

tin bronze [MET] A tin-copper alloy.

tincal *See* borax.

tincalconite [MINERAL] $Na_2B_4O_7 \cdot 5H_2O$ A colorless to dull-white mineral, crystallizing in the rhombohedral system; one of the principal ores of borax and boron compounds. Also known as mohavite; octahedral borax.

tin chloride *See* stannic chloride; stannous chloride.

tin chromate *See* stannic chromate; stannous chromate.

tin crystals *See* stannous chloride.

tincture [MATER] A dilute solution (aqueous or aqueous alcoholic) of a drug or chemical; more dilute than fluid extracts, less volatile than spirits.

tincture of iodine [PHARM] A medicinal preparation used as an anti-infective containing 20 grams iodine and 24 grams sodium iodide in 1000 milliliters of alcohol. Also known as iodine solution; iodine tincture.

tin dichloride *See* stannous chloride.

tin difluoride *See* stannous fluoride.

tin dioxide *See* stannic oxide.

tinea *See* ringworm.

tinea favosa *See* favus.

Tineidae [INV ZOO] A family of small moths in the superfamily Tineoidea distinguished by an erect, bristling vestiture on the head.

Tineoidea [INV ZOO] A superfamily of heteroneuran Lepidoptera which includes small moths that usually have well-developed maxillary palpi.

tin fluoride *See* stannous fluoride.

tinfoil [MET] Foil made of tin or a tin alloy.

Tingidae [INV ZOO] The lace bugs, the single family of the hemipteran superfamily Tingoidea.

Tingoidea [INV ZOO] A superfamily of the Hemiptera in the subdivision Geocorisae characterized by the wings with many lacelike areolae.

tin hydride [INORG CHEM] SnH_4 A gas boiling at -52°C. Also known as stannane.

tin iodide *See* stannic iodide.

tin monosulfide *See* stannous sulfide.

tinned wire [MET] Copper wire that has been coated during manufacture with a layer of tin or solder to prevent corrosion and simplify soldering of connections.

tinner's rivet [DES ENG] A special-purpose rivet that has a flat head, used in sheet metal work.

tinning [MET] **1.** Covering or preserving with tin. **2.** A protective coating of tin.

tinnitus [MED] A ringing, roaring, or hissing sound in one or both ears.

tin octoate *See* stannous 2-ethylhexoate.

tin oxalate *See* stannous oxalate.

tin oxide *See* stannic oxide; stannous oxide.

tin peroxide *See* stannic oxide.

tin pest [MET] Transformation of tin to a brittle, gray variety occurring spontaneously at temperatures below 0°C.

tinplate [MET] Thin sheet iron or steel coated with tin.

tin protosulfide *See* stannous sulfide.

tin protoxide *See* stannous oxide.

tin pyrites *See* stannite.

tin salts *See* stannous chloride.

tinsel cord [ELEC] A highly flexible cord used for headphone leads and test leads, in which the conductors are strips of thin metal foil or tinsel wound around a strong but flexible central cord.

tin stone *See* cassiterite.

tin sulfate *See* stannous sulfate.

tin sulfide *See* stannous sulfide.

tin sweat [MET] Exudation of tin-rich low-melting-point material from a tin-bronze surface as a result of inverse segregation in bronze casting, or overheating of the alloy.

tint [GRAPHICS] An even tone area on a printed page, often produced by screening black or a color to give a lighter shade. [OPTICS] The mixture of a pure color with white.

tin tetrabromide *See* stannic bromide.

tin tetrachloride *See* stannic chloride.

tin tetraiodide *See* stannic iodide.

tinticite [MINERAL] $Fe_3(PO_4)_2(OH)_3 \cdot 3\frac{1}{2}H_2O$ A creamy white mineral with a yellowish-green tint, consisting of a hydrated basic iron phosphate.

Tintinnida [INV ZOO] An order of ciliated protozoans in the subclass Spirotrichia whose members are conical or trumpet-shaped pelagic forms bearing shells.

tint of passage [OPTICS] The color produced when a plate which is colorless, but which rotates the plane of polarization of polarized light passing through it by an amount which depends on the wavelength of the light, is placed between crossed polarizers.

tintometer [OPTICS] A device used to estimate the intensity of a colored solution by comparing it with standard solutions or colored glass slides, as with the Lovibond tintometer.

tip [DES ENG] A piece of material secured to and differing from a cutter tooth or blade. [ELEC] The contacting part at the end of a phone plug. [ELECTR] A small protuberance on the envelope of an electron tube, resulting from the closing of the envelope after evacuation.

tipburn [PL PATH] A disease of certain cultivated plants, such as potato and lettuce, characterized by browning of the leaf margins due to excessive loss of water.

tip clearance [NAV ARCH] The clearance or distance between the circumference of the tip circle of a propeller and the hull of the vessel.

Tiphiidae [INV ZOO] A family of the Hymenoptera in the superfamily Scolioidea.

tip-in [GRAPHICS] **1.** A halftone illustration on smooth, coated paper that has been inserted on a page of a book printed on rough paper; a blank space is left on the rough page and the halftone is attached (tipped in) by a narrow coating of paste applied at the top edge. **2.** The insertion of a plate or full-page illustration on smoother or heavier stock than the rest of the book.

tip jack [ELEC] A small single-hole jack for a single-pin contact plug. Also known as pup jack.

tipped bit [DES ENG] A drill bit in which the cutting edge is made of especially hard material.

tipped solid cutters [DES ENG] Cutters made of one material and having tips or cutting edges of another material bonded in place.

tipper [MIN ENG] An apparatus for emptying coal or ore cars by turning them upside down and then righting them, with a minimum of manual labor.

tipping-bucket rain gage [ENG] A type of recording rain gage; the precipitation collected by the receiver empties into one side of a chamber which is partitioned transversely at its center and is balanced bistably upon a horizontal axis; when a predetermined amount of water has been collected, the chamber tips, spilling out the water and placing the other half of the chamber under the receiver; each tip of the bucket is recorded on a chronograph, and the record obtained indicates the amount and rate of rainfall.

tipple [MIN ENG] **1.** The place where the mine cars are tipped and emptied of their coal. **2.** The tracks, trestles, and screens at the entrance to a colliery, where coal is screened and loaded.

tip side [ELEC] Conductor of a circuit which is associated with the tip of a plug or the top spring of a jack; by extension, it is common practice to designate by these terms the conductors having similar functions or arrangements in circuits where plugs or jacks may not be involved.

Tipulidae [INV ZOO] The crane flies, a family of orthorrhaphous dipteran insects in the series Nematocera.

tire [ENG] A continuous metal ring, or pneumatic rubber and fabric cushion, encircling and fitting the rim of a wheel.

tire iron [DES ENG] A single metal bar having bladelike ends of various shapes to insert between the rim and the bead of a pneumatic tire to remove or replace the tire.

Tiros satellite [AERO ENG] Television infrared observation satellite; a meteorological satellite that takes television pictures of cloud cover, using radiation sensors and cameras; it stores and transmits this information on ground command.

tirrill burner [ENG] A modification of the bunsen burner which allows greater flexibility in the adjustment of the air-gas mixture.

Tirrill regulator [ELEC] A device for regulating the voltage of a generator, in which the field resistance of the exciter is short-circuited temporarily when the voltage drops.

Tischenko reaction [ORG CHEM] The formation of an ester by the condensation of two molecules of aldehyde utilizing a catalyst of aluminum alkoxides in the presence of a halide.

tissue [HISTOL] An aggregation of cells more or less similar morphologically and functionally. [TEXT] A sheer woven fabric or gauze, usually of fine quality.

tissue culture [CYTOL] Growth of tissue cells in artificial media.

tissue dose [NUCLEO] The dose received by a tissue in the region of interest, expressed in roentgens for x-rays and gamma rays.

tissue paper [MATER] Extremely lightweight paper, available in a great many colors and used in craft projects and in collage painting.

tissue roentgen *See* rep.

Titan [ASTRON] The largest satellite of Saturn, with a diameter estimated to be about 5800 kilometers. [ORD] A U.S. Air Force surface-to-surface intercontinental ballistic missile having a range of over 6000 miles (9700 kilometers) and a greater payload of nuclear or conventional weapons than Atlas; Titan uses inertial guidance alone or combined with radar guidance.

titanate [INORG CHEM] A salt of titanic acid; titanates of the M_2TiO_3 type are called metatitanates, those of the M_4TiO_4 type are called orthotitanates; an example is sodium titanate, $(Na_2O)_2Ti_2O_5$.

titanaugite [MINERAL] $Ca(Mg,Fe,Ti)(Si,Al)_2O_6$ A variety of augite rich in titanium and occurring in basaltic rocks.

titanellow *See* titanium trioxide.

titania *See* titanium dioxide.

Titania [ASTRON] A satellite of Uranus, with a diameter estimated to be 1600 kilometers.

titanic acid [INORG CHEM] H_2TiO_3 A white, water-insoluble powder; used as a dyeing mordant. Also known as metatitanic acid; titanic hydroxide.

titanic anhydride *See* titanium dioxide.

titanic chloride *See* titanium tetrachloride.

titanic hydroxide *See* titanic acid.

titanic iron ore *See* ilmenite.

titanic sulfate *See* titanium sulfate.

titanite *See* sphene.

titanium [CHEM] A metallic element in group IV, symbol Ti, atomic number 22, atomic weight 47.90; ninth most abundant element in the earth's crust; insoluble in water, melts at 1660°C, boils above 3000°C. [MET] A lustrous, silvery-gray, strong, light metal that is hard and brittle when cold, malleable when heated, and ductile when pure; used in the pure state or in alloys for aircraft and chemical-plate metals, for surgical instruments, and in cermets, and metal-ceramic brazing.

titanium boride [INORG CHEM] TiB_2 A hard solid that resists oxidation at elevated temperatures and melts at 2980°C; used as a refractory and in alloys, high-temperature electrical conductors, and cermets.

titanium butylate *See* tetrabutyl titanate.

titanium carbide [INORG CHEM] TiC Very hard gray crystals insoluble in water, soluble in nitric acid and aqua regia, melts at about 3140°C; used in cermets, arc-melting electrodes, and tungsten-carbide tools.

titanium chloride *See* titanium dichloride.

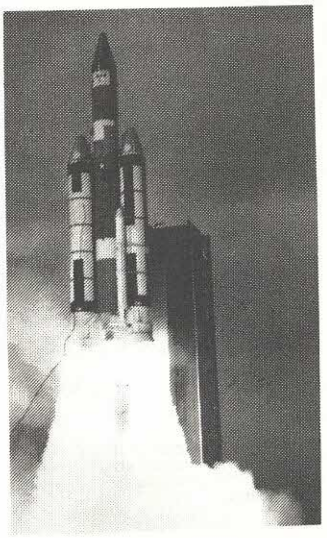
titanium dichloride [INORG CHEM] $TiCl_2$ A flammable, alcohol-soluble, black powder that decomposes in water, and in vacuum at 475°C, and burns in air. Also known as titanium chloride.

titanium dioxide [INORG CHEM] TiO_2 A white, water-insoluble powder that melts at 1560°C, and which is produced

TINTINNIDA

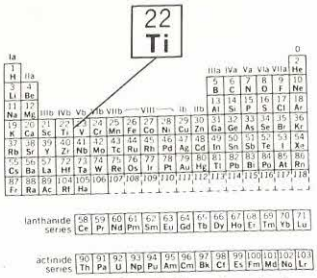
A living specimen of a representative species of the order Tintinnida in the genus *Tintinnopsis*, shown protruding from its lorica, or shell.

TITAN



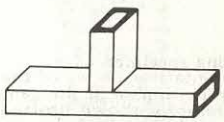
Launch of Titan III from Cape Canaveral, Florida, October 15, 1965. *(U.S. Air Force photograph)*

TITANIUM



Periodic table of the chemical elements showing the position of titanium.

T JUNCTION



Drawing showing one type of waveguide T junction.

TOAD

A toad of the genus *Bufo*, covered with warty structures that secrete poisons for purposes of defense.

commercially from the titanium dioxide minerals ilmenite and rutile; used in paints and cosmetics. Also known as titania; titanic anhydride; titanium oxide; titanium white.

titanium hydride [INORG CHEM] TiH_2 A black metallic powder whose dust is an explosion hazard and which dissociates above 288°C; used in powder metallurgy, hydrogen production, foamed metals, glass solder, and refractories, and as an electronic gas getter.

titanium nitride [INORG CHEM] TiN Golden-brown brittle crystals melting at 2927°C; used in refractories, alloys, cermets, and semiconductors.

titanium oxalate [ORG CHEM] $Ti_2(C_2O_4)_3 \cdot 10H_2O$ Toxic, yellow prisms soluble in water, insoluble in alcohol; used to make titanic acid and titanium metal. Also known as titanous oxalate.

titanium oxide *See* titanium dioxide; titanium trioxide.

titanium peroxide *See* titanium trioxide.

titanium sesquisulfate *See* titanous sulfate.

titanium sulfate [INORG CHEM] $Ti(SO_4)_2 \cdot 9H_2O$ Caked solid, soluble in water, toxic, highly acidic; used as a dye stripper, reducing agent, laundry chemical, and in treatment of chrome yellow colors. Also known as basic titanium sulfate; titanic sulfate; titanyl sulfate.

titanium tetrachloride [INORG CHEM] $TiCl_4$ A colorless, toxic liquid soluble in water, fumes when exposed to moist air, boils at 136°C; used to make titanium and titanium salts, as a dye mordant and polymerization catalyst, and in smoke screens and pigments. Also known as titanic chloride.

titanium trichloride [INORG CHEM] $TiCl_3$ Toxic, dark-violet, deliquescent crystals soluble in alcohol and some amines, decomposes in water with heat evolution, decomposes above 440°C; used as a reducing agent, chemical intermediate, polymerization catalyst, and laundry stripping agent. Also known as titanous chloride.

titanium trioxide [INORG CHEM] TiO_3 Yellow titanium oxide used to make ivory shades in ceramics. Also known as titanellow; titanium oxide; titanium peroxide.

titanium white *See* titanium dioxide.

Titanoideidae [PALEON] A family of extinct land mammals in the order Pantodonta.

titanothere [PALEON] Any member of the family Brontotheriidae.

titanous chloride *See* titanium trichloride.

titanous oxalate *See* titanium oxalate.

titanous sulfate [INORG CHEM] $Ti_2(SO_4)_3$ Green crystals soluble in dilute hydrochloric and sulfuric acids, insoluble in water and alcohol; used as a textile reducing agent. Also known as titanium sesquisulfate.

titanyl sulfate *See* titanium sulfate.

titer [CHEM] **1.** The concentration in a solution of a dissolved substance as shown by titration. **2.** The least amount or volume needed to give a desired result in titration. **3.** The solidification point of hydrolyzed fatty acids. [TEXT] **1.** The weight per unit length of yarn. **2.** The number of filaments in reeled silk thread.

Tithonian [GEOL] Southern European equivalent of the Portlandian stage (uppermost Jurassic) of geologic time.

Titius Bode law *See* Bode's law.

titrand [ANALY CHEM] The substance that is analyzed in a titration procedure.

titrant [ANALY CHEM] A standard solution of known concentration and composition used for analytical titrations.

titration [ANALY CHEM] A method of analyzing the composition of a solution by adding known amounts of a standardized solution until a given reaction (color change, precipitation, or conductivity change) is produced.

tivano [METEOROL] A night breeze blowing down the valley at Lake Como in Italy.

tjaele *See* frozen ground.

tjenting needle [GRAPHICS] The traditional tool for applying wax in the batik process; it is used for fine-line work and for outlining areas to be filled in by brush; the melted wax flows out from the fine needle spout.

T junction [ELECTR] A network of waveguides with three waveguide terminals arranged in the form of a letter T; in a rectangular waveguide a symmetrical T junction is arranged by having either all three broadsides in one plane or two broadsides in one plane and the third in a perpendicular plane.

Tl *See* thallium.

T²L *See* transistor-transistor logic.

TLP *See* transient lunar phenomena.

Tm *See* thulium.

TMA *See* trimethylamine.

TME *See* metric-technical unit of mass.

T method [BOT] A budding method in which a T-shaped cut is made through the bark at the internode of the stock, the bark of the scion is separated from the xylem along the cambium and removed, and the scion is forced into the incision on the stock.

TM mode *See* transverse magnetic mode.

TM wave *See* transverse magnetic wave.

Tn *See* thoron.

T network [ELEC] A network composed of three branches, with one end of each branch connected to a common junction point, and with the three remaining ends connected to an input terminal, an output terminal, and a common input and output terminal, respectively.

TNF *See* 2,4,7-trinitrofluorene.

TNT *See* 2,4,6-trinitrotoluene.

TNT–ammonium nitrate explosive [MATER] An explosive containing ammonium nitrate sensitized with trinitrotoluene; a proportion of aluminum powder or calcium silicide may be added to increase power and sensitiveness.

TNT equivalent [NUCLEO] A measure of the energy released in the detonation of a nuclear weapon, expressed in terms of the weight of TNT that would release the same amount of energy when exploded; usually expressed in kilotons or megatons of TNT; based on the release of 10^9 calories (approximately 4.18×10^9 joules) of energy by 1 ton of TNT.

toad [VERT ZOO] Any of several species of the amphibian order Anura, especially in the family Bufonidae; glandular structures in the skin secrete acrid, irritating substances of varying toxicity.

toadstool [MYCOL] Any of various fleshy, poisonous or inedible fungi with a large umbrella-shaped fruiting body.

to-and-fro ropeway *See* jig back.

Toarcian [GEOL] A European stage of geologic time; Lower Jurassic (above Pliensbachian, below Bajocian).

tobacco [BOT] **1.** Any plant of the genus *Nicotinia* cultivated for its leaves, which contain 1–3% of the alkaloid nicotine. **2.** The dried leaves of the plant.

tobacco jack *See* wolframite.

tobacco mosaic [PL PATH] Any of a complex of virus diseases of tobacco and other solanaceous plants in which the leaves are mottled with light- and dark-green patches, sometimes interspersed with yellow.

Tocco process [MET] A patented process for local hardening of steel by applying a high-frequency current to the area for a few seconds or until heated to the desired depth, then water-spraying the surface.

tocopherol [ORG CHEM] $C_{29}H_{50}O_2$ Any of several substances having vitamin E activity that occur naturally in certain oils; alpha tocopherol is the most potent.

tocophobia [PSYCH] Abnormal fear of children.

Todidae [VERT ZOO] The todies, a family of birds in the order Coraciiformes found in the West Indies.

toe [ANAT] One of the digits on the foot of man and other vertebrates. [CIV ENG] The part of a base of a dam or retaining wall on the side opposite to the retained material. [GEOL] The leading edge of a thrust nappe. [MET] The junction between the face of a weld and the base metal. [MIN ENG] **1.** The burden of material between the bottom of the borehole and the free face. **2.** The bottom of the borehole. **3.** A spurn, or small pillar of coal. **4.** The base of a bank in an open-pit mine.

toe crack [MET] A crack in the base metal at the toe of a weld.

toe cut [ENG] In underground blasting, the cut obtained by the use of toe holes.

toe hole [ENG] A blasting hole, usually drilled horizontally or at a slight inclination into the base of a bank, bench, or slope of a quarry or open-pit mine.

toe-in [MECH ENG] The degree (usually expressed in fractions of an inch) to which the forward part of the front wheels of an automobile are closer together than the rear part, measured at hub height with the wheels in the normal "straight ahead" position of the steering gear.

toenailing [ENG] The technique of driving a nail at an angle to join two pieces of lumber.

toe-out [MECH ENG] The outward inclination of the wheels

of an automobile at the front on turns due to setting the steering arms at an angle.

Toepler-Holtz machine [ELEC] An early type of machine for continuously producing electrical charges at high voltage by electrostatic induction, superseded by the Wimhurst machine. Also known as Holtz machine.

toe-to-toe drilling [ENG] The drilling of vertical large-diameter blasting holes in quarries and opencast pits.

tofan [METEOROL] A violent spring storm common in the mountains of Indonesia.

to-from indicator [NAV] An indicator that shows whether an aircraft is flying toward or away from an omnirange station. Also known as sense indicator.

toggle [ELECTR] To switch over to an alternate state, as in a flip-flop. [MECH ENG] A form of jointed mechanism for the amplification of forces.

toggle bolt [DES ENG] A bolt having a nut with a pair of pivotal wings that close against a spring; wings open after emergence through a hole or passage in a thin or hollow wall to fasten the unit securely.

toggle condition [ELECTR] Condition of a flip-flop circuit in which the internal state of the flip-flop changes from 0 to 1 or from 1 to 0.

toggle press [MECH ENG] A mechanical press in which a toggle mechanism actuates the slide.

toggle switch [ELEC] A small switch that is operated by manipulation of a projecting lever that is combined with a spring to provide a snap action for opening or closing a circuit quickly. [ELECTR] An electronically operated circuit that holds either of two states until changed.

toise [GEOD] A unit of length equal to about 6.4 feet (1.95 meters); used in early geodetic surveys.

tokamak [PL PHYS] A device for confining a plasma within a toroidal chamber, which produces plasma temperatures, densities, and confinement times greater than that of any other such device; confinement is effected by a very strong externally applied toroidal field, plus a weaker poloidal field produced by a toroidally directed plasma current, and this current causes ohmic heating of the plasma.

token [COMPUT SCI] A distinguishable unit in a sequence of characters.

token passing protocol [COMMUN] The assignment of data communications channels to units which communicate according to a fixed priority sequence.

tolazoline hydrochloride [ORG CHEM] $C_{10}H_{12}N_2 \cdot HCl$ Water-soluble white crystals, and melting at 173°C; used as a sympatholytic and vasodilator. Also known as priscol.

tolbutamide [PHARM] $C_{12}H_{18}N_2O_3S$ A hypoglycemic drug effective when administered orally.

toleragen [IMMUNOL] A substance which, in appropriate dosages, produces a state of specific immunological tolerance in humans or animals.

tolerance [DES ENG] The permissible variations in the dimensions of machine parts. [ENG] A permissible deviation from a specified value, expressed in actual values or more often as a percentage of the nominal value. [PHARM] **1.** The ability of enduring or being less responsive to the influence of a drug or poison, particularly when acquired by continued use of the substance. **2.** The allowable deviation from a standard, as the range of variation permitted for the content of a drug in one of its dosage forms.

tolerance chart [DES ENG] A chart indicating graphically the sequence in which dimensions must be produced on a part so that the finished product will meet the prescribed tolerance limits.

tolerance dose *See* permissible dose.

tolerance limits [DES ENG] The extreme values (upper and lower) that are permitted by the tolerance.

tolerance unit [DES ENG] A unit of length used to express the degree of tolerance allowed in fitting cylinders into cylindrical holes, equal, in micrometers, to $0.45\,D^{1/3} + 0.001\,D$, where D is the cylinder diameter in millimeters.

***ortho*-tolidine** [ORG CHEM] $[C_6H_3(CH_3)NH_2]_2$ Light-sensitive, combustible white to reddish crystals soluble in alcohol and ether, slightly soluble in water, melts at 130°C; used as an anlytical reagent and a curing agent for urethane resins. Also known as diaminoditolyl.

toll [COMMUN] **1.** Charge made for a connection beyond an exchange boundary. **2.** Any part of telephone plant, circuits, or services for which toll charges are made.

toll call [COMMUN] Telephone call to points beyond the area within which telephone calls are covered by a flat monthly rate or are charged for on a message unit basis.

toll center [COMMUN] A telephone central office where trunks from end offices are joined to the long-distance system, and operators are present; it is a class-4 office.

toll enrichment [NUCLEO] A proposed arrangement whereby privately owned uranium could be enriched in uranium-235 content in government facilities upon payment of a service charge by the owners.

Tollen's aldehyde test [ANALY CHEM] A test that uses an ammoniacal solution of silver oxides to test for aldehydes and ketones.

toll line [COMMUN] A telephone line or channel that connects different telephone exchanges.

toll office [COMMUN] A telephone central office which serves mainly to terminate and interconnect toll lines and various types of trunks.

toll television *See* subscription television.

toll terminal loss [COMMUN] The part of the overall transmission loss on a toll connection that is attributable to the facilities from the toll center through the tributary office, to and including the subscriber's equipment.

α-toluamide *See* α-phenylacetamide.

toluene [ORG CHEM] $C_6H_5CH_3$ A colorless, aromatic liquid derived from coal tar or from the catalytic reforming of petroleum naphthas; insoluble in water, soluble in alcohol and ether, boils at 111°C; used as a chemical intermediate, for explosives, and in high-octane gasolines. Also known as methylbenzene; phenylmethane; toluol.

toluene 2,4-diisocyanate [ORG CHEM] $CH_3C_6H_3(NCO)_2$ A liquid (at room temperature) with a sharp, pungent odor; miscible with ether, acetone, and benzene; used to make polyurethane foams and other elastomers, and also as a protein cross-linking agent. Also known as 2,4-diisocyanotololuene; 2,4-tolylene diisocyanate.

***para*-toluenesulfonate** *See para*-toluenesulfonic acid.

***para*-toluenesulfonic acid** [ORG CHEM] $C_6H_4(SO_3H)(CH_3)$ Toxic, colorless, combustible crystals soluble in water, alcohol, and ether; melts at 107°C; used in dyes and as a chemical intermediate and organic catalyst. Also known as *para*-toluenesulfonate.

toluenethiol *See* thiocresol.

toluene trichloride *See* benzotrichloride.

toluene trifluoride *See* benzotrifluoride.

α-toluic acid *See* phenylacetic acid.

***meta*-toluic acid** [ORG CHEM] $C_6H_4CH_3COOH$ White to yellow, combustible crystals soluble in alcohol and ether, slightly soluble in water, melts at 109°C; used as a chemical intermediate and base for insect repellants. Also known as 3-methylbenzoic acid; *meta*-toluylic acid.

***ortho*-toluic acid** [ORG CHEM] $C_6H_4CH_3COOH$ White, combustible crystals soluble in alcohol and chloroform, slightly soluble in water, melts at 104°C; used as a bacteriostat. Also known as 2-methylbenzoic acid; *ortho*-toluylic acid.

***para*-toluic acid** [ORG CHEM] $C_6H_4CH_3COOH$ Transparent, combustible crystals soluble in alcohol and ether, slightly soluble in water, melts at 180°C; used in agricultural chemicals and as an animal feed supplement. Also known as 4-methylbenzoic acid; *para*-toluylic acid.

α-toluic aldehyde *See* phenylacetaldehyde.

***meta*-toluidine** [ORG CHEM] $CH_3C_6H_4NH_2$ A combustible, colorless, toxic liquid soluble in alcohol and ether, slightly soluble in water, boils at 203°C; used for dyes and as a chemical intermediate. Also known as *meta*-aminotoluene.

***ortho*-toluidine** [ORG CHEM] $CH_3C_6H_4NH_2$ A light-green, light-sensitive, combustible, toxic liquid soluble in alcohol and ether, very slightly soluble in water, boils at 200°C; used for dyes and textile printing and as a chemical intermediate. Also known as *ortho*-aminotoluene.

***para*-toluidine** [ORG CHEM] $CH_3C_6H_4NH_2$ Toxic, combustible, white leaflets soluble in alcohol and ether, very slightly soluble in water, boils at 200°C; used as an analytical reagent and in dyes. Also known as *para*-aminotoluene.

α-tolunitrile *See* benzyl cyanide.

toluol *See* toluene.

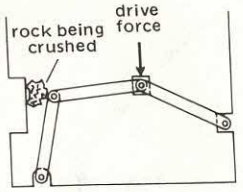
toluylene *See* stilbene.

toluylene red *See* neutral red.

***meta*-toluylic acid** *See meta*-toluic acid.

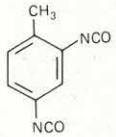
***ortho*-toluylic acid** *See ortho*-toluic acid.

TOGGLE



Toggle mechanism used in a rock crusher; relatively small drive force causes large force to be applied to rock.

TOLUENE-2,4-DIISOCYANATE



Structural formula.

para-toluylic acid *See* para-toluic acid.

2,4-tolylene diisocyanate *See* toluene 2,4-diisocyanate.

tolylmercaptan *See* thiocresol.

meta-tolyl N-methylcarbamate [ORG CHEM] $C_9H_{11}NO_2$. A white, crystalline compound, insoluble in water; used to control pests on rice, citrus, fruits, and cotton. Abbreviated MTMC.

para-tolyldichlorophosphinothioate [ORG CHEM] $C_7H_7Cl_2OPS$. Yellow crystals with a melting point of 62°C; soluble in ether, petroleum ether, benzene, carbon tetrachloride, and chloroform; a precursor to diazomethane; a useful reagent for the preparation of a wide range of biologically active compounds for gas chromatography analysis. Also known as *N*-methyl-*N*-nitroso-para-toluenesulfonamide.

Tomahawk [ORD] A solid-fuel cruise missile designed for firing from the torpedo tube of a submarine, climbing in air to a predetermined low altitude such as 300 meters, cruising horizontally to within striking range of its target, then homing on the target.

tomatine [ORG CHEM] $C_{50}H_{83}NO_{21}$. A glycosidal alkaloid obtained from the leaves and stems from the tomato plant; the crude extract is known as tomatin; white, toxic crystals; used as a plant fungicide and as a precipitating agent for cholesterol.

tomato [BOT] A plant of the genus *Lycopersicon*, especially *L. esculentum*, in the family Solanaceae cultivated for its fleshy edible fruit, which is red, pink, orange, yellow, white, or green, with fleshy placentas containing many small, oval seeds with short hairs and covered with a gelatinous matrix.

tombolo [GEOL.] A sand or gravel bar or spit that connects an island with another island or an island with the mainland. Also known as connecting bar; tie bar; tying bar.

tombolo cluster *See* complex tombolo.

tombolo series *See* complex tombolo.

tomentose [BOT] Covered with densely matted hairs.

tomentum [ANAT] The deep layer of the pia mater composed principally of minute blood vessels. [BOT] Pubescence consisting of densely matted woolly hairs.

tomium [VERT ZOO] The cutting edge of a bird's beak.

Tommy gun [ORD] Trademarked name for the Thompson submachine gun; sometimes erroneously applied to other submachine guns.

tomography *See* sectional radiography.

Tomopteridae [INV ZOO] The glass worms, a family of pelagic polychaete annelids belonging to the group Errantia.

ton [ENG ENG] A unit of volume of sea freight, equal to 40 cubic feet. Also known as freight ton; measurement ton; shipping ton. [MECH] **1.** A unit of weight in common use in the United States, equal to 2000 pounds or 907.18474 kilograms-force. Also known as net ton; net ton; short ton. **2.** A unit of mass in common use in the United Kingdom equal to 2240 pounds, or to 1016.0469088 kilograms-force. Also known as gross ton; long ton. **3.** A unit of weight in troy measure, equal to 2000 troy pounds, or to 746.4634432 kilograms-force. **4.** *See* tonne. [MECH ENG] A unit of refrigerating capacity, that is, of rate of heat flow, equal to the rate of extraction of latent heat when one short ton of ice of specific latent heat 144 international table British thermal units per pound is produced from water at the same temperature in 24 hours, equal to 200 British thermal units per minute, or to approximately 3516.85 watts. Also known as standard ton. [NAV ARCH] A unit of internal capacity of ships, equal to 100 cubic feet. Also known as register ton. [NUCLEON] The energy released by one metric ton of chemical high explosives calculated at the rate of 4000 calories per gram; equal to 4.19×10^9 joules; used principally in expressing the energy released by a nuclear bomb.

tonalite *See* quartz diorite.

tonelli [MECH] A unit of force equal to the force which will impart an acceleration of 1 foot per second to a mass of 1 long ton; equal to approximately 306.8803 newtons.

tone [ACOUS] **1.** A sound oscillation capable of exciting an auditory sensation having pitch. **2.** An auditory sensation having pitch. [ORGANOLEP] Each distinguishable shade variation from black to white on photographs.

tone-code ranging [NAV] In navigation by satellite, a method of transmitting a high-precision time signal using the reduced peak power available to a satellite; an audio frequency is used to phase an audio oscillator in the user equipment, and a train of short pulses is generated in synchronism with the zero-crossings of the audio tone to provide high-resolution timing.

tone control [ELECTR] A control used in an audio-frequency amplifier to change the frequency response so as to secure the most pleasing proportion of bass to treble; individual bass and treble controls are provided in some amplifiers.

tone dialing *See* pushbutton dialing.

tone generator [ELECTR] A signal generator used to generate an audio-frequency signal suitable for signaling purposes or for testing audio-frequency equipment.

tone localizer *See* equisignal localizer.

tone-modulated waves [COMMUN] Waves obtained from continuous waves by amplitude-modulating them at audio frequency in a substantially periodic manner.

tone modulation [COMMUN] Type of code-signal transmission obtained by causing the radio-frequency carrier amplitude to vary at a fixed audio frequency.

tone-operated net-loss adjuster [COMMUN] System for stabilizing the net loss of a telephone circuit by a tone transmitted between conversations.

toner [GRAPHICS] The fine, black, resinous powder used in electrostatic imaging processes to make an electrostatic image readable; the toner is either deposited directly on coated paper or transferred from a charged surface to ordinary paper, then fused to the paper by heating.

tone reversal [COMMUN] Distortion of the recorder copy in facsimile which causes the various shades of black and white not to be in the proper order.

tongara [METEOROL] A hazy, southeast wind in the Macassar Strait.

tong hold [MET] The end of a forging billet that is gripped by the operator's tongs; it is removed at the end of the forging operation.

Tongrian [GEOL.] A European stage of geologic time; lower Oligocene (above Ludian of Eocene, below Rupelian). Also known as Latorfian.

tongs [DES ENG] Any of various devices for holding, handling, or lifting materials and consisting of two legs joined eccentrically by a pivot or spring.

tongue [ANAT] A muscular organ located on the floor of the mouth in man and most vertebrates which may serve various functions, such as taking and swallowing food or tasting or as a tactile organ or sometimes a prehensile organ. [GEOL.] **1.** A minor rock-stratigraphic unit of limited geographic extent; it disappears laterally in one direction. **2.** A lava flow branching from a larger flow. [OCEANOGR] **1.** A protrusion of water into a region of different temperature, or salinity, or dissolved oxygen concentration. **2.** A protrusion of one water mass into a region occupied by a different water mass.

tongue and groove [DES ENG] A joint in which a projecting rib on the edge of one board fits into a groove in the edge of another board.

tongue worm *See* acorn worm.

tonic convulsion *See* tonic postural epilepsy, tonic spasm.

tonic labyrinthine reflexes [PHYSIO] Rotation or deviation of the head causes extension of the limbs on the same side as the chin, and flexion of the opposite extremities; deviation of the head produces increased extensor tonus of the upper extremities and relaxation of the lower limbs, while ventroflexion of the head produces the reverse; seen in the young infant and patients with a lesion at the midbrain level or above.

tonic neck reflexes [PHYSIO] Reflexes in which rotation or deviation of the head causes extension of the limbs on the same side as the chin, and flexion of the opposite extremities; deviation of the head produces increased extensor tonus of the upper extremities and relaxation of the lower limbs, and ventroflexion of the head, the reverse, seen normally in incomplete forms in the very young infant, and thereafter in patients with a lesion at the midbrain level or above.

tonic postural epilepsy [MED] A form of epilepsy in which seizures are characterized by a rigid posture with the arms and legs extended, hands pronated, and feet held in plantar flexion. Also known as tonic convulsion.

tonic spasm [MED] A spasm which persists for some time without relaxation. Also known as tonic convulsion.

ton-kilometer [MIN ENG] A unit of measurement equal to the weight in tons of material transported in a mine multiplied by the number of kilometers driven.

ton-mile [CIV ENG] In railroading, a standard measure of traffic, based on the rate of carriage per mile of each passenger or ton of freight.

tonnage [NAV ARCH] A measure of the size of a ship; it is

usually taken to mean gross tonnage or net tonnage, but may also refer to deadweight or displacement tonnage.

tonnage deck [NAV ARCH] In vessels having three or more decks to the hull, the tonnage deck is the second deck from the top; in all other cases, it is the upper deck of the hull.

tonne [MECH] A unit of mass in the metric system, equal to 1000 kilograms or to approximately 2204.62 pound mass. Also known as metric ton; millier; ton; tonneau.

tonneau *See* tonne.

tonofibril [CYTOL] Any of the fibrils converging on desmosomes in epithelial cells.

tonometer [MED] An electronic instrument that measures intraocular pressure within the eye: when placed in position, a tiny movable plate is pressed against the eye, flattening a circular section of the cornea (no eyeball anesthesia is required); a current is then sent through a small electromagnet, of such value that it will just pull the plate away from the eye; the value of the current is proportional to eye pressure; a measurement can be made in about 1 second; used in diagnosis of glaucoma. Also known as electronic tonometer.

tonoplast [BOT] The membrane surrounding a plant-cell vacuole.

Tonotron [ELECTR] Trademark for a type of direct-view storage tube.

tonsil [ANAT] **1.** Localized aggregation of diffuse and nodular lymphoid tissue found in the throat where the nasal and oral cavities open into the pharynx. **2.** *See* palatine tonsil.

tonsillectomy [MED] Surgical removal of the palatine tonsil.

tonsillitis [MED] Inflammation of the tonsils.

tonstein [GEOL] Kaolinitic bands in certain coalfields which have characteristic fossil fauna from short-lived but widespread marine invasions.

tonus [PHYSIO] The degree of muscular contraction when not undergoing shortening.

tool [ENG] Any device, instrument, or machine for the performance of an operation, for example, a hammer, saw, lathe, twist drill, drill press, grinder, planer, or screwdriver. [IND ENG] To equip a factory or industry for production by designing, making, and integrating machines, machine tools, and special dies, jigs, and instruments, so as to achieve manufacture and assembly of products on a volume basis at minimum cost.

tool bit [ENG] A piece of high-strength metal, usually steel, ground to make single-point cutting tools for metal-cutting operations.

toolbox [ENG] A box to hold tools.

tool-check system [IND ENG] A system for temporary issue of tools in which the employee is issued a number of small metal checks stamped with the same number; a check is surrendered for each tool obtained from the crib.

tool design [DES ENG] The division of mechanical design concerned with the design of tools.

tool-dresser [MECH ENG] A tool-stone-grade diamond inset in a metal shank and used to trim or form the face of a grinding wheel.

tool extractor [ENG] An implement for grasping and withdrawing drilling tools when broken, detached, or lost in a borehole.

toolhead [MECH ENG] The adjustable tool-carrying part of a machine tool.

tool joint [ENG] A coupling element for a drill pipe, designed to support the weight of the drill stem and the strain of frequent use, and to provide a leakproof seal.

toolmaker's vise *See* universal vise.

tool mark [GEOL] Any of the wide variety of current marks, such as groove marks, prod marks, and skip marks, produced by the continuous contact or intermittent impact of solid, current-borne objects against a muddy bottom.

tool nipper [MIN ENG] A person whose duty it is to carry powder, drills, and tools to the various levels of the mine and to bring dull tools and drills to the surface.

tool post [MECH ENG] A device to clamp and position a tool holder on a machine tool.

tool steel [MET] Any of various steels capable of being hardened sufficiently so as to be a suitable material for making cutting tools.

tooth [ANAT] One of the hard bony structures supported by the jaws in mammals and by other bones of the mouth and pharynx in lower vertebrates serving principally for prehension and mastication. [DES ENG] **1.** One of the regular projections on the edge or face of a gear wheel. **2.** An angular projection on a tool or other implement, such as a rake, saw, or comb. [GRAPHICS] **1.** The coarse or abrasive quality of a paper or a painting ground that assists in the application of charcoal, pastels, or paint. **2.** A paper texture that holds ink more readily. [INV PAT] Any of various sharp, horny, chitinous, or calcareous processes on or about any part of an invertebrate that functions like or resembles vertebrate jaws.

toothache [MED] Pain in or about a tooth. Also known as odontalgia.

tooth decay [MED] Caries of the teeth.

tooth point [DES ENG] The chamfered cutting edge of the blade of a face mill.

tooth shell [INV ZOO] A mollusk of the class Scaphopoda characterized by the elongate, tube-shaped, or cylindrical shell which is open at both ends and slightly curved.

top [GEOL] *See* overburden. [MECH] A rigid body one point of which is held fixed by an inertial reference frame, and which usually has an axis of symmetry passing through this point; its motion is usually studied when it is spinning rapidly about the axis of symmetry. [COAST MECH] See rotator.

top and bottom process [MET] A process in which sodium sulfide is added to molten copper-nickel sulfide to form a two-layer melt, with the bulk of the nickel in the bottom layer.

topaz [MINERAL] $Al_2SiO_4(F,OH)_2$ A red, yellow, green, blue, or brown nesosilicate mineral that crystallizes in the orthorhombic system and commonly occurs in prismatic crystals with pyramidal terminations; hardness is 8 on Mohs scale, and specific gravity is 3.4–3.6; used as a gemstone.

topaz quartz *See* citrine.

top-benching [MIN ENG] The method by which the bench is removed from above, as with a dragline.

top-blown rotary converter [MET] A rotary converter used for making nickel and steel; oxygen and other gases are fed to the furnace by a lance at the elevated end of the converter to permit formation of a metal product without oxidation.

top cager [MIN ENG] A person at the top of a mine shaft who superintends the lowering and raising of the cage, and, at most mines, the removing of loaded cars from the placing of empty cars in the cage.

top cut [MIN ENG] A machine cut made in the coal at or near the top of the working face in a mine.

top dead center [MECH ENG] The dead-center position of an engine piston and its crankshaft arm when at the top or outer end of its stroke.

top-down analysis [COMPUT SCI] A productive method of syntactic analysis which, starting from the root symbol, attempts to predict the means by which a string was generated.

top dyeing [TEXT] A method for dyeing combed wool yarn before spinning by placing it in large vats and circulating dye liquor through the yarn at increased temperature.

top grafting [AGR] Grafting a scion of one variety of tree onto the main branch of another.

top hamper *See* rigging.

top hooker *See* lander.

tophus [MED] A localized swelling principally in cartilage and connective tissues in or adjacent to the small joints of the hands and feet; occurs specifically in gout.

top lander *See* lander.

top-loaded vertical antenna [ELECTROMAG] Vertical antenna constructed so that, because of its greater size at the top, there results modified current distribution, giving a more desirable radiation pattern in the vertical plane.

topmark [NAV] A characteristic shape secured at the top of a buoy or beacon to aid in its identification.

topochemical control [CHEM] In a chemical reaction, product formation that is determined by the orientation of molecules in the crystal.

topocline [ECOL] A graded series of characters exhibited by a species or other closely related organisms along a geographical axis.

topogenesis *See* morphogenesis.

Topogon lens [OPTICS] A periscopic lens with opposite meniscus thick menisci to permit the correction of aperture aberrations for a moderate aperture and a large field; one or two plane-parallel plates are sometimes added to correct distortion.

topographical latitude *See* geodetic latitude.

topographic anatomy [ANAT] The use of bony and soft tissue landmarks on the surface of the body to indicate the known location of deeper structures.

Tube-shaped tooth shell.

Crystal form of topaz. (From Kenneth Cushman, American Museum of Natural History)

Components of a Topogon lens.

TORNADO

Tornado, at Fargo, North Dakota. *(Fargo Forum photograph by C. Gebert, Grand Prize Winner, 11th Annual Graflex Contest)*

topographic climax [ECOL] A climax plant community under a uniform macroclimate over which minor topographic features such as hills, rivers, valleys, or undrained depressions exert a controlling influence.

topographic curl effect [OCEANOGR] A term in Ekman's differential equation for the effects of variable wind stress, variable depth, variable friction, and variable latitude on the deep current; tends to make the curl G (velocity of deep current) positive when the current flows over increasing depth and negative when the depth decreases in the direction of the current.

topographic infancy *See* infancy.

topographic map [MAP] A large-scale map showing relief and man-made features of a portion of a land surface distinguished by portrayal of position, relation, size, shape, and elevation of the features.

topographic maturity *See* maturity.

topographic old age *See* old age.

topographic profile *See* profile.

topographic survey [ENG] A survey that determines ground relief and location of natural and man-made features thereon.

topographic unconformity [GEOGR] A lack of harmony or conformity between two parts of a landscape or two kinds of topography.

topographic youth *See* youth.

topography [GEOGR] **1.** The general configuration of a surface, including its relief; may be a land or water-bottom surface. **2.** The natural surface features of a region, treated collectively as to form.

topological groups [MATH] Groups which also have a topology with the property that the group operation and the inverse operation determine continuous functions.

topological K theory *See* K theory.

topologically closed set *See* closed set.

topological mapping *See* homeomorphism.

topological product [MATH] The topological space obtained from taking the cartesian product of topological spaces.

topological property [MATH] A property that holds true for any topological space homeomorphic to one possessing the property.

topological soliton [PHYS] A soliton whose confinement can be related to the existence of multiple states of minimum energy whose arrangement around the wave has special geometrical properties.

topological space [MATH] A set endowed with a topology.

topology [MATH] **1.** A collection of subsets of a set X, which includes X and the empty set, and has the property that any union or finite intersection of its members is also a member. **2.** The generalized study of properties of spaces invariant under deformations and stretchings.

topotaxis *See* tropism.

topotype [SYST] A specimen of a species not of the original type series collected at the type locality.

topped crude [MATER] A residual product remaining after the removal by distillation or other means of an appreciable quantity of the more volatile components of crude petroleum.

topping [CHEM ENG] The distillation of crude petroleum to remove the light fractions only; the unrefined distillate is called tops. [TEXT] A step in the dyeing process in which a dyed material is placed in a bath of another color.

topping governor *See* limit governor.

topping lift [NAV ARCH] A rope or chain extending from the head of a boom or gaff to a mast or to the vessel's structure for the purpose of supporting the weight and permitting the boom or gaff end to be raised or lowered.

topple [MECH] In gyroscopes for marine or aeronautical use, the condition of a sudden upset gyroscope or a gyroscope platform evidenced by a sudden and rapid precession of the spin axis due to large torque disturbances such as the spin axis striking the mechanical stops. Also known as tumble.

topple axis [MECH] Of a gyroscope, the horizontal axis, perpendicular to the horizontal spin axis, around which topple occurs. Also known as tumble axis.

topset bed [GEOL] One of the nearly horizontal sedimentary layers deposited on the top surface of an advancing delta.

top shell [INV ZOO] Any of the marine snails of the family Trochidae characterized by a spiral conical shell with a flat base.

topside sounder [AERO ENG] A satellite designed to measure ion concentration in the ionosphere from above the ionosphere.

TOROIDAL MAGNETIC CIRCUIT

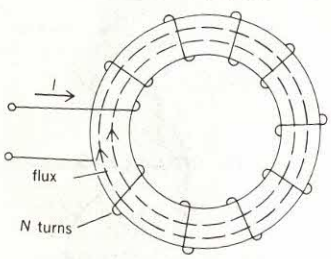


Diagram of toroidal magnetic circuit. I represents current. *(From A. E. Fitzgerald, D. E. Higginbotham, and A. Grabel, Basic Electrical Engineering, McGraw-Hill, 1967)*

top slicing [MIN ENG] A method of stoping in which the ore is extracted by excavating a series of horizontal (sometimes inclined) timbered slices alongside each other, beginning at the top of the ore body and working progressively downward.

top slicing and cover caving [MIN ENG] A mining method that entails the working of the ore body from the top down in successive horizontal slices that may follow one another sequentially or simultaneously; the overburden or cover is caved after mining a unit.

topsoil [GEOL] **1.** Soil presumed to be fertile and used to cover areas of special planting. **2.** Surface soil, usually corresponding with the A horizon, as distinguished from subsoil.

top steam [CHEM ENG] Steam admitted near the top of a shell still to purge the still, and to prevent a vacuum from forming when pumping out the liquid contents.

topwork [BOT] A procedure employed to propagate seedless varieties of fruit and hybrids, to change the variety of fruit, and to correct pollination problems, using any of three methods: root grafting, crown grafting, and top grafting.

tor [GEOGR] An isolated, rough pinnacle or rocky peak. [MECH] *See* pascal.

TORAN [NAV] A radiolocation receiver used with the Omega long-range navigation system having a digitized output and a position location capability of better than 50 meters.

torbanite [GEOL] A variety of coal that resembles a carbonaceous shale in outward appearance; it is fine-grained, black to brown, and tough. Also known as bitumenite; kerosine shale.

torbernite [MINERAL] $Cu(UO_2)_2(PO_4)_2 \cdot 8\text{-}12H_2O$ A green radioactive mineral crystallizing in the tetragonal system and occurring in tabular crystals or in foliated form. Also known as chalcolite; copper uranite; cuprouranite; uran-mica.

torch [ENG] A gas burner used for brazing, cutting, or welding.

torchon [TEXT] Bobbin lace made of coarse thread in simple fanlike or diamond-shaped design, with little background.

tornado [METEOROL] An intense rotary storm of small diameter, the most violent of weather phenomena; tornadoes always extend downward from the base of a convective-type cloud, generally in the vicinity of a severe thunderstorm.

tornado belt [METEOROL] The district of the United States in which tornadoes are most frequent; it encompasses the great lowland areas of the central and upper Mississippi, the Ohio, and lower Missouri River valleys.

tornado cellar *See* cyclone cellar.

tornado cloud *See* tuba.

tornado echo [METEOROL] A type of radar precipitation echo which has been observed in connection with a number of tornadoes; it frequently appears, on plan-position-indicator scopes, in the form of the figure 6 in the southwest sector of the storm; this echo has not been noted with all radar-observed tornadoes.

tornadotron [ELECTR] Millimeter-wave device which generates radio-frequency power from an enclosed, orbiting electron cloud, excited by a radio-frequency field, when subjected to a strong, pulsed magnetic field.

tornaria [INV ZOO] The larva of some acorn worms (Enteropneusta) which is large and marked by complex bands of cilia.

tornote [INV ZOO] A monaxon spicule in certain Porifera having both ends terminating abruptly in points.

torn-tape relay [COMMUN] Method of receiving messages in tape form, breaking the tape, and retransmitting the message in tape form.

Toro [ASTRON] A small asteroid with a diameter of about 6 kilometers, whose orbit, with semimajor axis of 1.368 astronomical units and eccentricity of 0.44, oscillates with that of Venus; it is about 0.13 astronomical unit from Earth at closest approach.

toroid *See* doughnut; toroidal magnetic circuit.

toroidal [SCI TECH] Shaped like a doughnut.

toroidal coil *See* toroidal magnetic circuit.

toroidal core [ELECTROMAG] The doughnut-shaped piece of magnetic material in a toroidal magnetic circuit.

toroidal magnetic circuit [ELECTROMAG] Doughnut-shaped piece of magnetic material, together with one or more coils of current-carrying wire wound about the doughnut, with the permeability of the magnetic material high enough so that the magnetic flux is almost completely confined within it. Also known as toroid; toroidal coil.

toromatic transmission [MECH ENG] A semiautomatic

transmission; it contains a compound planetary gear train with a torque converter.

torose [INV ZOO] **1.** Having knobby prominences on the surface. **2.** Cylindrical with alternate swellings and contractions.

torose load cast [GEOL] One of a group of elongate load casts with alternate contractions and swellings, which may terminate down current in bulbous, teardrop, or spiral forms.

Torpedinidae [VERT ZOO] The electric rays or torpedoes, a family of batoid sharks.

torpedo [ENG] An encased explosive charge slid, lowered, or dropped into a borehole and exploded to clear the hole of obstructions or to open communications with an oil or water supply. Also known as bullet. [ORD] A missile designed to contain an explosive charge and to be launched into water, where it is self-propelling and usually directable; used against ships or other targets in the water.

torpedo air flask [ORD] A cylindrical item having various compartments for housing compressed air, fuel, water, and chemicals, which when combined form the propelling charge of aerial and underwater torpedoes.

torpedo boat [NAV ARCH] Small, fast vessel that is equipped with torpedo tubes, carries very light guns, and uses its inconspicuousness and speed to get within torpedo range of a target.

torpedo defense net [ORD] A net employed to close an inner harbor to torpedoes fired from seaward or to protect an individual ship at anchor or underway.

torpedo exercise head [ORD] An item designed for attachment to a torpedo main assemblage to complete a torpedo for a practice run; it may contain recording instruments.

torpedo exploder mechanism [ORD] An electrical or mechanical device designed to actuate the explosive train of a torpedo warhead by means of a physical impact or an influence signal; it may contain a disarming device.

torpedo warhead extension [ORD] A metallic cylindrical item designed to change the center of gravity of a torpedo; it may be explosive-filled.

torpor [PHYSIO] The condition in hibernating poikilotherms during winter when body temperature drops in a parallel relation to ambient environmental temperatures.

torque [MECH] **1.** For a single force, the cross product of a vector from some reference point to the point of application of the force with the force itself. Also known as moment of force; rotation moment. **2.** For several forces, the vector sum of the torques (first definition) associated with each of the forces.

torque amplifier [COMPUT SCI] An analog computer device having input and output shafts and supplying work to rotate the output shaft in positional correspondence with the input shaft without imposing any significant torque on the input shaft.

torque arm [MECH ENG] In automotive vehicles, an arm to take the torque of the rear axle.

torque-coil magnetometer [ENG] A magnetometer that depends for its operation on the torque developed by a known current in a coil that can turn in the field to be measured.

torque converter [MECH ENG] A device for changing the torque speed or mechanical advantage between an input shaft and an output shaft.

torque-load characteristic [ENG] For electric motors, the armature torque developed versus the load on the motor at constant speed.

torquemeter [ENG] An instrument to measure torque.

torque motor [ELECTROMAG] A motor designed primarily to exert torque while stalled or rotating slowly.

torque reaction [MECH ENG] On a shaft-driven vehicle, the reaction between the bevel pinion with its shaft (which is supported in the rear axle housing) and the bevel ring gear (which is fastened to the differential housing) that tends to rotate the axle housing around the axle instead of rotating the axle shafts alone.

torque-speed characteristic [ELEC] For electric motors, the relationship of developed torque to armature speed.

torque-tube flowmeter [ENG] A liquid-flow measurement device in which a flexible torque tube transmits bellows motion (caused by differential pressure from the liquid flow through the pipe) to the recording pen arm.

torque-type viscometer [ENG] A device that measures liquid viscosity by the torque needed to rotate a vertical paddle submerged in the liquid; used for both Newtonian and non-Newtonian liquids and for suspensions.

torque-winding diagram [MECH ENG] A diagram showing how the winding load on a winch drum varies and is used to decide the method of balancing needed; made by plotting the turning moment in pounds per foot on the vertical axis against time, or revolutions or depth on the horizontal axis.

torque wrench [ENG] **1.** A hand or power tool used to turn a nut on a bolt that can be adjusted to deliver a predetermined amount of force to the bolt when tightening the nut. **2.** A wrench that measures torque while being turned.

torque yarn [TEXT] A yarn that tends to rotate or twist when hung freely.

torr [MECH] A unit of pressure, equal to 1/760 atmosphere; it differs from 1 millimeter of mercury by less than one part in seven million; approximately equal to 133.3224 pascals.

Torrert [GEOL] A suborder of the soil order Vertisol; it is the driest soil of the order and forms cracks that tend to remain open; occurs in arid regions.

torreyite [MINERAL] $(Mg,Mn,Zn)_7(SO_4)(OH)_{12}\cdot 4H_2O$ A bluish-white mineral consisting of a hydrated basic sulfate of magnesium, manganese, and zinc; occurs in massive form.

Torricellian barometer *See* mercury barometer.

Torricellian vacuum [FL MECH] The space enclosed above a column of mercury when a tube, closed at one end, is filled with mercury and then placed, open end downward, in a well of mercury; this space is evacuated except for mercury vapor.

Torricelli's law of efflux [FL MECH] The velocity of efflux of liquid from an orifice in a container is equal to that which would be attained by a body falling freely from rest at the free surface of the liquid to the orifice.

Torridincolidae [INV ZOO] A small family of coleopteran insects in the suborder Myxophaga found only in Africa and Brazil.

Torrid Zone [CLIMATOL] The zone of the earth's surface which lies between the Tropics of Cancer and Capricorn.

Torrox [GEOL] A suborder of the soil order Oxisol that is low in organic matter, well drained, and dry most of the year; believed to have been formed under rainier climates of past eras.

torsiometer [MECH ENG] An instrument which measures power transmitted by a rotating shaft; consists of angular scales mounted around the shaft from which twist of the loaded shaft is determined. Also known as torsionmeter.

torsion [MECH] A twisting deformation of a solid body about an axis in which lines that were initially parallel to the axis become helices.

torsional angle [MECH] The total relative rotation of the ends of a straight cylindrical bar when subjected to a torque.

torsional mode delay line [COMPUT SCI] A device in which torsional vibrations are propagated through a solid material to make use of the propagation time of the vibrations to obtain a time delay for the signals.

torsional modulus [MECH] The ratio of the torsional rigidity of a bar to its length. Also known as modulus of torsion.

torsional pendulum [MECH] A device consisting of a disk or other body of large moment of inertia mounted on one end of a torsionally flexible elastic rod whose other end is held fixed; if the disk is twisted and released, it will undergo simple harmonic motion, provided the torque in the rod is proportional to the angle of twist.

torsional rigidity [MECH] The ratio of the torque applied about the centroidal axis of a bar at one end of the bar to the resulting torsional angle, when the other end is held fixed.

torsional vibration [MECH] A periodic motion of a shaft in which the shaft is twisted about its axis first in one direction and then in the other; this motion may be superimposed on rotational or other motion.

torsion balance [ENG] An instrument, consisting essentially of a straight vertical torsion wire whose upper end is fixed while a horizontal beam is suspended from the lower end; used to measure minute gravitational, electrostatic, or magnetic forces.

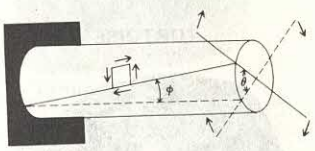
torsion bar [MECH ENG] A spring flexed by twisting about its axis; found in the spring suspension of truck and passenger car wheels, in production machines where space limitations are critical, and in high-speed mechanisms where inertia forces must be minimized.

torsion damper [MECH ENG] A damper used on automobile internal combustion engines to reduce torsional vibration.

torsion fault *See* wrench fault.

torsion galvanometer [ENG] A galvanometer in which the force between the fixed and moving systems is measured by the

TORSION



Cylindrical bar in torsion, showing deformation of a small element of the bar; θ represents torsional angle; ϕ represents helical angle.

TORSIONAL PENDULUM

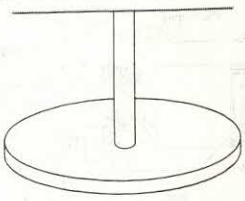


Diagram of a torsional pendulum.

TORSION BAR

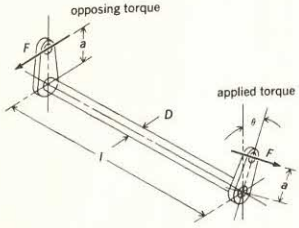

Diagram of torsion bar showing important dimensions involved in its design; θ is angle of twist, F is twisting force, a is radius of arm, l is length of bar, D is diameter of bar.

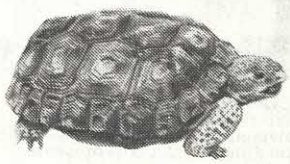
TORTOISE



Desert tortoise *(Gopherus agassizi).*

TOTAL RADIATION PYROMETER

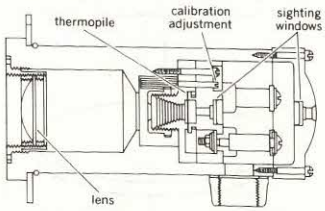


Diagram of total radiation pyrometer. Lens focuses heat radiation onto thermopile. *(Honeywell Inc.)*

angle through which the supporting head of the moving system must be rotated to bring the moving system back to its zero position.

torsion hygrometer [ENG] A hygrometer in which the rotation of the hygrometric element is a function of the humidity; such hygrometers are constructed by taking a substance whose length is a function of the humidity and twisting or spiraling it under tension in such a manner that a change in length will cause a further rotation of the element.

torsionmeter *See* torsiometer.

torsion of a curve [MATH] For a given space curve, the rate at which the curve turns out of its osculating plane relative to arc length; it is defined in terms of the binormals.

torsion-string galvanometer [ENG] A sensitive galvanometer in which the moving system is suspended by two parallel fibers that tend to twist around each other.

torso mountain *See* monadnock.

torticollis [MED] A deformity of the neck resulting from contraction of the cervical muscles or fascia. Also known as wryneck.

tortoise [VERT ZOO] Any of various large terrestrial reptiles in the order Chelonia, especially the family Testudinidae.

Tortonian [GEOL] A European stage of geologic time: Miocene (above Helvetian, below Sarmatian).

Tortricidae [INV ZOO] A family of phytophagous moths in the superfamily Tortricoidea which have a stout body, lightly fringed wings, and threadlike antennae.

Tortricoidea [INV ZOO] A superfamily of small wide-winged moths in the suborder Heteroneura.

Torulopsidales [MYCOL] The equivalent name for Cryptococcales.

torulosis *See* cryptococcosis.

torus [ANAT] A rounded protruberance occurring on a body part. [BOT] The thickened membrane closing a bordered pit. [MATH] **1.** The surface of a doughnut. **2.** The topological space obtained by identifying the opposite sides of a rectangle. **3.** The group which is the product of two circles.

Torymidae [INV ZOO] A family of hymenopteran insects in the superfamily Chalcidoidea.

TOS *See* tape operating system.

tosca [METEOROL] A southwest wind on Lake Garda in Italy.

toss bombing [ORD] A method of bombing where an aircraft flies on a line toward the target, pulls up in a vertical plane, releasing the bomb at an angle that will compensate for the effect of gravity drop on the bomb.

total air [ENG] The actual quantity of air supplied for combustion of fuel in a boiler, expressed as a percentage of theoretical air.

total binding energy *See* binding energy.

total carbon [MET] The sum of free and combined carbon in a ferrous alloy, especially steel.

total conductivity [GEOPHYS] In atmospheric electricity, the sum of the electrical conductivities of the positive and negative ions found in a given portion of the atmosphere.

total curvature *See* Gaussian curvature.

total curvature of a lens [OPTICS] The difference between the reciprocals of the radii of curvature of the two surfaces of a lens.

total cyanide [MET] Total amount of cyanide contained in an electroplating bath, including both simple and complex ions.

total deadlock [COMPUT SCI] A deadlock that involves all the tasks in a multiprogramming system.

total differential [MATH] The total differential of a function of several variables, $f(x_1,x_2,\ldots,x_n)$, is the function given by the sum of terms $(\partial f/\partial x_i)dx_i$ as i runs from 1 to n. Also known as differential.

total displacement *See* slip.

total drift [NAV] In marine gyroscopes, the algebraic sum of the apparent and real precession or drift; the apparent drift is that caused by the gyroscope attempting to maintain its orientation in inertial space while the vehicle on which the gyroscope is mounted moves to new locations.

total eclipse [ASTRON] An eclipse that obscures the entire surface of the moon or sun.

total evaporation *See* evapotranspiration.

total harmonic distortion [ELECTR] Ratio of the power at the fundamental frequency, measured at the output of the transmission system considered, to the power of all harmonics observed at the output of the system because of its nonlinearity, when a single frequency signal of specified power is applied to the input of the system; it is expressed in decibels.

total heat *See* enthalpy.

total heat of dilution *See* heat of dilution.

total heat of solution *See* heat of solution.

total impulse [AERO ENG] The product of the thrust and the time over which the thrust is produced, expressed in pounds (force)–seconds; used especially in reference to a rocket motor or a rocket engine.

total internal reflection [OPTICS] A phenomenon in which electromagnetic radiation in a given medium which is incident on the boundary with a less-dense medium (one having a lower index of refraction) at an angle less than the critical angle is completely reflected from the boundary.

totality [ASTRON] **1.** The portion of a total eclipse of the sun during which the sun is entirely covered by the moon at a specified location on the earth's surface. **2.** The portion of a total eclipse of the moon or other body during which the eclipsed body is entirely within the umbra of the eclipsing body.

total lift [AERO ENG] The upward force produced by the gas in a balloon; it is equal to the sum of the free lift, the weight of the balloon, and the weight of auxiliary equipment carried by the balloon.

total lung capacity [PHYSIO] The volume of gas contained within the lungs at the end of a maximum inspiration.

totally bounded set *See* precompact set.

totally disconnected [MATH] A topological space has this property if the largest connected subset containing any given point is only the point itself.

total order *See* linear order.

total porosity [GEOL] The ratio of total void space in porous oil–reservoir rock to the bulk volume of the rock itself.

total pressure [FL MECH] *See* dynamic pressure. [MECH] The gross load applied on a given surface. [MIN ENG] The total ventilating pressure in a mine, usually measured in the fan drift.

total radiation pyrometer [ENG] A pyrometer which focuses heat radiation emitted by a hot object on a detector (usually a thermopile or other thermal type detector), and which responds to a broad band of radiation, limited only by absorption of the focusing lens, or window and mirror.

total relief *See* stereo power.

total slip *See* net slip.

total solids [CHEM] The total content of suspended and dissolved solids in water.

total span [ANTHRO] An anthropometric determination of the distance between the tips of the middle fingers at maximum arm stretch without straining.

total specific ionization *See* specific ionization.

total transfer [COMPUT SCI] A method of calculating minor, intermediate, and major control totals during preparation of printed results on a punched-card tabulator, in which only minor totals are calculated by adding values in card fields, while intermediate totals are calculated by adding minor totals, and major totals are calculated by adding intermediate totals.

total variation [MATH] For a real function defined on an interval, the least upper bound of the function's variation relative to all possible partitions of the interval.

total vorticity [FL MECH] Usually, the magnitude of the vorticity vector, all components included, as opposed to the vertical (component of the) vorticity.

totipalmate [VERT ZOO] Having all four toes connected by webs, as in the Pelecaniformes.

totipotence [EMBRYO] Capacity of a blastomere to develop into a fully formed embryo.

toucan [VERT ZOO] Any of numerous fruit-eating birds, of the family Ramphastidae, noted for their large and colorful bills.

Toucan *See* Tucana.

touch [PHYSIO] The array of sensations arising from pressure sensitivity of the skin.

touch call *See* push-button dialing.

touch control [ELEC] A circuit that closes a relay when two metal areas are bridged by a finger or hand.

touch-down dispersion [NAV] The statistical scatter of the points of contact between the aircraft and the landing surface during a large number of automatic landings.

touch-down zone [NAV] In air operations, the first 3000

feet (914 meters) of runway beginning at the threshold. Abbreviated TDZ.

touch-down zone elevation [NAV] The highest runway centerline elevation in the touch-down zone.

touch feedback [ENG] A type of force feedback in which servos provide the manipulator fingers with a sense of resistance when an object is grasped, so that the operator does not crush the object.

toughness [MECH] A property of a material capable of absorbing energy by plastic deformation; intermediate between softness and brittleness.

tough pitch copper [MET] Copper refined in a reverberatory furnace to adjust the oxygen content to 0.2–0.5%.

tour *See* shift.

touriello [METEOROL] A south wind of foehn type descending from the Pyrenees in the Ariège valley, France; it is especially violent in February and March, when it melts the snow, flooding the rivers and sometimes causing avalanches.

tourmaline [MINERAL] $(Na,Ca)(Al,Fe,Li,Mg)_3Al_6(BO_3)_3Si_6O_{18}(OH)_4$ Any of a group of cyclosilicate minerals with a complex chemical composition, vitreous to resinous luster, and variable color; crystallizes in the ditrigonal-pyramidal class of the hexagonal system, has piezoelectric properties, and is used as a gemstone.

Tournaisian [GEOL] European stage of lowermost Carboniferous time.

tournament [MATH] A graph in which there is one line between every pair of points and no loops, and in which a unique direction is assigned to every line.

tourniquet [MED] An apparatus for controlling hemorrhage from, or circulation in, a limb or part of the body, where pressure can be brought upon the blood vessels by means of straps, cords, rubber tubes, or pads.

Toussaint's formula [METEOROL] A rule for the linear decrease of temperature with height in an atmosphere for which the temperature at mean sea level is 15°C, and given by the formula $t = 15 - 0.0065z$, where t is the temperature in degrees Celsius, and z is the geometric height in meters above mean sea level.

towbar [ENG] An element which connects to a vehicle that is not equipped with an integral drawbar, for the purpose of towing or moving the vehicle.

towboat [NAV ARCH] A relatively flat-bottomed vessel designed to push tows of barges on inland waterways; it has a square bow on which heavy, upright knees are fixed for the purpose of lashing the barges against the towing vessel.

towed artillery [ORD] Artillery weapons designed for movement as trailed loads behind prime movers or draft animals; some adjustment of the weapon is necessary to place it in firing position.

towed load [MECH] The weight of a carriage, trailer, or other equipment towed by a prime mover.

tower [CHEM ENG] A vertical, cylindrical vessel used in chemical and petroleum processing to increase the degree of separation of liquid mixtures by distillation or extraction. Also known as column. [ELECTROMAG] A tall metal structure used as a transmitting antenna, or used with another such structure to support a transmitting antenna wire. [ENG] A concrete, metal, or timber structure that is relatively high for its length and width, and used for various purposes, including the support of electric power transmission lines, radio and television antennas, and rockets and missiles prior to launching.

tower bolt *See* barrel bolt.

tower crane [CIV ENG] A crane mounted on top of a tower which is sometimes incorporated in the frame of a building.

tower excavator [MIN ENG] A cableway excavator designed specifically for levee work but which is used extensively in the stripping of overburden, spoil, or waste in surface mining; basically, it is a Sauerman-type excavator with towers either fixed or movable, and when the head tower is located on the spoil pile and the tail tower on the unexcavated wall, pits of almost unlimited width can be dug.

towering [METEOROL] A refraction phenomenon; a special case of looming in which the downward curvature of the light rays due to atmospheric refraction increases with elevation so that the visual image of a distant object appears to be stretched in the vertical direction.

towering cumulus [METEOROL] A descriptive term, used mostly in weather observing, for the cloud type cumulus congestus.

tower launcher [ORD] A missile launcher that is vertical (or nearly so) and high enough to give directional stability to the missile. Also known as vertical tower launcher.

tower loader [MIN ENG] A front-end loader whose bucket is lifted along tracks on a more or less vertical tower.

tower loading [ELEC] Load placed on a tower by its own weight, the weight of the wires with or without ice covering, the insulators, the wind pressure normal to the line acting both on the tower and the wires, and the pull from the wires.

tower radiator [ELECTROMAG] Metal structure used as a transmitting antenna.

tower telescope [ASTRON] A telescope, usually of long focal length, that is situated underneath a solar tower to study the sun.

towing spar *See* position buoy.

towing tank *See* model basin.

town plan *See* city plan.

Townsend avalanche *See* avalanche.

Townsend characteristic [ELECTR] Current-voltage characteristic curve for a phototube at constant illumination and at voltages below that at which a glow discharge occurs.

Townsend coefficient [ELECTR] The number of ionizing collisions by an electron per centimeter of path length in the direction of the applied electric field in a radiation counter.

Townsend discharge [ELECTR] A discharge which occurs at voltages too low for it to be maintained by the electric field alone, and which must be initiated and sustained by ionization produced by other agents; it occurs at moderate pressures, above about 0.1 torr, and is free of space charges.

Townsend ionization *See* avalanche.

towrope [NAV ARCH] A hawser of either fiber or wire used for towing a vessel.

towrope horsepower *See* effective horsepower.

towrope resistance [NAV ARCH] The total resistance overcome in towing a ship or model; it equals the sum of the frictional resistance, eddy making, and wave making.

tows [TEXT] **1.** The broken, short, matted fiber that is removed during the separation of long fibers of flax, hemp, or jute. **2.** A large number of continuous rayon filaments collected in a ropelike form without a definite twist. **3.** The coarsest of linen yarns used to make crash, a coarse, plainwoven fabric.

tow target [ORD] Target for antiaircraft fire or aerial gunnery practice, towed behind an aircraft.

toxa [INV ZOO] A curved sponge spicule.

toxaphene [ORG CHEM] $C_{10}H_{10}Cl_8$ A toxic, waxy, amber solid with a mild chlorine-camphor aroma, soluble in organic solvents, melts at 65–90°C; used as an insecticide. Also known as technical chlorinated camphene.

Toxasteridae [PALEON] A family of Cretaceous echinoderms in the order Spatangoida which lacked fascioles and petals.

toxemia [MED] A condition in which the blood contains toxic substances, either of microbial origin or as by-products of abnormal protein metabolism.

toxemia of pregnancy *See* preeclampsia.

toxic [MED] Relating to a harmful effect by a poisonous substance on the human body by physical contact, ingestion, or inhalation.

toxic amaurosis [MED] Blindness following the introduction of toxic substances into the body, such as ethyl and methyl alcohol, tobacco, lead, and metabolites of uremia and diabetes.

toxic goiter *See* hyperthyroidism.

toxic hepatitis [MED] Inflammation of the liver caused by chemical agents ingested or inhaled into the body, such as chlorinated hydrocarbons and some alkaloids.

toxicity [PHARM] **1.** The quality of being toxic. **2.** The kind and amount of poison or toxin produced by a microorganism, or possessed by a chemical substance not of biological origin.

toxicology [PHARM] The study of poisons, including their nature, effects, and detection, and methods of treatment.

toxicophobia [PSYCH] Abnormal fear of being poisoned.

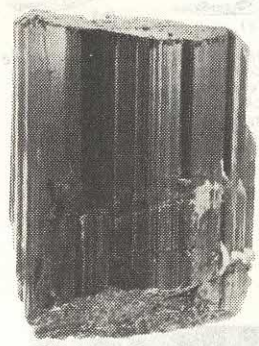
toxic psychosis [MED] A brain disorder due to a toxic agent such as lead or alcohol.

toxicyst [INV ZOO] A type of trichocyst in Protozoa which may, upon contact, induce paralysis or lysis of the prey.

toxigenicity [MICROBIO] A microorganism's capability for producing toxic substances.

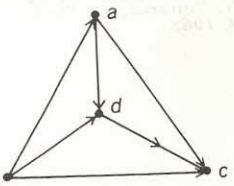
toxin [BIOCHEM] Any of various poisonous substances produced by certain plant and animal cells, including bacterial toxins, phytotoxins, and zootoxins.

TOURMALINE



Prismatic crystal form of tourmaline from Portland, Connecticut. *(American Museum of Natural History Specimen)*

TOURNAMENT



An oriented complete graph.

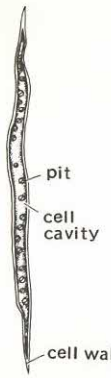
TOXOGLOSSATE RADULA

Toxoglossate radula from marine gastropods: *(a) Conus* species; *(b) Terebra* species. *(From R. R. Shrock and W. H. Twenhofel, Principles of Invertebrate Paleontology, 2d ed., McGraw-Hill, 1953)*

TRACE FOSSIL

Feeding trail, a trace fossil resulting from the grazing of animals along the surface of a sediment, in ichnogenus *Cosmorhaphe*, from Tertiary sediments at Pologne. *(From R. C. Moore, ed., Treatise on Invertebrate Paleontology, pt. W, University of Kansas Press, 1962)*

TRACHEID



Drawing of a tracheid, showing characteristic features. *(From H. J. Fuller and O. Tippo, College Botany, rev. ed., Holt, 1954)*

Toxodontia [PALEON] An extinct suborder of mammals representing a central stock of the order Notoungulata.

Toxoglossa [INV ZOO] A group of carnivorous marine gastropod mollusks distinguished by a highly modified radula (toxoglossate).

toxoglossate radula [INV ZOO] A radula in certain carnivorous gastropods having elongated, spearlike teeth often perforated by the ducts of large poison glands.

toxoid [IMMUNOL] Detoxified toxin, but with antigenic properties intact; toxoids of tetanus and diphtheria are used for immunization.

Toxoplasmea [INV ZOO] A class of the protozoan subphylum Sporozoa composed of small, crescent-shaped organisms that move by body flexion or gliding and are characterized by a two-layered pellicle with underlying microtubules, micropyle, paired organelles, and micronemes.

Toxoplasmida [INV ZOO] An order of the class Toxoplasmea; members are parasites of vertebrates.

toxoplasmin [BIOCHEM] The *Toxoplasma* antigen; used in a skin test to demonstrate delayed hypersensitivity to toxoplasmosis.

toxoplasmosis [MED] Infection by the protozoan *Toxoplasma gondi*, manifested clinically in severe cases by jaundice, hepatomegaly, and splenomegaly.

Toxopneustidae [INV ZOO] A family of Tertiary and extant echinoderms of the order Temnopleuroida where the branchial slits are deep and the test tends to be absent.

Toxothrix [MICROBIO] A genus of gliding bacteria of uncertain affiliation; long, often U-shaped filaments contain colorless, cylindrical cells; move slowly with ends of filament trailing.

Toxotidae [VERT ZOO] The archerfishes, a family of small fresh-water forms in the order Perciformes.

TPA *See* terephthalic acid.

T pad [ELEC] A pad made up of resistance elements arranged as a T network (two resistors inserted in one line, with a third between their junction and the other line).

T phage [VIROL] Any of a series (T1–T7) of deoxyribonucleic acid phages which lyse strains of the gram-negative bacterium *Escherichia coli* and its relatives.

TPI test *See* Treponema pallidum immobilization test.

TP monitor *See* teleprocessing monitor.

TPN *See* triphosphopyridine nucleotide.

TPR *See* airborne profile recorder.

Tr *See* trace.

trabecula [ANAT] A band of fibrous or muscular tissue extending from the capsule or wall into the interior of an organ.

trace [COMPUT SCI] To provide a record of every step, or selected steps, executed by a computer program, and by extension, the record produced by this operation. [ELECTR] The visible path of a moving spot on the screen of a cathode-ray tube. Also known as line. [ENG] The record made by a recording device, such as a seismometer or electrocardiograph. [GEOL] The intersection of two geological surfaces. [MATH] The trace of a matrix is the sum of the entries along its principal diagonal. Designated Tr. Also known as spur. [METEOROL] A precipitation of less than 0.005 inch (0.127 millimeter). [SCI TECH] An extremely small but detectable quantity of a substance.

trace analysis [ANALY CHEM] Analysis of a very small quantity of material of a sample by such techniques as polarography or spectroscopy.

trace element [GEOCHEM] A nonessential element found in small quantities (usually less than 1.0%) in a mineral. Also known as accessory element; guest element.

trace fossil [GEOL] A trail, track, or burrow made by an animal and found in ancient sediments such as sandstone, shale, or limestone. Also known as ichnofossil.

trace interval [ELECTR] Interval corresponding to the direction of sweep used for delineation.

tracer [CHEM] A foreign substance, usually radioactive, that is mixed with or attached to a given substance so the distribution or location of the latter can later be determined; used to trace chemical behavior of a natural element in an organism. Also known as tracer element. [ENG] A thread of contrasting color woven into the insulation of a wire for identification purposes.

tracer bullet [ORD] A bullet containing a pyrotechnic mixture to make the flight of the projectile visible by day and night.

tracer element *See* tracer.

tracer gas [ENG] In vacuum testing for leaks, a gas emitting through a leak in a pressure system and subsequently conducted into the detector.

tracer milling [MECH ENG] Cutting a duplicate of a three-dimensional form by using a mastic form to direct the tracer-controlled cutter.

tracer mixture [ORD] A pyrotechnic composition used for loading tracer bullets.

trace routine [COMPUT SCI] A routine which tracks the execution of a program, step by step, to locate a program malfunction. Also known as tracing routine.

trace sensitivity [ELECTR] The ability of an oscilloscope to produce a visible trace on the scope face for a specified input voltage.

trace slip [GEOL] That component of the net slip in a fault which is parallel to the trace of an index plane on a fault plane.

trace-slip fault [GEOL] A fault whose net slip is trace slip.

trace statement [COMPUT SCI] A statement, included in certain programming languages, that causes certain error-checking procedures to be carried out on specified segments of a source program.

trachea [ANAT] The cartilaginous and membranous tube by which air passes to and from the lungs in humans and many vertebrates. [BOT] A xylem vessel resembling the trachea of vertebrates. [INV ZOO] One of the anastomosing air-conveying tubules composing the respiratory system in most insects.

tracheid [BOT] An elongate, spindle-shaped xylem cell, lacking protoplasm at maturity, and having secondary walls laid in various thicknesses and patterns over the primary wall.

Tracheophyta [BOT] A large group of plants characterized by the presence of specialized conducting tissues (xylem and phloem) in the roots, stems, and leaves.

trachoma [MED] An infectious disease of the conjunctiva and cornea caused by *Chlamydia trachomatis* producing photophobia, pain, and excessive lacrimation.

trachomatous conjunctivitis [MED] Inflammation of the conjunctiva associated with trachoma, characterized by a subepithelial cellular infiltration with a follicular distribution.

trachybasalt [PETR] An extrusive rock characterized by calcic plagioclase and sanidine, with augite, olivine, and possibly minor analcime or leucite.

Trachylina [INV ZOO] An order of moderate-sized jellyfish of the class Hydrozoa distinguished by having balancing organs and either a small polyp stage or none.

Trachymedusae [INV ZOO] A group of marine jellyfish, recognized as a separate order or as belonging to the order Trachylina whose tentacles have a solid core consisting of a single row of endodermal cells.

Trachypsammiacea [INV ZOO] An order of colonial anthozoan coelenterates characterized by a dendroid skeleton.

Trachystomata [VERT ZOO] The name given to the Meantes when the group is considered to be an order.

trachyte [PETR] The light-colored, aphanitic rock (the volcanic equivalent of syenite), composed largely of alkali feldspar with minor amounts of mafic minerals.

trachytoid texture [GEOL] The texture of a phaneritic extrusive igneous rock in which the microlites of a mineral, not necessarily feldspar, in the groundmass have a subparallel or randomly divergent alignment.

tracing distortion [ENG ACOUS] The nonlinear distortion introduced in the reproduction of a mechanical recording because the curve traced by the motion of the reproducing stylus is not an exact replica of the modulated groove.

tracing paper [MATER] Thin paper used both for tracing and original drawings, and of various types and surfaces.

tracing routine *See* trace routine.

track [AERO ENG] The actual line of movement of an aircraft or a rocket over the surface of the earth; it is the projection of the history of the flight path on the surface. Also known as flight track. [COMPUT SCI] The recording path on a rotating surface. [DES ENG] As applied to a pattern of setting diamonds in a bit crown, an arrangement of diamonds in concentric circular rows in the bit crown, with the diamonds in a specific row following in the track cut by a preceding diamond. [ELECTR] **1.** A path for recording one channel of information on a magnetic tape, drum, or other magnetic recording medium; the location of the track is determined by the recording equipment rather than by the medium. **2.** The trace of a moving target on a plan-position-indicator radar screen or an equivalent plot.

[ENG] **1.** The groove cut in a rock by a diamond inset in the crown of a bit. **2.** A pair of parallel metal rails for a railway, railroad, tramway, or for any wheeled vehicle. [MECH ENG] **1.** The slide or rack on which a diamond-drill swivel head can be moved to positions above and clear of the collar of a borehole. **2.** A crawler mechanism for earth-moving equipment. [NAV] **1.** To follow the movements of an object by keeping the reticle of an optical system or a radar beam on the object, by plotting its bearing and distance at frequent intervals, or by a combination of the two. **2.** To navigate by following the movements of a craft without regard for future positions; this is used when frequent changes of an unanticipated amount are expected in course or speed or both. **3.** A recommended route on a nautical chart, such as a North Atlantic Track. [NUCLEO] **1.** The visible path of an ionizing particle in a particle detector, such as a cloud chamber, bubble chamber, spark chamber, or nuclear photographic emulsion. **2.** *See* race track.

track angle [NAV] Track measured from 0° at the reference direction clockwise or counterclockwise through 90 or 180°; it is labeled with the reference direction as a prefix and the direction of measurement from the reference direction as a suffix; thus, track angle N44°W is 44° west of north, or 316°.

trackball [COMPUT SCI] A ball inset in the console of a video display terminal, which can be rotated by the operator, and whose motion is followed by a cursor on the display screen.

track cable [ENG] Steel wire rope, usually a locked-coil rope which supports the wheels of the carriers of a cableway.

track cable scraper [MIN ENG] A type of excavator that uses a bottomless scraper bucket which conveys its load over the ground and is operated by a two-drum hoist which controls a track cable that spans the working area and a haulage cable that leads to the front of the bucket.

track chart [NAV] A chart showing recommended, required, or established tracks, and usually indicating turning points, courses, and distances.

track crawling [NAV] Keeping a craft close to a course line by frequent small changes of heading.

Tracker [AERO ENG] A United States twin-reciprocating-engine, antisubmarine aircraft capable of operating from carriers, and designed primarily for the detection, location, and destruction of submarines. Designated S-2.

track gage [CIV ENG] The width between the rails of a railroad track; in the United States the standard gage is 4 feet 8½ inches.

track haulage [MIN ENG] Movement or transportation of excavated or mined materials in cars or trucks that run on rails.

track homing [NAV] The process of following a line of position known to pass through an objective.

track hopper [ENG] A hopper-shaped receiver mounted beside or below railroad tracks, into which railroad boxcars or bottom-dump cars are discharged; used for solid materials.

tracking [ELEC] A leakage or fault path created across the surface of an insulating material when a high-voltage current slowly but steadily forms a carbonized path. [ELECTR] The condition in which all tuned circuits in a receiver accurately follow the frequency indicated by the tuning dial over the entire tuning range. [ENG] **1.** A motion given to the major lobe of a radar or radio antenna such that some preassigned moving target in space is always within the major lobe. **2.** The process of following the movements of an object; may be accomplished by keeping the reticle of an optical system or a radar beam on the object, by plotting its bearing and distance at frequent intervals, or by a combination of techniques. [ENG ACOUS] **1.** The following of a groove by a phonograph needle. **2.** Maintaining the same ratio of loudness in the two channels of a stereophonic sound system at all settings of the ganged volume control. [NAV] Navigation which follows the movements of a craft but does not anticipate future positions.

tracking beam [ORD] The beam that is aimed directly at the target at all times in antimissile warfare; data obtained from this beam are transmitted to the counterattacking guided missile over what is known as the guidance beam.

tracking cross [COMPUT SCI] A cross displayed on the screen of a video terminal which automatically follows a light pen. Also known as tracking cursor.

tracking cursor *See* tracking cross.

tracking error [ENG ACOUS] Deviation of the vibration axis of a phonograph pickup from tangency with a groove; true tangency is possible for only one groove when the pickup arm is pivoted; the longer the pickup arm, the less is the tracking error.

tracking filter [ELECTR] Electronic device for attenuating unwanted signals while passing desired signals, by phase-lock techniques that reduce the effective bandwidth of the circuit and eliminate amplitude variations.

tracking jitter [ENG] Minor variations in the pointing of an automatic tracking radar.

tracking network [ENG] A group of tracking stations whose operations are coordinated in tracking objects through the atmosphere or space.

tracking problem [CONT SYS] The problem of determining a control law which when applied to a dynamical system causes its output to track a given function; the performance index is in many cases taken to be of the integral square error variety.

tracking radar [ENG] Radar used to monitor the flight and obtain geophysical data from space probes, satellites, and high-altitude rockets.

tracking station [ENG] A radio, radar, or other station set up to track an object moving through the atmosphere or space.

tracking system [ENG] General name for apparatus, such as tracking radar, used in following and recording the position of objects in the sky.

tracking telescope [OPTICS] A long-focal-length telescope mounted to track missiles in flight precisely while collecting missile performance data.

track in range [ELECTR] To adjust the gate of a radar set so that it opens at the correct instant to accept the signal from a target of changing range from the radar.

track-laying vehicle [ORD] Vehicle which travels upon two endless tracks, one on each side of the machine; it has high mobility and can maneuver, is usually armed and frequently armored, and is intended for tactical use; tanks are one type of track-laying vehicle.

trackless mine [MIN ENG] A mine in which rubber-tired vehicles are used for haulage and transport.

trackless tunneling [MIN ENG] Tunneling by means of loaders mounted on caterpillars.

track made good [AERO ENG] The actual path of an aircraft over the surface of the earth, or its graphic representation.

track pitch [ELECTR] The physical distance between track centers.

track-return power system [ELEC] A system for distributing electric power to trains or other vehicles, in which the track rails are used as an uninsulated return conductor.

track shifter [ENG] A machine or appliance used to shift a railway track laterally.

track telling [COMMUN] The process of communicating air surveillance and tactical data information between command and control systems and facilities within the systems.

track-to-track access time [COMPUT SCI] The time required for a read-write head to move between the adjacent cylinders of a disk.

track-while-scan [ELECTR] Electronic system used to detect a radar target, compute its velocity, and predict its future position without interfering with continuous radar scanning.

traction [GEOL] Transport of sedimentary particles along and parallel to a bottom surface of a stream channel by rolling, sliding, dragging, pushing, or saltation. [GRAPHICS] A defect in a paint coating in which the film cracks and wide fissures reveal the underlying surface. [MECH] Pulling friction of a moving body on the surface on which it moves.

tractional force [FL MECH] The force exerted on particles under flowing water by the current; it is proportional to the square of the velocity.

traction diverticulum [MED] A circumscribed sacculation, usually of the esophagus, with bulging of the full thickness of the wall; caused by the pull of adhesions arising from adjacent organs.

traction meter [ENG] A load-sensing device placed between a locomotive and the car immediately behind it to measure pulling force exerted by the locomotive.

traction tube [ENG] A device for measuring the minimum water velocities capable of moving various sizes of sand grains; it consists of a horizontal glass tube half-filled with sand.

tractor [MECH ENG] **1.** An automotive vehicle having four wheels or a caterpillar tread used for pulling agricultural or construction implements. **2.** The front pulling section of a semitrailer. Also known as truck-tractor.

TRACTOR GATE

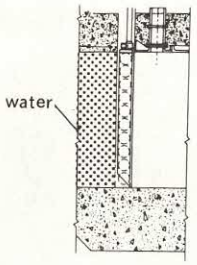


Diagram of tractor gate. *(U.S. Army Corps of Engineers and U.S. Bureau of Reclamation)*

tractor drill [MECH ENG] A drill having a crawler mounting to support the feed-guide bar on an extendable arm.

tractor fuel *See* engine distillate.

tractor gate [CIV ENG] A type of outlet control gate used to release water from a reservoir; there are two types, roller and wheel.

tractor loader [MECH ENG] A tractor equipped with a tipping bucket which can be used to dig and elevate soil and rock fragments to dump at truck height. Also known as shovel dozer; tractor shovel.

tractor shovel *See* tractor loader.

tractrix [MATH] A curve in the plane where every tangent to it has the same length.

trade air [METEOROL] The type of air of which the trade winds consist, and whose chief thermodynamic characteristic is the presence of the trade-wind inversion.

trade cumulus *See* trade-wind cumulus.

trade wind [METEOROL] The wind system, occupying most of the tropics, which blows from the subtropical highs toward the equatorial trough; a major component of the general circulation of the atmosphere; the winds are northeasterly in the Northern Hemisphere and southeasterly in the Southern Hemisphere; hence they are known as the northeast trades and southeast trades, respectively.

trade-wind cumulus [METEOROL] The characteristic cumulus cloud of the trade winds over the oceans in average, undisturbed weather conditions; the individual cloud usually exhibits a blocklike appearance since its vertical growth ends abruptly in the lower stratum of the trade-wind inversion; a group of fully grown clouds shows considerable uniformity in size and shape. Also known as trade cumulus.

trade wind desert [CLIMATOL] **1.** An area of very little rainfall and high temperature which occurs where the trade winds or their equivalent (such as the harmattan) blow over land; the best examples are the Sahara and Kalahari deserts. **2.** The arid cold-water coasts on the western shores of North and South America and Africa.

trade-wind inversion [METEOROL] A characteristic temperature inversion usually present in the trade-wind streams over the eastern portions of the tropical oceans: it is formed by broad-scale subsidence of air from high altitudes in the eastern extremities of the subtropical highs; while descending, the current meets the opposition of the low-level maritime air flowing equatorward; the inversion forms at the meeting point of these two strata which flow horizontally in the same direction.

traersu [METEOROL] A violent east wind of Lake Garda in Italy.

traffic [COMMUN] The messages transmitted and received over a communication channel. [ENG] The passage or flow of vehicles, pedestrians, ships, or planes along defined routes such as highways, sidewalks, sea lanes, or air lanes.

trafficability [CIV ENG] Capability of terrain to bear traffic, or the extent to which the terrain will permit continued movement of any or all types of traffic.

traffic-circulation map [MAP] A map showing traffic routes and the measures for traffic regulation; indicates the roads for use of certain classes of traffic, the location of traffic-control stations, and the directions in which traffic may move. Also known as circulation map.

traffic control [ENG] Control of the movement of vehicles, such as airplanes, trains, and automobiles, and the regulatory mechanisms and systems used to exert or enforce control.

traffic density [CIV ENG] The average number of vehicles that occupy 1 mile or 1 kilometer of road space, expressed in vehicles per mile or per kilometer.

traffic diagram [COMMUN] Chart or illustration used to show the movement and control of traffic over a communications system.

traffic distribution [COMMUN] Routing of communications traffic through a terminal to a switchboard or dialing center.

traffic engineering [CIV ENG] The determination of the required capacity and layout of highway and street facilities that can safely and economically serve vehicular movement between given points.

traffic flow [CIV ENG] The total number of vehicles passing a given point in a given time, expressed as vehicles per hour.

traffic flow security [COMMUN] Transmission of an uninterrupted flow of random text on a wire or radio link between two stations with no indication to an interceptor of what portions of this steady stream constitute encrypted message text and what portions are merely random filler.

traffic forecast [COMMUN] Traffic level prediction on which communications system management decisions and engineering effort are based.

traffic noise [ENG] The general disturbance in sonar transmissions which is due to ships but is not associated with a specific vessel.

traffic pattern [AERO ENG] The traffic flow that is prescribed for aircraft landing at, taxiing on, and taking off from an airport; the usual components of a traffic pattern are upwind leg, crosswind leg, downwind leg, base leg, and final approach.

traffic recorder [ENG] A mechanical counter or recorder used to determine traffic movements (hourly variations and total daily volumes of traffic at a point) on an existing route; the air-impulse counter, magnetic detector, photoelectric counter, and radar detector are used.

traffic signal [CIV ENG] With the exception of traffic signs, any power-operated device for regulating, directing, or warning motorists or pedestrians.

tragacanth [MATER] The gummy exudate produced by certain Asiatic species of *Astragalus*; consists of a soluble portion containing uronic acid and arabinose, and an insoluble portion that absorbs water and swells to make a stiff opalescent mucilage.

tragion–nasal root [ANTHRO] A measure of the distance from the tragion to the deepest concavity of the nasal root.

Tragulidae [VERT ZOO] The chevrotains, a family of pecoran ruminants in the superfamily Traguloidea.

Traguloidea [VERT ZOO] A superfamily of pecoran ruminants, composed of the most primitive forms with large canines; the chevrotain is the only extant member.

tragus [ANAT] **1.** The prominence in front of the opening of the external ear. **2.** One of the hairs in the external ear canal.

T rail [CIV ENG] A rail shaped like a T in cross section due to a wide head, web, and flanged base.

trail [ASTRON] A luminous trace left in the sky by the passage of a large meteor. [GEOL] A line of rock fragments that were picked up by glacial ice at a localized outcropping and left scattered along a fairly well-defined tract during the movement of a glacier. [GRAPHICS] One of the lines left on a photographic plate during prolonged exposure to starlight if the motion of the plate was not synchronized with the apparent motion of the sky. [ORD] **1.** In bombing, the line between the point of impact of the bomb and a point on the ground directly beneath the aircraft at the moment of impact, assuming that the aircraft stays on course after release of the bomb and maintains a constant speed. **2.** Rear part of a gun carriage which connects the piece with a limber or tractor.

trail angle [AERO ENG] The angle at an aircraft between the vertical and the line of sight to an object over which the aircraft has passed.

trailer [ELECTR] A bright streak at the right of a dark area or dark line in a television picture, or a dark area or streak at the right of a bright part; usually due to insufficient gain at low video frequencies. [MECH ENG] The section of a semitrailer that is pulled by the tractor.

trailer card [COMPUT SCI] A card that contains supplemental information related to the data on the preceding cards.

trailer label [COMPUT SCI] A record appearing at the end of a magnetic tape that uniquely identifies the tape as one required by the system.

trailer record [COMPUT SCI] A record which contains data pertaining to an associated group of records immediately preceding it.

trail formation [AERO ENG] Aircraft flying singly or in elements in such manner that each aircraft or element is in line behind the preceding aircraft or element. [ENG] Vehicles proceeding one behind the other at designated intervals. Also known as column formation.

trailing antenna [ELECTROMAG] An aircraft radio antenna having one end weighted and trailing free from the aircraft when in flight.

trailing edge [AERO ENG] The rear section of a multipiece airfoil, usually that portion aft of the rear spar. [ELECTR] The major portion of the decay of a pulse.

trailing-edge tab [AERO ENG] One of the devices on the aircraft elevator that reduce or eliminate hinge movements required to deflect the elevator during flight.

train [ASTRON] The bright tail of a comet or meteor. [ENG] To aim or direct a radar antenna in azimuth.

train bombing [ORD] A method of bombing in which two or more bombs are released at a predetermined interval from one aircraft as the result of a single actuation of the bomb-release mechanism.

trainer [ELECTR] A piece of equipment used for training operators of radar, sonar, and other electronic equipment by simulating signals received under operating conditions in the field.

training aid [ENG] Any item which is developed or procured primarily to assist in training and the process of learning.

training ammunition [ORD] Ammunition used for training persons in marksmanship, handling weapons, and so forth.

training time [COMPUT SCI] The machine time expended in training employees in the use of the equipment, including such activities as mounting, console operation, converter operation, and printing operation, and time spent in conducting required demonstrations.

training wall [CIV ENG] A wall built along the bank of a river or estuary parallel to the direction of flow to direct and confine the flow.

train shed [CIV ENG] **1.** A structure to protect trains from weather. **2.** The part of a railroad station that covers the tracks.

trajectory [GEOPHYS] The path followed by a seismic wave. [MECH] The curve described by an object moving through space, as of a meteor through the atmosphere, a planet around the sun, a projectile fired from a gun, or a rocket in flight.

trajectory chart [ORD] Diagram of a side view of the paths of projectiles fired at various elevations under standard conditions; the trajectory chart is different for different guns, projectiles, and fuses.

trajectory-measuring system [ENG] A system used to provide information on the spatial position of an object at discrete time intervals throughout a portion of the trajectory or flight path.

trama [MYCOL] The loosely woven hyphal tissue between adjacent hymenia in basidiomycetes.

trammel [ENG] A device consisting of a bar, each of whose ends is constrained to move along one of two perpendicular lines; used in drawing ellipses and in the Rowland mounting.

tramming [MIN ENG] Pushing tubs, mine cars, or trams by hand.

tramontana [METEOROL] A cold wind from the northeast or north, particularly on the west coast of Italy and northern Corsica, but also in the Balearic Islands and the Ebro valley in Catalonia.

tramp metal [MIN ENG] Unwanted metal which finds its way into the mill ore stream.

tramp metal detector [MIN ENG] A sensing device which detects presence of unwanted metal in an ore stream, and sounds an alarm or removes the metal.

tramway [MECH ENG] An overhead rail, rope, or cable on which wheeled cars run to convey a load.

Trancor [MET] A commercial magnetic alloy composed of 3.5% silicon and 96.5% iron.

tranexamic acid [PHARM] $C_8H_{15}NO_2$ Crystals which soften at 270°C and are soluble in water; used as a hemostatic agent. Abbreviated AMCHA. Also known as *trans*-4-(aminomethyl)cyclohexanecarboxylic acid.

tranquilizer [PHARM] **1.** Any agent that brings about a state of relief from anxiety, or peace of mind. **2.** Any agent that produces a calming or sedative effect without inducing sleep. **3.** Any drug, such as chlorpromazine, used primarily for its calming and antipsychotic effects, or such as meprobamate, used for symptomatic treatment of common psychoneuroses and as an adjunct in somatic disorders complicated by anxiety and tension.

transacter [COMPUT SCI] A system in which data from sources in a number of different locations, as in a factory, are transmitted to a data-processing center and immediately processed by a computer.

transaction [COMPUT SCI] General description of updating data relevant to any item.

transaction data [COMPUT SCI] A set of data in a data-processing area in which the incidence of the data is essentially random and unpredictable; hours worked, quantities shipped, and amounts invoiced are examples from, respectively, the areas of payroll, accounts receivable, and accounts payable.

transaction file *See* detail file.

transaction processing system [COMPUT SCI] A system which processes predefined transactions, one at a time, with direct, on-site entry of the transactions into a terminal, and which produces predefined outputs and maintains the necessary data base.

transaction record *See* change record.

transaction tape *See* change tape.

transadmittance [ELECTR] A specific measure of transfer admittance under a given set of conditions, as in forward transadmittance, interelectrode transadmittance, short-circuit transadmittance, small-signal forward transadmittance, and transadmittance compression ratio.

transaminase [BIOCHEM] One of a group of enzymes that catalyze the transfer of the amino group of an amino acid to a keto acid to form another amino acid. Also known as aminotransferase.

transamination [CHEM] **1.** The transfer of one or more amino groups from one compound to another. **2.** The transposition of an amino group within a single compound.

transcapsidation [VIROL] Change in the capsid of PARA (particle aiding replication of adenovirus) from one type of adenovirus to another.

transceiver [COMPUT SCI] A device which transmits and receives data from punch card to punch card; it is essentially a conversion device which at the sending end reads the card and transmits the data over the wire, and at the receiving end punches the data into a card. [ELECTR] A radio transmitter and receiver combined in one unit and having switching arrangements such as to permit use of one or more tubes for both transmitting and receiving. Also known as transmitter-receiver.

transceiver data link [COMPUT SCI] Integrated data processing by means of punched cards, using transceivers as terminal equipment; the transmission path can be wire or radio.

transcendental element [MATH] An element of a field K is transcendental relative to a subfield F if it satisfies no polynomial whose coefficients come from F.

transcendental field extension [MATH] A field extension K of F where the elements of K not in F are all transcendental relative to F.

transcendental functions [MATH] Functions which cannot be given by any algebraic expression involving only their variables and constants.

transcendental number [MATH] An irrational number that is the root of no polynomial with rational-number coefficients.

transconductance [ELECTR] An electron-tube rating, equal to the change in plate current divided by the change in control-grid voltage that causes it, when the plate voltage and all other voltages are maintained constant. Also known as grid-anode transconductance; grid-plate transconductance; mutual conductance. Symbolized G_m; g_m. Also known as grid-plate transconductance.

transcontinental ballistic missile [ORD] A ballistic missile having a range of at least 12,500 miles (20,000 kilometers), so it can be fired from any point on the earth's surface and reach any surface target.

transcribe [COMPUT SCI] To copy, with or without translating, from one external computer storage medium to another. [ELECTR] To record, as to record a radio program by means of electric transcriptions or magnetic tape for future rebroadcasting.

transcriber [COMPUT SCI] The equipment used to convert information from one form to another, as for converting computer input data to the medium and language used by the computer.

transcription [ENG ACOUS] A 16-inch-diameter (40.6-centimeter-diameter), 33-1/3-rpm disk recording of a complete radio program, made especially for broadcast purposes. Also known as electrical transcription. [MOL BIO] The process by which ribonucleic acid is formed from deoxyribonucleic acid.

transcrystalline [MET] Across the crystals of a metal; used of cracks in metals. Also known as intracrystalline; transgranular.

transcurrent fault [GEOL] A strike-slip fault characterized by a steeply inclined surface. Also known as transverse thrust.

transducer [ENG] Any device or element which converts an input signal into an output signal of a different form; examples include the microphone, phonograph pickup, loudspeaker, barometer, photoelectric cell, automobile horn, doorbell, and underwater sound transducer.

transducer loss [ELECTR] The ratio of the power available

to a transducer from a specified source to the power that the transducer delivers to a specified load; usually expressed in decibels.

transduction [MICROBIO] Transfer of genetic material between bacterial cells by bacteriophages.

transductor *See* magnetic amplifier; saturable reactor.

transect [SCI TECH] To cut across, or to cut transversely.

transesterification [ORG CHEM] Conversion of an organic acid ester into another ester of that same acid.

transfection [GEN] Infection of a cell with viral deoxyribonucleic acid or ribonucleic acid.

transfer [COMPUT SCI] *See* jump. [MIN ENG] A vertical or inclined connection between two or more levels, used as an ore pass. [NAV] **1.** The distance a vessel moves perpendicular to its initial direction in making a turn of 90° with a constant rudder angle. **2.** The distance a vessel moves perpendicular to its initial direction for turns of less than 90°.

transfer admittance [ELECTR] An admittance rating for electron tubes and other transducers or networks; it is equal to the complex alternating component of current flowing to one terminal from its external termination, divided by the complex alternating component of the voltage applied to the adjacent terminal on the cathode or reference side; all other terminals have arbitrary external terminations.

transferase [BIOCHEM] Any of various enzymes that catalyze the transfer of a chemical group from one molecule to another.

transfer caliper [DES ENG] A caliper having one leg which can be opened (or closed) to remove the instrument from the piece being measured; used to measure inside recesses or over projections.

transfer car [MIN ENG] A quarry car provided with transverse tracks, on which the gang car may be conveyed to or from the saw gang.

transfer card *See* transition card.

transfer chamber [ENG] In plastics processing, a vessel in which thermosetting plastic is softened by heat and pressure before being placed in a closed mold for final curing.

transfer characteristic [ELECTR] **1.** Relation, usually shown by a graph, between the voltage of one electrode and the current to another electrode, with all other electrode voltages being maintained constant. **2.** Function which, multiplied by an input magnitude, will give a resulting output magnitude. **3.** Relation between the illumination on a camera tube and the corresponding output-signal current, under specified conditions of illumination.

transfer check [COMPUT SCI] Check (usually automatic) on the accuracy of the transfer of a word in a computer operation.

transfer chute [ENG] A chute used at a transfer point in a conveyor system; the chute is designed with a curved base or some other feature so that the load be discharged in a centralized stream and in the same direction as the receiving conveyor.

transfer conditionally [COMPUT SCI] To copy, exchange, read, record, store, transmit, or write data or to change control or jump to another location according to a certain specified rule or in accordance with a certain criterion.

transfer constant [ENG] A transducer rating, equal to one-half the natural logarithm of the complex ratio of the product of the voltage and current entering a transducer to that leaving the transducer when the latter is terminated in its image impedance; alternatively, the product may be that of force and velocity or pressure and volume velocity; the real part of the transfer constant is the image attenuation constant, and the imaginary part is the image phase constant. Also known as transfer factor.

transfer ellipse *See* transfer orbit.

transference [PSYCH] The unconscious transfer of the patient's feelings and reactions originally associated with important persons in the patient's life, usually father, mother, or siblings, toward others and in the analytic situation, toward the analyst.

transference number [PHYS CHEM] The portion of the total electrical current carried by any ion species in a fluid-state electrolyte.

transfer factor *See* transfer constant.

transfer function [CONT SYS] The mathematical relationship between the output of a control system and its input: for a linear system, it is the Laplace transform of the output divided by the Laplace transform of the input under conditions of zero initial-energy storage.

transfer impedance [ELEC] The ratio of the voltage applied at one pair of terminals of a network to the resultant current at another pair of terminals, all terminals being terminated in a specified manner.

transfer-in-channel command [COMPUT SCI] A command used to direct channel control to a specified location in main storage when the next channel command word is not stored in the next location in sequence.

transfer instruction [COMPUT SCI] Step in computer operation specifying the next operation to be performed, which is not necessarily the next instruction in sequence.

transfer interpreter [COMPUT SCI] A variation of a punched-card interpreter that senses a punched card and prints the punched information on the following card. Also known as posting interpreter.

transfer matrix [CONT SYS] The generalization of the concept of a transfer function to a multivariable system; it is the matrix whose product with the vector representing the input variables yields the vector representing the output variables.

transfer molding [ENG] Molding of thermosetting materials in which the plastic is softened by heat and pressure in a transfer chamber, then forced at high pressure through suitable sprues, runners, and gates into a closed mold for final curing.

transfer of fire [ORD] Shifting of fire from one target to another, applying the corrections for the first target to the data for the second target.

transfer operation [COMPUT SCI] An operation which moves information from one storage location or one storage medium to another (for example, read, record, copy, transmit, exchange).

transfer orbit [AERO ENG] In interplanetary travel, an elliptical trajectory tangent to the orbits of both the departure planet and the target planet. Also known as transfer ellipse.

transfer rate [COMPUT SCI] The speed at which data are moved from a direct-access device to a central processing unit.

transfer ratio [ENG] From one point to another in a transducer at a specified frequency, the complex ratio of the generalized force or velocity at the second point to the generalized force or velocity applied at the first point; the generalized force or velocity includes not only mechanical quantities, but also other analogous quantities such as acoustical and electrical; the electrical quantities are usually electromotive force and current.

transfer reaction [NUC PHYS] A nuclear reaction in which one or more nucleons are exchanged between the target nucleus and an incident projectile.

transferred arc [MET] In plasma arc welding, an arc established between the electrode and the workpiece.

transferred-electron amplifier [ELECTR] A diode amplifier, which generally uses a transferred-electron diode made from doped *n*-type gallium arsenide, that provides amplification in the gigahertz range to well over 50 gigahertz at power outputs typically below 1 watt continuous-wave. Abbreviated TEA.

transferred-electron device [ELECTR] A semiconductor device, usually a diode, that depends on internal negative resistance caused by transferred electrons in gallium arsenide or indium phosphide at high electric fields; transit time is minimized, permitting oscillation at frequencies up to several hundred megahertz.

transferred-electron effect [SOLID STATE] The variation in the effective drift mobility of charge carriers in a semiconductor when significant numbers of electrons are transferred from a low-mobility valley of the conduction band in a zone to a high-mobility valley, or vice versa.

transfer ribonucleic acid [MOL BIO] The smallest ribonucleic acid molecule found in cells; its structure is complementary to messenger ribonucleic acid and it functions by transferring amino acids from the free state to the polymeric form of growing polypeptide chains. Abbreviated t-RNA.

transferrin [BIOCHEM] Any of various beta globulins in blood serum which bind and transport iron to the bone marrow and storage areas.

transfer switch [ELEC] A switch for transferring one or more conductor connections from one circuit to another.

transfer test [COMMUN] Verification of transmitted information by temporary storing, retransmitting, and comparing.

transfer unit [CHEM ENG] The relationship between the overall rate coefficient (for whatever transfer operation is being calculated), column volume, and fluid volumetric flow rate in fixed-bed sorption operations.

transfinite induction [MATH] A reasoning process by which if a theorem holds true for the first element of a well-

ordered set N and is true for an element n whenever it holds for all predecessors of n, then the theorem is true for all members of N.

transfinite number [MATH] Any ordinal or cardinal number equal to or exceeding aleph null.

transfluxor [ELECTROMAG] A magnetic core having two or more apertures and three or more legs for flux; used as a computer memory element, crossbar switch, channel commutator, or control element.

transform [COMPUT SCI] To change the form of digital-computer information without significantly altering its meaning. [MATH] **1.** A conjugate of an element of a group. **2.** An expression, commonly used in harmonic analysis, formed from a given function f by taking an integral of $f \cdot g$, where g is a member of an orthogonal family of functions. **3.** The value of a transformation at some point.

transformation [CRYSTAL] *See* inversion. [ELEC] For two networks which are equivalent as far as conditions at the terminals are concerned, a set of equations giving the admittances or impedances of the branches of one circuit in terms of the admittances or impedances of the other. [GRAPHICS] The process of projecting a photograph (mathematically, graphically, or photographically) from its plane onto another plane by translation, rotation, or scale change. [MATH] A function, usually between vector spaces.

transformation constant *See* decay constant.

transformation group [MATH] **1.** A collection of transformations which forms a group with composition as the operation. **2.** A dynamical system or, more generally, a topological group G together with a topological space X where each g in G gives rise to a homeomorphism of X in a continuous manner with respect to the algebraic structure of G.

transformation matrix [ELECTROMAG] A two-by-two matrix which relates the amplitudes of the traveling waves on one side of a waveguide junction to those on the other.

transformation series *See* radioactive series.

transformation temperature [MET] **1.** The temperature at which a change in phase occurs in a metal during heating or cooling. **2.** The maximum or minimum temperature of a transformation temperature range.

transformation temperature ranges [MET] The ranges of temperatures within which austenite forms during heating and transforms during cooling.

transformation theory [QUANT MECH] The study of coordinate and other transformations in quantum mechanics, especially those which leave some properties of the system invariant.

transformation twin [CRYSTAL] A crystal twin developed by a growth transformation from a higher to a lower symmetry.

transformer [ELECTROMAG] An electrical component consisting of two or more multiturn coils of wire placed in close proximity to cause the magnetic field of one to link the other; used to transfer electric energy from one or more alternating-current circuits to one or more other circuits by magnetic induction.

transformer bridge [ELEC] A network consisting of a transformer and two impedances, in which the input signal is applied to the transformer primary and the output is taken between the secondary center-tap and the junction of the impedances that connect to the outer leads of the secondary.

transformer-coupled amplifier [ELECTR] Audio-frequency amplifier that uses untuned iron-core transformers to provide coupling between stages.

transformer coupling [ELEC] *See* inductive coupling. [ELECTR] Interconnection between stages of an amplifier which employs a transformer for connecting the plate circuit of one stage to the grid circuit of the following stage; a special case of inductive coupling.

transformer hybrid *See* hybrid set.

transformer load loss [ELEC] Losses in a transformer which are incident to the carrying of the load; load losses include resistance loss in the windings due to load current, stray loss due to stray fluxes in the windings, core clamps, and so on, and to circulating current, if any, in parallel windings.

transformer loss [ELEC] Ratio of the signal power that an ideal transformer of the same impedance ratio would deliver to the load impedance, to the signal power that the actual transformer delivers to the load impedance; this ratio is usually expressed in decibels.

transformer oil [MATER] A high-quality insulating oil in which windings of large power transformers are sometimes immersed to provide high dielectric strength, high insulation resistance, high flash point, freedom from moisture, and freedom from oxidization.

transformer read-only store [COMPUT SCI] In computers, read-only store in which the presence or absence of mutual inductance between two circuits determines whether a binary 1 or 0 is stored.

transformer substation [ELEC] An electric power substation whose equipment includes transformers.

transformer voltage ratio [ELEC] Ratio of the root-mean-square primary terminal voltage to the root-mean-square secondary terminal voltage under specified conditions of load.

transform fault [GEOL] A strike-slip fault with offset ridges characteristic of a midoceanic ridge.

transforming principle [MICROBIO] Deoxyribonucleic acid which effects transformation in bacterial cells.

transforming section [ELECTROMAG] Length of waveguide or transmission line of modified cross section, or with a metallic or dielectric insert, used for impedance transformation.

transfusion [MED] The administration of blood, or one of its components, as a part of treatment.

transgranular *See* transcrystalline.

transgression [GEOL] Geologic evidence of landward extension of the sea. Also known as invasion; marine transgression. [OCEANOGR] Extension of the sea over land areas.

transgressive deposit [GEOL] Sediment deposited during transgression of the sea or during subsidence of the land.

transgressive overlap *See* onlap.

transhybrid loss [ELEC] In a carrier telephone system, the transmission loss at a given frequency measured across a hybrid circuit joined to a given two-wire termination and balancing network.

transient [PHYS] A pulse, damped oscillation, or other temporary phenomenon occurring in a system prior to reaching a steady-state condition.

transient analyzer [ELECTR] An analyzer that generates transients in the form of a succession of equal electric surges of small amplitude and adjustable waveform, applies these transients to a circuit or device under test, and shows the resulting output waveforms on the screen of an oscilloscope.

transient distortion [ELECTR] Distortion due to inability to amplify transients linearly.

transient lunar phenomena [ASTRON] Local obscurations and reddish glows that are sometimes observed in certain areas of the moon. Abbreviated TLP.

transient motion [PHYS] An oscillatory or other irregular motion occurring while a quantity is changing to a new steady-state value.

transient overshoot [PHYS] The maximum value of the overshoot of a quantity as a result of a sudden change in conditions.

transient phenomena [ELEC] Rapidly changing actions occurring in a circuit during the interval between closing of a switch and settling to a steady-state condition, or any other temporary actions occurring after some change in a circuit.

transient problem *See* initial-value problem.

transient response [PHYS] The behavior of a system following a sudden change in its input.

transient situational disturbance [PSYCH] A form of personality disorder, more or less transient, and generally an acute symptom response to a specific situation, without persistent personality disturbance.

transient suppressor *See* surge suppressor.

transient x-ray source *See* x-ray nova.

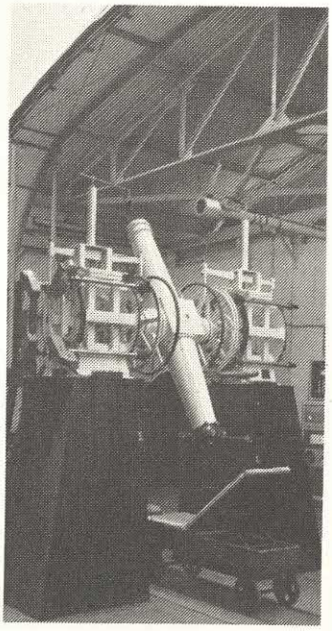
transistance [ELECTR] The characteristic that makes possible the control of voltages or currents so as to accomplish gain or switching action in a circuit; examples of transistance occur in transistors, diodes, and saturable reactors.

transistor [ELECTR] An active component of an electronic circuit consisting of a small block of semiconducting material to which at least three electrical contacts are made, usually two closely spaced rectifying contacts and one ohmic (nonrectifying) contact; it may be used as an amplifier, detector, or switch.

transistor amplifier [ELECTR] An amplifier in which one or more transistors provide amplification comparable to that of electron tubes.

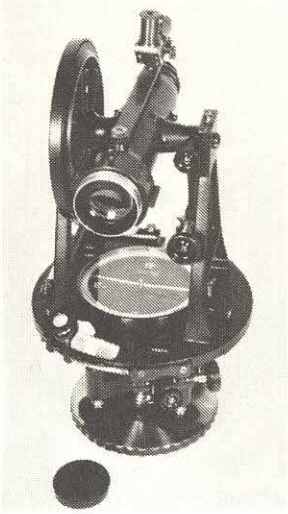
transistor biasing [ELECTR] Maintaining a direct-current voltage between the base and some other element of a transistor.

TRANSIT CIRCLE



Six-inch (15-centimeter) transit circle, U.S. Naval Observatory. *(Official U.S. Naval Observatory photograph)*

TRANSIT DECLINOMETER



Transit declinometer with compass needle, telescope, and microscope. *(U.S. Coast and Geodetic Survey)*

TRANSITIONAL EPITHELIUM

Cellular arrangement in transitional epithelium.

transistor characteristics [ELECTR] The values of the impedances and gains of a transistor.

transistor chip [ELECTR] An unencapsulated transistor of very small size used in microcircuits.

transistor circuit [ELECTR] An electric circuit in which a transistor is connected.

transistor clipping circuit [ELECTR] A circuit in which a transistor is used to achieve clipping action; the bias at the input is set at such a level that output current cannot flow during a portion of the amplitude excursion of the input voltage or current waveform.

transistor gain [ELECTR] The increase in signal power produced by a transistor.

transistor input resistance [ELECTR] The resistance across the input terminals of a transistor stage. Also known as input resistance.

transistor magnetic amplifier [ELECTR] A magnetic amplifier together with a transistor preamplifier, the latter used to make the signal strong enough to change the flux in the core of the magnetic amplifier completely during a half-cycle of the power supply voltage.

transistor memory *See* semiconductor memory.

transistor radio [ELECTR] A radio receiver in which transistors are used in place of electron tubes.

transistor-transistor logic [ELECTR] A logic circuit containing two transistors, for driving large output capacitances at high speed. Abbreviated T^2L; TTL.

transit [ASTRON] **1.** A celestial body's movement across the meridian of a place. Also known as meridian transit. **2.** Passage of a smaller celestial body across a larger one. **3.** Passage of a satellite's shadow across the disk of its primary. [ENG] **1.** A surveying instrument with the telescope mounted so that it can measure horizontal and vertical angles. Also known as transit theodolite. **2.** To reverse the direction of the telescope of a transit by rotating 180° about its horizontal axis. Also known as plunge. [NAV] A positive-fixing system employing low-orbit satellites which constantly emit continuous-wave signals; on the surface vehicle, the signals are received and the Doppler shift is recorded; position is determined by computation based on the shift.

transit circle [ENG] A type of astronomical transit instrument having a micrometer eyepiece that has an extra pair of moving wires perpendicular to the vertical set to measure the zenith distance or declination of the celestial object in conjunction with readings taken from a large, accurately calibrated circle attached to the horizontal axis. Also known as meridian circle; meridian transit.

transit declinometer [ENG] A type of declinometer; a surveyor's transit, built to exacting specifications with respect to freedom from traces of magnetic impurities and quality of the compass needle, has a 17-power telescope for sighting on a mark and for making solar and stellar observations to determine true directions.

Transite pipe *See* asbestos-cement pipe.

transit instrument *See* transit telescope.

transition [COMMUN] Change from one circuit condition to the other; for example, the change from mark to space or from space to mark. [MOL BIO] A mutation resulting from the substitution in deoxyribonucleic acid or ribonucleic acid of one purine or pyrimidine for another. [QUANT MECH] The change of a quantum-mechanical system from one energy state to another. [THERMO] A change of a substance from one of the three states of matter to another.

transitional epithelium [HISTOL] A form of stratified epithelium found in the urinary bladder; cells vary between squamous, when the tissue is stretched, and columnar, when not stretched.

transitional fit [DES ENG] A fit with varying clearances due to specified tolerances on the shaft and sleeve or hole.

transitional flow [FL MECH] A flow in which the viscous and Reynolds stresses are of approximately equal magnitude; it is transitional between laminar flow and turbulent flow.

transition altitude [AERO ENG] The altitude in the vicinity of an aerodrome at or below which the vertical position of an aircraft is controlled by reference to true altitude.

transition card [COMPUT SCI] In reading a deck of punched cards by a computer, a card that causes the computer to stop reading cards and begin executing a program. Also known as transfer card.

transition curve *See* easement curve.

transition element [CHEM] One of a group of metallic elements in which the members have the filling of the outermost shell to 8 electrons interrupted to bring the penultimate shell from 8 to 18 or 32 electrons; includes elements 21 through 29 (scandium through copper), 39 through 47 (yttrium through silver), 57 through 79 (lanthanum through gold), and all known elements from 89 (actinium) on. [ELECTROMAG] An element used to couple one type of transmission system to another, as for coupling a coaxial line to a waveguide.

transition factor *See* reflection factor.

transition flow [AERO ENG] A flow of fluid about an airfoil that is changing from laminar flow to turbulent flow.

transition frequency [ENG ACOUS] The frequency corresponding to the intersection of the asymptotes to the constant-amplitude and constant-velocity portions of the frequency-response curve for a disk recording; this curve is plotted with output-voltage ratio in decibels as the ordinate, and the logarithm of the frequency as the abscissa. Also known as crossover frequency; turnover frequency. [QUANT MECH] The characteristic frequency of radiation emitted or absorbed by a quantum-mechanical system as it changes from one energy state to another; equal to the energy difference between the states divided by Planck's constant.

transition function [COMPUT SCI] A function which determines the next state of a sequential machine from the present state and the present input.

transition lattice [MET] An unstable, intermediate configuration formed in a metal lattice during solid-state reactions such as precipitation or transformation.

transition level [NAV] The flight level below which heights are expressed in feet above mean sea level and are based on an approved station altimeter setting.

transition loss [ELEC] At a junction between a source and a load, the ratio of the available power to the power delivered to the load.

transition moment [QUANT MECH] Any type of multipole moment which determines radiative transitions between states; it consists of an integral of the product of the conjugate of the final state wave function, a multipole moment operator, and the initial state wave function.

transition point [ELECTROMAG] A point at which the constants of a circuit change in such a way as to cause reflection of a wave being propagated along the circuit. [THERMO] Either the temperature at which a substance changes from one state of aggregation to another (a first-order transition), or the temperature of culmination of a gradual change, such as the lambda point, or Curie point (a second-order transition). Also known as transition temperature.

transition probability [MATH] Conditional probability concerning a discrete Markov chain giving the probabilities of change from one state to another. [QUANT MECH] The probability per unit time that a quantum-mechanical system will make a transition from a given initial state to a given final state.

transition region [SOLID STATE] The region between two homogeneous semiconductors in which the impurity concentration changes.

transition temperature [MET] The temperature at which a fracture changes from tough to brittle in various tests, such as notched-bar impact test. [THERMO] *See* transition point.

transition time [ANALY CHEM] The time interval needed for a working (nonreference) electrode to become polarized during chronopotentiometry (time-measurement electrolysis of a sample).

transition zone [FL MECH] Those conditions of fluid flow in which the nature of the flow is changing from laminar to turbulent. [GEOL] **1.** A region within the upper mantle bordering the lower mantle, at a depth of 410–1000 kilometers, characterized by a rapid increase in density of about 20% and an increase in seismic wave velocities. **2.** A region within the outer core, transitional to the inner core.

transitive relation [MATH] A relation $<$ on a set such that if $a < b$ and $b < c$, then $a < c$.

transit mix [MATER] Concrete or mortar mixed in a rotating cylinder en route to or at the construction site.

transitory target [ORD] A target that obtains only for a limited period of time, as in the case of a troop concentration which may be dissipated in a short time.

transitron [ELECTR] Thermionic-tube circuit whose action depends on the negative transconductance of the suppressor grid of a pentode with respect to the screen grid.

transitron oscillator [ELECTR] A negative-resistance oscillator in which the screen grid is more positive than the anode, and a capacitor is connected between the screen grid and the suppressor grid; the suppressor grid periodically divides the current between the screen grid and the anode, thereby producing oscillation.

Transit satellite [AERO ENG] One of a system of passive, low-orbiting satellites which provide high-accuracy fixes using the Doppler technique several times a day at every point on earth, for navigation and geodesy.

transit survey [ENG] A ground surveying method in which a transit instrument is set up at a control point and oriented, and directions and distances to observed points are recorded.

transit telescope [OPTICS] A telescopic instrument adapted to the observation of the passage, or transit, of an astronomical object across the meridian of an observer; consists of a telescope mounted on a single fixed horizontal axis of rotation which has a central hollow cube (sometimes a sphere) and two conical semiaxes ending in cylindrical pivots; the objective and eyepiece halves of the instrument are also fastened to the cube of the instrument, perpendicular to the horizontal axis. Also known as transit instrument.

transit theodolite *See* transit.

transit time [ELECTR] The time required for an electron or other charge carrier to travel between two electrodes in an electron tube or transistor.

transit-time microwave diode [ELECTR] A solid-state microwave diode in which the transit time of charge carriers is short enough to permit operation in microwave bands.

transit-time mode [ELECTR] One of the three operating modes of a transferred-electron diode, in which space-charge domains are formed at the cathode and travel across the drift region to the anode.

transketolase [BIOCHEM] An enzyme that cleaves a substrate at the position of the carbonyl carbon and transports a two-carbon fragment to an acceptor compound to form a new compound.

translate [COMPUT SCI] To convert computer information from one language to another, or to convert characters from one representation set to another, and by extension, the computer instruction which directs the latter conversion to be carried out.

translating circuit *See* translator.

translating-roller [ORD] A double-thread screw by means of which a breechblock is drawn longitudinally from its position in the breech of a large-caliber gun.

translation [MATH] **1.** A function changing the coordinates of a point in a euclidean space into new coordinates relative to axes parallel to the original. **2.** A function on a group to itself given by operating on each element by some one fixed element. [MECH] The linear movement of a point in space without any rotation. [MOL BIO] The process by which the linear sequence of nucleotides in a molecule of messenger ribonucleic acid directs the specific linear sequence of amino acids, as during protein synthesis.

translational fault [GEOL] A fault in which there has been uniform movement in one direction and no rotational component of movement. Also known as translatory fault.

translation algorithm [COMPUT SCI] A specific, effective, essentially computational method for obtaining a translation from one language to another.

translational motion [MECH] Motion of a rigid body in such a way that any line which is imagined rigidly attached to the body remains parallel to its original direction.

translational movement [GEOL] Movement, as of fault blocks, that is uniform, without rotation, so that parallel features maintain their orientation.

translation gliding *See* crystal gliding.

translation group [CRYSTAL] The collection of all translation operations which carry a crystal lattice into itself.

translation operation [PHYS] The process of moving an object along a straight line in such a way that any line which is fixed with respect to the object remains parallel to its original direction.

translator [COMPUT SCI] A computer network or system having a number of inputs and outputs, so connected that when signals representing information expressed in a certain code are applied to the inputs, the output signals will represent the same information in a different code. Also known as translating circuit. [ELECTR] A combination television receiver and low-power television transmitter, used to pick up television signals on one frequency and retransmit them on another frequency to provide reception in areas not served directly by television stations.

translator routine [COMPUT SCI] A program which accepts statements in one language and outputs them as statements in another language.

translatory fault *See* translational fault.

transliterate [COMPUT SCI] To represent the characters or words of one language by corresponding characters or words of another language.

translocation [BOT] Movement of water, mineral salts, and organic substances from one part of a plant to another. [CYTOL] The transfer of a chromosome segment from its usual position to a new position in the same or in a different chromosome.

translucent attritus [GEOL] Attritus composed principally of transparent humic degradation matter. Also known as humodurite.

translucent medium [OPTICS] A medium which transmits rays of light so diffused that objects cannot be seen distinctly; examples are various forms of glass which admit considerable light but impede vision.

translucidus [METEOROL] A cloud variety occurring in a layer, patch, or extensive sheet, the greater part of which is sufficiently translucent to reveal the position of the sun, or through which higher clouds may be discerned; this variety is found in the general altocumulus, altostratus, stratocumulus, and stratus.

translunar [ASTRON] Beyond the orbit of the moon.

transmethylase [BIOCHEM] A transferase enzyme involved in catalyzing chemical reactions in which methyl groups are transferred from a substrate to a new compound.

transmethylation [BIOCHEM] A metabolic reaction in which a methyl group is transferred from one compound to another; methionine and choline are important donors of methyl groups.

transmissibility [MECH] A measure of the ability of a system either to amplify or to suppress an input vibration, equal to the ratio of the response ampliude of the system in steady-state forced vibration to the excitation amplitude; the ratio may be in forces, displacements, velocities, or accelerations.

transmission [ELECTR] **1.** The process of transferring a signal, message, picture, or other form of intelligence from one location to another location by means of wire lines, radio, light beams, infrared beams, or other communication systems. **2.** A message, signal, or other form of intelligence that is being transmitted. [ELECTROMAG] *See* transmittance. [MECH ENG] The gearing system by which power is transmitted from the engine to the live axle in an automobile. Also known as gearbox.

transmission anomaly [ACOUS] The ratio of the transmission loss of underwater sound at a given distance from the source to the inverse square of this distance, usually expressed in decibels.

transmission band [ELECTROMAG] Frequency range above the cutoff frequency in a waveguide, or the comparable useful frequency range for any other transmission line, system, or device.

transmission coefficient [PHYS] **1.** The value of some quantity associated with the resultant field produced by incident and reflected waves at a given point in a transmission medium divided by the corresponding quantity in the incident wave. **2.** The ratio of transmitted to incident energy flux or flux of some other quantity at a discontinuity in a transmission medium; for sound waves, it is called the sound transmission coefficient. **3.** The ratio of the transmitted flux of some quantity to the incident flux for a substance of unit thickness. [QUANT MECH] *See* penetration probability.

transmission control character [COMMUN] A character included in a message to control its routing to the intended destination.

transmission diffraction [ANALY CHEM] A type of electron diffraction analysis in which the electron beam is transmitted through a thin film or powder whose smallest dimension is no greater than a few tenths of a micrometer.

transmission dynamometer [ENG] A device for measuring torque and power (without loss) between a propulsion power plant and the driven mechanism, for example, wheels or propellers.

transmission electron microscope [ELECTR] A type of

TRANSIT TELESCOPE

Large transit telescope, Pulkovo Observatory, Soviet Union, in use since 1838. *(Courtesy of B. L. Klock)*

TRANSLATOR

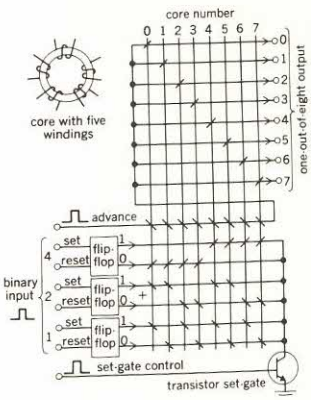


Diagram of a register circuit and translator (adp) using magnetic cores, each of which has five windings. Vertical lines represent magnetic cores. Short slanted lines represent windings and also symbolize a mirror action with respect to pulses.

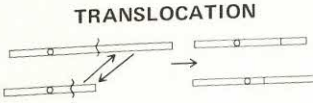
TRANSLOCATION



Translocation in which nonhomologous chromosomes become broken, switching their broken ends in the process of rejoining.

electron microscope in which the specimen transmits an electron beam focused on it, image contrasts are formed by the scattering of electrons out of the beam, and various magnetic lenses perform functions analogous to those of ordinary lenses in a light microscope.

transmission electron radiography [ELECTR] A technique used in microradiography to obtain radiographic images of very thin specimens; the photographic plate is in close contact with the specimen, over which is placed a lead foil and then a light-tight covering; hardened x-rays shoot through the light-tight covering.

transmission facilities [COMMUN] Cable or radio facilities constituting interswitch trunks and subscriber access lines.

transmission factor [PHYS] The ratio of the flux of some quantity transmitted through a body to the incident flux.

transmission function [GEOPHYS] A mathematical formulation of relationships between infrared transmission in the atmosphere, the path length, and the concentration of absorbing gases.

transmission gain *See* gain.

transmission gate [ELECTR] A gate circuit that delivers an output waveform that is a replica of a selected input during a specific time interval which is determined by a control signal.

transmission grating [OPTICS] A diffraction grating produced on a transparent base so radiation is transmitted through the grating instead of being reflected from it.

transmission interface converter [COMPUT SCI] A device that converts data to or from a form suitable for transfer over a channel connecting two computer systems or connecting a computer with its associated data terminals.

transmission level [COMMUN] The ratio of the signal power at any point in a transmission system to the signal power at some point in the system chosen as a reference point; usually expressed in decibels.

transmission line [ELEC] A system of conductors, such as wires, waveguides, or coaxial cables, suitable for conducting electric power or signals efficiently between two or more terminals.

transmission-line admittance [ELEC] The complex ratio of the current flowing in a transmission line to the voltage across the line, where the current and voltage are expressed in phasor notation.

transmission-line attenuation [ELEC] The decrease in power of a transmission-line signal from one point to another, expressed as a ratio or in decibels.

transmission-line cable [ELEC] The coaxial cable, waveguide, or microstrip which forms a transmission line; a number of standard types have been designated, specified by size and materials.

transmission-line constants *See* transmission-line parameters.

transmission-line current [ELEC] The amount of electrical charge which passes a given point in a transmission line per unit time.

transmission-line efficiency [ELEC] The ratio of the power of a transmission-line signal at one end of the line to that at the other end where the signal is generated.

transmission-line impedance [ELEC] The complex ratio of the voltage across a transmission line to the current flowing in the line, where voltage and current are expressed in phasor notation.

transmission-line parameters [ELEC] The quantities which are necessary to specify the impedance per unit length of a transmission line, and the admittance per unit length between various conductors of the line. Also known as linear electrical parameters; line parameters; transmission line constants.

transmission-line power [ELEC] The amount of energy carried past a point in a transmission line per unit time.

transmission-line reflection coefficient [ELEC] The ratio of the voltage reflected from the load at the end of a transmission line to the direct voltage.

transmission-line theory [ELEC] The application of electrical and electromagnetic theory to the behavior of transmission lines.

transmission-line transducer loss [ELEC] The ratio of the power delivered by a transmission line to a load to that produced at the generator, expressed in decibels; equal to the sum of the attenuation of the line and the mismatch loss.

transmission-line voltage [ELEC] The work that would be required to transport a unit electrical charge between two specified conductors of a transmission line at a given instant.

transmission loss [COMMUN] **1.** The ratio of the power at one point in a transmission system to the power at a point farther along the line; usually expressed in decibels. **2.** The actual power that is lost in transmitting a signal from one point to another through a medium or along a line. Also known as loss.

transmission mode *See* mode.

transmission modulation [ELECTR] Amplitude modulation of the reading-beam current in a charge storage tube as the beam passes through apertures in the storage surface; the degree of modulation is controlled by the stored charge pattern.

transmission oil [MATER] A lubricant especially compounded for automobile transmissions.

transmission plane [OPTICS] The plane of vibration of polarized light that will pass through a Nicol prism or other polarizer.

transmission primaries [COMMUN] The set of three color primaries that correspond to the three independent signals contained in the color television picture signal.

transmission range *See* night visual range.

transmission regulator [ELECTR] In electrical communications, a device that maintains substantially constant transmission levels over a system.

transmission security [COMMUN] Component of communications security which results from all measures designed to protect transmissions from unauthorized interception, traffic analysis, and imitative deception.

transmission speed [COMMUN] The number of information elements sent per unit time; usually expressed as bits, characters, bands, word groups, or records per second or per minute.

transmission substation [ELEC] An electric power substation associated with high voltage levels.

transmission time [COMMUN] Absolute time interval from transmission to reception of a signal.

transmission tower [ENG] A concrete, metal, or timber structure used to carry a transmission line.

transmissivity [ELECTROMAG] The ratio of the transmitted radiation to the radiation arriving perpendicular to the boundary between two mediums.

transmissometer [ENG] An instrument for measuring the extinction coefficient of the atmosphere and for the determination of visual range. Also known as hazemeter; transmittance meter.

transmissometry [OPTICS] The technique of determining the extinction characteristics of a medium by measuring the transmission of a light beam of known initial intensity directed into that medium.

transmit [COMMUN] To send a message, program, or other information to a person or place by wire, radio, or other means. [COMPUT SCI] To move data from one location to another.

transmit-receive tube [ELECTR] A gas-filled radio-frequency switching tube used to disconnect a receiver from its antenna during the interval for pulse transmission in radar and other pulsed radio-frequency systems. Also known as TR box; TR cell (British usage); TR switch; TR tube.

transmittability [COMMUN] The ability of standard electronic and mechanical elements and automatic communications equipment to handle a code under various signal-to-noise ratios; for example, a code with a variable number of elements such as Morse presents technical problems in automatic interpretation not encountered in a fixed-length code.

transmittance [ANALY CHEM] During absorption spectroscopy, the amount of radiant energy transmitted by the solution under analysis. [ELECTROMAG] The radiant power transmitted by a body divided by the total radiant power incident upon the body. Also known as transmission.

transmittance meter *See* transmissometer.

transmittancy [ELECTROMAG] The transmittance of a solution divided by that of the pure solvent of the same thickness.

transmitted-carrier operation [COMMUN] Form of amplitude-modulated carrier transmission in which the carrier wave is transmitted.

transmitted wave *See* refracted wave.

transmitter [COMMUN] **1.** In telephony, the carbon microphone that converts sound waves into audio-frequency signals. **2.** *See* radio transmitter. [ELEC] *See* synchro transmitter.

transmitter-distributor [ELEC] In teletypewriter operations, a motor-driven device which translates teletypewriter

code combinations form perforated tape into electrical impulses, and transmits these impulses to one or more receiving stations. Abbreviated TD.

transmitter noise *See* frying noise.

transmitter-receiver *See* transceiver.

transmitter synchro *See* synchro transmitter.

transmitting loop loss [COMMUN] That part of the repetition equivalent assignable to the station set, subscriber line, and battery supply circuit which is on the transmitting end.

transmitting mode [COMPUT SCI] Condition of an input/output device, such as a magnetic tape when it is actually reading or writing.

transmittivity [ELECTROMAG] The internal transmittance of a piece of nondiffusing substance of unit thickness.

transmutation [NUC PHYS] A nuclear process in which one nuclide is transformed into the nuclide of a different element. Also known as nuclear transformation.

transobuoy [ENG] A free-floating or moored automatic weather station developed for the purpose of providing weather reports from the open oceans; it transmits barometric pressure, air temperature, sea-water temperature, and wind speed and direction.

transolver [ELEC] A synchro having a two-phase cylindrical rotor within a three-phase stator, for use as a transmitter or a control transformer with no degradation of accuracy or nulls.

transom [BUILD] A window above a door. [NAV ARCH] The flat, vertical aft end of a ship or boat as distinguished from a canoe-shaped or cruiser stern.

transonic [PHYS] That which occurs or is occurring within the range of speed in which flow patterns change from subsonic to supersonic (or vice versa), about Mach 0.8 to 1.2, as in transonic flight or transonic flutter.

transonic flight [AERO ENG] Flight of vehicles at speeds near the speed of sound (660 miles per hour or 1060 kilometers per hour, at 35,000 feet or 10,700 meters altitude), characterized by great increase in drag, decrease in lift at any altitude, and abrupt changes in the moments acting on the aircraft; the vehicle may shake or buffet.

transonic flow [FL MECH] Flow of a fluid over a body in the range just above and just below the acoustic velocity.

transonic range [FL MECH] The range of speeds between the speed at which one point on a body reaches supersonic speed, and the speed at which all points reach supersonic speed.

transonic speed [FL MECH] The speed of a body relative to the surrounding fluid at which the flow is in some places on the body subsonic and in other places supersonic.

transonic wind tunnel [ENG] A type of high-speed wind tunnel capable of testing the effects of airflow past an object at speeds near the speed of sound, Mach 0.7 to 1.4; sonic speed occurs where the cross section of the tunnel is at a minimum, that is, where the test object is located.

transorbital lobotomy [MED] A lobotomy performed through the roof of the orbit.

transosonde [ENG] The flight of a constant-level balloon, whose trajectory is determined by tracking with radio-direction-finding equipment; thus, it is a form of upper-air, quasi-horizontal sounding.

transparency [GRAPHICS] An image fixed on a clear base by means of a photographic, printing, chemical, or other process, especially adaptable for viewing by transmitted light. [OPTICS] The ability of a substance to transmit light of different wavelengths, sometimes measured in percent of radiation which penetrates a distance of 1 meter.

transparent [PHYS] Permitting passage of radiation or particles.

transparent medium [OPTICS] **1.** A medium which has the property of transmitting rays of light in such a way that the human eye may see through the medium distinctly. **2.** A medium transparent to other regions of the electromagnetic spectrum, such as x-rays and microwaves.

transparent sky cover [METEOROL] In United States weather-observing practice, that portion of sky cover through which higher clouds and blue sky may be observed; opposed to opaque sky cover.

transpassive region [PHYS CHEM] That portion of an anodic polarization curve in which metal dissolution increases as the potential becomes noble.

transpiration [BIOL] The passage of a gas or liquid (in the form of vapor) through the skin, a membrane, or other tissue.

transpiration cooling *See* sweat cooling.

transplantation [BIOL] **1.** The artificial removal of part of an organism and its replacement in the body of the same or of a different individual. **2.** To remove a plant from one location and replant it in another place.

transplantation antigen [IMMUNOL] An antigen in a cell which induces a histocompatibility reaction when the cell is transplanted into an organism not having that antigen.

transplantation disease [MED] Disease ascribable to an immunological graft-versus-host reaction which occurs after transplantation of adult lymphoid cells to incompatible recipients who cannot reject them.

transplanter [AGR] A special kind of equipment designed for the planting of cuttings or small plants; it transports one or more men who assist the action of the machine in placing plants in a furrow and covering them; it commonly supplies a small quantity of water to each plant.

transplutonium element [INORG CHEM] An element having an atomic number greater than that of plutonium (94).

transpolarizer [ELEC] An electrostatically controlled circuit impedance that can have about 30 discrete and reproducible impedance values: two capacitors, each having a crystalline ferroelectric dielectric with a nearly rectangular hysteresis loop, are connected in series and act as a single low impedance to an alternating-current sensing signal when both capacitors are polarized in the same direction; application of 1-microsecond pulses of appropriate polarity increases the impedance in steps.

transponder [COMMUN] A transmitter-receiver capable of accepting the challenge of an interrogator and automatically transmitting an appropriate reply.

transponder beacon *See* responder beacon.

transponder dead time [ELECTR] Time interval between the start of a pulse and the earliest instant at which a new pulse can be received or produced by a transponder.

transponder set [ELECTR] A complete electronic set which is designed to receive an interrogation signal, and which retransmits coded signals that can be interpreted by the interrogating station; it may also utilize the received signal for actuation of additional equipment such as local indicators or servo amplifiers.

transponder suppressed time delay [ELECTR] Overall fixed time delay between reception of an interrogation and transmission of a reply to this interrogation.

transport [COMPUT SCI] **1.** To convey as a whole from one storage device to another in a digital computer. **2.** *See* tape transport. [ENG] Conveyance equipment such as vehicular transport, hydraulic transport, and conveyor-belt setups. [NAV ARCH] A ship designed to carry military personnel from one place to another. Also known as troop ship.

transportation [GEOL] A phase of sedimentation concerned with movement by natural agents of sediment or any loose or weathered material from one place to another.

transportation emergency [ENG] A situation which is created by a shortage of normal transportation capability and of a magnitude sufficient to frustrate movement requirements, and which requires extraordinary action by the designated authority to ensure continued movement.

transportation engineering [ENG] That branch of engineering relating to the movement of goods and people; major types of transportation are highway, water, rail, subway, air, and pipeline.

transportation lag *See* distance/velocity lag.

transportation priorities [ENG] Indicators assigned to eligible traffic which establish its movement precedence; appropriate priority systems apply to the movement of traffic by sea and air.

transportation problem [IND ENG] A programming problem that is concerned with the optimal pattern of the distribution of goods from several points of origin to several different destinations, with the specified requirements at each destination.

transport capacity [ENG] The number of persons or the tonnage (or volume) of equipment which can be carried by a vehicle under given conditions.

transport case [ENG] A moistureproof nonconductive wood, plastic, or fabric container used to transport safely small quantities of dynamite sticks to and from blasting sites.

transport delay unit [COMPUT SCI] A device used in analog computers which produces an output signal as a delayed form of an input signal. Also known as delay unit; transport unit.

transporter crane [MECH ENG] A long lattice girder supported by two lattice towers which may be either fixed or moved

along rails laid at right angles to the girder; a crab with a hoist suspended from it travels along the girder.

transport lag *See* distance/velocity lag.

transport mean free path [NUCLEO] **1.** A path length equal to three times the diffusion coefficient of neutron flux in a nuclear reactor when Fick's law is applicable. **2.** A modification of the mean free path to take into account anisotropy of scattering and the persistence of velocities.

transport network [ENG] The complete system of the routes pertaining to all means of transport available in a particular area, made up of the network particular to each means of transport.

transport number [PHYS CHEM] The fraction of the total current carried by a given ion in an electrolyte.

transport properties [PHYS] Properties of a compound or material associated with mass or heat transport; for example, viscosity and thermal conductivity of liquids, gases, or solids.

transport unit *See* transport delay unit.

transport vehicle [MECH ENG] Vehicle primarily intended for personnel and cargo carrying.

transpose of a matrix [MATH] The matrix obtained from the original matrix by interchanging its rows and columns.

transposition [COMMUN] Interchanging the relative positions of conductors at regular intervals along a transmission line to reduce cross talk. [MATH] A permutation of a set of symbols which exchanges exactly two while leaving all others unaffected.

transposition cipher [COMMUN] A cipher in which the order of the characters in the original message is changed.

transradar [COMMUN] Bandwidth compression system developed for long-range narrow-band transmission of radio signals from a radar receiver to a remote location.

transrectification [ELEC] Rectification that occurs in one circuit when an alternating voltage is applied to another circuit.

transrectification characteristic [ELECTR] Graph obtained by plotting the direct-voltage values for one electrode of a vacuum tube as abscissas against the average current values in the circuit of that electrode as ordinates, for various values of alternating voltage applied to another electrode as a parameter; the alternating voltage is held constant for each curve, and the voltages on other electrodes are maintained constant.

transrectifier [ELECTR] Device, ordinarily a vacuum tube, in which rectification occurs in one electrode circuit when an alternating voltage is applied to another electrode.

transsexual [PSYCH] An individual whose chromosomes, gonads, and body habitus mark that individual as a member of one sex, but who feels psychically to be of the other sex, with an overwhelming desire for sex reassignment through surgical and hormonal intervention.

transuranic elements [CHEM] Elements that have atomic numbers greater than 92; all are radioactive, are products of artificial nuclear changes, and are members of the actinide group. Also known as transuranium elements.

transuranium elements *See* transuranic elements.

Transvaal jade [MINERAL] A mineral that is not a true jade but a green grossularite garnet. Also known as South African jade.

transversal [MATH] **1.** A line intersecting a given family of lines. **2.** A curve orthogonal to a hypersurface. **3.** If π is a given map of a set X onto a set Y, a transversal for π is a subset T of X with the property that T contains exactly one point of $\pi^{-1}(y)$ for each $y \in Y$.

transverse bar [GEOL] A slightly submerged sand bar extending perpendicular to the shoreline.

transverse basin *See* exogeosyncline.

transverse cyclindrical orthomorphic chart *See* transverse Mercator chart.

transverse cylindrical orthomorphic projection *See* transverse Mercator projection.

transverse Doppler effect [ELECTROMAG] An aspect of the optical Doppler effect, occurring when the direction of motion of the source relative to an observer is perpendicular to the direction of the light received by the observer; the observed frequency is smaller than the source frequency by the factor $[1-(v/c)^2]^{1/2}$, where v is the speed of the source and c is the speed of light.

transverse dune [GEOL] A sand dune with a nearly straight ridge crest formed by the merger of crescentic dunes; elongated at right angles to the direction of prevailing winds, with a gentle windward slope and a steep leeward slope.

transverse electric mode [ELECTROMAG] A mode in which a particular transverse electric wave is propagated in a waveguide or cavity. Abbreviated TE mode. Also known as H mode (British usage).

transverse electric wave [ELECTROMAG] An electromagnetic wave in which the electric field vector is everywhere perpendicular to the direction of propagation. Abbreviated TE wave. Also known as H wave (British usage).

transverse electromagnetic mode [ELECTROMAG] A mode in which a particular transverse electromagnetic wave is propagated in a waveguide or cavity. Abbreviated TEM mode.

transverse electromagnetic wave [ELECTROMAG] An electromagnetic wave in which both the electric and magnetic field vectors are everywhere perpendicular to the direction of propagation. Abbreviated TEM wave.

transverse equator [MAP] A meridian the plane of which is perpendicular to the axis of a transverse projection; it serves as the origin for measurement of transverse latitude.

transverse fault [GEOL] A fault whose strike is more or less perpendicular to the general structural trend of the region.

transverse fold *See* cross fold.

transverse frame [NAV ARCH] A ship frame consisting of a large number of relatively small, closely spaced, athwartship frames, reinforced in the bottom by vertical floor plates and working in conjunction with widely spaced, fore-and-aft, deep girders, such as the keel, longitudinals, and side stringers.

transverse gallery [MIN ENG] An auxiliary crosscut made in thick deposits across the ore body in order to divide it into sections along the strike.

transverse graticule [MAP] A fictitious graticule based upon a transverse projection.

transverse interference [ELEC] Interference occurring across terminals or between signal leads.

transverse joint *See* cross joint.

transverse latitude [MAP] Angular distance from a transverse equator. Also known as inverse latitude.

transversely excited atmospheric pressure laser *See* TEA laser.

transverse magnetic mode [ELECTROMAG] A mode in which a particular transverse magnetic wave is propagated in a waveguide or cavity. Abbreviated TM mode. Also known as E mode (British usage).

transverse magnetic wave [ELECTROMAG] An electromagnetic wave in which the magnetic field vector is everywhere perpendicular to the direction of propagation. Abbreviated TM wave. Also known as E wave (British usage).

transverse magnetization [ENG ACOUS] Magnetization of a magnetic recording medium in a direction perpendicular to the line of travel and parallel to the greatest cross-sectional dimension.

transverse magnetoresistance [ELECTROMAG] One of the galvanomagnetic effects, in which a magnetic field perpendicular to an electric current gives rise to an electrical potential change in the direction of the current.

transverse mass [RELAT] The ratio of a force acting on a relativistic particle in a direction perpendicular to its velocity to the resulting acceleration; equal to $m_0 (1 - v^2/c^2)^{-1/2}$, where m_0 is the particle's rest mass, v is its speed, and c is the speed of light.

transverse Mercator chart [MAP] A chart on the transverse Mercator projection. Also known as inverse cylindrical orthomorphic chart; inverse Mercator chart; transverse cylindrical orthomorphic chart.

transverse Mercator projection [MAP] A conformal map projection in which the regular Mercator projection is rotated (transversed) 90° in azimuth, the central meridian corresponding to the line which represents the equator on the regular Mercator; the characteristics as to scale are identical to those of the regular Mercator, except that the scale is dependent on distances east or west of the meridian instead of north or south of the equator. Also known as inverse cylindrical orthomorphic projection; inverse Mercator projection; transverse cylindrical orthomorphic projection.

transverse meridian [MAP] A great circle perpendicular to a transverse equator.

transverse metacenter [NAV ARCH] The point of intersection of the vertical through the center of buoyancy of a ship in the position of equilibrium with the vertical through the new center of buoyancy when the ship is slightly heeled.

transverse parallel [MAP] A circle or line parallel to a trans-

verse equator, connecting all points of equal transverse latitude. Also known as inverse parallel.

transverse pole [MAP] One of the two points 90° from a transverse equator.

transverse recording [ELECTR] Technique for recording television signals on magnetic tape using a four-transducer rotating head.

transverse rhumb line [MAP] A line making the same oblique angle with all fictitious meridians of a transverse Mercator projection; transverse parallels and meridians may be considered special cases of the transverse rhumb line. Also known as inverse rhumb line.

transverse ripple mark [GEOL] A ripple mark formed nearly perpendicular to the direction of the current.

transverse stability [ENG] The ability of a ship or aircraft to recover an upright position after waves or wind roll it to one side.

transverse thrust *See* transcurrent fault.

transverse valley [GEOL] **1.** A valley perpendicular to the general strike of the underlying strata. **2.** A valley cutting perpendicularly across a ridge, range, or chain of mountains. Also known as cross valley.

transverse vibration [MECH] Vibration of a rod in which elements of the rod move at right angles to the axis of the rod.

transverse wave [GEOPHYS] *See* S wave. [PHYS] A wave in which the direction of the disturbance at each point of the medium is perpendicular to the wave vector and parallel to surfaces of constant phase.

transversion [MOL BIO] A mutation resulting from the substitution in deoxyribonucleic acid or ribonucleic acid of a purine for a pyrimidine or a pyrimidine for a purine.

trap [AERO ENG] That part of a rocket motor that keeps the propellant grain in place. [CIV ENG] A bend or dip in a soil drain which is always full of water, providing a water seal to prevent odors from entering the building. [COMPUT SCI] An automatic transfer of control of a computer to a known location, this transfer occurring when a specified condition is detected by hardware. [ELECTR] **1.** A tuned circuit used in the radio-frequency or intermediate-frequency section of a receiver to reject undesired frequencies; traps in television receiver video circuits keep the sound signal out of the picture channel. Also known as rejector. **2.** *See* wave trap. [GEOL] *See* oil trap. [MECH ENG] A device which reduces the effect of the vapor pressure of oil or mercury on the high-vacuum side of a diffusion pump. [PETR] Any dark-colored, fine-grained, nongranitic, hypabyssal or extrusive rock. Also known as trappide; trap rock. [SOLID STATE] Any irregularity, such as a vacancy, in a semiconductor at which an electron or hole in the conduction band can be caught and trapped until released by thermal agitation. Also known as semiconductor trap.

trap address [COMPUT SCI] The location at which control is transferred in case of an interrupt as soon as the current instruction is completed.

TRAPATT diode [ELECTR] A *pn* junction diode, similar to the IMPATT diode, but characterized by the formation of a trapped space-charge plasma within the junction region; used in the generation and amplification of microwave power. Derived from trapped plasma avalanche transit time diode.

trapdoor [BUILD] A hinged, sliding, or lifting door to cover an opening in a roof, ceiling, or floor.

trapdoor fault [GEOL] A circular fault that is hinged at one end.

trapeziform [BIOL] Having the form of a trapezium.

trapezium [MATH] A quadrilateral where no sides are parallel.

Trapezium [ASTRON] Four very hot stars that appear to the eye as a single star in the Great Nebula of Orion; the star symbol is M42.

trapezohedron [CRYSTAL] An isometric crystal form of 24 faces, each face of which is an irregular four-sided figure. Also known as icositetrahedron; leucitohedron; tetragonal trisoctahedron.

trapezoid [MATH] A quadrilateral having two parallel sides.

trapezoidal excavator [MECH ENG] A digging machine which removes earth in a trapezoidal cross-section pattern for canals and ditches.

trapezoidal generator [ELECTR] Electronic stage designed to produce a trapezoidal voltage wave.

trapezoidal integration [MATH] A numerical approximation of an integral by means of the trapezoidal rule.

trapezoidal pulse [ELECTR] An electrical pulse in which the voltage rises linearly to some value, remains constant at this value for some time, and then drops linearly to the original value.

trapezoidal rule [MATH] The rule that the integral from a to b of a real function $f(x)$ is approximated by

$$\frac{b-a}{2n}\left[f(a) + \sum_{j=1}^{n-1} 2f(x_j) + f(b)\right]$$

where $x_0 = a$, $x_j = x_{j-1} + (b-a)/n$ for $j = 1, 2, \ldots, n-1$.

trapezoidal wave [ELECTR] A wave consisting of a series of trapezoidal pulses.

trap mine [ORD] Land mine designed to explode unexpectedly when enemy personnel attempt to move an object.

trapped-air process [ENG] A procedure for the blow-mold forming of closed plastic objects; the bottom pinch is conventional and, after blowing, sliding pinchers close off the top to form a sealed-air, inflated product.

trapped fuel [ENG] The fuel in an engine or fuel system that is not in the fuel tanks.

trapped plasma avalanche transit time diode *See* TRAPATT diode.

trapped radiation [GEOPHYS] Radiation from space that has become trapped in the magnetic field of the earth, as in the Van Allen belt.

trappide *See* trap.

trapping [COMMUN] *See* guided propagation. [GRAPHICS] The process of an already printed ink film accepting a succeeding or overprinted ink film.

trapping mode [COMPUT SCI] A procedure by means of which the computer, upon encountering a predetermined set of conditions, saves the program in its present status, executes a diagnostic procedure, and then resumes the processing of the program as of the moment of interruption.

trap rock *See* trap.

trash screen [CIV ENG] A screen placed in a waterway to prevent the passage of trash.

Traube's rule [PHYS CHEM] In dilute solutions, the concentration of a member of a homologous series at which a given lowering of surface tension is observed decreases threefold for each additional methylene group in a given series.

trauma [MED] An injury caused by a mechanical or physical agent. [PSYCH] A severe psychic injury.

traumatic pneumonosis [MED] The acute, noninflammatory pathologic pulmonary changes produced by a large momentary deceleration.

traumatotropism [BIOL] Orientation response of an organ of a sessile organism in response to a wound.

Trauzl test [ENG] A test to determine the relative disruptive power of explosives, in which a standard quantity of explosive (10 grams) is placed in a cavity in a lead block and exploded; the resulting volume of cavity in the block is compared with the volume produced under the same conditions by a standard explosive, usually trinitrotoluene (TNT).

traveling block [MECH ENG] The movable unit, consisting of sheaves, frame, clevis, and hook, connected to, and hoisted or lowered with, the load in a block-and-tackle system. Also known as floating block; running block.

traveling charge [ORD] A propelling charge which travels along the bore with the projectile as burning takes place. Also known as Langweiler charge.

traveling compartment [MIN ENG] The section of a mine shaft used for raising and lowering the miners.

traveling detector [ENG] Radio-frequency probe which incorporates a detector used to measure the standing-wave ratio in a slotted-line section.

traveling dune *See* wandering dune.

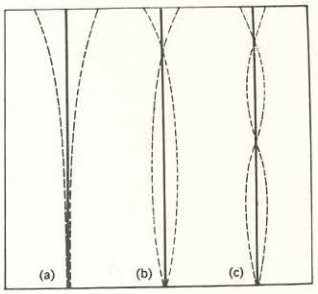
traveling gantry crane [ENG] A type of hoisting machine with a bridgelike structure spanning the area over which it operates and running along tracks at ground level.

traveling-grate stoker [MECH ENG] A type of furnace stoker; coal feeds by gravity into a hopper located on top of one end of a moving (traveling) grate; as the grate passes under the hopper, it carries a bed of fresh coal toward the furnace.

traveling position [ORD] Position of a weapon when ready for traveling, as opposed to firing position.

traveling road [MIN ENG] A roadway used by miners for

TRANSVERSE VIBRATION



Transverse vibrations of a long circular rod, rigidly clamped at one end and free at the other.
(a) The fundamental mode.
(b) The first-overtone mode.
(c) The second-overtone mode.

walking to and from the face, that is, from the shaft bottom or main entry to the workings.

traveling-screen dryer [CHEM ENG] A moving screen belt on which damp material is conveyed through a heated drying zone. Also known as screen dryer.

traveling valve [PETRO ENG] A sucker-rod-pump (oil well) discharge valve that moves with the plunger of a stationary-barrel-type pump, and with the barrel of a traveling-barrel-type pump; contrasted with a standing valve.

traveling wave [PHYS] A wave in which energy is transported from one part of a medium to another, in contrast to a standing wave.

traveling-wave amplifier [ELECTR] An amplifier that uses one or more traveling-wave tubes to provide useful amplification of signals at frequencies of the order of thousands of megahertz.

traveling-wave antenna [ELECTROMAG] An antenna in which the current distributions are produced by waves of charges propagated in only one direction in the conductors. Also known as progressive-wave antenna.

traveling-wave magnetron [ELECTR] A traveling-wave tube in which the electrons move in crossed static electric and magnetic fields that are substantially normal to the direction of wave propagation, as in practically all modern magnetrons.

traveling-wave magnetron oscillations [ELECTR] Oscillations sustained by the interaction between the space-charge cloud of a magnetron and a traveling electromagnetic field whose phase velocity is approximately the same as the mean velocity of the cloud.

traveling-wave maser [PHYS] A ruby maser used with a comblike slow-wave structure and a number of yttrium iron garnet isolators to give L-band amplification (390 to 1550 megahertz); operation is at the temperature of liquid helium (4.2 K).

traveling-wave parametric amplifier [ELECTR] Parametric amplifier which has a continuous or iterated structure incorporating nonlinear reactors and in which the signal, pump, and difference-frequency waves are propagated along the structure.

traveling-wave phototube [ELECTR] A traveling-wave tube having a photocathode and an appropriate window to admit a modulated laser beam; the modulated laser beam causes emission of a current-modulated photoelectron beam, which in turn is accelerated by an electron gun and directed into the helical slow-wave structure of the tube.

traveling-wave tube [ELECTR] An electron tube in which a stream of electrons interacts continuously or repeatedly with a guided electromagnetic wave moving substantially in synchronism with it, in such a way that there is a net transfer of energy from the stream to the wave; the tube is used as an amplifier or oscillator at frequencies in the microwave region.

travel-time curve [GEOPHYS] A plot of P-, S-, and L-wave travel times used by seismologists to locate earthquakes.

traverse [ENG] **1.** A survey consisting of a set of connecting lines of known length, meeting each other at measured angles. **2.** Movement to right or left on a pivot or mount, as of a gun, launcher, or radar antenna. [GEOL] A line of survey or sampling across a thin section of geological region. [METEOROL] A westerly wind in central France; it is moderate to strong, generally squally, humid and thundery in summer, especially on slopes facing west; it is cold in winter and spring and brings snow or hail showers. [NAV] A series of directions and distances, as those involved when a sailing vessel beats into the wind or a steam vessel zigzags.

traverse adjustment *See* balancing a survey.

traverse sailing [NAV] A method of determining the equivalent course and distance made good by a craft following a track consisting of a series of rhumb lines.

traverse table [NAV] A table giving relative values of various parts of plane right triangles, for use in solving such triangles, particularly in connection with various sailings.

traversia [METEOROL] A South American nautical term (especially Chile) for a west wind from the sea.

traversier [METEOROL] In the Mediterranean, a dangerous wind blowing directly into port.

traversing mechanism [ENG] Mechanism by which a gun or other device can be turned in a horizontal plane.

travertine [GEOL] Concretionary limestone deposited at the mouth of a hot spring.

trawl [ENG] A baglike net whose mouth is kept open by boards or by a leading diving vane or depressor at the foot of the opening and a spreader bar at the top; towed by a ship at specified depths for catching forms of marine life.

trawler [NAV ARCH] A ship designed for catching fish with a trawl.

tray elevator [MECH ENG] A device for lifting drums, barrels, or boxes; a parallel pair of vertical-mounted continuous chains turn over upper and lower drive gears, and spaced trays on the chains cradle and lift the objects to be moved.

tray tower [CHEM ENG] A vertical process tower for liquid-vapor contacting (as in distillation, absorption, stripping, evaporation, spray drying, dehumidification, humidification, flashing, rectification, dephlegmation), along the height of which is a series of trays designed to cause intimate contact between the falling liquid and the rising vapor.

TR box *See* transmit-receive tube.

TR cell *See* transmit-receive tube.

tread [CIV ENG] **1.** The horizontal part of a step in a staircase. **2.** The distance between two successive risers in a staircase. [ENG] The part of a wheel or tire that bears on the road or rail.

treanorite *See* allanite.

treater [CHEM ENG] A vessel or system for the contacting of a process stream with reagent (treating) chemicals; for example, acid treating or caustic treating.

treating [CHEM ENG] Usually, the contacting of a fluid stream (for example, water, sewage, petroleum products, or mixed gases) with chemicals to improve the fluid properties by removing, sequestering, or converting undesirable impurities.

Trebidae [INV ZOO] A family of copepod crustaceans of the order Caligoida which are external parasites on selachians.

treble [ACOUS] High audio frequencies, such as those handled by a tweeter in a sound system.

tree [BOT] A perennial woody plant at least 20 feet (6 meters) in height at maturity, having an erect stem or trunk and a well-developed crown or leaf canopy. [ELECTR] A set of connected circuit branches that includes no meshes; responds uniquely to each of the possible combinations of a number of simultaneous inputs. Also known as decoder. [MATH] A connected graph contained in a given connected graph having all the vertices of the original but without any closed circuit. [MET] A projecting treelike aggregate of crystals formed at areas of high local current density in electroplating.

tree automaton [COMPUT SCI] An automaton that processes inputs in the form of trees, usually trees associated with parsing expressions in context-free languages.

tree climate [CLIMATOL] Any type of climate which supports the growth of trees, including the tropical rainy climates, temperate rainy climates, and snow-forest climates.

tree diagram [COMPUT SCI] A flow diagram which has no closed paths.

tree fern [BOT] The common name for plants belonging to the families Cyatheaceae and Dicksoniaceae; all are ferns that exhibit an arborescent habit.

tree frog [VERT ZOO] Any of the arboreal frogs comprising the family Hylidae characterized by expanded digital adhesive disks.

tree line *See* timberline.

tree pruning [COMPUT SCI] A strategy for eliminating branches of the complete game tree associated with a given position in a game such as chess or checkers, creating subtrees that explore a limited number of continuations for a limited number of moves.

trellis drainage [HYD] A drainage pattern characterized by parallel main streams and secondary tributaries intersected at right angles by tributaries. Also known as espalier drainage; grapevine drainage.

Trematoda [INV ZOO] A loose grouping of acoelomate, parasitic flatworms of the phylum Platyhelminthes; they exhibit cephalization, bilateral symmetry, and well-developed holdfast structures.

trematodiasis [MED] Infection caused by a member of the Trematoda (trematodes).

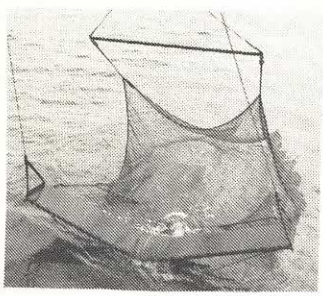
Trematosauria [PALEON] A group of Triassic amphibians in the order Temnospondyli.

trembling ill *See* louping ill.

Tremellales [MYCOL] An order of basidiomycetous fungi in the subclass Heterobasidiomycetidae in which basidia have longitudinal walls.

tremie [ENG] An apparatus for placing concrete underwater.

TRAWL



Isaacs-Kidd midwater trawl, showing depressor at foot of opening and spreader bar at top. *(Scripps Institution of Oceanography)*

consisting of a large metal tube with a hopper at the top end and a valve arrangement at the bottom, submerged end.

tremolite [MINERAL] $Ca_2Mg_5Si_8O_{22}(OH)_2$ Magnesium-rich monoclinic calcium amphibole that forms one end member of a group of solid-solution series with iron, sodium, and aluminum; occurs in long blade-shaped or short stout prismatic crystals and also in masses or compound aggregates.

tremor [GEOPHYS] A minor earthquake. Also known as earthquake tremor; earth tremor. [MED] Involuntary, rhythmic trembling of voluntary muscles resulting from alternate contraction and relaxation of opposing muscle groups.

trench [GEOGR] **1.** A narrow, straight, elongate, U-shaped valley between two mountain ranges. **2.** A narrow stream-eroded canyon, gulley, or depression with steep sides. [GEOL] A long, narrow, deep depression of the sea floor, with relatively steep sides. Also known as submarine trench.

trencher *See* trench excavator.

trench excavator [MECH ENG] A digging machine, usually on crawler tracks, and having either a movable wheel or a continuous chain on which buckets are mounted. Also known as bucket-ladder excavator; ditcher; trencher; trenching machine.

trench fever [MED] A louse-borne infection that is caused by *Rickettsia quintana* and is characterized by headache, chills, rash, pain in the legs and back, and often by a relapsing fever.

trenching machine *See* trench excavator.

trench mouth [MED] A common form of Vincent's angina; characterized by redness, congestion, and edema of the gums, with involvement of the entire oral cavity in severe cases.

trench sampling [MIN ENG] A slight refinement of grab sampling in which the ore material to be sampled is spread out flat and channeled in one direction with a shovel, and the material for the sample is taken at regular intervals along the channel.

trend [GEOL] The direction of an outcrop of a layer, vein, fold, or other kind of geologic feature. Also known as direction. [STAT] The general drift, tendency, or bent of a set of statistical data as related to time or another related set of statistical data.

trennschaukel apparatus [ENG] An instrument for determining the thermal diffusion factors of gases and gas mixtures, consisting of 20 suitably interconnected tubes whose top ends are maintained at the same temperature and whose bottom ends are maintained at the same temperature, with the temperature of the top ends greater than that of the bottom ends.

Trentepohliaceae [BOT] A family of green algae belonging to the Ulotrichales having thick walls, bandlike or reticulate chloroplasts, and zoospores or isogametes produced in enlarged, specialized cells.

Trentonian [GEOL] A North American stage of geologic time; Middle Ordovician (above Wilderness, below Edenian); equivalent to the upper Mohawkian.

trepanning tool [MECH ENG] A cutting tool in the form of a circular tube, having teeth on the end; the workpiece or tube, or both, are rotated and the tube is fed axially into the workpiece, leaving behind a narrow grooved surface in the workpiece.

Treponema [MICROBIO] A genus of bacteria in the family Spirochaetaceae; cells are helical rods with tight spirals and have axial fibrils at both ends of the protoplasmic cylinder; some species are pathogens.

Treponema pallidum [MICROBIO] The spirochetal bacterium which causes syphilis.

Treponema pallidum immobilization test [IMMUNOL] A serologic test for syphilis in which suspensions of *Treponema pallidum* are immobilized in the presence of syphilitic serum and complement. Abbreviated TPI test.

Treponemataceae [MICROBIO] Formerly a family of the bacterial order Spirochaetales including the spirochetes less than 20 micrometers long and less than 5 micrometers in diameter; most species are parasitic.

treponematosis [MED] Infection caused by any species of the genus *Treponema*. Also known as treponemiasis.

treponemiasis *See* treponematosis.

Trepostomata [PALEON] An extinct order of ectoproct bryozoans in the class Stenolaemata characterized by delicate to massive colonies composed of tightly packed zooecia with solid calcareous zooecial walls.

treptomorphism *See* isochemical metamorphism.

Treroninae [VERT ZOO] The fruit pigeons, a subfamily of the avian family Columbidae distinguished by the gaudy coloration of the feathers.

trestle [CIV ENG] A series of short bridge spans supported by a braced tower. [ENG] **1.** A movable support usually with legs that spread diagonally. **2.** A braced structure of timber, reinforced concrete, or steel spanning a land depression to carry a road or railroad.

trestle bent [CIV ENG] A transverse frame that supports the ends of the stringers in adjoining spans of a trestle.

tretamine *See* triethylenemelamine.

Tretothoracidae [INV ZOO] A family of the Coleoptera in the superfamily Tenebrionoidea which contains a single species found in Queensland, Australia.

TRF receiver *See* tuned-radio-frequency receiver.

triacetate [TEXT] A fiber manufactured from cellulose acetate in which 92% or more of the hydroxyl groups are acetylated.

triacetin [ORG CHEM] $C_3H_5(CO_2CH_3)_3$ A colorless, combustible oil with a bitter taste and a fatty aroma; found in cod liver and butter; soluble in alcohol and ether, slightly soluble in water; boils at 259°C; used in plasticizers, perfumery, cosmetics, and external medicine and as a solvent and food additive. Also known as glyceryl triacetate.

triacetyloleandomycin [MICROBIO] An antibiotic produced by *Streptomyces antibioticus* and used clinically in the treatment of pneumonia, osteomyelitis, furuncles, and carbuncles.

triad [COMPUT SCI] A group of three bits, pulses, or characters forming a unit of data. [ELECTR] A triangular group of three small phosphor dots, each emitting one of the three primary colors on the screen of a three-gun color picture tube. [NAV] *See* triplet.

triaene [INV ZOO] An elongated spicule in certain Porifera with three rays diverging from one end.

triage [MED] The process of determining which casualties (as from an accident, disaster, military battle, or explosion of nuclear weapons) need urgent treatment, which ones are well enough to go untreated, and which ones are beyond hope of benefit from treatment.

Triakidae [VERT ZOO] A family of galeoid sharks in the carcharinid line.

trial batch [ENG] A batch of concrete mixed to determine the water-cement ratio that will produce the required slump and compressive strength; from a trial batch, one can also compute the yield, cement factor, and required quantities of each material.

trial fire [ORD] Deliberate gunfire laid on a fixed point or target to determine the corrections for firing data.

triallate *See* *S*(2,3,3-trichlorallyl)diisopropylthiocarbamate.

trial pit [MIN ENG] A shallow hole, 2 to 3 feet (60 to 90 centimeters) in diameter, put down to test shallow minerals or to establish the nature and thickness of superficial deposits and depth to bedrock.

trial shots [ENG] The experimental shots and rounds fired in a sinking pit, tunnel, opencast, or quarry to determine the best drill-hole pattern to use.

triamcinolone [ORG CHEM] $C_{21}H_{27}FO_6$ White, toxic crystals; insoluble in water, soluble in dimethylformamide; melts at 266°C; used as an intermediate for ion-exchange resin, wetting and frothing agent, and photographic developer.

2,4,6-triamino-*s*-triazine *See* melamine.

triamylamine [ORG CHEM] $(C_5H_{11})_3N$ A combustible, colorless, toxic liquid; soluble in gasoline, insoluble in water; used to inhibit corrosion and in insecticides.

triamyl borate [ORG CHEM] $(C_5H_{11})_3BO_3$ A combustible, colorless liquid with an alcoholic aroma; soluble in alcohol and ether; boils at 220–280°C; used in varnishes.

triandrous [BOT] Possessing three stamens.

triangle [MATH] The figure realized by connecting three noncollinear points by line segments.

Triangle *See* Triangulum.

triangle cut [MIN ENG] A zigzag arrangement of drill holes permitting larger openings to be obtained as the drill holes can break out between the preceding row of holes.

triangle equation *See* angle equation.

triangle inequality [MATH] For real or complex numbers or vectors in a normed space x and y, the absolute value or norm of $x + y$ is less than or equal to the sum of the absolute values or norms of x and y.

triangle of velocities [NAV] The fundamental triangle asso-

ciated with dead-reckoning, composed of the following vectors: heading and true airspeed, track and groundspeed, and wind speed and wind direction.

triangular facet [GEOL] A triangular-shaped steep-sloped hill or cliff formed usually by the erosion of a fault-truncated hill.

triangular ligament *See* urogenital diaphragm.

triangular matrix [MATH] A matrix where either all entries above or all entries below the principal diagonal are zero.

triangular method [MIN ENG] A method of ore reserve estimation based on the assumption that a linear relationship exists between the grade difference and the distance between all drill holes.

triangular-notch weir [CIV ENG] A measuring weir with a V-shaped notch for measuring small flows. Also known as V-notch weir.

triangular pulse [ELECTR] An electrical pulse in which the voltage rises linearly to some value, and immediately falls linearly to the original value.

triangular wave [ELECTR] A wave consisting of a series of triangular pulses.

triangulation [ENG] A surveying method for measuring a large area of land by establishing a base line from which a network of triangles is built up; in a series, each triangle has at least one side common with each adjacent triangle. [MATH] A decomposition of a topological manifold into subsets homeomorphic with a polyhedron in some euclidean space. [NAV] Determination of the position of a ship or aircraft by obtaining bearings of the moving object with reference to two fixed radio stations a known distance apart; this gives the values of one side and all angles of a triangle, from which the position can be computed.

triangulation mark [ENG] A bronze disk set in the ground to identify a point whose latitude and longitude have been determined by triangulation.

triangulation problem [MATH] The problem of whether each topological n manifold admits a piecewise linear structure.

Triangulum [ASTRON] A northern constellation, right ascension 2 hours, declination 30°N. Also known as Triangle.

Triangulum Australe [ASTRON] A southern constellation, right ascension 16 hours, declination 65°S. Also known as Southern Triangle.

Triangulum Nebula [ASTRON] A nebula that is part of a small cluster of galaxies known as the local group; the nebula is labeled M 33.

Triassic [GEOL] The first period of the Mesozoic era, lying above Permian and below Jurassic, 180–225 million years ago.

Triatominae [INV ZOO] The kissing bugs, a subfamily of hemipteran insects in the family Reduviidae, distinguished by a long, slender rostrum.

triaxial pinch [PL PHYS] A device for heating a confined plasma, in which a discharge in an annular space between two concentric cylindrical conductors forms a cylindrical sheet of plasma, and this plasma is then confined and compressed by magnetic fields produced by currents flowing in the axial direction in the discharge itself and in the two conductors.

triaxon [INV ZOO] A spicule in Porifera having three axes which cross each other at right angles.

***s*-triazinetriol** *See* cyanuric acid.

triazole [ORG CHEM] A five-membered chemical ring compound with three nitrogens in the ring; for example, $C_2H_3N_3$; proposed for use as a photoconductor and for copying systems.

triazophos *See* phentriazophos.

tribasic calcium phosphate *See* calcium phosphate.

tribasic zinc phosphate *See* zinc phosphate.

tribo- [PHYS] A prefix meaning pertaining to or resulting from friction.

triboelectricity *See* frictional electricity.

triboelectric series [ELEC] A list of materials that produce an electrostatic charge when rubbed together, arranged in such an order that a material has a positive charge when rubbed with a material below it in the list, and has a negative charge when rubbed with a material above it in the list.

triboelectrification [ELEC] The production of electrostatic charges by friction.

tribology [PHYS] The study of the phenomena and mechanisms of friction, lubrication, and wear of surfaces in relative motion.

triboluminescence [ATOM PHYS] Luminescence produced by friction between two materials.

tribonate [ORG CHEM] $C_{17}H_{14}N_4O_{10}$ A postcontact herbicide. Also known as 2,4-dinitrophenyl-2-(sec-butyl)-4,6-dinitrophenyl carbonate.

tribromoethanol [PHARM] $C_2H_3Br_3O$ A white crystalline compound, melting at 79–82°C; used in medicine in anesthesia. Also known as tribromoethyl alcohol.

tribromoethyl alcohol *See* tribromoethanol.

tribromomethane *See* bromoform.

tribromonitromethane *See* bromopicrin.

tributary [HYD] A stream that feeds or flows into or joins a larger stream or a lake. Also known as contributory; feeder; side stream; tributary stream.

tributary glacier [GEOL] A glacier that flows into a larger glacier.

tributary station [COMMUN] Communications terminal consisting of equipment compatible for the introduction of messages into or reception from its associated relay station.

tributary stream *See* tributary.

tributary waterway [HYD] Any body of water that flows into a larger body, that is, a creek in relation to a river, a river in relation to a bay, and a bay in relation to the open sea.

tributoxyethyl phosphate [ORG CHEM] $[CH_3(CH_2)_3O(CH_2)_2O]PO$ A light yellow, oily liquid with a boiling range of 215–228°C; soluble in organic solvents; used as a plasticizer and flame retardant, and in floor waxes.

tributyl borate [ORG CHEM] $(C_4H_9)_3BO_3$ A combustible, water-white liquid miscible with common organic liquids; boils at 232°C; used in welding fluxes and as a chemical intermediate and textile flame-retardant. Also known as butyl borate.

tri-*n*-butylchlorostannane *See* tributyltin chloride.

tributyl[(5-chloro-2-thienyl)methyl]phosphonium chloride [ORG CHEM] $C_{17}H_{32}PSCl_2$ An amorphous, tan solid with a melting point of 157–159°C; soluble in water; used as a growth regulator for soybeans, peas, snap beans, and elm trees.

tributyl citrate *See* butyl citrate.

tributyl phosphate [ORG CHEM] $(C_4H_9)_3PO_4$ A combustible, toxic, stable liquid; soluble in most solvents, and very slightly soluble in water; boils at 292°C; used as a heat-exchange medium, pigment-grinding assistant, antifoam agent, and solvent. Abbreviated TBP.

***S,S,S*-tributylphosphorotrithioate** [ORG CHEM] $(CH_3(CH_2)_3S)_3P$ A pale yellow liquid, used as a defoliant for cotton.

tributyltin acetate [ORG CHEM] $(C_4H_9)_3Sn—OOCCH_3$ An organic compound of tin, used as an antimicrobial agent in the paper, wood, plastics, leather, and textile industries.

tributyltin chloride [ORG CHEM] $(C_4H_9)_3SnCl$ A colorless liquid with a boiling point of 145–147°C; soluble in alcohol, benzene, and other organic solvents; used as a rodenticide. Also known as tri-*n*-butylchlorostannane.

tricaine [ORG CHEM] $C_{10}H_{15}NO_5S$ Fine, needlelike crystals, soluble in water; used as an anesthetic for fish. Also known as *meta*-aminobenzoate methanesulfonate.

tricalcium phosphate *See* calcium phosphate.

tricamera photography [GRAPHICS] Photography obtained by simultaneous exposure of three cameras systematically disposed in the air vehicle at fixed overlapping angles relative to each other in order to cover a wide field.

tricarboxylic acid cycle *See* Krebs cycle.

trichalcite [MINERAL] $Cu_5Cu(AsO_4)_2(CO_3)(OH)_8 \cdot 6H_2O$ A verdigris green to blue-green, orthorhombic mineral consisting of hydrated copper arsenate. Also known as tyrolite.

Trichechidae [VERT ZOO] The manatees, a family of nocturnal, solitary sirenian mammals in the suborder Trichechiformes.

Trichechiformes [VERT ZOO] A suborder of mammals in the order Sirenia which contains the manatees and dugongids.

trichesthesia [PHYSIOL] A form of tactile sensibility in hair-covered regions of the body.

Trichiaceae [MYCOL] A family of slime molds in the order Trichiales.

Trichiales [MYCOL] An order of Myxomycetes in the subclass Myxogastromycetidae.

trichinosis [MED] Infection by the nematode *Trichinella spiralis* following ingestion of encysted larvae in raw or partially cooked pork; characterized by eosinophilia, nausea, fever, diarrhea, stiffness and painful swelling of muscles, and facial edema.

trichite [PETR] A black, straight or curved, hairlike crystalline.

TRIASSIC

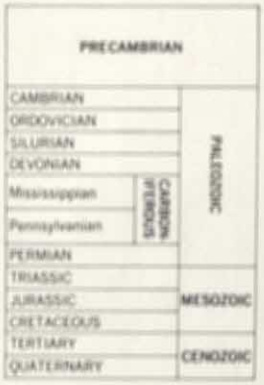


Chart showing position of the Triassic period in relation to the other periods and to the eras of geologic time.

TRICAINE

Structural formula.

Trichiuridae [VERT ZOO] The cutlass-fishes, a family of the suborder Scombroidei.

trichlorfon [ORG CHEM] $C_4H_8Cl_3O_4P$ A colorless, crystalline compound with a melting point of 83–84°C; used as an insecticide in agriculture. Also known as *O,O*-dimethyl(2,2,2-trichloro-1-hydroxyethyl)phosphonate.

trichloroacetic acid [ORG CHEM] CCl_3COOH Toxic, deliquescent, colorless crystals with a pungent aroma; soluble in water, alcohol, and ether; boils at 198°C; used as a chemical intermediate and laboratory reagent, and in medicine, pharmacy, and herbicides. Abbreviated TCA.

trichloroacetic aldehyde *See* chloral.

S(2,3,3-trichlorallyl)diisopropylthiocarbamate [ORG CHEM] $C_{10}H_{16}NSCl_3$ An oily liquid with a boiling point of 127°C at 0.6 mmHg (80 newtons per square meter); decomposes at 200°C; solubility in water is 4 parts per million at 25°C; used as a preemergence herbicide for wild oats, peas, barley, and fruit crops. Also known as triallate.

trichlorobenzene [ORG CHEM] $C_6H_3Cl_3$ Either of two toxic compounds: 1,2,3-trichlorobenzene forms white crystals, soluble in ether, insoluble in water, boiling at 221°C, and is used as a chemical intermediate; 1,2,4-trichlorobenzene is a combustible, colorless liquid, soluble in most organic solvents and oils, insoluble in water, boiling at 213°C, and is used as a solvent and in dielectric fluids, synthetic transformer oils, lubricants, and insecticides.

trichloro-*tert*-butyl alcohol *See* chlorobutanol.

trichloroethanal *See* chloral.

trichloroethane [ORG CHEM] $C_2H_3Cl_3$ Either of two nonflammable, irritating liquid isomeric compounds: 1,1,1-trichloroethane (CH_3CCl_3) is toxic, soluble in alcohol and ether, insoluble in water, and boils at 75°C; it is used as a solvent, aerosol propellant, and pesticide and for metal degreasing, and is also known as methyl chloroform; 1,1,2-trichloroethane ($CHCl_2CH_2Cl$) is clear and colorless, is soluble in alcohols, ethers, esters, and ketones, insoluble in water, has a sweet aroma, and boils at 114°C; it is used as a chemical intermediate and solvent, and is also known as vinyl trichloride.

2,2,2-trichloroethanol [PHARM] CCl_3CH_2OH A hygroscopic liquid with a boiling point of 151–153°C; soluble in water and miscible with alcohol or ether; used in medicine as a hypnotic and anesthetic. Also known as trichloroethyl alcohol.

trichloroethyl alcohol *See* 2,2,2-trichloroethanol.

trichloroethylene [ORG CHEM] $CHCl{:}CCl_2$ A heavy, stable, toxic liquid with a chloroform aroma; slightly soluble in water, soluble with greases and common organic solvents; boils at 87°C; used for metal degreasing, solvent extraction, and dry cleaning and as a fumigant and chemical intermediate.

trichlorofluoromethane [ORG CHEM] CCl_3F A toxic, noncombustible, colorless liquid boiling at 24°C; used as a chemical intermediate, solvent, refrigerant, aerosol propellant, and blowing agent (plastic foams) and in fire extinguishers. Also known as fluorocarbon-11; fluorotrichloromethane.

trichloroiminocyanuric acid *See* trichloroisocyanuric acid.

trichloroisocyanuric acid [ORG CHEM] $C_3Cl_3N_3O_3$ A crystalline substance that releases hypochlorous acid on contact with water; melting point is 246–247°C; soluble in chlorinated and highly polar solvents; used as a chlorinating agent, disinfectant, and industrial deodorant. Also known as symclosene; trichloroiminocyanuric acid.

trichloromethane *See* chloroform.

trichloromethyl chloroformate [ORG CHEM] $ClCOOCCl_3$ A toxic, colorless liquid with a boiling point of 127–128°C; soluble in alcohol, ether, and benzene; used in organic synthesis, and as a military poison gas during World War I. Also known as diphosgene.

cis-N-(trichloromethylthio)-4-cyclohexene-1,2-dicarboximide *See* captan.

N(trichloromethylthio)phthalimide *See* folpet.

trichloronate *See ortho*-ethyl[*O*-2,4,5-trichlorophenyl]ethylphosphonothioate.

trichloronitromethane *See* chloropicrin.

trichlorophenol [ORG CHEM] $C_6H_3Cl_3OH$ Either of two toxic nonflammable compounds with a phenol aroma: 2,4,5-trichlorophenol is a gray solid, is soluble in alcohol, acetone, and ether, melts at 69°C, and is used as a fungicide and bactericide; 2,4,6-trichlorophenol forms yellow flakes, is soluble in alcohol, acetone, and ether, boils at 248°C, and is used as a fungicide, defoliant, and herbicide; it is also known as 2,4,6-T.

2,4,5-trichlorophenoxyacetic acid [ORG CHEM] $C_8H_5Cl_3O_3$ OCH_2CO_2H A toxic, light-tan solid; soluble in alcohol, insoluble in water; melts at 152°C; used as a defoliant, plant hormone, and herbicide. Also known as 2,4,5-T.

2-(2,4,5-trichlorophenoxy)ethyl 2,2-dichloropropionate *See* erbon.

2-(2,4,5-trichlorophenoxy)propionic acid *See* silvex.

2,3,6-trichlorophenylacetic acid *See* chlorofenac.

1,2,3-trichloropropane [ORG CHEM] $CH_2ClCHClCH_2Cl$ A toxic, colorless liquid with a boiling point of 156.17°C; used as a paint and varnish remover and degreasing agent.

1,1,2-trichloro-1,2,2-trifluoroethane [ORG CHEM] $CCl_2F\text{-}CClF_2$ A colorless, volatile liquid with a boiling point of 47.6°C; used as a solvent for dry cleaning, as a refrigerant, and in fire extinguishers. Also known as trifluorotrichloroethane.

trichobezoar [MED] A ball of hair or similar concretion in the stomach or intestine.

trichobothrium [INV ZOO] An erect, bristlelike sensory hair found on certain arthropods, insects, and other invertebrates.

trichobranchiate gill [INV ZOO] A gill with filamentous branches arranged in several series around the axis; found in some decapod crustaceans.

Trichobranchidae [INV ZOO] A family of polychaete annelids belonging to the Sedentaria; most members are rare and live at great ocean depths.

trichocercous cercaria [INV ZOO] A trematode larva distinguished by a spiny tail.

Trichocomaceae [MYCOL] A small tropical family of ascomycetous fungi in the order Eurotiales with ascocarps from which a tuft of capillitial threads extrudes, releasing the ascospores after dissolution of the asci.

trichocyst [INV ZOO] A minute structure in the cortex of certain protozoans that releases filamentous or fibrillar threads when discharged.

Trichodactylidae [INV ZOO] A family of fresh-water crabs in the section Brachyura, found mainly in tropical regions.

trichoepithelioma [MED] A benign tumor characterized by small, round, yellow, or flesh-colored papules, chiefly on the center of the face.

Trichogrammatidae [INV ZOO] A family of the Hymenoptera in the superfamily Chalcidoidea whose larvae are parasitic in the eggs of other insects.

trichogyne [BOT] A terminal portion of a procarp or archicarp which receives a spermatium.

trichome [BOT] An appendage derived from the protoderm in plants, including hairs and scales. [INV ZOO] A brightly colored tuft of hairs on the body of a myrmecophile that releases an aromatic substance attractive to ants.

Trichomonadida [INV ZOO] An order of the protozoan class Zoomastigophorea which contains four families of uninucleate species.

Trichomonadidae [INV ZOO] A family of flagellate protozoans in the order Trichomonadida.

Trichomonas [INV ZOO] A genus of flagellate, parasitic protozoans, belonging to the Mastigophora, characterized by three to five flagella and an undulating membrane.

Trichomonas vaginalis [INV ZOO] A species of Protozoa that causes vaginitis.

trichomoniasis [MED] An infection caused by a species of the genus *Trichomonas*.

Trichomycetes [MYCOL] A class of true fungi, division Fungi.

trichomycin [MICROBIO] An antibiotic produced by *Streptomyces hachijoensis* and *S. ablokwensis*; a water-soluble yellow powder that inhibits yeasts and fungi.

Trichoniscidae [INV ZOO] A primitive family of isopod crustaceans in the suborder Oniscoidea found in damp littoral, halophilic, or riparian habitats.

trichopathophobia [PSYCH] Extreme anxiety and fear regarding growth, color, or diseases of hair.

Trichophilopteridae [INV ZOO] A family of lice in the order Mallophaga adapted to life upon the lemurs of Madagascar.

trichophytin [IMMUNOL] A group antigen obtained from filtrates of *Trichophyton mentagrophytes*; used in a skin test to ascertain past or present infection with the dermatophytes.

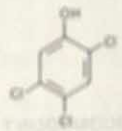
Trichoptera [INV ZOO] The caddis flies, an aquatic order of the class Insecta; larvae are wormlike and adults have two pairs of well-veined hairy wings, long antennae, and mouthparts capable of lapping only liquids.

Trichopterygidae [INV ZOO] The equivalent name for Ptiliidae.

TRICHLOROISOCYANURIC ACID

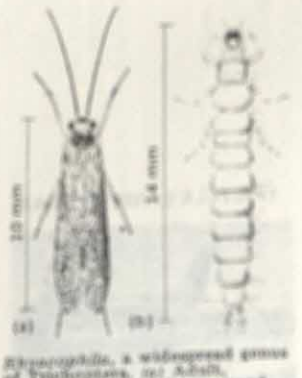
Structural formula.

TRICHLOROPHENOL



Structural formula.

TRICHOPTERA



Rhyacophila, a widespread genus of Trichoptera. (a) Adult, showing well-veined wings and long antennae. (b) Free-living larva. (*Illinois Natural History Survey*)

Trichostomatida [INV ZOO] An order of ciliated protozoans in the subclass Holotrichia in which no true buccal ciliature is present but there is a vestibulum.

Trichostrongylidae [INV ZOO] A family of parasitic roundworms belonging to the Strongyloidea; hosts are cattle, sheep, goats, swine, and cats.

trichroism [OPTICS] Phenomenon exhibited by certain optically anisotropic transparent crystals when subjected to white light, in which a cube of the material is found to transmit a different color through each of the three pairs of parallel faces.

trichromatic theory [OPTICS] A theory of color vision which states that three primary colors may be chosen in such a way that, combined in various proportions, they can match any color.

Trichuroidea [INV ZOO] A group of nematodes parasitic in various vertebrates and characterized by a slender body sometimes having a thickened posterior portion.

trickle charge [ELEC] A continuous charge of a storage battery at a low rate to maintain the battery in a fully charged condition.

trickle cooler *See* cascade cooler.

trickle hydrodesulfurization [CHEM ENG] A fixed-bed, petroleum refining process for desulfurization of middle distillates and gas oils; catalyst is cobalt molybdenum on alumina.

trickling [COMPUT SCI] The temporary transfer of momentarily unneeded data from main storage to secondary storage devices.

trickling filter [CIV ENG] A bed of broken rock or other coarse aggregate onto which sewage or industrial waste is sprayed intermittently and allowed to trickle through, leaving organic matter on the surface of the rocks, where it is oxidized and removed by biological growths.

Tricladida [INV ZOO] The planarians, an order of the Turbellaria distinguished by diverticulated intestines with a single anterior branch and two posterior branches separated by the pharynx.

triclinic crystal [CRYSTAL] A crystal whose unit cell has axes which are not at right angles, and are unequal. Also known as anorthic crystal.

triclinic system [CRYSTAL] The most general and least symmetric crystal system, referred to by three axes of different length which are not at right angles to one another.

tricolor picture tube *See* color picture tube.

tricone bit [ENG] A rock bit with three toothed, conical cutters, each of which is mounted on friction-reducing bearings.

triconodont [VERT ZOO] **1.** A tooth with three main conical cusps. **2.** Having such teeth.

Triconodonta [PALEON] An extinct mammalian order of small flesh-eating creatures of the Mesozoic era having no angle or a pseudoangle on the lower jaw and triconodont molars.

tricosane [ORG CHEM] $CH_3(CH_2)_{21}CH_3$ Combustible, glittering crystals; soluble in alcohol, insoluble in water; melts at 48°C; used as a chemical intermediate.

tricot [TEXT] A warp-knitted fabric, that is, flat-knitted with fine ribs on the face (lengthwise) and ribs on the back (widthwise).

tricotine [TEXT] A fabric similar to gabardine but with a steep double-twill weave resembling a knitted surface. Also known as cavalry twill.

tricresyl phosphate [ORG CHEM] $(CH_3C_6H_4O)_3PO$ A combustible, colorless liquid; insoluble in water, soluble in common solvents and vegetable oils; boils at 420°C; used as a plasticizer, plastics fire retardant, air-filter medium, and gasoline and lubricant additive. Abbreviated TCP.

Trictenotomidae [INV ZOO] A small family of Indian and Malaysian beetles in the superfamily Tenebrionoidea.

tricuspid [ANAT] Having three cusps or points, as a tooth.

tricuspid valve [ANAT] A valve consisting of three flaps located between the right atrium and right ventricle of the heart.

tricycle landing gear [AERO ENG] A landing-gear arrangement that places the nose gear well forward of the center of gravity on the fuselage and the two main gears slightly aft of the center of gravity, with sufficient distance between them to provide stability against rolling over during a yawed landing in a crosswind, or during ground maneuvers.

tricyclic dibenzopyran *See* xanthene.

tricyclohexyltin hydroxide *See* cyhexatin.

Tridacnidae [INV ZOO] A family of bivalve mollusks in the subclass Eulamellibranchia which contains the giant clams of the tropical Pacific.

Tridactylidae [INV ZOO] The pygmy mole crickets, a family of insects in the order Orthoptera, highly specialized for fossorial existence.

***n*-tridecane** [ORG CHEM] $CH_3(CH_2)_{11}CH_3$ A combustible liquid; soluble in alcohol, insoluble in water; boils at 226°C; used as a distillation chaser and chemical intermediate.

tridecanol *See* tridecyl alcohol.

tridecyl alcohol [ORG CHEM] $C_{12}H_{25}CH_2OH$ An isomer mixture; a white, combustible solid with a pleasant aroma; melts at 31°C; used in detergents and perfumery and to make synthetic lubricants. Also known as tridecanol.

***N*-tridecyl-2,6-dimethyl morpholine** *See* tridemorph.

tridemorph [ORG CHEM] $C_{19}H_{39}NO$ A colorless liquid with a boiling point of 134°C; used as a fungicide for powdery mildew in cereals. Also known as *N*-tridecyl-2,6-dimethyl morpholine.

tridentate ligand [INORG CHEM] A chelating agent having three groups capable of attachment to a metal ion. Also known as terdentate ligand.

trident of Newton [MATH] The curve in the plane given by the equation $xy = ax^3 + bx^2 + cx + d$, where $a \neq 0$; this cuts the x axis in one or three points and is asymptotic to the y axis if $d \neq 0$.

tridiagonal matrix [MATH] A square matrix in which all entries other than those on the principal diagonal and the two adjacent diagonals are zero.

triductor [ELEC] Arrangement of iron-core transformers and capacitors used to triple a power-line frequency.

tridymite [MINERAL] SiO_2 A white or colorless crystal occurring in minute, thin, tabular crystals or scales; a high-temperature polymorph of quartz.

triethanolamine [ORG CHEM] $(HOCH_2CH_2)_3N$ A viscous, hygroscopic liquid with an ammonia aroma, soluble in chloroform, water, and alcohol, and boiling at 335°C; used in dry-cleaning soaps, cosmetics, household detergents, and textile processing, for wool scouring, and as a corrosion inhibitor.

triethanolamine stearate *See* trihydroxyethylamine stearate.

triethylamine [ORG CHEM] $(C_2H_5)_3N$ A colorless, toxic, flammable liquid with an ammonia aroma; soluble in water and alcohol; boils at 90°C; used as a solvent, rubber-accelerator activator, corrosion inhibitor, and propellant, and in penetrating and waterproofing agents.

triethylborane [ORG CHEM] $(C_2H_5)_3B$ A colorless liquid with a boiling point of 95°C; used as a jet fuel or igniter for jet engines and as a fuel additive. Also known as boron triethyl; triethylborine.

triethylborine *See* triethylborane.

triethylene glycol [ORG CHEM] $HO(C_2H_4O)_3H$ A colorless, combustible, hygroscopic, water-soluble liquid; boils at 287°C; used as a chemical intermediate, solvent, bactericide, humectant, and fungicide. Abbreviated TEG.

triethylenemelamine [ORG CHEM] $NC[N(CH_2)_2]NC[N(CH_2)_2]NC[N(CH_2)_2]$ White crystals, soluble in water, alcohol, acetone, chloroform, and methanol; polymerizes at 160°C; used in medicine and insecticides and as a chemosterilant. Abbreviated TEM. Also known as tretamine.

triethylenetetramine [ORG CHEM] $NH_2(C_2H_4NH)_2C_2H_4NH_2$ A yellow, water-soluble liquid with a boiling point of 277.5°C; used in detergents and in the manufacture of dyes and pharmaceuticals.

triethylic borate *See* ethyl borate.

triethyl phosphate [ORG CHEM] $(C_2H_5)_3PO_4$ A toxic, colorless liquid that acts as a cholinesterase inhibitor; boiling point is 216°C; soluble in organic solvents; used as a solvent and plasticizer and for pesticides manufacture. Abbreviated TEP.

trifid [BIOL] Divided into three lobes separated by narrow sinuses partway to the base.

trifilter hydrophotometer [ENG] An instrument that uses red, green, and blue filters to measure the transparency of the water at three wavelengths.

trifluorochlorethylene resin [ORG CHEM] A fluorocarbon used as a base for polychlorotrifluoroethylene resin, marketed as Kel-F.

trifluorochloromethane *See* chlorotrifluoromethane.

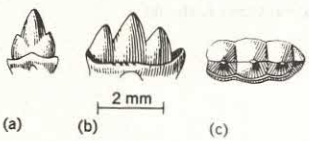
α,α,α-trifluoro-2,6-dinitro-*N,N*-dipropyl-*para*-toluidine *See* trifluralin.

trifluoromethane *See* fluoroform.

trifluoromethyl benzene *See* benzotrifluoride.

3′-trifluoromethyldiphenylamine-2-carboxylic acid *See* flufenamic acid.

TRICONODONT



Triconodont molars, showing three main cusps in longitudinal series. *(a)* External view of a lower molar of *Amphilestes*, an amphilestine triconodont. *(b)* Internal and *(c)* occlusal views of a lower molar of *Priacodon*, a triconodontine triconodont. *(After G. G. Simpson, 1929)*

TRICYCLE LANDING GEAR

Typical tricycle landing gear on A-7 Corsair II. *(LTV Aerospace Corp.)*

trifluorotrichloroethane *See* 1,1,2-trichloro-1,2,2-trifluoroethane.

trifluralin [ORG CHEM] $C_{13}H_{16}F_3N_3O_4$ A yellow-orange, crystalline compound with a melting point of 48.5–49°C; used as a preemergence herbicide for use on cotton, beans, and vegetables. Also known as α,α,α-trifluoro-2,6-dinitro-*N*,*N*-dipropyl-*para*-toluidine.

trifoliate [BOT] Having three leaves or leaflets.

trifoliosis [VET MED] An acute photosensitization characterized by superficial necrosis of white or light-skinned animals feeding on certain leguminous plants.

triforine [ORG CHEM] $C_{10}H_{10}Cl_6N_4O_2$ A colorless, crystalline compound with a melting point of 155°C; used to control fungus diseases of ornamentals, cereals, fruits, and vegetables. Also known as *N*,*N*′-[1,4-piperazinediyl-bis(2,2,2-trichloroethylidine)] bis[formamide].

triformal *See sym*-trioxane.

trigatron [ELECTR] Gas-filled, spark-gap switch used in line pulse modulators.

trigeminal nerve [ANAT] The fifth cranial nerve in vertebrates; either of a pair of composite nerves rising from the side of the medulla, and with three great branches: the ophthalmic, maxillary, and mandibular nerves.

trigeminal neuralgia [MED] Sudden severe pains of unknown cause along the path of one or more branches of the trigeminal nerve. Also known as tic douloureux.

trigger [COMPUT SCI] To execute a jump to the first instruction of a program after the program has been loaded into the computer. Also known as initiate. [ELECTR] **1.** To initiate an action, which then continues for a period of time, as by applying a pulse to a trigger circuit. **2.** The pulse used to initiate the action of a trigger circuit. **3.** *See* trigger circuit. [ORD] A metallic item, part of the firing mechanism of a firearm, designed to release a firing pin by the application of pressure by the finger.

trigger action [ELECTR] Use of a weak input pulse to initiate main current flow suddenly in a circuit or device.

trigger bolt *See* auxiliary dead latch.

trigger circuit [ELECTR] **1.** A circuit or network in which the output changes abruptly with an infinitesimal change in input at a predetermined operating point. Also known as trigger. **2.** A circuit in which an action is initiated by an input pulse, as in a radar modulator. **3.** *See* bistable multivibrator.

trigger control [ELECTR] Control of thyratrons, ignitrons, and other gas tubes in such a way that current flow may be started or stopped, but not regulated as to rate.

trigger diode [ELECTR] A symmetrical three-layer avalanche diode used in activating silicon-controlled rectifiers; it has a symmetrical switching mode, and hence fires whenever the breakover voltage is exceeded in either polarity. Also known as diode ac switch (diac).

triggered spark gap [ELEC] A fixed spark gap in which the discharge passes between two electrodes but is initiated by an auxiliary trigger electrode to which low-power pulses are applied at regular intervals by a pulse amplifier.

trigger electrode *See* starter.

trigger extension [ORD] A metallic item attached to a trigger in order to extend its length.

trigger housing [ORD] An item, usually of metal, designed to fit into the framework of a carbine, machine gun, pistol, or rifle; used to provide a mounting for a trigger.

triggering [ELECTR] Phenomenon observed in some high-performance magnetic amplifiers with very low leakage rectifiers; as the input current is decreased in magnitude, the amplifier remains at cutoff for some time, and the output then suddenly shoots upward.

trigger level [ELECTR] In a transponder, the minimum input to the receiver which is capable of causing a transmitter to emit a reply.

trigger motor [ORD] An electric motor on certain types of automatic weapons that operates the sear mechanism for rapid fire.

trigger pull [MECH] Resistance offered by the trigger of a rifle or other weapon; force which must be exerted to pull the trigger.

trigger pulse [ELECTR] A pulse that starts a cycle of operation. Also known as tripping pulse.

trigger shaft [ORD] The shaft which passes transversely through the breechblock and firing lock of a gun and whose arm is actuated by the firing mechanism; movement of the arm rotates the shaft and thus imparts movement to the trigger fork of the firing lock.

trigger squeeze [ORD] Method of firing a rifle or similar weapon in which the trigger is not pulled, but squeezed gradually by an independent action of the forefinger.

trigger switch [ELEC] A switch that is actuated by pulling a trigger, and is usually mounted in a pistol-grip handle.

trigger tube [ELECTR] A cold-cathode gas-filled tube in which one or more auxiliary electrodes initiate the anode current but do not control it.

trigistor [ELECTR] A *pnpn* device with a gating control acting as a fast-acting switch similar in nature to a thyratron.

Triglidae [VERT ZOO] The searobins, a family of perciform fishes in the suborder Cottoidei.

triglyceride [ORG CHEM] $CH_2(OOCR_1)CH(OOCR_2)$-$CH_2(OOCR_3)$ A naturally occurring ester of normal, fatty acids and glycerol; used in the manufacture of edible oils, fats, and monoglycerides.

Trigonalidae [INV ZOO] A small family of hymenopteran insects in the superfamily Proctotrupoidea.

trigonal lattice *See* rhombohedral lattice.

trigonal system [CRYSTAL] A crystal system which is characterized by threefold symmetry, and which is usually considered as part of the hexagonal system since the lattice may be either hexagonal or rhombohedral.

trigone [ANAT] A triangular area inside the bladder limited by the openings of the ureters and urethra. [BOT] A thickening of plant cell walls formed when three or more cells adjoin.

trigonite [MINERAL] $MnPb_3H(AsO_3)_3$ A sulfur yellow to yellowish-brown or dark brown, monoclinic mineral consisting of an acid arsenite of lead and manganese; occurs in domatic form.

trigonometric functions [MATH] The real-valued functions such as $\sin(x)$, $\tan(x)$, and $\cos(x)$ obtained from studying certain ratios of the sides of a right triangle. Also known as circular functions.

trigonometric leveling [ENG] A method of determining the difference of elevation between two points, by using the principles of triangulation and trigonometric calculations.

trigonometric parallax [ASTRON] A parallax that may be determined for the nearest stars (less than 300 light-years or 2.84×10^{18} m) by a direct method utilizing trigonometry.

trigonometric polynomial [MATH] A finite series of functions of the form $a_n \cos nx + b_n \sin nx$; occasionally used synonymously with trigonometric series.

trigonometric series [MATH] An infinite series of functions with nth term of the form $a_n \cos nx + b_n \sin nx$.

trigonometry [MATH] The study of triangles and the trigonometric functions.

Trigonostylopoidea [PALEON] A suborder of Paleocene-Eocene ungulate mammals in the order Astrapotheria.

trigonous [BIOL] **1.** Having three corners. **2.** Having a triangular cross section.

trihedral [MATH] Any figure obtained from three noncoplanar lines intersecting in a common point.

1,2,4-trihydroxyanthraquinone *See* purpurin.

1,3,5-trihydroxy benzene *See* phloroglucinol.

trihydroxycyanidine *See* cyanuric acid.

trihydroxyethylamine stearate [ORG CHEM] $C_{24}H_{49}NO_5$ A cream-colored, waxy solid with a melting point of 42–44°C; soluble in methanol, ethanol, mineral oil, and vegetable oil; used as an emulsifier in cosmetics and pharmaceuticals. Also known as triethanolamine stearate.

2,3,5-triiodobenzoic acid *See* tiba.

triiodomethane *See* iodoform.

triisobutylene [ORG CHEM] $(C_4H_8)_3$ A mixture of isomers; combustible liquid boiling at 348–354°C; used as a chemical and resin intermediate, lubricating oil additive, and motor-fuel alkylation feedstock.

triketohydrindene hydrate *See* ninhydrin.

trilateration [ENG] The measurement of a series of distances between points on the surface of the earth, for the purpose of establishing relative positions of the points in surveying.

trill *See* trilling.

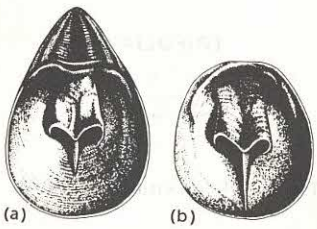
trilling [CRYSTAL] A cyclic crystal twin consisting of three individual crystals. Also known as threeling; trill.

trillion [MATH] **1.** The number 10^{12}. **2.** In British and German usage, the number 10^{18}.

Trilobita [PALEON] The trilobites, a class of extinct Cambrian-Permian arthropods characterized by an exoskeleton

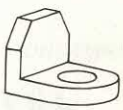
Trifoliate leaf, with three leaflets.

TRIMERELLACEA



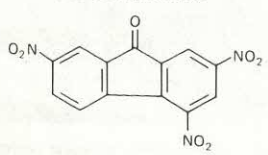
Internal views of Silurian trimerellacean *Trimerella:* *(a)* pedicle valve; *(b)* brachial valve. *(From C. D. Walcott, Cambrian Brachiopoda, USGS Monogr. no. 51, 1912)*

TRIMETRIC DRAWING



Trimetric drawing, in which three axes are unequally inclined to drawing surface. *(From T. E. French and C. J. Vierck, Graphic Science, McGraw-Hill, 1958)*

2,4,7-TRINITRO-FLUORENONE



Structural formula.

covering the dorsal surface, delicate biramous appendages, body segments divided by furrows on the dorsal surface, and a pygidium composed of fused segments.

Trilobitoidea [PALEON] A class of Cambrian arthropods that are closely related to the Trilobita.

Trilobitomorpha [INV ZOO] A subphylum of the Arthropoda including Trilobita.

trilocular [BIOL] Having three cavities or cells.

trim [AERO ENG] The orientation of an aircraft relative to the airstream, as indicated by the amount of control pressure required to maintain a given flight performance. [ELECTR] Fine adjustment of capacitance, inductance, or resistance of a component during manufacture or after installation in a circuit. [NAV ARCH] **1.** The deviation of a ship from an even keel fore and aft. **2.** To add or remove water from the variable ballast tanks of a submarine to maintain neutral buoyancy.

trim by head [NAV ARCH] That condition of trim in which a vessel inclines forward so that its actual plane of flotation is not coincident with or parallel to its designed plane of flotation.

trim by stern [NAV ARCH] That condition of trim in which a vessel inclines aft so that its actual plane of flotation is not coincident with or parallel to its designed plane of flotation.

trimellitic acid *See* 1,2,4-benzenetricarboxylic acid.

Trimenoponidae [INV ZOO] A family of lice in the order Mallophaga occurring as parasites on South American rodents.

trimer [CHEM] A condensation product of three monomer molecules; C_6H_6 is a trimer of C_2H_2.

trimercuric orthophosphate *See* mercuric phosphate.

trimercurous orthophosphate *See* mercurous phosphate.

Trimerellacea [PALEON] A superfamily of extinct inarticulate brachiopods in the order Lingulida; they have valves, usually consisting of calcium carbonate.

Trimerophytatae *See* Trimerophytopsida.

Trimerophytopsida [PALEOBOT] A group of extinct land vascular plants with leafless, dichotomously branched stems that bear terminal sporangia.

trimerous [BOT] Having parts in sets of three. [INV ZOO] In insects, having the tarsus divided or apparently divided into three segments.

trimethadione [PHARM] C_6H_9NO White, crystalline granules with a melting point of 45–47°C; soluble in water, alcohol, chloroform, and ether; used in medicine as an anticonvulsant.

2,4,5-trimethoxy-1-propenyl benzene *See* asarone.

trimethyl-β-acetoxypropylammonium chloride *See* methacholine chloride.

trimethylamine [ORG CHEM] $(CH_3)_3N$ A colorless, liquefied gas with a fishy odor and a boiling point of −4°C; soluble in water, ether, and alcohol; used as a warning agent for natural gas, a flotation agent, and insect attractant. Abbreviated TMA.

***uns*-trimethylbenzene** *See* pseudocumene.

trimethyl borate [ORG CHEM] $B(OCH_3)_3$ A water-white liquid, boiling at 67–68°C; used as a solvent for resins, waxes, and oils, and as a catalyst and a reagent in analysis of paint and varnish. Also known as methyl borate.

2,2,3-trimethylbutane *See* triptane.

trimethylchlorosilane [ORG CHEM] $(CH_3)_3SiCl$ A colorless liquid with a boiling point of 57°C; soluble in ether and benzene; used as a water-repelling agent.

trimethylethylene *See* methyl butene.

2,2,4-trimethylpentane *See* isooctane.

trimethylol aminomethane *See* tromethamine.

trimethylolethane [ORG CHEM] $CH_3C(CH_2OH)_3$ Colorless crystals, soluble in alcohol and water; used in the manufacture of varnishes and drying oils. Also known as methyltrimethylolmethane; pentoglycerine.

2,4,6-trimethylpyridine *See* 2,4,6-collidine.

trimethylvinylammonium hydroxide *See* neurine.

trimetric drawing [GRAPHICS] A form of nonperspective pictorial drawing in which the object being drawn is turned so that three mutually perpendicular edges are unequally foreshortened.

trimmer [BUILD] One of the single or double joists or rafters that go around an opening in the framing type of construction. [MIN ENG] **1.** A piece of bent wire used to regulate the size of the flame of a safety lamp without removing the top of the lamp. **2.** A worker who arranges coal in the hold of a vessel (miner, ship) as the coal is discharged into it from bins. **3.** A person who cleans miners' lamps. **4.** An apparatus for trimming a pile of coal into a regular form (as a cone or prism). **5.** *See* rib hole.

trimmer capacitor [ELEC] A relatively small variable capacitor used in parallel with a larger variable or fixed capacitor to permit exact adjustment of the capacitance of the parallel combination.

trimmer conveyor [MECH ENG] A self-contained, lightweight portable conveyor, usually of the belt type, for use in unloading and delivering bulk materials from trucks to domestic storage places, and for trimming bulk materials in bins or piles.

trimmer potentiometer [ELEC] A potentiometer which is used to provide a small-percentage adjustment and is often used with a coarse control.

trimming [MET] Removing irregular edges from a drawn part, or parting-line flash from a forging, or gates, risers, and fins from a casting.

trimorphous [BIOL] Characterized by occurring in three distinct forms, as an organ or whole organism.

trim size [GRAPHICS] The size of a map or page when the excess paper outside the margin has been trimmed off after printing.

trimuon event [PARTIC PHYS] An inelastic collision of a neutrino or antineutrino with a nucleus in which there are three muons among the products of the collision.

trinickelous orthophosphate *See* nickel phosphate.

Trinidad asphalt [MATER] Natural asphaltic material found in Trinidad; contains about 47% bitumen and 28% clay, and the remainder is water.

trinitrobenzene [ORG CHEM] $C_6H_3(NO_2)_3$ A yellow crystalline compound, soluble in alcohol and ether; used as an explosive.

2,4,7-trinitrofluorenone [ORG CHEM] $C_{13}H_5N_3O_7$ A yellow, crystalline compound with a melting point of 175.2–176°C; forms crystalline complexes with indoles for identification by mass spectroscopy. Abbreviated TNF.

trinitromethane [ORG CHEM] $CH(NO_2)_3$ A crystalline compound, melting at 150°C, decomposing above 25°C; used to make explosives. Also known as nitroform.

trinitrophenol *See* picric acid.

2,4,6-trinitroresorcinol *See* styphnic acid.

2,4,6-trinitrotoluene [ORG CHEM] $CH_3C_6H_2(NO_2)_3$ Toxic, flammable, explosive, yellow crystals; soluble in alcohol and ether, insoluble in water; melts at 81°C; used as an explosive and chemical intermediate and in photographic chemicals. Also known as methyltrinitrobenzene; TNT.

trinomial [MATH] A polynomial comprising three terms. [SYST] A nomenclatural designation for an organism composed of three terms: genus, species, and subspecies or variety.

trinomial distribution [STAT] A multinomial distribution in which there are three distinct outcomes.

trinominal nomenclature [SYST] The designation of subspecies by a three-word name.

triode [ELECTR] A three-electrode electron tube containing an anode, a cathode, and a control electrode.

triode clamp [ELECTR] A keyed clamp circuit utilizing triodes, such as a circuit which contains a complementary pair of bipolar transistors.

triode clipping circuit [ELECTR] A clipping circuit that utilizes a transistor or vacuum triode.

triode laser [ELECTR] Gas laser whose light output may be modulated by signal voltages applied to an integral grid.

triode transistor [ELECTR] A transistor that has three terminals.

Trionychidae [VERT ZOO] The soft-shelled turtles, a family of reptiles in the order Chelonia.

triose [BIOCHEM] A group of monsaccharide compounds that have a three-carbon chain length.

***sym*-trioxane** [ORG CHEM] $(CH_2O)_3$ White, flammable, explosive crystals; soluble in water, alcohol, and ether; melts at 62°C; used as a chemical intermediate, disinfectant, and fuel. Also known as metaformaldehyde; triformol; trioxin.

trioxin *See sym*-trioxane.

trioxycyanidine *See* cyanuric acid.

trip [ENG] To release a lever or set free a mechanism. [MIN ENG] **1.** The line of cars hauled by mules or by motor, or run on a slope, plane, or sprag road. **2.** An automatic arrangement for dumping cars. [ORD] Part of the mechanism of some firearms, released by the action of the trigger.

tripalmitin [ORG CHEM] $C_3H_5(OOCC_{15}H_{31})_3$ A white, water-insoluble powder that melts at 65.5°C; used in the prepa-

ration of leather dressings and soaps. Also known as glyceryl tripalmitate; palmitin.

trip change [MIN ENG] The period during which the loaded cars are taken away and empties are brought back.

trip coil [ELECTROMAG] A type of solenoid in which the moving armature opens a circuit breaker or other protective device when the coil current exceeds a predetermined value.

trip hammer [MECH ENG] A large power hammer whose head is tripped and falls by cam or lever action.

triphane *See* spodumene.

triphenylmethane dye [ORG CHEM] A family of dyes with a molecular structure derived from $(C_6H_5)_3CH$, usually by NH_2, OH, or HSO_3 substitution for one of the C_6H_5 hydrogens; includes many coal tar dyes, for example, rosaniline and fuchsin.

triphenylmethyl radical [ORG CHEM] A free radical in which three phenyl rings are bonded to a single carbon. Also known as trityl radical.

triphenyl phosphate [ORG CHEM] $(C_6H_5O)_3PO$ A crystalline compound with a melting point of 49–50°C; soluble in benzene, chloroform, ether, and acetone; used as a substitute for camphor in celluloid, as a plasticizer in lacquers and varnishes, and to impregnate roofing paper.

triphenylphosphine [ORG CHEM] $(C_6H_5)_3P$ A crystalline compound with a melting point of 80.5°C; soluble in ether, benzene, chloroform, and glacial acetic acid; used as an initiator of polymerization and in organic synthesis.

triphenyltetrazolium chloride [ORG CHEM] $C_{19}H_{15}ClN_4$ A crystalline compound, soluble in water, alcohol, and acetone; used as a sensitive reagent for reducing sugars. Also known as red tetrazolium.

triphenyltinacetate *See* fentinacetate.

triphosphopyridine dinucleotide *See* triphosphopyridine nucleotide.

triphosphopyridine nucleotide [BIOCHEM] $C_{12}H_{28}N_7O_{17}P_3$ A grayish-white powder, soluble in methanol and in water; a coenzyme and an important component of enzymatic systems concerned with biological oxidation-reduction systems. Abbreviated TPN. Also known as codehydrogenase II; coenzyme II; triphosphopyridine dinucleotide.

triphylite [MINERAL] $Li(Fe^{2+},Mn^{2+})PO_4$ A grayish-green or bluish-gray mineral crystallizing in the orthorhombic system; it is isomorphous with lithiophilite.

tripinnate [BIOL] Being bipinnate and having each division pinnate.

trip lamp [MIN ENG] A removable self-contained mine lamp, designed for marking the rear end of a train (trip) of mine cars.

triple-base propellant [MATER] A propellant with three principal active ingredients, such as nitrocellulose, nitroglycerin, and nitroguanidine.

triple collision [PHYS] A process in which three particles collide simultaneously.

triple-conversion receiver [ELECTR] Communications receiver having three different intermediate frequencies to give higher adjacent-channel selectivity and greater image-frequency suppression.

triple detection *See* double-superheterodyne reception.

triple ejection rack [ORD] A device designated to carry up to three bombs or other munitions on a single station of an aircraft.

triple entry [MIN ENG] A system of opening a mine by driving three parallel entries as main entries.

triple-length working [COMPUT SCI] Processing of data by a computer in which three machine words are used to represent each data item, in order to achieve the desired precision in the results.

triple modular redundancy [COMPUT SCI] A form of redundancy in which the original computer unit is triplicated and each of the three independent units feeds into a majority voter, which outputs the majority signal.

triple point [PHYS CHEM] A particular temperature and pressure at which three different phases of one substance can coexist in equilibrium.

triple response [PHYSIO] The three stages of vasomotor reaction consisting of reddening, flushing of adjacent skin, and development of wheals, when a pointed instrument is drawn heavily across the skin.

triple scalar product *See* scalar triple product.

triple-stub transformer [ELECTROMAG] Microwave transformer in which three stubs are placed a quarter-wavelength apart on a coaxial line and adjusted in length to compensate for impedance mismatch.

triple superphosphate [MATER] A phosphatic fertilizer produced by the reaction of phosphate rock with phosphoric acid so as to give higher concentrations of calcium phosphate than for ordinary superphosphate.

triplet [NAV] A group of three synchronous transmitting stations operating as a system to provide signals for determination of position. Also known as triad. [OPTICS] A compound lens made up of three components.

triple thread [DES ENG] A multiple screw thread having three threads or starts equally spaced around the periphery; the lead is three times the pitch.

triplet state [ATOM PHYS] Electronic state of an atom or molecule whose total spin angular momentum quantum number is equal to 1. [QUANT MECH] Any multiplet having three states.

triplex chain block [MECH ENG] A geared hoist using an epicyclic train.

triplexer [ELECTR] Dual duplexer that permits the use of two receivers simultaneously and independently in a radar system by disconnecting the receivers during the transmitted pulse.

triplex system [COMMUN] Telegraph system in which two messages in one direction and one message in the other direction can be sent simultaneously over a single circuit.

triplite [MINERAL] $(Mn,Fe,Mg,Ca)_2(PO)_4(F,OH)$ A dark brown, chestnut brown, reddish-brown, or salmon pink, monoclinic mineral consisting of a fluophosphate of iron, manganese, magnesium, and calcium; occurs in massive form.

Triploblastica [ZOO] Animals that develop from three germ layers.

triploidy [CYTOL] The occurrence of related forms possessing chromosome numbers three times the haploid number.

trip magnet *See* phase magnet.

tripod [DES ENG] An adjustable, collapsible three-legged support, as for a camera or surveying instrument.

tripod drill [MECH ENG] A reciprocating rock drill mounted on three legs and driven by steam or compressed air; the drill steel is removed and a longer drill inserted about every 2 feet (61 centimeters).

tripoli [GEOL] A lightweight, porous, friable, siliceous sedimentary rock that may have a white, gray, pink, red, or yellow color; used for polishing metals and stones.

tripolite *See* diatomaceous earth.

tripotassium orthophosphate *See* potassium phosphate.

tripper [CIV ENG] A device activated by a passing train to work a signal or switch or to apply brakes. [MECH ENG] A device that snubs a conveyor belt causing the load to be discharged.

tripping [MIN ENG] **1.** The process of pulling or lowering drill-string equipment in a borehole. **2.** To open a latch or locking device, thereby allowing a door or gate to open to empty the contents of a skip or bailer.

tripping device [ELEC] Mechanical or electromagnetic device used to bring a circuit breaker or starter to its off or open position, either when certain abnormal electrical conditions occur or when a catch is actuated manually.

tripping pulse *See* trigger pulse.

trippkeite [MINERAL] $CuAs_2O_4$ A greenish-blue, tetragonal mineral consisting of copper arsenite.

triprene [ORG CHEM] $C_{18}H_{32}O_2S$ An amber liquid used as a growth regulator for crops. Also known as ethyl (2*E*,4*E*)-11-methoxy-3,7,11-trimethyl-2,4-dodecadienethiolate.

trip rider [MIN ENG] A rider who throws switches, gives signals, and makes couplings. Also known as rope rider.

trip spear [ENG] A fishing tool intended to recover lost casing; if the casing is found to be immovable, the hold is broken by operating the trip release.

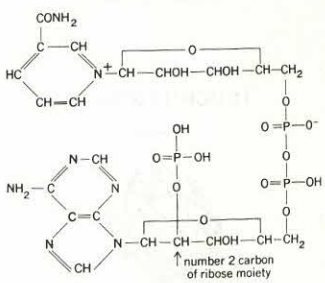
triptane [ORG CHEM] C_7H_{16} A hydrocarbon compound made commercially in small quantities, but having one of the highest antiknock ratings known. Also known as 2,2,3-trimethylbutane.

tripuhyite [MINERAL] $FeSb_2O_6$ A greenish-yellow to dark brown mineral consisting of iron antimonate; occurs as microcrystalline aggregates.

Tripylina [INV ZOO] A subdivision of the protozoan order Oculosida in which the major opening (astropyle) usually contains a perforated plate.

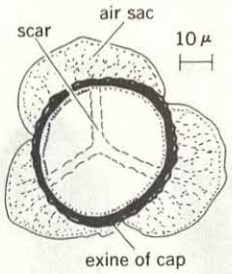
TRIS *See* tromethamine.

TRIPHOSPHOPYRIDINE NUCLEOTIDE



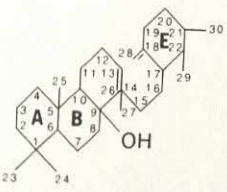
Structural formula of oxidized form of triphosphopyridine nucleotide (TPN).

TRISACCATE POLLEN



Trisaccate pollen (young grain of *Podocarpus dacrydioides*) with scar on cap.

TRITERPENE

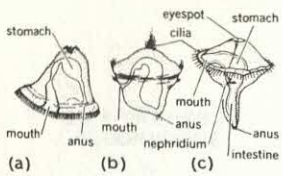


Structural formula of ambrein, a triterpene. Numbers represent positions of carbon atoms. A, B, and E identify three carbon rings used in classifying this compound as a tricyclic, tertiary alcohol.

TROCHILISCALES

Dextrally spiraled gyrogonite of Trochiliscales.

TROCHOPHORE



Some trochophore larvae, showing pear-shaped form, circlet of cilia, digestive tract and nephridium. *(a)* Bryozoan. *(b) Patella*, a mollusk. *(c) Polygardius*, an annelid. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

trisaccate pollen [BOT] A three-pored pollen grain, often having a triangular outline in cross section.

trisaccharide [BIOCHEM] A carbohydrate which, on hydrolysis, yields three molecules of monosaccharides.

trisamine *See* tromethamine.

tris buffer *See* tromethamine.

tris[2-(2,4-dichlorophenoxy)ethyl]phosphite [ORG CHEM] $C_{24}H_{21}Cl_6O_6P$ A dark liquid that boils above 200°C; used as a preemergence herbicide for corn, peanuts, and strawberries. Abbreviated 2,4-DEP.

trisectrix [MATH] The planar curve given by $x^3 + xy^2 + ay^2 - 3ax^2 = 0$ which is symmetric about the x-axis and asymptotic to the line $x = -a$; this is useful in studying the trisection of an angle problem. Also known as trisectrix of Maclaurin.

trisectrix of Maclaurin *See* trisectrix.

tris(hydroxymethyl)aminomethane *See* tromethamine.

trisistor [ELECTR] Fast-switching semiconductor consisting of an alloyed junction *pnp* device in which the collector is capable of electron injection into the base; characteristics resemble those of a thyratron electron tube, and switching time is in the nanosecond range.

triskaidekaphobia [PSYCH] Superstitious fear of the number thirteen.

trisodium citrate *See* sodium citrate.

trisodium orthophosphate *See* trisodium phosphate.

trisodium phosphate [INORG CHEM] Na_3PO_4 A water-soluble crystalline compound; used as a cleaning compound and as a water softener. Abbreviated TSP. Also known as tertiary sodium phosphate; trisodium orthophosphate.

trisomic syndrome [MED] Any pathological condition characterized by the presence in triplicate of one of the chromosomes of a complement.

trisomy [CYTOL] The presence in triplicate of one of the chromosomes of the complement.

trisomy 13–15 *See* D_1 trisomy.

trisomy 18 syndrome [MED] A congenital disorder due to trisomy of all or a large part of chromosome 18, characterized by severe mental deficiency, hypertonicity with clenched hands, and anomalies of the hands, sternum, pelvis, and facies; most infants so afflicted fail to thrive. Also known as Edwards' syndrome; E trisomy.

trisomy 21 syndrome *See* Down's syndrome.

tristate logic [ELECTR] A form of transistor-transistor logic in which the output stages or input and output stages can assume three states; two are the normal low-impedance 1 and 0 states, and the third is a high-impedance state that allows many tristate devices to time-share bus lines.

tristazine [ORG CHEM] $C_9H_{16}ClN_5$ A solid compound, insoluble in water; used to control weeds in potatoes and peas. Also known as 2-chloro-4-(methylamino)-6-(ethylamino)-*S*-triazine.

tristearin *See* stearin.

tristimulus colorimeter [OPTICS] A colorimeter that measures a color stimulus in terms of tristimulus values.

tristimulus values [OPTICS] The magnitudes of three standard stimuli needed to match a given sample of light.

trisulfide [CHEM] A binary chemical compound that contains three sulfur atoms in its molecule, for example, iron trisulfide, Fe_2S_3.

trit [MATH] A digit in a balanced ternary system, that is, a balanced digit system with base 3.

tritanopia [MED] A defect in a third constituent essential for color vision, as in violet blindness.

triterpene [ORG CHEM] One of a class of compounds having molecular skeletons containing 30 carbon atoms, and theoretically composed of six isoprene units; numerous and widely distributed in nature, occurring principally in plant resins and sap; an example is ambrein.

tri-tet oscillator [ELECTR] Crystal-controlled, electron-coupled, vacuum-tube oscillator circuit which is isolated from the output circuit through use of the screen grid electrode as the oscillator anode; used for multiband operation because it generates strong harmonics of the crystal frequency.

trithioacetaldehyde [ORG CHEM] $(C_4H_4S_2)_3$ A colorless, water-insoluble, crystalline compound; used as a hypnotic. Also known as sulfoparaldehyde.

tritium [NUC PHYS] The hydrogen isotope having mass number 3; it is one form of heavy hydrogen, the other being deuterium. Symbolized H^3; T.

triton [NUC PHYS] The nucleus of tritium.

Triton [ASTRON] One of the two satellites of the planet Neptune with a diameter of about 4800 kilometers.

tritonal [MATER] An explosive composed of 80% trinitrotoluene (TNT) and 20% powdered aluminum; can be melt-loaded, and is used in bombs for its blast effect.

triton block [MATER] Block of pressed trinitrotoluene (TNT) used for demolition purposes.

tritonymph [INV ZOO] The third stage of development in certain acarids.

trityl radical *See* triphenylmethyl radical.

triuranium octoxide [INORG CHEM] U_3O_8 Olive green to black crystals or granules, soluble in nitric acid and sulfuric acid; decomposes at 1300°C; used in nuclear technology and in the preparation of other uranium compounds. Also known as uranous-uranic oxide; uranyl uranate.

Triuridaceae [BOT] A family of monocotyledonous plants in the order Triuridales distinguished by unisexual flowers and several carpels with one seed per carpel.

Triuridales [BOT] A small order of terrestrial, mycotrophic monocots in the subclass Alismatidae without chlorophyll, and with separate carpels, trinucleate pollen, and a well-developed endosperm.

trivial name [ORG CHEM] Unsystematic nomenclature, being the name of a chemical compound derived from the names of the natural source of the compound at the time of its isolation and before anything is known about its molecular structure.

trivium [INV ZOO] The three rays opposite the madreporite in starfish.

t-RNA *See* transfer ribonucleic acid.

Trochacea [PALEON] A recent subfamily of primitive gastropod mollusks in the order Aspidobranchia.

trochal disk [INV ZOO] A flat or funnel-shaped ciliated disk at the anterior end of a rotifer that functions in locomotion and food ingestion.

trochanter [ANAT] A process on the proximal end of the femur in many vertebrates, which serves for muscle attachment and, in birds, for articulation with the ilium. [INV ZOO] The second segment of an insect leg, counting from the base.

Trochidae [INV ZOO] A family of gastropod mollusks in the order Aspidobranchia, including many of the top shells.

Trochili [VERT ZOO] A suborder of the avian order Apodiformes.

Trochilidae [VERT ZOO] The hummingbirds, a tropical New World family of the suborder Trochili with tubular tongues modified for nectar feeding; slender bills and the ability to hover are further feeding adaptations.

Trochiliscales [PALEOBOT] A group of extinct plants belonging to the Charophyta in which the gyrogonites are dextrally spiraled.

trochlea [ANAT] A pulleylike anatomical structure.

trochlear nerve [ANAT] The fourth cranial nerve; either of a pair of somatic motor nerves which innervate the superior oblique muscle of the eyeball.

trochoblast [INV ZOO] A cell bearing cilia on a trochophore.

Trochodendraceae [BOT] A family of dicotyledonous trees in the order Trochodendrales distinguished by the absence of a perianth and stipules, numerous stamens, and pinnately veined leaves.

Trochodendrales [BOT] An order of dicotyledonous trees in the subclass Hamamelidae characterized by primitively vesselless wood and unique, elongate, often branched idioblasts in the leaves.

trochoid [ANAT] *See* pivot joint. [MATH] The path in the plane obtained from a point on the radius of a circle as the circle rolls along a fixed straight line.

trochoidal mass analyzer [PHYS] A mass spectrometer in which the ion beams traverse trochoidal paths within mutually perpendicular electric and magnetic fields.

trochoidal wave [FL MECH] A progressive oscillatory wave whose form is that of a prolate cycloid or trochoid; it is approximated by waves of small amplitude.

trochophore [INV ZOO] A generalized but distinct free-swimming larva found in several invertebrate groups, having a pear-shaped form with an external circlet of cilia, apical ciliary tufts, a complete functional digestive tract, and paired nephridia with excretory tubules. Also known as trochosphere.

trochosphere *See* trochophore.

trochus [INV ZOO] The inner band of cilia on a trochal disk.

troctolite [PETR] A gabbro composed principally of calcic plagioclase and olivine. Also known as forellenstein.

troegerite [MINERAL] $(UO_2)_3(AsO_4)_2 \cdot 12H_2O$ A lemon yellow, tetragonal mineral consisting of a hydrated uranium arsenate.

Troglodytidae [VERT ZOO] The wrens, a family of songbirds in the order Passeriformes.

Trogonidae [VERT ZOO] The trogons, the single, pantropical family of the avian order Trogoniformes.

Trogoniformes [VERT ZOO] An order of brightly colored, slow-moving birds characterized by a unique foot structure with the first and second toes directed backward.

troilite [MINERAL] FeS A meteorite mineral crystallizing in the hexagonal system; a variety of pyrrhotite.

Trojan planet [ASTRON] One of a group of asteroids whose periods of revolution are about equal to that of Jupiter, or about 12 years; these bodies move close to one or the other of two positions called Lagrangian points, 60° ahead of or 60° behind Jupiter; the asteroids near these positions are known as Greeks and Pure Trojans respectively.

troland [OPTICS] A unit of retinal illuminance, equal to the retinal illuminance produced by a surface whose luminance is one nit when the apparent area of the entrance pupil of the eye is 1 square millimeter. Also known as luxon; photon.

Troland and Fletcher theories [PHYSIO] Theories of hearing according to which the time nature of a sound stimulation affects the sensation of pitch.

trolley [GEOL] A basin-shaped depression in strata. Also known as lum. [MECH ENG] **1.** A wheeled car running on an overhead track, rail, or ropeway. **2.** An electric streetcar.

trolley locomotive [MECH ENG] A locomotive operated by electricity drawn from overhead conductors by means of a trolley pole.

trolley pole [ELEC] The pole which conducts electricity from the trolley wire to the trolley.

trolley wire [ELEC] The means by which power is conveyed to an electric trolley locomotive; it is an overhead wire which conducts power to the locomotive by the trolley pole.

Trombiculidae [INV ZOO] The chiggers, or red bugs, a family of mites in the suborder Trombidiformes whose larvae are parasites of vertebrates.

Trombidiformes [INV ZOO] The trombidiform mites, a suborder of the Acarina distinguished by the presence of a respiratory system opening at or near the base of the chelicerae.

trombone [ELECTROMAG] U-shaped, adjustable, coaxial-line matching assembly.

tromethamine [ORG CHEM] $C_4H_{11}NO_3$ A crystalline compound with a melting point of 171–172°C; soluble in water, ethylene glycol, methanol, and ethanol; used to make surface-active agents, vulcanization accelerators, and pharmaceuticals, and as a titrimetric standard. Also known as THAM; trimethylol aminomethane; TRIS; trisamine; tris buffers; tris(hydroxymethyl)aminomethane.

trommel [MIN ENG] **1.** A revolving cylindrical screen used to grade coarsely crushed ore: the ore is fed into the trommel at one end, the fine material drops through the holes, and the coarse is delivered at the other end. Also known as trommel screen. **2.** To separate coal into various sizes by passing it through a revolving screen.

trommel screen *See* trommel.

trona [MINERAL] $Na_2(CO_3) \cdot Na(HCO_3) \cdot 2H_2O$ A gray-white or yellowish-white mineral that crystallizes in the monoclinic system and occurs in fibrous or columnar layers or masses. Also known as urao.

Trona process [CHEM ENG] A process for separation and purification of a mixture of soda ash, anhydrous sodium sulfate, bromine, and potassium chloride from brine (Searles Lake, California).

troop ship *See* transport.

Tropaeolaceae [BOT] A family of dicotyledonous plants in the order Geraniales characterized by strongly irregular flowers, simple peltate leaves, eight stamens, and schizocarpous fruit.

tropeoline 00 [ORG CHEM] $NaSO_3C_6H_4NNC_6H_4NHC_6H_5$ An acid-base indicator with a pH range of 1.4–3.0, color change (from acid to base) red to yellow; used as a biological stain. Also known as sodium *para*-diphenylaminoazobenzene sulfonate.

Tropept [GEOL] A suborder of the order Inceptisol, characterized by moderately dark A horizons with modest additions of organic matter, B horizons with brown or reddish colors, and slightly pale C horizons; restricted to tropical regions with moderate or high rainfall.

trophallaxis [ECOL] Exchange of food between organisms, not only of the same species but between different species, especially among social insects.

trophic [BIOL] Pertaining to or functioning in nutrition.

trophic level [ECOL] Any of the feeding levels through which the passage of energy through an ecosystem proceeds; examples are photosynthetic plants, herbivorous animals, and microorganisms of decay.

trophobiosis [ECOL] A nutritional relationship associated only with certain species of ants in which alien insects supply food to the ants and are milked by the ants for their secretions.

trophoblast [EMBRYO] A layer of ectodermal epithelium covering the outer surface of the chorion and chorionic villi of many mammals.

trophocyte [INV ZOO] A nutritive cell of the ovary or testis of an insect.

trophogenic [ECOL] Originating from nutritional differences rather than resulting from genetic determinants, such as various castes of social insects.

tropholytic [ECOL] Pertaining to the deep zone in a lake where dissimilation of organic matter predominates.

trophosome [INV ZOO] The nutritional zooids of a hydroid colony.

trophotaeniae [VERT ZOO] Vascular rectal processes which establish placental relationships with the ovarian tissue in live-bearing fishes.

trophozoite [INV ZOO] A vegetative protozoan; used especially of a parasite.

trophus [INV ZOO] Masticatory apparatus in Rotifera.

tropical air [METEOROL] A type of air whose characteristics are developed over low latitudes.

tropical climate [CLIMATOL] A climate which is typical of equatorial and tropical regions, that is, one with continually high temperatures and with considerable precipitation, at least during part of the year.

tropical cyclone [METEOROL] The general term for a cyclone that originates over tropical oceans; at maturity, the tropical cyclone is one of the most intense storms of the world; winds exceeding 175 knots (324 kilometers per hour) have been measured, and the rain is torrential.

tropical disturbance [METEOROL] A cyclonic wind system of the tropics, of lesser intensity than a tropical cyclone.

tropical easterlies [METEOROL] The trade winds when shallow and exhibiting a strong vertical shear; at about 500 feet (152 meters) the easterlies give way to the upper westerlies, which are sufficiently strong and deep to govern the course of cloudiness and weather. Also known as subtropical easterlies.

tropical finish [ENG] A finish that is applied to electronic equipment to resist the high relative humidity, fungus, and insects encountered in tropical climates.

tropical front *See* intertropical front.

tropicalize [ENG] To prepare electronic equipment for use in a tropical climate by applying a coating that resists moisture and fungi.

tropical life zone [ECOL] A subdivision of the eastern division of Merriam's life zones; an example is southern Florida, where the vegetation is the broadleaf evergreen forest; typical and important plants are palms and mangroves; typical and important animals are the armadillo and alligator; typical and important crops are citrus fruits, avocado, and banana.

tropical meteorology [METEOROL] The study of the tropical atmosphere; the dividing lines, in each hemisphere, between the tropical easterlies and the mid-latitude westerlies in the middle troposphere roughly define the poleward boundaries of this region.

tropical monsoon climate [CLIMATOL] One of the tropical rainy climates; it is sufficiently warm and rainy to produce tropical rainforest vegetation, but it does exhibit the monsoon climate influences in that it has a winter dry season.

tropical month [ASTRON] The average period of the revolution of the moon about the earth with respect to the vernal equinox, a period of 27 days 7 hours 43 minutes 4.7 seconds, or approximately 27⅓ days.

tropical rainforest [ECOL] A vegetation class consisting of tall, close-growing trees, their columnar trunks more or less unbranched in the lower two-thirds, and forming a spreading and frequently flat crown; occurs in areas of high temperature and high rainfall. Also known as hylaea; selva.

TROJAN PLANET

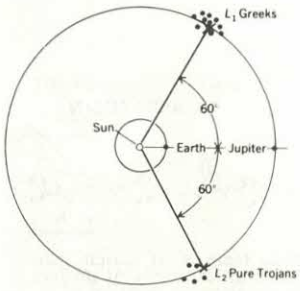


Diagram showing position of Trojan planets. Crosses indicate Lagrangian points L_1 and L_2, near which are clustered Greeks and Pure Trojans respectively.

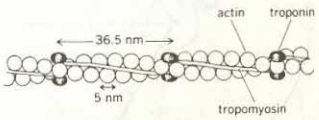
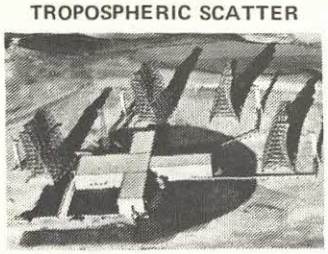
TROPOMYOSIN



Thin filament of muscle tissue, made up primarily of protein actin, showing position of tropomyosin, and also of troponin. *(From S. Ebashi, M. Endo, and I. Ohtsuki, Control of muscle contraction, Quart. Rev. Biophys., 2:351–384, 1969)*

TROPOSPHERIC SCATTER



Tropospheric scatter relay facility operated by the U.S. Air Force in Spain. High-powered ultra-high-frequency transmitters, sensitive receivers, and large parabolic antennas operating with frequency and space diversity make it possible to transmit many voice and teletype circuits simultaneously far beyond the horizon. *(Page Engineers, Inc.)*

tropical rainforest climate [CLIMATOL] In general, the climate which produces tropical rainforest vegetation, that is, a climate of unbroken warmth, high humidity, and heavy annual precipitation. Also known as tropical wet climate.

tropical rainy climate [CLIMATOL] A major category in W. Köppen's climatic classification, characterized by a mean temperature of the coldest month of 64.4°F (18°C) or higher, and by a mean annual precipitation, in inches, greater than $0.44\,(t - a)$, where t is the mean annual temperature in degrees Fahrenheit, and a equals 32 for precipitation chiefly in winter, 19.4 for evenly distributed precipitation, and 6.8 for precipitation chiefly in summer.

tropical savanna *See* tropical woodland.

tropical savanna climate [CLIMATOL] In general, the type of climate which produces the vegetation of the tropical and subtropical savanna; thus, a climate with a winter dry season, a relatively short but heavy rainy summer season, and high year-round temperatures. Also known as savanna climate; tropical wet and dry climate.

tropical scrub [ECOL] A class of vegetation composed of low woody plants (shrubs), sometimes growing quite close together, but more often separated by large patches of bare ground, with clumps of herbs scattered throughout; an example is the Ghanaian evergreen coastal thicket. Also known as brush; bush; fourré; mallee; thicket.

tropical wet and dry climate *See* tropical savanna climate.

tropical wet climate *See* tropical rainforest climate.

tropical woodland [ECOL] A vegetation class similar to a forest but with wider spacing between trees and sparse lower strata characterized by evergreen shrubs and seasonal graminoids; the climate is warm and moist. Also known as parkland; savanna-woodland; tropical savanna.

tropical year [ASTRON] A unit of time equal to the period of one revolution of the earth about the sun measured between successive vernal equinoxes; it is 365.2422 mean solar days or 365 days 5 hours 48 minutes 46 seconds.

tropic higher-high-water interval [OCEANOGR] The lunitidal interval pertaining to the higher high waters at the time of tropic tides.

tropic high-water inequality [OCEANOGR] The average difference between the heights of the two high waters of the tidal day at the time of tropic tides.

tropic lower-low-water interval [OCEANOGR] The lunitidal interval pertaining to the lower low waters at the time of tropic tides.

tropic low-water inequality [OCEANOGR] The average difference between the heights of the two low waters of the tidal day at the time of tropic tides.

Tropic of Cancer [ASTRON] A small circle on the celestial sphere connecting points with declination 23.45° north of the celestial equator, the northernmost declination of the sun. [GEOD] A parallel of latitude 23.45° north of the equator, marking the northernmost latitude at which the sun reaches its zenith.

Tropic of Capricorn [ASTRON] A small circle on the celestial sphere connecting points with declination 23.45° south of the celestial equator, the southernmost declination of the sun. [GEOD] A parallel of latitude 23.45° south of the equator, marking the southernmost latitude at which the sun reaches its zenith.

tropics [CLIMATOL] Any portion of the earth characterized by a tropical climate.

tropic tidal currents [OCEANOGR] Tidal currents of increased diurnal inequality occurring at the time of tropic tides.

tropic tide [OCEANOGR] A tide occurring when the moon is near maximum declination; the diurnal inequality is then at a maximum.

tropic velocity [OCEANOGR] The speed of the greater flood or greater ebb at the time of tropic currents.

Tropiometridae [INV ZOO] A family of feather stars in the class Crinoidea which are bottom crawlers.

tropism [BIOL] Orientation movement of a sessile organism in response to a stimulus. Also known as topotaxis.

tropocollagen [BIOCHEM] The fundamental units of collagen fibrils.

tropomyosin [BIOCHEM] A muscle protein similar to myosin and implicated as being part of the structure of the Z bands separating sarcomeres from each other.

troponin [BIOCHEM] A protein species located at specific stations every 36.5 nanometers on the actin helix in muscle sarcomere.

tropopause [METEOROL] The boundary between the troposphere and stratosphere, usually characterized by an abrupt change of lapse rate; the change is in the direction of increased atmospheric stability from regions below to regions above the tropopause; its height varies from 15 to 20 kilometers in the tropics to about 10 kilometers in polar regions.

tropopause chart [METEOROL] A synoptic chart showing the contour lines of the tropopause and tropopause break lines.

tropopause inversion [METEOROL] The decrease in the lapse rate of temperature encountered at the level of the tropopause. Also known as upper inversion.

tropophytia [BOT] Plants that thrive in a climate that undergoes marked periodic changes.

troposcatter *See* tropospheric scatter.

troposphere [METEOROL] That portion of the atmosphere from the earth's surface to the tropopause, that is, the lowest 10 to 20 kilometers of the atmosphere.

tropospheric duct *See* duct.

tropospheric ducting *See* ducting.

tropospheric scatter [COMMUN] Scatter propagation of radio waves caused by irregularities in the refractive index of air in the troposphere; used for long-distance communications, with the aid of relay facilities, 300–500 kilometers apart. Also known as troposcatter.

tropospheric superrefraction [GEOPHYS] Phenomenon occurring in the troposphere whereby radio waves are bent sufficiently to be returned to the earth.

tropospheric wave [COMMUN] A radio wave that is propagated by reflection from a region of abrupt change in dielectric constant or its gradient in the troposphere.

trouble-location problem [COMPUT SCI] In computers, a test problem used in a diagnostic routine.

troubleshoot [COMPUT SCI] To find and correct errors and faults in a computer, usually in the hardware.

trough [GEOL] **1.** A small, straight depression formed just offshore on the bottom of a sea or lake and on the landward side of a longshore bar. **2.** Any narrow, elongate depression in the surface of the earth. **3.** An elongate depression on the sea floor that is wider and shallower than a trench. Also known as submarine trench. **4.** The line connecting the lowest points of a fold. [METEOROL] An elongated area of relatively low atmospheric pressure; the opposite of a ridge.

trough aloft *See* upper-level trough.

trough crossbedding [GEOL] A variety of crossbedding in which the lower crossbedding surfaces are smoothly curved, rather than planar.

troughed belt conveyor [MECH ENG] A belt conveyor with the conveyor belt edges elevated on the carrying run to form a trough by conforming to the shape of the troughed carrying idlers or other supporting surface.

troughed roller conveyor [MECH ENG] A roller conveyor having two rows of rolls set at an angle to form a trough over which objects are conveyed.

trough fault [GEOL] One of a set of two faults bounding a graben.

troughing idler [MECH ENG] A belt idler having two or more rolls arranged to turn up the edges of the belt so as to form the belt into a trough.

troughing rolls [MECH ENG] The rolls of a troughing idler that are so mounted on an incline as to elevate each edge of the belt into a trough.

trough plane *See* trough surface.

trough reef *See* reverse saddle.

trough surface [GEOL] A surface or plane connecting the troughs of the bed of a syncline. Also known as synclinal axis; trough plane.

trough valley *See* U-shaped valley.

trough washer [MIN ENG] A sloping wooden trough, 1½ to 2 feet wide, 8 to 12 feet long, and 1 foot deep (about 50 by 300 by 30 centimeters), open at the tail end but closed at the head end; it is used to float adhering clay or fine stuff from the coarser portions of an ore or coal.

trout [VERT ZOO] Any of various edible fresh-water fishes in the order Salmoniformes that are generally much smaller than the salmon.

Trouton's rule [PHYS CHEM] An approximation rule for the derivation of molar heats of vaporization of normal liquids at their boiling points. [THERMO] The rule that, for a non-

associated liquid, the latent heat of vaporization in calories is equal to approximately 22 times the normal boiling point on the Kelvin scale.

trowel [DES ENG] Any of various hand tools consisting of a wide, flat or curved blade with a short wooden handle; used by gardeners, plasterers, and bricklayers.

troy ounce *See* ounce.

troy pound *See* pound.

troy system [MECH] A system of mass units used primarily to measure gold and silver; the ounce is the same as that in the apothecaries' system, being equal to 480 grains or 31.1034768 grams. Abbreviated t. Also known as troy weight.

troy weight *See* troy system.

TRSB *See* time reference scanning beam.

TR switch *See* transmit-receive tube.

TR tube *See* transmit-receive tube.

Trube's correlation [PETRO ENG] An empirical correlation (based on pseudocritical properties) for compressibilities of undersaturated oil-reservoir fluids.

Trucherognathidae [PALEON] A family of conodonts in the order Conodontophorida in which the attachment scar permits the conodont to rest on the jaw ramus.

truck [MECH ENG] A self-propelled wheeled vehicle, designed primarily to transport goods and heavy equipment; it may be used to tow trailers or other mobile equipment. [MIN ENG] *See* barney.

truck crane [MECH ENG] A crane carried on the bed of a motortruck.

truck-mounted drill rig [MECH ENG] A drilling rig mounted on a lorry or caterpillar tracks.

truck-tractor *See* tractor.

trudellite [MINERAL] $Al_{10}(SO_4)_3Cl_{12}(OH)_{12}\cdot 30H_2O$ An amber yellow, hexagonal mineral consisting of a hydrated basic sulfate-chloride of aluminum; occurs as compact masses.

true [GEOD] Related to true north. [SCI TECH] **1.** Actual, as contrasted with fictitious, such as true sun. **2.** Related to a fixed point, either on the earth or in space, in contrast with relative, which is related to a moving point.

true airspeed [AERO ENG] The actual speed of an aircraft relative to the air through which it flies, that is, the calibrated airspeed corrected for temperature, density, or compressibility.

true-airspeed indicator [AERO ENG] An instrument for measuring true airspeed. Also known as true-airspeed meter.

true-airspeed meter *See* true-airspeed indicator.

true air temperature [METEOROL] Basic air temperature corrected for heat of compression error due to high-speed motion of the thermometer through the air, as on an aircraft.

true altitude *See* corrected altitude.

true amplitude [NAV] In celestial navigation, amplitude relative to true east or true west.

true anomaly *See* anomaly.

true azimuth [NAV] Azimuth relative to true north.

true bearing [NAV] Bearing relative to true north; compass bearing corrected for magnetic deviation.

true-boiling-point analysis [CHEM ENG] A standard laboratory technique used to predict the refining qualities of crude petroleum; gives distillation cuts for gasoline, kerosine, distillate (diesel) fuel, cracking, and lube distillate stocks. Also known as true-boiling-point distillation.

true-boiling-point distillation *See* true-boiling-point analysis.

true complement *See* radix complement.

true condensing point *See* critical condensation temperature.

true convergence [GEOD] The angle at which one meridian is inclined to another on the surface of the earth.

true course [NAV] Course relative to true north.

true crater [GEOL] The primary depression formed by impact or explosion before modification by slumping or by deposition of ejected material. Also known as primary crater.

true dip *See* dip.

true direction [NAV] Horizontal direction expressed as angular distance from true north.

true formation resistivity [GEOPHYS] Electrical resistivity of a clean (nonshaly) porous reservoir formation containing hydrocarbons and formation water; value is greater than the resistivity when there is added water incursion.

true freezing point [PHYS CHEM] The temperature at which the liquid and solid forms of a substance exist in equilibrium at a given pressure (usually 1 standard atmosphere, or 101,325 newtons per square meter).

true heading [NAV] Heading relative to true north.

true homing [NAV] The process of following a course such that the true bearing of the craft from the objective is maintained constant.

true horizon [OPTICS] The boundary of a horizontal plane passing through a point of vision, or in photogrammetry, the perspective center of a lens system.

true mean temperature [METEOROL] As adopted by the International Meteorological Organization, a monthly or annual mean air temperature based upon hourly observations at a given place, or on some combination of less frequent observations designed to represent this mean as nearly as possible.

true-motion radar [ELECTR] A radar set which provides a true-motion radar presentation on the plan-position indicator, as opposed to the relative-motion, true-or-relative-bearing, presentation most commonly used.

true-motion radar presentation [ELECTR] A radar plan-position indicator presentation in which the center of the scope represents the same geographic position, until reset, with all moving objects, including the user's own craft, moving on the scope.

true motor load *See* thermal horsepower.

true north [NAV] **1.** The direction of the north geographical pole. **2.** The reference direction for measurement of true directions.

true place [ASTRON] The position of a star on the celestial sphere as it would be observed from the center of the sun, referred to the celestial equator and celestial equinox at the moment of observation.

true porcelain *See* porcelain.

true rake [MECH ENG] The angle, measured in degrees, between a plane containing a tooth face and the axial plane through the tooth point in the direction of chip flow.

true soil *See* solum.

true solar day *See* apparent solar day.

true solar time *See* apparent solar time.

true sun [ASTRON] The actual sun as it appears in the sky.

true width [MIN ENG] The width of thickness of a vein or stratum as measured perpendicular to or normal to the dip and the strike; the true width is always the least width.

true wind [METEOROL] Wind relative to a fixed point on the earth.

true wind direction [METEOROL] The direction, with respect to true north, from which the wind is blowing.

truffle [BOT] The edible underground fruiting body of various European fungi in the family Tuberaceae, especially the genus *Tuber*.

truing [MECH ENG] **1.** Cutting a grinding wheel to make its surface run concentric with the axis. **2.** Aligning a wheel to be concentric and in one plane.

trumpet buoy [NAV] A buoy provided with a trumpet having a distinctive tone.

trumpeter [VERT ZOO] A bird belonging to the Psophiidae, a family with three South American species; the common trumpeter (*Psophia crepitans*) is the size of a pheasant and resembles a long-legged guinea fowl.

truncate [BIOL] Abbreviated at an end, as if cut off. [MATH] **1.** To drop digits at the end of a numerical value; the number 3.14159265 is truncated to five figures in 3.1415, whereas it would be 3.1416 if rounded off to five figures. **2.** To approximate the sum of an infinite series by the sum of a finite number of its terms. **3.** To terminate an infinite sequence of successively better approximations of a quantity after a finite number of such approximations.

truncated landform [GEOGR] A landform which has been cut off by erosion, creating a steep side or cliff.

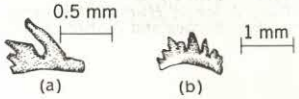
truncated paraboloid [ELECTROMAG] Paraboloid antenna in which a portion of the top and bottom have been cut away to broaden the main lobe in the vertical plane.

truncation [MATH] **1.** Approximating the sum of an infinite series by the sum of a finite number of its terms. **2.** *See* rounding.

truncation error [ENG] The error resulting from the analysis of a partial set of data in place of a complete or infinite set. [MATH] **1.** The computation error resulting from use of only a finite number of terms of an infinite series. **2.** The error resulting from the approximation of a derivative or differential by a finite difference.

truncus arteriosis [EMBRYO] The embryonic arterial trunk between the bulbous arteriosis and the ventral aorta in anamniotes and early stages of amniotes.

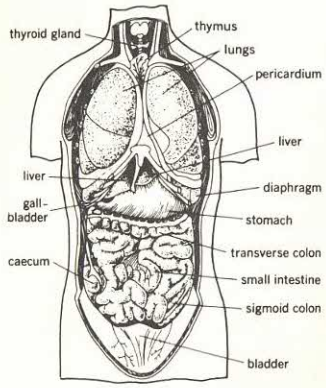
TRUCHEROGNATHIDAE



Typical examples of Trucherognathidae; *(a) Polycaulodus*, and *(b) Curtognathus. (After illustration in R. R. Shrock and W. H. Twenhofel, Principles of Invertebrate Paleontology, McGraw-Hill, 2d ed., 1953)*

TRUCK

Conventional truck chassis before installation of special body. *(White Motor Co.)*



Human trunk, showing principal organs. *(From Franz Frohse et al., Atlas of Human Anatomy, rev. ed., Barnes and Noble, 1957)*

trunk [ANAT] The main mass of the human body, exclusive of the head, neck, and extremities; it is divided into thorax, abdomen, and pelvis. [BOT] The main stem of a tree. [COMMUN] **1.** A path over which information is transferred in a computer. **2.** A telephone line connecting two central offices. Also known as trunk circuit.

trunk buoy [ENG] A mooring buoy having a pendant extending through an opening in the buoy, with the ship's anchor chain or mooring line being secured to this pendant.

trunk circuit *See* trunk.

trunk exchange [COMMUN] A telephone exchange whose main function is to interconnect trunks.

trunk feeder [ELEC] An electric power transmission line that connects two generating stations, or a generating station and an important substation, or two electrical distribution networks.

trunk group [COMMUN] The collection of trunks of a given type or characteristic that connect two switching points.

trunk height [ANTHRO] A vertical measurement (taken in front) of the distance from the table top to the upper edge of the sternum, when the individual is seated as in a sitting-height measurement.

trunk roadway [MIN ENG] The main developing heading from the pit bottom and is usually driven along the strike of the coal seam.

trunk sewer [CIV ENG] A sewer receiving sewage from many tributaries serving a large territory.

trunk stream *See* main stream.

trunnion [DES ENG] **1.** Either of two opposite pivots, journals, or gudgeons, usually cylindrical and horizontal, projecting one from each side of a piece of ordnance, the cylinder of an oscillating engine, a molding flask, or a converter, and supported by bearings to provide a means of swiveling or turning. **2.** A pin or pivot usually mounted on bearings for rotating or tilting something.

truss [CIV ENG] A frame, generally of steel, timber, concrete, or a light alloy, built from members in tension and compression.

truss bridge [CIV ENG] A fixed bridge consisting of members vertically arranged in a triangular pattern.

trussed beam [CIV ENG] A beam stiffened by a steel tie rod to reduce its deflection.

trussed rafter [BUILD] A triangulated beam in a trussed roof.

truss rod [CIV ENG] A rod attached to the ends of a trussed beam which transmits the strain due to downward pressure.

truth table [MATH] A table listing statements concerning an event and their respective truth values.

Tryblidiidae [PALEON] An extinct family of Paleozoic mollusks.

trypan blue [MATER] An acid disazo dye of the benzopurpurine series used as a vital stain.

Trypanorhyncha [INV ZOO] An order of tapeworms of the subclass Cestoda; all are parasites in the intestine of elasmobranch fishes.

Trypanosoma [INV ZOO] A genus of slender, polymorphic, elongate protozoans belonging to the Mastigophora, characterized by a central nucleus, posterior blepharoplast, and an undulating membrane; responsible for such infections as trypanosomiasis and Chagas' disease in man.

Trypanosomatidae [INV ZOO] A family of Protozoa, order Kinetoplastida, containing flagellated parasites which exhibit polymorphism during their life cycle.

trypanosome [INV ZOO] A flagellated protozoan of the genus *Trypanosoma*.

trypanosomiasis [MED] Any of many diseases of man and animals caused by infection with species of *Trypanosoma* and transmitted by tsetse flies and other insects.

trypsin [BIOCHEM] A proteolytic enzyme which catalyzes the hydrolysis of peptide linkages in proteins and partially hydrolyzed proteins; derived from trypsinogen by the action of enterokinase in intestinal juice.

trypsinogen [BIOCHEM] The zymogen of trypsin, secreted in the pancreatic juice. Also known as protrypsin.

try square [ENG] An instrument consisting of two straightedges secured at right angles to each other, used for laying off right angles and testing whether work is square.

tryptophan [BIOCHEM] $C_{11}H_{12}O_2N_2$ An amino acid obtained from casein, fibrin, and certain other proteins; it is a precursor of indoleacetic acid, serotonin, and nicotinic acid.

tschermakite [MINERAL] $Ca_2Mg_3(Al,Fe^{3+})_2(Al_2Si_6)O_{22}(OH,F)_2$ An amphibole mineral.

Tschudi engine [MECH ENG] A cat-and-mouse engine in which the pistons, which are sections of a torus, travel around a toroidal cylinder; motion of the pistons is controlled by two cams which bear against rollers attached to the rotors.

T-S curve *See* temperature-salinity diagram.

T-S diagram *See* temperature-salinity diagram.

T-section filter [ELEC] T network used as an electric filter.

tsetse fly [INV ZOO] Any of various South African muscoid flies of the genus *Glossina;* medically important as vectors of sleeping sickness or trypanosomiasis.

TSH *See* thyrotropic hormone.

tsi [MECH] A unit of force equal to 1 ton-force per square inch; equal to approximately 1.54444×10^7 pascals.

T slot [DES ENG] A recessed slot, in the form of an inverted T, in the table of a machine tool, to receive the square head of a T-slot bolt.

tsp *See* teaspoonful.

TSP *See* trisodium phosphate.

T_1 space [MATH] A topological space where, for each pair of distinct points, each one has a neighborhood not containing the other.

T_2 space *See* Hausdorff space.

T_3 space *See* regular topological space.

T_4 space *See* normal space.

T_6 space [MATH] A topological space where, for each pair of distinct points, at least one has a neighborhood not containing the other.

tspn *See* teaspoonful.

TSPP *See* sodium pyrophosphate.

T square [GRAPHICS] A straightedge rule with a crosspiece at one end by which parallel lines are drawn perpendicular to the edge of the drawing board.

T-S relation *See* temperature-salinity diagram.

tsumebite [MINERAL] $Pb_2Cu(PO_4)(SO_4)(OH)$ An emerald green, monoclinic mineral consisting of a hydrated basic phosphate and sulfate of lead and copper.

tsunami [OCEANOGR] A long-period sea wave produced by a seaquake or volcanic eruption; it may travel for thousands of miles. Also known as seismic sea wave.

Tsushima Current [OCEANOGR] That part of the Kuroshio Current flowing northeastward through the Korea Strait and along the Japanese coast in the Sea of Japan.

tsutsugamushi disease [MED] A rickettsial disease of humans caused by *Rickettsia tsutsugamushi,* transmitted by larval mites, and characterized by headache, high fever, and a rash. Also known as scrub typhus.

T Tauri star [ASTRON] A star classification; an extrinsic variable star whose variation in luminosity may be stimulated by the associated nebulosity. Also known as nebular variable.

TTD *See* tetraethylthiuram disulfide.

t-test [STAT] A statistical test involving means of normal populations with unknown standard deviations; small samples are used, based on a variable t equal to the difference between the mean of the sample and the mean of the population divided by a result obtained by dividing the standard deviation of the sample by the square root of the number of individuals in the sample.

TTL *See* transistor-transistor logic.

tuba [METEOROL] A cloud column or inverted cloud cone, pendant from a cloud base; this supplementary feature occurs mostly with cumulus and cumulonimbus; when it reaches the earth's surface it constitutes the cloudy manifestation of an intense vortex, namely, a tornado or waterspout. Also known as pendant cloud; tornado cloud.

tubal bladder [VERT ZOO] A urine reservoir organ that is an enlargement of the mesonephric ducts in most fish; there are four types: duplex, bilobed, simplex with ureters tied, and simplex with separate ureters.

tubal ligation [MED] Surgical tying of the uterine tubes to prevent conception.

tubatoxin *See* rotenone.

tubbing [MIN ENG] The watertight cast-iron lining of a circular shaft built up of segments with the space outside the tubbing grouted to add strength and to improve watertightness.

tube [BIOL] A narrow channel within the body of an animal or plant. [ELECTR] *See* electron tube. [ENG] A long cylindrical body with a hollow center used especially to convey fluid. [GEOL] A passage in a cave having smooth sides and

an elliptical to nearly circular cross section. [ORD] The main part of a gun, the cylindrical piece of metal surrounding the bore; tube is frequently used in referring to artillery weapons, and barrel is more frequently used in referring to small arms.

tube cleaner [MECH ENG] A device equipped with cutters or brushes used to clean tubes in heat transfer equipment.

tube coefficient [ELECTR] Any of the constants that describe the characteristics of a thermionic vacuum tube, such as amplification factor, mutual conductance, or alternating-current plate resistance.

tube core [AERO ENG] One type of sandwich configuration used in structural materials in aircraft; aluminum, steel, and titanium have been used for face materials with cores of wood, rubber, plastics, steel, and aluminum in the form of tubes.

tube door [MECH ENG] A door in a boiler furnace wall which facilitates the removal or installation of tubes.

tube foot [INV ZOO] One of the tentaclelike outpushings of the radial vessels of the water-vascular system in echinoderms; may be suctorial, or serve as stiltlike limbs or tentacles.

tube heating time [ELECTR] Time required for a tube to attain operating temperature.

tube hole [ENG] A hole in a tube sheet through which a tube is passed prior to sealing.

tube mill [MECH ENG] A revolving cylinder used for fine pulverization of ore, rock, and other such materials; the material, mixed with water, is fed into the chamber from one end, and passes out the other end as slime.

tube noise [ELECTR] Noise originating in a vacuum tube, such as that due to shot effect and thermal agitation.

tube of flux *See* tube of force.

tube of force [ELEC] A region of space bounded by a tubular surface consisting of the lines of force which pass through a given closed curve. Also known as tube of flux.

tube plug [ENG] A solid plug inserted into the end of a tube in a tube sheet.

tuber [BOT] The enlarged end of a rhizome in which food accumulates, as in the potato.

tuber cinereum [ANAT] An area of gray matter extending from the optic chiasma to the mammillary bodies and forming part of the floor of the third ventricle.

tubercle [BIOL] A small knoblike prominence. [MET] A mound of corrosive products on the surface of a metal that is subjected to local corrosive attack.

tubercle bacillus *See* Mycobacterium tuberculosis.

Tuberculariaceae [MYCOL] A family of fungi of the order Moniliales having short conidia that form cushion-shaped, often waxy or gelatinous aggregates (sporodochia).

tuberculate [BIOL] Having or characterized by knoblike processes.

tuberculation [MET] Corrosive attack with formation of tubercles.

tuberculin [IMMUNOL] A preparation containing tuberculoproteins derived from *Mycobacterium tuberculosis* used in the tuberculin test to determine sensitization to tubercle bacilli.

tuberculin test [IMMUNOL] A test for past or present infection with tubercle bacilli based on a delayed hypersensitivity reaction at the site where tuberculin or purified protein derivative was introduced.

tuberculosis [MED] A chronic infectious disease of humans and animals primarily involving the lungs caused by the tubercle bacillus, *Mycobacterium tuberculosis*, or by *M. bovis*. Also known as consumption; phthisis.

tube reducing [MET] Reducing the diameter and wall thickness of tubing by means of a mandrel and rolls.

tuberosity [ANAT] A large or obtuse prominence, especially as on bone for muscle attachment.

tuberous organ [PHYSIO] An electroreceptor most sensitive to high-frequency electric signals, and distributed over the body surface of electric fish.

tuberous sclerosis [MED] A familial neurocutaneous syndrome characterized in its complete form by epilepsy, adenoma sebaceum, and mental deficiency, and pathologically by nodular sclerosis of the cerebral cortex. Also known as Bourneville's disease.

tube seat [ENG] The surface of the tube hole in a tube sheet which contacts the tube.

tube sheet [ENG] A mounting plate for elements of a larger item of equipment; for example, filter cartridges, or tubes for heat exchangers, coolers, or boilers.

tube shield [ENG] A shield designed to be placed around an electron tube.

tube socket [ENG] A socket designed to accommodate electrically and mechanically the terminals of an electron tube.

tube-still heater [CHEM ENG] A firebox containing a pipe coil through which oil for a tube still (pipe still) is pumped.

tube stock [MET] Semifinished metal tubing.

tube tester [ELECTR] A test instrument designed to measure and indicate the condition of electron tubes used in electronic equipment.

tube turbining [MECH ENG] Cleaning tubes by passing a power-driven rotary device through them.

tube voltage drop [ELECTR] In a gas tube, the anode voltage during the conducting period.

tube voltmeter *See* vacuum-tube voltmeter.

Tubicola [INV ZOO] An order of sedentary polychaete annelids that surround themselves with a calcareous tube or one which is composed of agglutinated foreign particles.

tubing [ENG] Material in the form of a tube, most often seamless.

tubing hanger *See* hanger.

tubing head [PETRO ENG] A spool-type unit or housing attached to the top flange on the uppermost oil-well-casing head to support the tubing string and to seal the annulus between the tubing string and the production casing string.

tubing-head adapter flange [PETRO ENG] An intermediate flange used in oil wells to connect the top tubing-head flange to the master valve (Christmas tree) and to provide support for the tubing.

tubing pump [PETRO ENG] A type of oil-well, sucker-rod pump in which the pump barrel is attached to the tubing string, and lowered into the well bore with the tubing.

tubing safety valve *See* storm choke.

Tubulanidae [INV ZOO] A family of the order Palaeonemertini.

tubular capacitor [ELEC] A paper or electrolytic capacitor having the form of a cylinder, with leads usually projecting axially from the ends; the capacitor plates are long strips of metal foil separated by insulating strips, rolled into a compact tubular shape.

tubular gland [ANAT] A secreting structure whose secretory endpieces are tubelike or cylindrical in shape.

tubule [ANAT] A slender, elongated microscopic tube in an anatomical structure.

Tubulidentata [VERT ZOO] An order of mammals which contains a single living genus, the aardvark (*Orycteropus*) of Africa.

tubulin [BIOCHEM] A globular protein containing two subunits; 10–14 molecules are arranged to form a microtubule.

tubuloacinous gland *See* tubuloalveolar gland.

tubuloalveolar gland [ANAT] A secreting structure having both tubular and alveolar secretory endpieces. Also known as acinotubular gland; tubuloacinous gland.

Tucana [ASTRON] A constellation in the southern hemisphere; right ascension 23 hours, declination 60° south. Also known as Toucan.

tuck-and-pat pointing *See* tuck pointing.

tuck joint pointing *See* tuck pointing.

tuck pointing [BUILD] The finishing of old masonry joints in which the joints are first cleaned out and then filled with fine mortar which projects slightly or has a fillet of putty or lime. Also known as tuck-and-pat pointing; tuck joint pointing.

tufa [GEOL] A spongy, porous limestone formed by precipitation from evaporating spring and river waters, often onto leaves and stems of neighboring plants. Also known as calcareous sinter; calcareous tufa.

tufaceous [GEOL] Pertaining to or similar to tufa.

tuff [GEOL] Consolidated volcanic ash, composed largely of fragments (less than 4 millimeters) produced directly by volcanic eruption; much of the fragmented material represents finely comminuted crystals and rocks.

tuffaceous [GEOL] Pertaining to sediments which contain up to 50% tuff.

tuff ball *See* mud ball.

tuff lava *See* welded tuff.

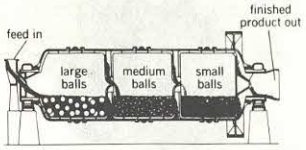
tuft *See* mound.

tugboat [NAV ARCH] A powerful, strongly built boat with shaped hull and bow, designed to tow or push other vessels or barges in harbors, on inland waterways, and at sea.

TUBE CORE

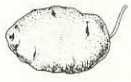
Tube core type of sandwich construction in a fuselage.

TUBE MILL



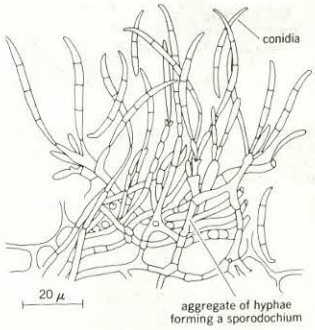
Three-compartment tube mill pulverizer, containing three sizes of balls. *(Hardinge Co., Inc.)*

TUBER



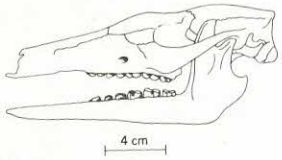
Tuber of a potato.

TUBERCULARIACEAE



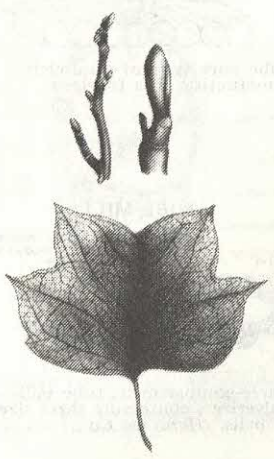
Sporodochium of *Fusarium lini*, a representative species of Tuberculariaceae, showing sickle-shaped, multicelled conidia. *(After H. L. Bolley, 1901)*

TUBULIDENTATA



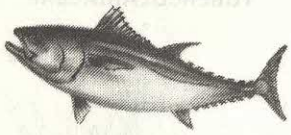
Skull and jaw of *Orycteropus gaudryi*, a Pliocene tubulidentate from Samos, Greece. *(After E. H. Colbert, 1941)*

TULIP TREE



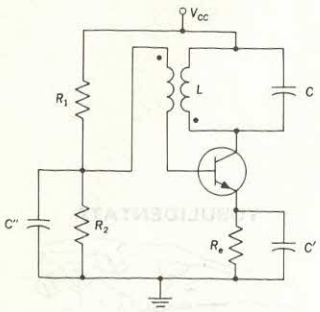
Twig, terminal bud, and leaf of the tulip tree *(Liriodendron tulipifera)*.

TUNA



Bluefin tuna *(Thunnus thynnus)*, a species of tuna which occurs in all warm and temperate seas and serves as a food fish.

TUNED-COLLECTOR OSCILLATOR



Circuit diagram of tuned-collector oscillator. Frequency is determined by resonant circuit containing capacitance C and self-inductance L. Resistances R_1, R_2, and R_e determine quiescent bias. C' and C'' are capacitances. V_{cc} is collector supply voltage, with respect to emitter.

tugger [MIN ENG] A small portable pneumatic or electric hoist mounted on a column and used in a mine.

Tukon tester [ENG] A device that uses a diamond (Knoop) indenter applying average loads of 1 to 2000 grams to determine microhardness of a metal.

tularemia [VET MED] A bacterial infection of wild rodents caused by *Pasteurella tularensis;* it may be generalized, or it may be localized in the eyes, skin, or lymph nodes, or in the respiratory tract or gastrointestinal tract; may be transmitted to humans and to some domesticated animals.

tulip [BOT] Any of various plants with showy flowers constituting the genus *Tulipa* in the family Liliaceae; characterized by coated bulbs, lanceolate leaves, and a single flower with six equal perianth segments and six stamens.

tulip poplar *See* tulip tree.

tulip tree [BOT] *Liriodendron tulipifera*. A tree belonging to the magnolia family (Magnoliaceae) distinguished by leaves which are squarish at the tip, true terminal buds, cone-shaped fruit, and large greenish-yellow and orange-colored flowers. Also known as tulip poplar.

tulle *See* malines.

tumble *See* topple.

tumble axis *See* topple axis.

tumble home [NAV ARCH] The curve of a boat or ship's upper side toward the centerline, causing the sides to be convex.

tumble-plating process [MET] A method of zinc-coating small metal parts by first applying zinc powder with an adhesive, then tumbling with glass beads to roll out the powder into a continuous coat.

tumbler [ENG] **1.** A device in a lock cylinder that must be moved to a particular position, as by a key, before the bolt can be thrown. **2.** A device or mechanism in which objects are tumbled.

tumbler feeder *See* drum feeder.

tumbler gears [MECH ENG] Idler gears interposed between spindle and stud gears in a lathe gear train; used to reverse rotation of lead screw or feed rod.

tumbleweed [BOT] Any of various plants that break loose from their roots in autumn and are driven by the wind in rolling masses over the ground.

tumbling [AERO ENG] An attitude situation in which the vehicle continues on its flight, but turns end over end about its center of mass. [ENG] A surface-finishing operation for small articles in which irregularities are removed or surfaces are polished by tumbling them together in a barrel, along with wooden pegs, sawdust, and polishing compounds. [MECH ENG] Loss of control in a two-frame free gyroscope, occurring when both frames of reference become coplanar.

tumbling mill [MECH ENG] A grinding and pulverizing machine consisting of a shell or drum rotating on a horizontal axis.

tumid [BIOL] Marked by swelling or inflation.

tumor [MED] Any abnormal mass of cells resulting from excessive cellular multiplication.

tumorigenic [MED] Tumor-forming.

tumuli lava [GEOL] A type of lava flow forming ovoid mounds, a few feet high and a few tens of feet long, caused by buckling up of the crust.

tuna [VERT ZOO] Any of the large, pelagic, cosmopolitan marine fishes which form the family Thunnidae including species that rank among the most valuable of food and game fish.

tunable echo box [ELECTROMAG] Echo box consisting of an adjustable cavity operating in a single mode; if calibrated, the setting of the plunger at resonance will indicate the wavelength.

tunable filter [ELECTR] An electric filter in which the frequency of the passband or rejection band can be varied by adjusting its components.

tunable laser [OPTICS] A laser in which the frequency of the output radiation can be tuned over part or all of the ultraviolet, visible, and infrared regions of the spectrum.

tunable magnetron [ELECTR] Magnetron which can be tuned mechanically or electronically by varying its capacitance or inductance.

tuna boat *See* tuna clipper.

tuna clipper [NAV ARCH] A large craft used for tuna fishing on the Pacific coast; it is usually diesel-powered, and is equipped with refrigeration brine tanks. Also known as tuna boat.

tundish [MET] A funnel or pouring basin used for transferring a stream of molten metal.

tundra [ECOL] An area supporting some vegetation between the northern upper limit of trees and the lower limit of perennial snow on mountains, and on the fringes of the Antarctic continent and its neighboring islands.

tundra climate [CLIMATOL] The climate which produces tundra vegetation; it is too cold for the growth of trees but does not have a permanent snow-ice cover.

tune [ELECTR] To adjust for resonance at a desired frequency.

tuned amplifier [ELECTR] An amplifier in which the load is a tuned circuit; load impedance and amplifier gain then vary with frequency.

tuned-anode oscillator [ELECTR] A vacuum-tube oscillator whose frequency is determined by a tank circuit in the anode circuit, coupled to the grid to provide the required feedback. Also known as tuned-plate oscillator.

tuned-anode tuned-grid oscillator *See* tuned-grid tuned-anode oscillator.

tuned-base oscillator [ELECTR] Transistor oscillator in which the frequency-determining resonant circuit is located in the base circuit; comparable to a tuned-grid oscillator.

tuned cavity *See* cavity resonator.

tuned circuit [ELECTR] A circuit whose components can be adjusted to make the circuit responsive to a particular frequency in a tuning range. Also known as tuning circuit.

tuned-collector oscillator [ELECTR] A transistor oscillator in which the frequency-determining resonant circuit is located in the collector circuit; this is comparable to a tuned-anode electron-tube oscillator.

tuned filter [ELECTR] Filter that uses one or more tuned circuits to attenuate or pass signals at the resonant frequency.

tuned-grid oscillator [ELECTR] Oscillator whose frequency is determined by a parallel-resonant circuit in the grid coupled to the plate to provide the required feedback.

tuned-grid tuned-anode oscillator [ELECTR] A vacuum-tube oscillator whose frequency is determined by a tank circuit in the grid circuit, coupled to the anode to provide the required feedback. Also known as tuned-anode tuned-grid oscillator.

tuned-plate oscillator *See* tuned-anode oscillator.

tuned-radio-frequency receiver [ELECTR] A radio receiver consisting of a number of amplifier stages that are tuned to resonance at the carrier frequency of the desired signal by a gang capacitor; the amplified signals at the original carrier frequency are fed directly into the detector for demodulation, and the resulting audio-frequency signals are amplified by an a-f amplifier and reproduced by a loudspeaker. Abbreviated TRF receiver.

tuned-radio-frequency transformer [ELECTR] Transformer used for selective coupling in radio-frequency stages.

tuned-reed frequency meter *See* vibrating-reed frequency meter.

tuned relay [ELEC] A relay having mechanical or other resonating arrangements that limit response to currents at one particular frequency.

tuned resonating cavity [ELECTROMAG] Resonating cavity half a wavelength long or some multiple of a half wavelength, used in connection with a waveguide to produce a resultant wave with the amplitude in the cavity greatly exceeding that of the wave in the waveguide.

tuned transformer [ELEC] Transformer whose associated circuit elements are adjusted as a whole to be resonant at the frequency of the alternating current supplied to the primary, thereby causing the secondary voltage to build up to higher values than would otherwise be obtained.

tuner [ELECTR] The portion of a receiver that contains circuits which can be tuned to accept the carrier frequency of the alternating current supplied to the primary, thereby causing the secondary voltage to build up to higher values than would otherwise be obtained.

tungar tube [ELECTR] A gas tube having a heated thoriated tungsten filament serving as cathode and a graphite disk serving as anode in an argon-filled bulb at a low pressure; used chiefly as a rectifier in battery chargers.

tung nut [BOT] The seed of the tung tree (*Aleurites fordii*), which is the source of tung oil.

tung oil [MATER] A yellow, combustible drying oil extracted from the seed of the tung tree; soluble in ether, chloroform, carbon disulfide, and oils; used in formulations for paints, varnishes, varnish driers, paper waterproofing, and linoleum. Also known as China wood oil.

tungstate [INORG CHEM] M_2WO_4 A salt of tungstic acid;

for example, sodium tungstate, Na_2WO_4. [MINERAL] Any species of mineral containing the radical WO_4, such as wolframite.

tungstate white *See* barium tungstate.

tungsten [CHEM] Also known as wolfram. A metallic element in group VI, symbol W, atomic number 74, atomic weight 183.85; soluble in mixed nitric and hydrofluoric acids; melts at 3400°C. [MET] A hard, brittle, ductile, heavy gray-white metal used in the pure form chiefly for electrical purposes and with other substances in dentistry, pen points, x-ray-tube targets, phonograph needles, and high-speed tool metal, and as a radioactive shield.

tungsten boride [INORG CHEM] WB_2 A silvery solid; insoluble in water, soluble in aqua regia and concentrated acids; melts at 2900°C; used as a refractory for furnaces and chemical process equipment.

tungsten carbide [INORG CHEM] WC A hard, gray powder; insoluble in water; readily attacked by nitric-hydrofluoric acid mixture; melts at 2780°C; used in tools, dies, ceramics, cermets, and wear-resistant mechanical parts, and as an abrasive.

tungsten carbonyl *See* tungsten hexacarbonyl.

tungsten disulfide [INORG CHEM] WS_2 A grayish-black solid with a melting point above 1480°C; used as a lubricant and aerosol.

tungsten filament [ELEC] A filament used in incandescent lamps, and as an incandescent cathode in many types of electron tubes, such as thermionic vacuum tubes.

tungsten hexacarbonyl [INORG CHEM] $W(CO)_6$ A white, refractive, crystalline solid which decomposes at 150°C; used for tungsten coatings on base metals. Also known as tungsten carbonyl.

tungsten hexachloride [INORG CHEM] WCl_6 Dark blue or violet crystals with a melting point of 275°C; soluble in organic solvents; used for tungsten coatings on base metals and as a catalyst for olefin polymers.

tungsten–inert gas welding [MET] Welding in which an arc plasma from a nonconsumable tungsten electrode radiates heat onto the work surface, to create a weld puddle in a protective atmosphere provided by a flow of inert shielding gas; heat must then travel by conduction from this puddle to melt the desired depth of weld. Abbreviated TIG welding.

tungstenite [MINERAL] WS_2 A dark lead gray mineral consisting of tungsten disulfide; occurs in massive form, in scaly or feathery aggregates.

tungsten lake *See* phosphotungstic pigment.

tungsten oxychloride [INORG CHEM] $WOCl_4$ Dark red crystals with a melting point of approximately 211°C; soluble in carbon disulfide; used for incandescent lamps.

tungsten steel [MET] Steel containing tungsten with other alloys; formerly used for cutting and forging tools but replaced by high-speed steel.

tungstic acid [INORG CHEM] H_2WO_4 A yellow powder; insoluble in water, soluble in alkalies; used as a color-resist mordant for textiles, as an ingredient in plastics, and for the manufacture of tungsten metal products. Also known as orthotungstic acid; wolframic acid.

tungstic acid anhydride *See* tungstic oxide.

tungstic anhydride *See* tungstic oxide.

tungstic oxide [INORG CHEM] WO_3 A heavy, canary-yellow powder; soluble in caustic, insoluble in water; melts at 1473°C; used in alloys, in fabric fireproofing, for ceramic pigments, and for the manufacture of tungsten metal. Also known as anhydrous wolframic acid; tungstic acid anhydride; tungstic anhydride; tungstic trioxide.

tungstic trioxide *See* tungstic oxide.

tungstite [MINERAL] $WO_3 \cdot H_2O$ A bright yellow, golden yellow, or yellowish-green mineral thought to consist of hydrated tungsten oxide; occurs in massive form and as platy crystals.

tung tree [BOT] *Aleurites fordii*. A plant of the spurge family in the order Euphorbiales, native to central and western China and grown in the southern United States.

tunica [BIOL] A membrane or layer of tissue that covers or envelops an organ or other anatomical structure.

tunica adventitia *See* adventitia.

tunica intima *See* intima.

tunica mucosa *See* mucous membrane.

Tunicata [INV ZOO] A subphylum of the Chordata characterized by restriction of the notochord to the tail and posterior body of the larva, absence of mesodermal segmentation, and secretion of an outer covering or tunic about the body.

tuning [ELECTR] The process of adjusting the inductance or the capacitance or both in a tuned circuit, for example, in a radio, television, or radar receiver or transmitter, so as to obtain optimum performance at a selected frequency.

tuning capacitor [ELEC] A variable capacitor used for tuning purposes.

tuning circuit *See* tuned circuit.

tuning core [ELECTROMAG] A ferrite core that is designed to be moved in and out of a coil or transformer to vary the inductance.

tuning fork [ENG] A U-shaped bar for hard steel, fused quartz, or other elastic material that vibrates at a definite natural frequency when struck or when set in motion by electromagnetic means; used as a frequency standard.

tuning indicator [ELECTR] A device that indicates when a radio receiver is tuned accurately to a radio station, such as a meter or a cathode-ray tuning indicator; it is connected to a circuit having a direct-current voltage that varies with the strength of the incoming carrier signal.

tuning range [ELECTR] The frequency range over which a receiver or other piece of equipment can be adjusted by means of a tuning control.

tuning screw [ELECTROMAG] A screw that is inserted into the top or bottom wall of a waveguide and adjusted as to depth of penetration inside for tuning or impedance-matching purposes.

tuning stub [ELECTROMAG] Short length of transmission line, usually shorted at its free end, connected to a transmission line for impedance-matching purposes.

tuning susceptance [ELECTR] Normalized susceptance of an anti-transmit-receive tube in its mount due to the deviation of its resonant frequency from the desired resonant frequency.

tuning wand [ELEC] Rod of insulating material having a brass plug at one end and a powered iron core at the other end; used for checking receiver alignment.

tunnel [ENG] A long, narrow, horizontal or nearly horizontal underground passage that is open to the atmosphere at both ends; used for aqueducts and sewers, carrying railroad and vehicular traffic, various underground installations, and mining.

tunnel-bearing grease [MATER] Lubricating grease for the main engine and propeller shaft (in the shaft tunnel) of ships.

tunnel blasting [ENG] A method of heavy blasting in which a heading is driven into the rock and afterward filled with explosives in large quantities, similar to a borehole, on a large scale, except that the heading is usually divided in two parts on the same level at right angles to the first heading, forming in plan a T, the ends of which are filled with explosives and the intermediate parts filled with inert material like an ordinary borehole.

tunnel borer [MECH ENG] Any boring machine for making a tunnel; often a ram armed with cutting faces operated by compressed air.

tunnel carriage [MECH ENG] A machine used for rapid tunneling, consisting of a combined drill carriage and manifold for water and air so that immediately the carriage is at the face, drilling may commence with no lost time for connecting up or waiting for drill steels; the air is supplied at pressures of 95 to 100 pounds per square inch (6.55 to 6.89 $\times$ 10^5 newtons per square meter).

tunnel cave *See* natural tunnel.

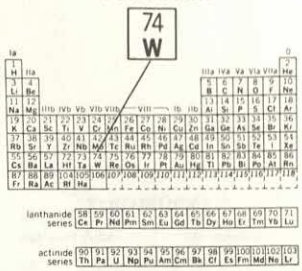
tunnel diode [ELECTR] A heavily doped junction diode that has a negative resistance at very low voltage in the forward bias direction, due to quantum-mechanical tunneling, and a short circuit in the negative bias direction. Also known as Esaki tunnel diode.

tunnel effect [QUANT MECH] The ability of a particle to pass through a region of finite extent in which the particle's potential energy is greater than its total energy; this is a quantum-mechanical phenomenon which would be impossible according to classical mechanics.

tunnel gun [ORD] A gun mounted inside an airplane fuselage and firing through an aperture.

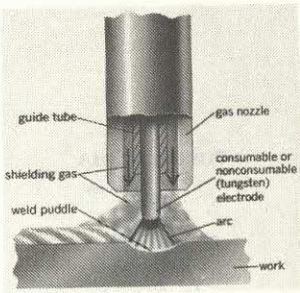
tunneling cryotron [ELECTR] A low-temperature current-controlled switching device that has two electrodes of superconducting material separated by an insulating film, forming a Josephson junction, and a control line whose currents generate magnetic fields that switch the device between two states characterized by the presence or absence of electrical resistance.

TUNGSTEN



Periodic table of the chemical elements showing the position of tungsten.

TUNGSTEN–INERT GAS WELDING

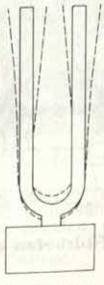


Components of tungsten–inert gas welding process.

TUNG TREE

Leaf of tung tree.

TUNING FORK



A tuning fork vibrating at its fundamental frequency.

tunnel liner [CIV ENG] Any of various materials, especially timber, concrete, and cast iron, applied to the inner surface of a vehicular or railroad tunnel. [MIN ENG] The timber, brick, concrete, or steel supports erected in a mine tunnel to maintain dimensions and safe working conditions.

tunnel rectifier [ELECTR] Tunnel diode having a relatively low peak-current rating as compared with other tunnel diodes used in memory-circuit applications.

tunnel resistor [ELECTR] Resistor in which a thin layer of metal is plated across a tunneling junction, to give the combined characteristics of a tunnel diode and an ordinary resistor.

tunnel set [MIN ENG] Timbers 6 to 8 inches (15 to 20 centimeters) in diameter and of sufficient height to support the roof of the tunnel.

tunnel system [MIN ENG] A method of mining in which tunnels or drifts are extended at regular intervals from the floor of the pit into the ore body.

tunnel triode [ELECTR] Transistorlike device in which the emitter-base junction is a tunnel diode and the collector-base junction is a conventional diode.

tunnel valt *See* barrel vault.

Tupaiidae [VERT ZOO] The tree shrews, a family of mammals in the order Insectivora.

tupelo [BOT] Any of various trees belonging to the genus *Nyssa* of the sour gum family, Nyssaceae, distinguished by small, obovate, shiny leaves, a small blue-black drupaceous fruit, and branches growing at a wide angle from the axis.

turanite [MINERAL] $Cu_5(VO_4)_2(OH)_4$ An olive green, orthorhombic mineral consisting of basic copper vanadate; occurs as reniform crusts and spherical concretions.

Turbellaria [INV ZOO] A class of the phylum Platyhelminthes having bodies that are elongate and flat to oval or circular in cross section.

turbidimeter [OPTICS] A device that measures the loss in intensity of a light beam as it passes through a solution with particles large enough to scatter the light.

turbidimetric analysis [ANALY CHEM] A scattered-light procedure for the determination of the weight concentration of particles in cloudy, dull, or muddy solutions; uses a device that measures the loss in intensity of a light beam as it passes through the solution. Also known as turbidimetry.

turbidimetric titration [ANALY CHEM] Titration in which the end point is indicated by the developing turbidity of the titrated solution.

turbidimetry *See* tubidimetric analysis.

turbidite [GEOL] Any sediment or rock transported and deposited by a turbidity current, generally characterized by graded bedding, large amounts of matrix, and commonly exhibiting a Bouma sequence.

turbidity [METEOROL] Any condition of the atmosphere which reduces its transparency to radiation, especially to visible radiation. [ANALY CHEM] **1.** Measure of the clarity (using APHA or colorimetric scales) of an otherwise clear liquid. **2.** Cloudy or hazy appearance in a naturally clear liquid caused by a suspension of colloidal liquid droplets or fine solids.

turbidity coefficient [OPTICS] A factor in the absorption (light) law equation that describes the extinction of the incident light beam.

turbidity current [OCEANOGR] A highly turbid, relatively dense current carrying large quantities of clay, silt, and sand in suspension which flows down a submarine slope through less dense sea water. Also known as density current; suspension current.

turbidity factor [GEOPHYS] A measure of the atmospheric transmission of incident solar radiation; if I_0 is the flux density of the solar beam just outside the earth's atmosphere, I the flux density measured at the earth's surface with the sun at a zenith distance which implies an optical air mass m, and $I_{m,w}$ the intensity which would be observed at the earth's surface for a pure atmosphere containing 1 centimeter of precipitable water viewed through the given optical air mass, then turbidity factor θ is given by $\theta = (\ln I_0 - \ln I)/(\ln I_0 - \ln I_{m,w})$.

turbidostat [MICROBIO] A device in which a bacterial culture is maintained at a constant volume and cell density (turbidity) by adjusting the flow rate of fresh medium into the growth tube by means of a photocell and appropriate electrical connections.

turbinate [BOT] Shaped like an inverted cone. [INV ZOO] Spiral with rapidly decreasing whorls from base to apex.

turbine [MECH ENG] A fluid acceleration machine for generating rotary mechanical power from the energy in a stream of fluid.

turbine generator [ELEC] An electric generator driven by a steam, hydraulic, or gas turbine.

turbine propulsion [MECH ENG] Propulsion of a vehicle or vessel by means of a steam or gas turbine.

turbine pump *See* regenerative pump.

Turbinidae [INV ZOO] A family of gastropod mollusks including species of top shells.

turbining [MECH ENG] The removal of scale or other foreign material from the internal surface of a metallic cylinder.

turboalternator [ELEC] An alternator, such as a synchronous generator, which is driven by a steam turbine.

turboblower [MECH ENG] A centrifugal or axial-flow compressor.

turbodrill [PETRO ENG] A rotary tool used in drilling oil or gas wells in which the bit is rotated by a turbine motor inside the well.

turbofan [AERO ENG] An air-breathing jet engine in which additional propulsive thrust is gained by extending a portion of the compressor or turbine blades outside the inner engine case.

turbogrid plate [CHEM ENG] A tray for distillation columns that consists of a flat grid of parallel slots extending over the entire cross-sectional area of the column; the liquid level on each tray is maintained by a dynamic balance between down-flowing liquid and up-flowing vapor.

turbojet [AERO ENG] A jet engine incorporating a turbine-driven air compressor to take in and compress the air for the combustion of fuel (or for heating by a nuclear reactor), the gases of combustion (or the heated air) being used both to rotate the turbine and to create a thrust-producing jet.

turbonada [METEOROL] A short thundersquall on the north Spanish coast, sometimes accompanied by waterspouts.

turbosphere [METEOROL] The region of the atmosphere in which turbulence frequently exists.

turbosupercharger [MECH ENG] A centrifugal air compressor, gas-turbine driven, usually used to increase induction system pressure in an internal combustion reciprocating engine.

turbulence *See* turbulent flow.

turbulence energy *See* eddy kinetic energy.

turbulent boundary layer [FL MECH] The layer in which the Reynolds stresses are much larger than the viscous stresses.

turbulent burner [ENG] An atomizing burner which mixes fuel and air to produce agitated flow.

turbulent diffusion *See* eddy diffusion.

turbulent flow [FL MECH] Motion of fluids in which local velocities and pressures fluctuate irregularly, in a random manner. Also known as turbulence.

turbulent flux *See* eddy flux.

turbulent heat conduction [OCEANOGR] Conduction of heat in water by lateral and vertical eddy diffusion, with currents.

turbulent Lewis number [PHYS] A dimensionless number used in the study of combined turbulent heat and mass transfer, equal to the ratio of the eddy mass diffusivity to the eddy thermal diffusivity. Symbolized Le_T.

turbulent Prandtl number [PHYS] A dimensionless number used in the study of heat transfer in turbulent flow, equal to the ratio of the eddy viscosity to the eddy thermal diffusivity. Symbolized Pr_T.

turbulent Schmidt number [FL MECH] A dimensionless number used in the study of mass transfer in turbulent flow, equal to the ratio of the eddy viscosity to the eddy mass diffusivity. Symbolized Sc_T.

turbulent shear force [FL MECH] A shear force in a fluid which arises from turbulent flow.

Turdidae [VERT ZOO] The thrushes, a family of passeriform birds in the suborder Oscines.

turgid [MED] Swollen and congested.

turgor [BOT] Distension of a plant cell wall and membrane by the fluid contents.

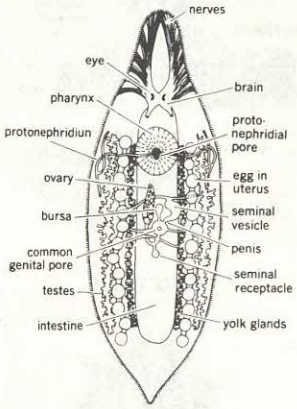
turgor movement [BOT] A reversible change in the position of plant parts due to a change in turgor pressure in certain specialized cells; movement of *Mimosa* leaves when touched is an example.

turgor pressure [BOT] The actual pressure developed by the fluid content of a turgid plant cell.

Turing computable function [MATH] A function that can be computed on a Turing machine.

Turing machine [COMPUT SCI] A mathematical idealization

TURBELLARIA



A typical hermaphroditic turbellarian, *Mesostoma ehrenbergii wardii*, showing principal organs. *(Modified from Ruebush, 1940)*

TURBOFAN

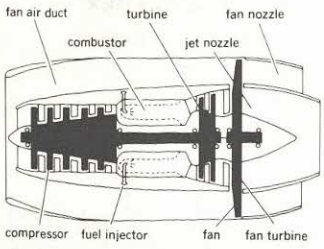


Diagram of turbofan engine.

of a computing automation similar in some ways to real computing machines; used by mathematicians to define the concept of computability.

Turing's thesis *See* Church's thesis.

turion [BOT] A scaly shoot, such as asparagus, developed from an underground bud.

turkey [VERT ZOO] Either of two species of wild birds, and any of various derived domestic breeds, in the family Meleagrididae characterized by a bare head and neck, and in the male a large pendant wattle which hangs on one side from the base of the bill.

Turkey red oil [MATER] Sulfonated castor oil, soluble in water; autoignites at 833°F (445°C); used in textiles, leather, and paper coatings, for manufacture of soaps, and as an alizarin dye assistant. Also known as soluble castor oil; sulfonated castor oil.

Turkey stone *See* turquoise.

Turkish geranium oil *See* palmarosa oil.

Turk's head rolls [MET] A group of four idler rolls, arranged in a square or rectangular pattern, through which strip metal can be drawn to form angled sections.

turmeric [BOT] *Curcuma longa*. An East Indian perennial of the ginger family (Zingiberaceae) with a short stem, tufted leaves, and short thick rhizomes; a spice with a pungent, bitter taste and a musky odor is derived from the rhizome. [MATER] An orange-red or reddish-brown dye obtained from the rhizome of turmeric.

turn [ELEC] One complete loop of wire. [MATH] *See* circle.

turnaround [CHEM ENG] In petroleum refining, the shutdown of a unit after a normal run for maintenance and repair work, then putting the unit back into operation. [ENG] The length of time between arriving at a point and departing from that point; it is used in this sense for the turnaround of vehicles, ships in ports, and aircraft.

turnaround cycle [ENG] A term used in conjunction with vehicles, ships, and aircraft, and comprising the following: loading time at home, time to and from destination, unloading and loading time at destination, unloading time at home, planned maintenance time, and, where applicable, time awaiting facilities.

turnaround document [COMPUT SCI] A document, such as a punch card, that is produced by a computer, can be read by humans, and can be reread into the machine.

turnaround system [COMPUT SCI] In character recognition, a system in which the input data to be read have previously been printed by the computer with which the reader is associated; an application is invoice billing and the subsequent recording of payments.

turnaround time [COMPUT SCI] The delay between submission of a job for a data-processing system and its completion.

turnbuckle [DES ENG] A sleeve with a thread at one end and a swivel at the other, or with threads of opposite hands at each end so that by turning the sleeve connected rods or wire rope will be drawn together and tightened.

Turnbull's blue [INORG CHEM] A blue pigment that precipitates from the reaction of potassium ferricyanide with a ferrous salt.

Turner's syndrome [MED] A sex aberration in humans in which the chromosome complement includes only one sex chromosome, an X.

Turnicidae [VERT ZOO] The button quails, a family of Old World birds in the order Gruiformes.

turning [MECH ENG] Shaping a member on a lathe.

turning area *See* enroute turning area.

turning bar *See* chimney bar.

turning basin [CIV ENG] An open area at the end of a canal or narrow waterway to allow boats to turn around.

turning-block linkage [MECH ENG] A variation of the sliding-block mechanical linkage in which the short link is fixed and the frame is free to rotate. Also known as the Wentworth quick-return motion.

turning buoy [NAV] A buoy marking a turn, as in a channel.

turning circle [NAV] The path approximating a circle of 360° or more described by the pivot point of the ship as it makes a turn.

turning error *See* northerly turning error.

turning table [ENG] In plastics molding, a rotating table or wheel carrying various molds in a multimold, single-parison blow-molding operation.

turnip [BOT] *Brassica rapa* or *B. campestris* var. *rapa*. An annual crucifer of Asiatic origin belonging to the family Brassiaceae in the order Capparales and grown for its foliage and edible root.

turnkey [COMPUT SCI] A complete computer system delivered to a customer in running condition, with all necessary premises, hardware and software equipment, supplies, and operating personnel.

turnkey contract [ENG] A contract in which an independent agent undertakes to furnish for a fixed price all materials and labor, and to do all the work needed to complete a project.

turn-off time [ELECTR] The time that is takes a gate circuit to shut off a current.

turn of the tide *See* change of tide.

turn-on time [ELECTR] The time that it takes a gate circuit to allow a current to reach its full value.

turnout [ENG] **1.** A contrivance consisting of a switch, a frog, and two guardrails for passing from one track to another. **2.** The branching off of one rail track from another. **3.** A siding. [MIN ENG] To shovel coal toward the track for more convenient loading.

turnover [MOL BIO] The number of substrate molecules transformed by a single molecule of enzyme per minute, when the enzyme is operating at maximum rate.

turnover cartridge [ENG ACOUS] A phonograph pickup having two styli and a pivoted mounting that places in playing position the correct stylus for a particular record speed.

turnover frequency *See* transition frequency.

turnover number [BIOCHEM] The number of molecules of a substrate acted upon in a period of 1 minute by a single enzyme molecule, with the enzyme working at a maximum rate. [CHEM ENG] In an industrial catalytic process, a value that indicates the amount of feed or substrate converted per a measured amount of catalyst.

turnover rate [CHEM ENG] In an industrial catalytic process, a value corresponding to the turnover number per specified unit of time.

turnpike [CIV ENG] A toll expressway.

turnplow *See* moldboard.

turns ratio [ELEC] The ratio of the number of turns in a secondary winding of a transformer to the number of turns in the primary winding.

turnstile antenna [ELECTROMAG] An antenna consisting of one or more layers of crossed horizontal dipoles on a mast, usually energized so the currents in the two dipoles of a pair are equal and in quadrature; used with television, frequency modulation, and other very-high-frequency or ultra-high-frequency transmitters to obtain an essentially omnidirectional radiation pattern.

turntable [ENG ACOUS] The rotating platform on which a disk record is placed for recording or playback.

turntable rumble [ENG ACOUS] Low-frequency vibration that is mechanically transmitted to a recording or reproducing turntable and superimposed on the reproduction. Also known as rumble.

Turonian [GEOL] A European stage of geologic time: Upper or Middle Cretaceous (above Cenomanian, below Coniacian).

turpentine [MATER] An essential oil produced by steam distillation of pine woods and from gum turpentine; used as a solvent and a thinner for paints and varnishes.

turpentine camphor *See* terpene hydrochloride.

turquoise [MINERAL] $CuAl_6(PO_4)_4(OH)_8 \cdot 4H_2O$ A semitranslucent sky-blue, bluish-green, apple-green, or greenish-gray mineral that crystallizes in the triclinic system and occurs in veinlets or as crusts of massive, concretionary, and stalactite shapes; an important gem mineral. Also known as calaite; Turkey stone.

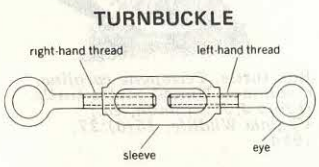
turret [ORD] A dome-shaped or cylindrical armored structure containing one or more guns and located on forts, warships, airplanes, and tanks.

turret coal cutter [MIN ENG] A coal cutter in which the horizontal jib can be adjusted vertically to cut at different levels in the seam; for example, an overcut.

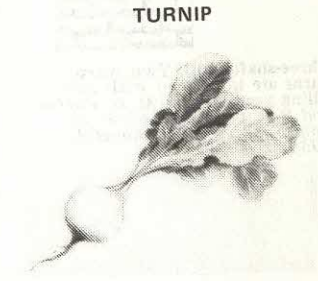
turret ice *See* ropak.

turret lathe [MECH ENG] A semiautomatic lathe differing from the engine lathe in having the tailstock replaced with a multisided, indexing tool holder or turret designed to hold several tools.

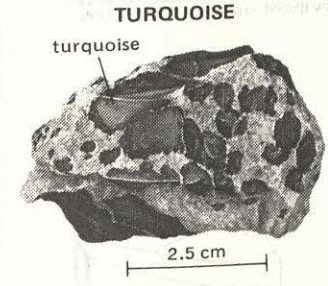
turret mount [ORD] A gun mount positioned in the turret of a tank or combat vehicle; power-driven multiple gun turret



Turnbuckle with threads of opposite hands at each end, and with eyes for attaching rods or wire rope.



Turnip, showing enlarged root and foliage.

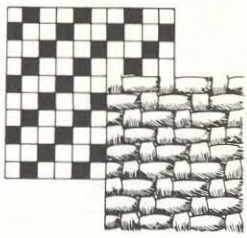


Turquoise in massive form; sample taken from Santa Fe County, New Mexico. *(Specimen from Department of Geology, Bryn Mawr College)*

TURTLE

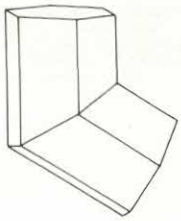
Box turtle, *Terrapene carolina*, a common United States turtle. *(From J. J. Shomon, ed., Virginia Wildlife, 15(6):27, 1954)*

TWILL WEAVE



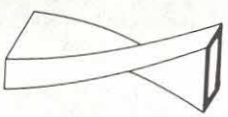
Three-shaft twill. Two warp yarns are interlaced with one filling yarn. *(From M. D. Potter and B. P. Corbman, Fiber to Fabric, 3d ed., McGraw-Hill, 1959)*

TWIN CRYSTAL



Example of twin crystal, consisting of hexagonal prism twinned on a pyramid face.

TWIST



A 90° twist for a rectangular waveguide.

mounts improve control in tracking aerial targets and also increase firepower.

turret tuner [ELECTR] A television tuner having one set of pretuned circuits for each channel, mounted on a drum that is rotated by the channel selector; rotation of the drum connects each set of tuned circuits in turn to the receiver antenna circuit, radio-frequency amplifier, and r-f oscillator.

turtle [VERT ZOO] Any of about 240 species of reptiles which constitute the order Chelonia distinguished by the two bony shells enclosing the body.

turtle oil [MATER] The oil derived from the muscles and genital glands of the giant sea turtle; melts at 25°C; used in cosmetics.

turtle stone *See* septarium.

tusche [MATER] A liquid lithographic ink that can be used with pen or brush on lithographic stones or metal plates; it is also used in the silk-screen process in a glue-resist system of pattern making; an extremely greasy material.

tussock [ECOL] A small hummock of generally solid ground in a bog or marsh, usually covered with and bound together by the roots of low vegetation such as grasses, sedges, or ericaceous shrubs.

tuyere [MET] An opening in the shell and refractory lining of a furnace through which air is forced.

TV *See* television.

TV camera scanner [COMPUT SCI] In optical character recognition, a device that images an input character onto a sensitive photoconductive target of a camera tube, thereby developing an electric charge pattern on the inner surface of the target; this pattern is then explored by a scanning beam which traces out a rectangular pattern with the result that a waveform is produced which represents the character's most probable identity.

TVI *See* television interference.

TW *See* terawatt.

Twaddell scale [ENG] A scale for specific gravity of solutions that is the first two digits to the right of the decimal point multiplied by two; for example, a specific gravity of 1.4202 is equal to 84.04°Tw.

tweeter [ENG ACOUS] A loudspeaker designed to handle only the higher audio frequencies, usually those well above 3000 hertz; generally used in conjunction with a crossover network and a woofer.

twenty-nine feature [COMPUT SCI] A device used on some punched-card machines to represent values from 0 through 29 by a maximum of two punches on a single column; x and y punches represent 10 and 20, and these are added to punches in positions 0 through 9.

twilight [ASTRON] An intermediate period of illumination of the sky before sunrise and after sunset; the three forms are civil, nautical, and astronomical.

twilight arch *See* bright segment.

twilight compass [NAV] An instrument for indicating direction by use of the polarizing effect of the earth's atmosphere on sunlight. Also known as sky compass.

twilight correction [ASTRON] In the interpretation of the records of sunshine recorders, the difference between the time of sunrise and the time at which a record of sunshine first began to be made by the sunshine recorder; and conversely at sunset; this correction is added only when the horizon is clear during the period.

twilight phenomena [OPTICS] Those meteorological optical phenomena which occur during twilight, including such effects as the antitwilight arch, dark segment, bright segment, green flash, purple light, and crepuscular rays.

twilight zone [ASTRON] That zone of the earth or other planet in twilight at any time. [ELECTROMAG] Anything resembling the twilight zone of the earth, as the narrow sector on each side of the equisignal zone of a four-course radio range station, in which one signal is barely heard above the monotone on-course signal.

twill weave [TEXT] A woven pattern of diagonal or twill lines that run upward to the right or left of the fabric face.

twin [BIOL] One of two individuals born at the same time. [CRYSTAL] *See* twin crystal.

twin arithmetic units [COMPUT SCI] A feature of some computers where the essential portions of the arithmetic section are virtually duplicated.

twin axis [CRYSTAL] The crystal axis about which one individual of a twin crystal may be rotated (usually 180°) to bring it into coincidence with the other individual.

twin band [MET] A line on a polished or etched surface representing the section through crystal twins.

twin boundary [CRYSTAL] A grain boundary whose lattice structures are mirror images of each other in the plane of the boundary.

twin-cable ropeway [MECH ENG] An aerial ropeway which has parallel track cables with carriers running in opposite directions; both rows of carriers are pulled by the same traction rope.

twin check [COMPUT SCI] Continuous check of computer operation, achieved by the duplication of equipment and automatic comparison of results.

twin crystal [CRYSTAL] A compound crystal which has one or more parts whose lattice structure is the mirror image of that in the other parts of the crystal. Also known as twin.

twine [MATER] A strong string made up of two or more strands twisted together.

twin entry [MIN ENG] A pair of parallel entries, one of which is an intake air course and the other the return air course; rooms can be worked from both entries.

twiner [BOT] A climbing stem that winds about its support, as pole beans or many tropical lianas.

twin-geared press [MECH ENG] A crank press having the drive gears attached to both ends of the crankshaft.

twinkling stars [ASTRON] Rapid fluctuations of the brightness and size of the images of stars caused by turbulence in the earth's atmosphere.

twin law [CRYSTAL] A statement relating two or more individuals of a twin to one another in terms of their crystallography (twin plane, twin axis, and so on).

twinning [CRYSTAL] The development of a twin crystal by growth, translation, or gliding.

twinning plane *See* twin plane.

twin paradox *See* clock paradox.

twin plane [CRYSTAL] The plane common to and across which the individual crystals or components of a crystal twin are symmetrically arranged or reflected. Also known as twinning plane.

twin ring structures [ASTRON] Consanguineous ring structures whose component craters are of the same size, as well as being similar in form.

Twins *See* Gemini.

twin-T filter [ELEC] An electric filter consisting of a parallel-T network with values of network elements chosen in such a way that the outputs due to each of the paths precisely cancel at a specified frequency.

twin-T network *See* parallel-T network.

twist [DES ENG] In a fiber, rope, yarn, or cord, the turns about its axis per unit length; usually expressed as TPI (turns per inch). [ELECTROMAG] A waveguide section in which there is a progressive rotation of the cross section about the longitudinal axis of the waveguide.

twist drill [DES ENG] A tool having one or more helical grooves, extending from the point to the smooth part of the shank, for ejecting cuttings and admitting a coolant.

twisted pair [ELEC] A cable composed of two small insulated conductors twisted together without a common covering.

twister [METEOROL] In the United States, a colloquial term for tornado. [SOLID STATE] A piezoelectric crystal that generates a voltage when twisted.

twisting [TEXT] In a ply yarn or cord, the process of combining two or more ends with a twist to give greater strength and smoothness, increased uniformity, or novel effects.

twist of rifling [ORD] Inclination of the spiral grooves (rifling) to the axis of the bore of a weapon; it is expressed as the number of calibers of length in which the rifling makes one complete turn.

twistor [COMPUT SCI] Computer memory element consisting of a helix of a magnetic wire wound under tension at a 45° angle on a short piece of nonmagnetic wire, with a fine-wire solenoid wound over the helix.

twist-yarn cloth [TEXT] Fabric made from two or more colored yarns twisted or plied together, giving a mottled effect.

Twitchell reagent [ORG CHEM] A catalyst for the acid hydrolysis of fats; a sulfonated addition product of naphthalene and oleic acid, that is, a naphthalenestearosulfonic acid.

two-address code [COMPUT SCI] In computers, a code using two-address instructions.

two-address instruction [COMPUT SCI] In computers, an instruction which includes an operation and specifies the location of two registers.

two-beam interference [PHYS] Interference between two waves.

two-body force [PHYS] A force between two particles which is not affected by the existence of other particles in the vicinity, such as a gravitational force or a Coulomb force between charged particles.

two-body problem [MECH] The problem of predicting the motions of two objects obeying Newton's laws of motion and exerting forces on each other according to some specified law such as Newton's law of gravitation, given their masses and their positions and velocities at some initial time.

two-carrier theory [SOLID STATE] A theory of the conduction properties of a material in bulk or in a rectifying barrier which takes into account the motion of both electrons and holes.

two-component neutrino theory [PARTIC PHYS] A theory according to which the neutrino and antineutrino have exactly zero rest mass, and the neutrino spin is always antiparallel to its motion, while the antineutrino spin is parallel to its motion.

two-cycle engine [MECH ENG] A reciprocating internal combustion engine that requires two piston strokes or one revolution to complete a cycle.

two-decision problem [STAT] The problem of deciding, using statistical information, between two actions or decisions.

two-degrees-of-freedom gyro [MECH] A gyro whose spin axis is free to rotate about two orthogonal axes, not counting the spin axis.

two-dimensional chromatography [ANALY CHEM] A paper chromatography technique in which the sample is resolved by standard procedures (ascending, descending, or horizontal solvent movement) and then turned at right angles in a second solvent and re-resolved.

two-dimensional flow [FL MECH] Fluid flow in which all flow occurs in a set of parallel planes with no flow normal to them, and the flow is identical in each of these parallel planes.

two-dimensional storage [COMPUT SCI] A direct-access storage device in which the storage locations assigned to a particular file do not have to be physically adjacent, but instead may be taken from one or more seek areas.

two-fluid cell [PHYS CHEM] Cell having different electrolytes at the positive and negative electrodes.

two-gap head [COMPUT SCI] One of two separate magnetic tape heads, one for reading and the other for recording data.

two-hop transmission [COMMUN] Propagation of radio waves in which the waves are reflected from the ionosphere, then reflected from the ground, and then reflected from the ionosphere again before reaching the receiver.

two-input subtracter *See* half-subtracter.

two-layer ocean [OCEANOGR] An idealized ocean in which a layer of uniform density near the surface overlays a deep layer of uniform but distinctly higher-density water.

two-level mold [ENG] Placement of one cavity of a plastics mold above another instead of alongside it; reduces clamping force needed.

two-level subroutine [COMPUT SCI] A subroutine in which entry is made to a second, lower-level subroutine.

two-lip end mill [MECH ENG] An end-milling cutter having two cutting edges and straight or helical flutes.

two-man concept *See* two-man rule.

two-man policy *See* two-man rule.

two-man rule [ORD] A system designed to prohibit access by an individual to nuclear weapons and certain designated components by requiring the presence at all times of at least two authorized persons, each capable of detecting incorrect or unauthorized procedures with respect to the task to be performed. Also known as two-man concept; two-man policy.

two-out-of-five code [COMPUT SCI] An encoding of the decimal digits using five binary bits and having the property that every code element contains two 1s and three 0s.

two-part adhesive [MATER] A glue supplied in two parts, a resin and an accelerator, which are mixed only just before application.

two-part code [COMMUN] Randomized code consisting of an encoding section in which the plain text groups are arranged in alphabetical or other significant order accompanied by their code groups in nonalphabetical or random order, and a decoding section in which the code groups are arranged in alphabetical or numerical order and are accompanied by their meanings given in the encoding section.

two-part experiment [STAT] Experiments in which two operations or actions are performed; for example, throwing two dice, drawing two marbles from a box, throwing a die and then drawing a marble from a box.

two-person game [MATH] A game consisting of exactly two players with competing interests.

two-phase [PHYS] Having a phase difference of one quarter-cycle or 90°. Also known as quarter-phase.

two-phase alternating-current circuit [ELEC] A circuit in which there are two alternating currents on separate wires, the two currents being 90° out of phase.

two-phase current [ELEC] Current delivered through two pairs of wires or at a phase difference of one-quarter cycle (90°) between the current in the two pairs.

two-phase five-wire system [ELEC] System of alternating-current supply comprising five conductors, four of which are connected as in a two-phase four-wire system, the fifth being connected to the neutral points of each phase.

two-phase flow [CRYO] Flow of helium II, or of electrons in a superconductor, thought of as consisting of two interpenetrating, noninteracting fluids, a superfluid component which exhibits no resistance to flow and is responsible for superconducting properties, and a normal component, which behaves as does an ordinary fluid or as conduction electrons in a nonsuperconducting metal. [FL MECH] Cocurrent movement of two phases (for example, gas and liquid) through a closed conduit or duct (for example, a pipe).

two-phase four-wire system [ELEC] System of alternating-current supply comprising two pairs of conductors, between one pair of which is maintained an alternating difference of potential displaced in phase by one-quarter of a period from an alternating difference of potential of the same frequency maintained between the other pair.

two-phase three-wire system [ELEC] System of alternating-current supply comprising three conductors, between one of which (known as the common return) and each of the other two are maintained alternating difference of potential displaced in phase by one-quarter of a period with relation to each other.

two-piece set [MIN ENG] A set of timbers consisting of a cap and a single post.

two-plus-one address instruction [COMPUT SCI] An instruction in a computer program which has two addresses specifying the locations of operands and one address specifying the location in which the result is to be entered.

two-point press [MECH ENG] A mechanical press in which the slide is actuated at two points.

two-port junction [ELECTROMAG] A waveguide junction with two openings; it can consist either of a discontinuity or obstacle in a waveguide, or of two essentially different waveguides connected together.

two-port system [CONT SYS] A system which has only one input or excitation and only one response or output.

two-position propeller [AERO ENG] An airplane propeller whose blades are limited to two angles, one for take off and climb and the other for cruising.

two-pulse canceler [ELECTR] A moving-target indicator canceler which compares the phase variation of two successive pulses received from a target; discriminates against signals with radial velocities which produce a Doppler frequency equal to a multiple of the pulse repetition frequency.

two-quadrant multiplier [COMPUT SCI] Of an analog computer, a multiplier in which operation is restricted to a single sign of one input variable only.

two-range Decca [NAV] A Decca radio navigation system modified to provide circular lines of position.

two's complement [MATH] A number derived from a given n-bit number by requiring the two numbers to sum to a value of 2^n.

two-sheet detector [GRAPHICS] A device which stops the printing press when more than one sheet attempts to feed into the grippers.

two-sided ideal [MATH] A two-sided ideal I is a sub-ring of a ring R where the products xy and yx are always in I for every x in R and y in I.

two-sided sampling plans [IND ENG] Any sampling plan whereby the acceptability of material is determined against upper and lower limits.

two-sided test [STAT] A test which rejects the null hypothesis when the test statistic T is either less than or equal to c or greater than or equal to d, where c and d are critical values.

two-source frequency keying [COMMUN] Keying in

which the modulating wave shifts the output frequency between predetermined values derived from independent sources.

two-sphere [MATH] The surface of a ball; the two-dimensional sphere in euclidean three-dimensional space obtained from all points whose distance from the origin is one.

two-stage design [STAT] The design of an experiment which employs a pilot study in order to decide how to design the main experiment.

two-stage experiment [STAT] An experiment in two parts, the outcome of the first part deciding the procedure for the second.

two-stage hoisting [MIN ENG] Deep shaft hoisting with two winders, one at the surface, and the other at mid-depth in the shaft.

two-stage sampling [STAT] Sampling from a population whose members are themselves sets of objects and then sampling from the sets selected in the first sampling; for example, to first draw a sample of states and then to draw a sample of representatives to Congress from each state selected.

two-state Turing machine [COMPUT SCI] A variation of a Turing machine in which only two states are allowed, although the number of symbols may be large.

two-step test [MED] Repeated ascents over two 9-inch (23-centimeter) steps as a simple exercise test of cardiovascular function. Also known as Master's two-step test.

two-stroke cycle [MECH ENG] An internal combustion engine cycle completed in two strokes of the piston.

two-symbol Turing machine [COMPUT SCI] A variation of a Turing machine in which only two symbols are permitted, although the number of states may be large.

two-tone diaphone [ENG ACOUS] A diaphone producing blasts of two tones, the second tone being of a lower pitch than the first tone.

two-tone keying [COMMUN] Keying in which the modulating wave causes the carrier to be modulated with one frequency for the marking condition and modulated with a different frequency for the spacing condition.

two-tone modulation [COMMUN] In teletypewriter operation, a method of modulation in which two different carrier frequencies are employed for the two signaling conditions; the transition from one frequency to the other is abrupt, with resultant phase discontinuities.

two-valued logic [MATH] A system of logic where each statement has two possible values or states, truth or falsehood.

two-valued variable [MATH] A variable which assumes values in a set containing exactly two elements, often symbolized as 0 and 1.

two-way slab [CIV ENG] A concrete slab supported by beams along all four edges and reinforced with steel bars arranged perpendicularly.

two-wire circuit [ELEC] A metallic circuit formed by two conductors insulated from each other; in contrast with a four-wire circuit, it uses only one line or channel for transmission of electric waves in both directions.

two-wire repeater [ELECTR] Repeater that provides for transmission in both directions over a two-wire circuit; in carrier transmission, it usually operates on the principle of frequency separation for the two directions of transmission.

two-year ice *See* second-year ice.

TWX machine *See* teletypewriter.

TWX service *See* teletypewriter exchange service.

Twyman-Green interferometer [OPTICS] An interferometer similar to the Michelson interferometer except that it is illuminated with a point source of light instead of an extended source.

Twystron [ELECTR] Very-high-power, hybrid microwave tube, combining the input section of a high-power klystron with the output section of a traveling wave tube, characterized by high operating efficiency and wide bandwidths.

tychite [MINERAL] $Na_6Mg_2(SO_4)(CO_3)_4$ A white, isometric mineral consisting of a sulfate-carbonate of sodium and magnesium.

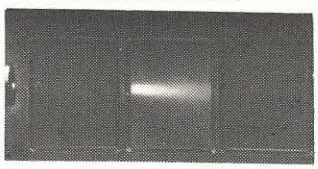
Tycho [ASTRON] A crater on the near side of the moon.

Tychonic system [ASTRON] A theory of the planetary motion proposed by the astronomer Tycho Brahe in which the earth is stationary, with the sun and moon revolving about it but all the other planets revolving about the sun.

Tychonoff space *See* completely regular space.

Tychonoff theorem [MATH] A product of topological spaces is compact if and only if each individual space is compact.

TYNDALL CONE



The luminous light path known as the Tyndall cone. *(H. Steeves and R. G. Babcock)*

Tycho's Nova [ASTRON] A supernova that appeared in the constellation Cassiopeia in 1572; the star B Cassiopeiae. Also known as Tycho's star.

Tycho's star *See* Tycho's Nova.

tyfon *See* typhon.

tying bar *See* tombolo.

Tylenchida [INV ZOO] An order of soil-dwelling or phytoparasitic nematodes in the subclass Rhabdita.

Tylenchoidea [INV ZOO] A superfamily of mainly soil and insect-associated nematodes in the order Tylenchida with a stylet for piercing live cells and sucking the juices.

Tyler screen [CHEM ENG] A screen standard for the openings in screen-type mediums based on meshes per linear inch; convertible to the U.S. Sieve Series.

Tyler Standard screen scale [ENG] A scale for classifying particles in which the particle size in micrometers is correlated with the meshes per inch of a screen.

Tylopoda [VERT ZOO] An infraorder of artiodactyls in the suborder Ruminantia that contains the camels and extinct related forms.

tylostyle [INV ZOO] A uniradiate spicule in Porifera with a point at one end and a knob at the other end.

tylote [INV ZOO] A slender sponge spicule with a knob at each end.

tympan [GRAPHICS] One or more layers of paper placed on the impression surface of a printing press to improve presswork quality.

tympanic cavity [ANAT] The irregular, air-containing, mucous-membrane-lined space of the middle ear; contains the three auditory ossicles and communicates with the nasopharynx through the auditory tube.

tympanic membrane [ANAT] The membrane separating the external from the middle ear. Also known as eardrum; tympanum.

tympanoplasty [MED] A surgical procedure performed to eradicate disease in the middle ear cavity or to reconstruct the conductive mechanism.

tympanum [ANAT] *See* tympanic membrane. [INV ZOO] A thin membrane covering an organ of hearing in insects.

Tyndall cone [OPTICS] The luminous path of a beam of light resulting from the Tyndall effect.

Tyndall effect [OPTICS] Visible scattering of light along the path of a beam of light as it passes through a system containing discontinuities, such as the surfaces of colloidal particles in a colloidal solution.

Tyndall flowers [HYDROL] Small water-filled cavities, often of basically hexagonal shape, which appear in the interior of ice masses upon which light is falling.

Tyndallization [ENG] Heat sterilization by steaming the food or medium for a few minutes at atmospheric pressure on three or four successive occasions, separated by 12- to 18-hour intervals of incubation at a temperature favorable for bacterial growth.

type [GRAPHICS] The relief or plane characters used to generate printed characters of various styles and sizes. [SYST] A specimen on which a species or subspecies is based.

type A encephalitis *See* lethargic encephalitis.

type A wave *See* continuous wave.

type A1 wave [COMMUN] An unmodulated, keyed, continuous wave.

type A2 wave [COMMUN] A modulated, keyed, continuous wave.

type A3 wave [COMMUN] A continuous wave modulated by music, speech, or other sounds.

type A4 wave [COMMUN] A superaudio frequency-modulated continuous wave, as used in facsimile systems.

type A5 wave [COMMUN] A superaudio frequency-modulated continuous wave, as used in television.

type A9 wave [COMMUN] A composite transmission and continuous wave that is not type A1, A2, A3, A4, or A5 wave.

type bar [GRAPHICS] A long, narrow box or magazine from which projects the type used at a particular print position of a printer, and which contains the entire collection of characters available to that print position.

type-bar printer [GRAPHICS] A serial printer in which two characters are mounted on a type bar, as in some electric typewriters and early teletypewriters, and desired characters are printed one at a time.

type B wave [COMMUN] A keyed, damped wave.

Type II Cepheids *See* W Virginis stars.

type drum [COMPUT SCI] A steel cylinder containing 128 to 144 lateral bands, each band containing the alphabet, the digits 0–9, and the standard set of punctuation marks such as commas and periods, and revolving at high speed; printing is achieved by a hammer facing each band and activated at the right time to cause a character to be printed on the paper flowing between hammers and drum.

typeface *See* face.

type-α leader [GEOPHYS] A stepped leader of lightning which exhibits very little branching and whose individual steps are short and so weakly luminous as to be difficult to discern.

type gage [GRAPHICS] A ruler, calibrated in picas, used by a printer for making measurements during the composition process. Also known as line gage.

type-β leader [GEOPHYS] A stepped leader of lightning in which the upper portion of the channel is characterized by longer and brighter steps than those found in the lower portion of the channel, a consequence of excessive branching in the upper parts under the influence of strong fields set up by heavy space charges near and around the upper end of the channel.

type locality [GEOL] **1.** The place at which a stratigraphic unit is typically displayed and from which it derives its name. **2.** The place where a geologic feature was first recognized and described.

type-M carcinotron *See* M-type backward-wave oscillator.

type metal [MET] Any of various low-melting-point alloys, composed mainly of lead (50–90%), antimony (2–30%), and tin (2–20%), used for casting printers' type.

type-O carcinotron *See* O-type backward wave oscillator.

type I of Cori *See* von Gierke's disease.

type section [GEOL] That sequence of strata identified as the original sequence for a location or area; the standard against which other stratigraphy of parts of the area are compared. Also known as section.

type I superconductor [CRYO] A superconductor for which there is a single critical magnetic field; magnetic flux is completely excluded from the interior of the material at field strengths below this critical field, while at field strengths above the critical field, magnetic flux penetrates the superconductor completely and it reverts to the normal state.

type II superconductor [CRYO] A superconductor for which there are two critical magnetic fields; magnetic flux is completely excluded from the interior of the material only at field strengths below the smaller critical field, and at field strengths between the two critical fields the magnetic flux consists of flux vortices in the form of filaments embedded in the superconducting material. Also known as high-field superconductor (HFS).

type I supernova [ASTRON] A member of a class of supernovae which attain a maximum absolute magnitude of at least 16, have similar light curves characterized by a rapid rise and rapid decline, and have spectra formed of extremely broad, overlapping bright lines.

type II supernova [ASTRON] A member of a class of supernovae whose individual light curves vary considerably, but which in general show a weaker maximum and slower decline than type I supernovae, with marked periods of constant brightness during the decrease, and whose spectra are continuous until about a month after maximum when broad emission lines develop.

typewriter [GRAPHICS] A machine that produces printed copy, character by character, as the typewriter is operated; essential parts are an input keyboard, a set of raised characters, inking means, a platen, and a mechanism for advancing the position at which successive characters are imprinted.

typewriter terminal [COMPUT SCI] An electric typewriter combined with an ASCII or other code generator that provides code output for feeding a computer, calculator, or other digital equipment; the terminal also produces hard copy when driven by incoming code signals.

Typhaceae [BOT] A family of monocotyledonous plants in the order Typhales characterized by an inflorescence of dense, cylindrical spikes and absence of a perianth.

Typhales [BOT] An order of marsh or aquatic monocotyledons in the subclass Commelinidae with emergent or floating stems and leaves and reduced, unisexual flowers having a single ovule in an ovary composed of a single carpel.

Typhlopidae [VERT ZOO] A family of small, burrowing circumtropical snakes, suborder Serpentes, with vestigial eyes and toothless jaws.

Typhloscolecidae [INV ZOO] A family of pelagic polychaete annelids belonging to the Errantia.

typhlosole [INV ZOO] A dorsal longitudinal invagination of the intestinal wall in certain invertebrates serving to increase the absorptive surface.

typhoid fever [MED] A highly infectious, septicemic disease of humans caused by *Salmonella typhi* which enters the body by the oral route through ingestion of food or water contaminated by contact with fecal matter.

typhoid vaccine [IMMUNOL] A type of killed vaccine used for active immunity production; made from killed typhoid bacillus (*Salmonella typhi*).

typhon [ENG ACOUS] A diaphragm horn which operates under the influence of compressed air or steam. Also spelled tyfon.

Typhon [ORD] A United States surface-to-air missile of advance design for installation on carriers, cruisers, frigates, and destroyers, and for use against high-performance aircraft and short-range tactical missiles; equipped with either a nuclear or nonnuclear warhead.

typhoon [METEOROL] A severe tropical cyclone in the western Pacific.

typhoon wind *See* hurricane wind.

typhus fever [MED] Any of three louse-borne human diseases caused by *Rickettsia prowazakii* characterized by fever, stupor, headaches, and a dark-red rash.

typography [GRAPHICS] The techniques involved in letterpress printing, including style, arrangements, and appearance of the printed matter.

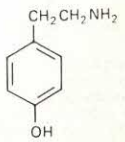
typography point *See* point.

Typotheria [PALEON] A suborder of extinct rodentlike herbivores in the order Notoungulata.

typp [TEXT] A unit of the reciprocal of line density used in the textile industry, equal to the reciprocal of the line density of a thread whose length is 1000 yards and whose length is 1 pound; equal to approximately 2015.91 meters per kilogram.

tyramine [PHARM] $HOC_6H_4CH_2CH_2NH_2$ A crystalline compound with a melting point of 164–165°C; soluble in water and boiling alcohol; used in medicine as an adrenergic drug. Also known as *para*-β-aminoethylphenol; α-(4-hydroxyphenyl)-β-aminoethane; 2-*para*-hydroxyphenylethylamine; tyrosamine.

TYRAMINE



Structural formula.

Tyranni [VERT ZOO] A suborder of suboscine Passeriformes containing birds with limited song power and having the tendon of the hind toe separate and the intrinsic muscles of the syrinx reduced to one pair.

Tyrannidae [VERT ZOO] The tyrant flycatchers, a family of passeriform birds in the suborder Tyranni confined to the Americas.

Tyrannoidea [VERT ZOO] The flycatchers, a superfamily of suboscine birds in the suborder Tyranni.

tyrocidine [MICROBIO] A peptide antibiotic produced by *Bacillus brevis*; used to control fungi, bacteria, and protozoa.

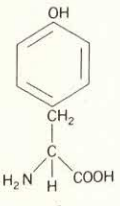
tyrolite *See* trichalcite.

tyrosamine *See* tyramine.

tyrosinase [BIOCHEM] An enzyme found in plants, molds, crustaceans, mollusks, and some bacteria which, in the presence of oxygen, catalyzes the oxidation of monophenols and polyphenols with the introduction of —OH groups and the formation of quinones.

tyrosine [BIOCHEM] $C_9H_{11}NO_3$ A phenolic alpha amino acid found in many proteins; a precursor of the hormones epinephrine, norepinephrine, thyroxine, and triiodothyronine, and of the black pigment melanin.

TYROSINE



Structural formula.

tyrosinemia [MED] An inborn metabolic disorder in which there is a deficiency of the enzyme *p*-hydroxyphenylpyruvic acid oxidase with abnormally high blood levels of tyrosine and sometimes methionine.

tyrosinosis [MED] Excretion of excessive amounts of tyrosine and its first oxidation products in the urine.

tyrothricin [MICROBIO] A polypeptide mixture produced by *Bacillus brevis* and consisting of the antibiotic substances gramicidin and tyrocidine; effective as an antibacterial applied locally in infections due to germ-positive organisms.

Tyson's gland [ANAT] A small scent gland in the human male which secretes the smegma. Also known as preputial gland.

Tytonidae [VERT ZOO] The barn owls, a family of birds in the

order Strigiformes distinguished by an unnotched sternum which is fused to large clavicles.

tyuyamunite [MINERAL] $Ca(UO_2)_2(VO_4)_2 \cdot 5–8H_2O$ A yellow orthorhombic mineral occurring in incrustations as a secondary mineral; an ore of uranium. Also known as calciocarnotite.

tyvelose [BIOCHEM] A dideoxy sugar found in bacterial lipopolysaccharides.

u

u *See* up quark.

U *See* uranium.

ubac [METEOROL] The shady (usually north) side of an Alpine mountain, characterized by a lower timberline and snow line than the sunny side.

u-band [OPTICS] The absorption band in the ultraviolet resulting from a U-center type of point lattice defect.

U-bend die [MECH ENG] A die with a square or rectangular cross section which provides two edges over which metal can be drawn.

U blades [DES ENG] Curved bulldozer blades designed to increase moving capacity of tractor equipment.

U bolt [DES ENG] A U-shaped bolt with threads at the ends of both arms to receive nuts.

UBV photometry [ASTRON] A system of three-color photometry used to obtain specific stellar magnitudes; the system is based on the comparison of stars' magnitudes with a standard sequence of about 400 stars.

U center [CRYSTAL] The color-center type of point lattice defect in ionic crystals created by the incorporation of an impurity such as hydrogen into alkali halides.

U Cephei [ASTRON] A binary star; in this double-star eclipsing system, one component has reached its Roche limit (a dynamical barrier beyond which the size of neither star can expand) while the other is distinctly smaller than this limit.

U coefficient [QUANT MECH] A coefficient that appears in the transformation between modes of coupling eigenfunctions of three angular momenta; it is equal to the product of the Racah coefficient and $[(2\,j_{12} + 1)\,(2\,j_{23} + 1)]^{1/2}$, where j_{12} and j_{23} are the intermediate angular momenta in the respective modes.

Uda antenna *See* Yagi-Uda antenna.

Udalf [GEOL] A suborder of the soil order Alfisol; brown soil formed in a udic moisture regime and in a mesic or warmer temperature regime.

udder [VERT ZOO] A pendulous organ consisting of several mammary glands enclosed in a single envelope; each gland has its own nipple; found in some mammals, such as the cow and goat.

Udert [GEOL] A suborder of the soil order Vertisol; formed in a humid region so that surface cracks remain open only for 2–3 months.

Udex process [CHEM ENG] A proprietary petroleum refining process used to extract aromatic hydrocarbons from a complex hydrocarbon mixture; uses a glycol-water solvent.

UDMH *See uns*-dimethylhydrazine.

Udoll [GEOL] A suborder of the Mollisol soil order; found in humid, temperate, and warm regions where maximum rainfall comes during growing season; has thick, very dark A horizons, brown B horizons, and paler C horizons.

udometer *See* rain gage.

UDP *See* uridine diphosphate.

UDPG *See* uridine diphosphoglucose.

Udult [GEOL] A suborder of the soil order Ultisol; organic-carbon content is low, argillic horizons are reddish or yellowish; formed in a udic moisture regime.

U figure *See* U index.

UFO *See* unidentified flying object.

U format [COMPUT SCI] A record format which the input/output control system treats as completely unknown and unpredictable.

U Geminorum stars [ASTRON] A class of variable stars known as dwarf novae; their light curves resemble those of novae, with range brightness variations of about 4 magnitudes; examples are U Gemini and SS Cygni. Also known as SS Cygni stars.

Ugine Sejournet process *See* Sejournet process.

UHF *See* ultra-high-frequency.

Uhlbricht sphere [OPTICS] A sphere whose inside surface has a diffusely reflecting white finish, used in an integrating sphere photometer.

uhligite [MINERAL] A black, pseudoisometric mineral consisting of an oxide of titanium and calcium, with zirconium and aluminum replacing titanium.

U index [GEOPHYS] The difference between consecutive daily mean values of the horizontal component of the geomagnetic field. Also known as U figure.

Uintatheriidae [PALEON] The single family of the extinct mammalian order Dinocerata.

Uintatheriinae [PALEON] A subfamily of extinct herbivores in the family Uintatheriidae including all horned forms.

UJT *See* unijunction transistor.

Ulatisian [GEOL] A mammalian age in a local stage classification of the Eocene in use on the Pacific Coast based on foraminifers.

ULCC *See* ultra-large crude carrier.

ulcer [MED] Localized interruption of the continuity of an epithelial surface, with an inflamed base.

ulcerative colitis [MED] An idiopathic inflammatory disease of the mucosa and submucosa of the colon manifested clinically by pain, diarrhea, and rectal bleeding.

ulcerative endocarditis [MED] Acute bacterial endocarditis.

ulexite [MINERAL] $NaCaB_5O_9 \cdot 8H_2O$ A white mineral that crystallizes in the triclinic system and forms rounded reniform masses of extremely fine acicular crystals. Also known as boronatrocalcite; cotton ball; natronborocalcite.

ullage [ENG] The amount that a container, such as a fuel tank, lacks of being full. [NAV ARCH] The distance from the surface of the oil in a cargo tank of an oil tanker to the top of the hatch, or to the top of the inspection cover in the hatch.

ullage rocket [AERO ENG] A small rocket used in space to impart an acceleration to a tank system to ensure that the liquid propellants collect in the tank in such a manner as to flow properly into the pumps or thrust chamber.

ullmannite [MINERAL] NiSbS A steel-gray to black mineral consisting of nickel antimonide and sulfide, usually with a little arsenic, occurring massive, and having a metallic luster. Also known as nickel-antimony glance.

Ullmann reaction [ORG CHEM] A variation of the Fittig synthesis, using copper powder instead of sodium.

Ulloa's ring *See* Bouguer's halo.

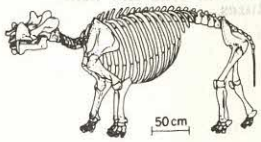
Ullrich-Turner syndrome [MED] A complex of symptoms including webbing of the neck, short stature, cubitus valgus, and hypogonadism in the male. Also known as male Turner's syndrome.

Ulmaceae [BOT] A family of dicotyledonous trees in the order Urticales distinguished by alternate stipulate leaves, two styles, a pendulous ovule, and lack of a latex system.

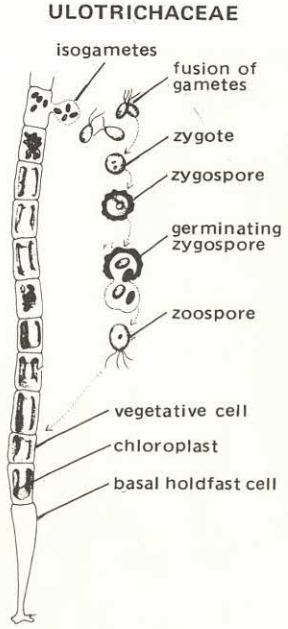
ulmic acid *See* ulmin.

ulmin [GEOL] Alkali-soluble organic substances derived from decaying vegetable matter; occurs as amorphous brown to black gel material. Also known as carbohumin; fundamental

UINTATHERIINAE



Skeleton of *Uintatherium*, a middle Eocene member of the subfamily Uintatheriinae in the order Dinocerata, showing the five-toed feet, a characteristi of the order. *(After Flerov)*



Ulothrix, an attached form of Ulotrichaceae, showing cylindrical cells and other features.

jelly; fundamental substance; gelose; humin; humogelite; jelly; ulmic acid; vegetable jelly.

ulna [ANAT] The larger of the two bones of the forearm or forelimb in vertebrates; articulates proximally with the humerus and radius and distally with the radius.

Ulotrichaceae [BOT] A family of green algae in the suborder Ulotrichineae; contains both attached and floating filamentous species with cells having parietal, platelike or bandlike chloroplasts.

Ulotrichales [BOT] A large, artificial order of the Chlorophyta composed mostly of fresh-water, branched or unbranched filamentous species with mostly cylindrical, uninucleate cells having cellulose, but often mucilaginous walls.

Ulotrichineae [BOT] A suborder of the Ulotrichales characterized by short cylindrical cells.

ulrichite *See* uraninite.

ultimate analysis [ANALY CHEM] The determination of the percentage of elements contained in a chemical substance.

ultimate elongation [MET] The percentage of permanent deformation remaining after tensile rupture.

ultimate lines [ASTRON] Special spectral lines that can be used to indicate the existence of an element in the sun or other star.

ultimate-load design [DES ENG] Design of a beam that is proportioned to carry at ultimate capacity the design load multiplied by a safety factor. Also known as limit-load design; plastic design; ultimate-strength design.

ultimate recovery [PETRO ENG] Estimated total (ultimate) recovery of hydrocarbon fluids expected from a reservoir during its productive lifetime.

ultimate set [ENG] The ratio of the length of a specimen plate or bar before testing to the length at the moment of fracture; usually expressed as a percentage.

ultimate strength [MECH] The tensile stress, per unit of the original surface area, at which a body will fracture, or continue to deform under a decreasing load.

ultimate-strength design *See* ultimate-load design.

ultimobranchial body [EMBRYO] One of the small, endocrine structures which originate as terminal outpocketings from each side of the embryonic vertebrate pharynx; can produce the hormone calcitonin.

Ultisol [GEOL] A soil order characterized by typically moist soils, with horizons of clay accumulation and a low supply of bases.

ultra-audion circuit [ELECTR] Regenerative detector circuit in which a parallel resonant circuit is connected between the grid and the plate of a vacuum tube, and a variable capacitor is connected between the plate and cathode to control the amount of regeneration.

ultra-audion oscillator [ELECTR] Variation of the Colpitts oscillator circuit; the resonant circuit employs a section of transmission line.

ultrabasic [PETR] Of igneous rock, having a low silica content, as opposed to the higher silica contents of acidic, basic, and intermediate rocks.

ultrabasite *See* diaphorite.

ultracentrifuge [ENG] A laboratory centrifuge that develops centrifugal fields of more than 100,000 times gravity.

ultra-cold neutron [PHYS] A neutron whose energy is of the order of 10^{-7} electron volt or less, so that it is totally reflected from various materials and suitably constructed magnetic fields, regardless of the angle of incidence, and can be stored in suitably constructed bottles.

Ultrafax [COMMUN] Trade name for a system using radio, facsimile, and television methods to transmit printed information; characterized by the great speed with which printed material may be transmitted over distances.

ultrafiche [GRAPHICS] A sheet of film, usually 4 by 6 inches (10 by 15 centimeters) in size, containing either negative or positive images, or frames, of printed material reduced more than 100 times by photographic reduction.

ultrafilter [MATH] A filter base which has no properly subordinated filter base.

ultrafiltration [CHEM ENG] Separation of colloidal or very fine solid materials by filtration through microporous or semipermeable mediums.

Ultrafining [CHEM ENG] A proprietary fixed-bed catalytic hydrogenation process used in petroleum refineries to desulfurize and upgrade naphtha distillates.

Ultraforming [CHEM ENG] A proprietary catalytic reforming process used to increase the octane ratings of petroleum naphthas.

ultragravity waves [FL MECH] Gravity waves which are characterized by periods in the 0.1–1.0 second range.

ultra-high-frequency [COMMUN] The band of frequencies between 300 and 3000 megahertz in the radio spectrum, corresponding to wavelengths of 10 centimeters to 1 meter. Abbreviated UHF.

ultra-high-frequency tuner [ELECTR] A tuner in a television receiver for reception of stations transmitting in the ultra-high-frequency band (channels 14–83); it usually employs continuous tuning.

ultra-high vacuum [PHYS] A vacuum in which the pressure is of the order of 10^{-10} millimeter of mercury or less.

ultra-large crude carrier [NAV ARCH] A liquid-cargo vessel over 250,000 tons. Abbreviated ULCC.

ultramafic [PETR] Referring to igneous rock composed principally of mafic minerals, such as olivine and pyroxene.

ultramarine blue [INORG CHEM] A blue pigment; a powder with heat resistance, used for enamels on toys and machinery, white baking enamels, printing inks, and cosmetics, and in textile printing.

ultramicrobalance [ENG] A differential weighing device with accuracies better than 1 microgram; used for analytical weighings in microanalysis.

ultramicroscope [OPTICS] An instrument for investigating particles of submicroscopic dimensions: it consists of a high-intensity illumination system for producing a Tyndall cone in a colloidal system, coupled with a compound microscope to examine the points of light scattered from the individual particles.

ultramicrotome [ENG] A microtome which uses a glass or diamond knife, allowing sections of cells to be cut 300 nanometers in thickness.

ultraphotic rays [ELECTROMAG] Rays outside the visible part of the spectrum, including infrared and ultraviolet rays.

ultrashort waves [COMMUN] Radio waves shorter than 10 meters in wavelength; corresponding to frequencies above 30 megahertz.

ultrasonic [ACOUS] Pertaining to signals, equipment, or phenomena involving frequencies just above the range of human hearing, hence above about 20,000 hertz. Also known as supersonic (deprecated usage).

ultrasonic atomizer [MECH ENG] An atomizer in which liquid is fed to, or caused to flow over, a surface which vibrates at an ultrasonic frequency; uniform drops may be produced at low feed rates.

ultrasonic bonding [MET] Bonding of two identical or dissimilar metals by mechanical pressure combined with a wiping motion produced by ultrasonic vibration.

ultrasonic camera [ELECTR] A device which produces a picture display of ultrasonic waves sent through a sample to be inspected or through live tissue; a piezoelectric crystal is used to convert the ultrasonic waves to voltage differences, and the voltage pattern on the crystal modulates the intensity of an electronic beam scanning the crystal; this beam in turn controls the intensity of a beam in a television tube.

ultrasonic cleaning [ENG] A method used to clean debris and swarf from surfaces by immersion in a solvent in which ultrasonic vibrations are excited.

ultrasonic coagulation [PHYS] The bonding of small particles into large aggregates by the action of ultrasonic waves.

ultrasonic communication [COMMUN] Communication accomplished through water by keying the sound output of echo-ranging sonar on ships or submarines.

ultrasonic delay line [ENG ACOUS] A delay line in which use is made of the propagation time of sound through a medium such as fused quartz, barium titanate, or mercury to obtain a time delay of a signal. Also known as ultrasonic storage cell.

ultrasonic depth finder [ENG] A direct-reading instrument which employs frequencies above the audible range to determine the depth of water; it measures the time interval between the emission of an ultrasonic signal and the return of its echo from the bottom.

ultrasonic drill [MECH ENG] A drill in which a magnetostrictive transducer is attached to a tapered cone serving as a velocity transformer; with an appropriate tool at the end of the transformer, practically any shape of hole can be drilled in hard, brittle materials such as tungsten carbide and gems.

ultrasonic drilling [MECH ENG] A vibration drilling method in which ultrasonic vibrations are generated by the compression

and extension of a core of electrostrictive or magnetostrictive material in a rapidly alternating electric or magnetic field.

ultrasonic echo [ACOUS] An ultrasonic wave that has been reflected or otherwise returned with sufficient magnitude and time delay to be perceived in some manner as a wave distinct from that directly transmitted.

ultrasonic flaw detector [ENG ACOUS] An ultrasonic generator and detector used together, much as in radar, to determine the distance to a wave-reflecting internal crack or other flaw in a solid object.

ultrasonic generator [ENG ACOUS] A generator consisting of an oscillator driving an electroacoustic transducer, used to produce acoustic waves above about 20 kilohertz.

ultrasonic imaging *See* acoustic imaging.

ultrasonic imaging device [ENG ACOUS] An imaging device in which a wave is generated by a transducer external to the body; the reflected wave is detected by the same transducer.

ultrasonic leak detector [ENG] An instrument which detects ultrasonic energy resulting from the transition from laminar to turbulent flow of a gas passing through an orifice.

ultrasonic light modulator [OPTICS] Device containing a fluid which, by action of ultrasonic waves passing through the fluid, modulates a beam of light passed transversely through the fluid.

ultrasonic machining [MECH ENG] The removal of material by abrasive bombardment and crushing in which a flat-ended tool of soft alloy steel is made to vibrate at a frequency of about 20,000 hertz and an amplitude of 0.001–0.003 inch (0.0254–0.0762 millimeter) while a fine abrasive of silicon carbide, aluminum oxide, or boron carbide is carried by a liquid between tool and work.

ultrasonic metal inspection [MET] The application of ultrasonic vibrations to materials for detection of flaws, pits, or wall thickness.

ultrasonic microscope [OPTICS] A special type of microscope which employs ultrasonic radiation.

ultrasonic radiation [ACOUS] Ultrasonic waves propagating through a solid, liquid, or gaseous medium.

ultrasonics [ACOUS] The science of ultrasonic sound waves.

ultrasonic sealing [ENG] A method for sealing plastic film by using localized heat developed by vibratory mechanical pressure at ultrasonic frequencies.

ultrasonic soldering [MET] A method used for aluminum soldering by ultrasonically vibrating the soldering iron to disrupt the oxide film on the metal.

ultrasonic storage cell *See* ultrasonic delay line.

ultrasonic testing [ENG] A nondestructive test method that employs high-frequency mechanical vibration energy to detect and locate structural discontinuities or differences and to measure thickness of a variety of materials.

ultrasonic therapy *See* ultrasound diathermy.

ultrasonic thickness gage [ENG] A thickness gage in which the time of travel of an ultrasonic beam through a sheet of material is used as a measure of the thickness of the material.

ultrasonic transducer [ENG ACOUS] A transducer that converts alternating-current energy above 20 kilohertz to mechanical vibrations of the same frequency; it is generally either magnetostrictive or piezoelectric.

ultrasonic transmitter [ENG ACOUS] A device used to track seals, fish, and other aquatic animals: the device is fastened to the outside of the animal or fed to it, and has a loudspeaker which is made to vibrate at an ultrasonic frequency, propagating ultrasonic waves through the water to a special microphone or hydrophone.

ultrasonic wave [ACOUS] A sound wave that has a frequency above about 20,000 hertz.

ultrasonic welding [MET] A nonfusion welding process in which the atomic movement required for coalescence is stimulated by ultrasonic vibrations.

ultrasonoscope [ENG] An instrument that displays an echosonogram on an oscilloscope; usually has auxiliary output to a chart-recording instrument.

ultrasound diathermy [MED] The application of high-frequency sound waves (0.7 to 1.0 megahertz) and the conversion of this mechanical energy into heat for local thermotherapy. Also known as ultrasonic therapy.

ultraspeed welding *See* commutator-controlled welding.

ultraspherical polynomials *See* Gegenbauer polynomials.

ultrastrip [GRAPHICS] A piece of film, usually 1.5 inches by 7 inches (3.5 by 18 centimeters) in size, containing either negative or positive images, or frames, of printed material reduced 150 times by photographic reduction.

ultrastructure [MOL BIO] The ultimate physiochemical organization of protoplasm.

ultraviolet [PHYS] Pertaining to ultraviolet radiation. Abbreviated UV.

ultraviolet absorber [OPTICS] Any substance that absorbs ultraviolet radiant energy, then dissipates the energy in a harmless form; used in plastics and rubbers to decrease light sensitivity.

ultraviolet absorber fixative [MATER] A protective fixative that includes a material to filter ultraviolet light from the sun and from artificial light; it helps to keep colors from fading.

ultraviolet absorption [OPTICS] Absorption of specific ultraviolet radiation wavelengths by a material; for example, by a sample solution during spectroscopic analysis.

ultraviolet absorption spectrophotometry [SPECT] The study of the spectra produced by the absorption of ultraviolet radiant energy during the transformation of an electron from the ground state to an excited state as a function of the wavelength causing the transformation.

ultraviolet catastrophe [STAT MECH] The prediction of the Rayleigh-Jeans law that the energy radiated by a blackbody at extremely short wavelengths is extremely large, and the total energy radiated is infinite, whereas in reality it must be finite.

ultraviolet densitometry [SPECT] An ultraviolet-spectrophotometry technique for measurement of the colors on thin-layer chromatography absorbents following elution.

ultraviolet imagery [ELECTROMAG] That imagery produced as a result of sensing ultraviolet radiations reflected from a given target surface.

ultraviolet lamp [ELECTR] A lamp providing a high proportion of ultraviolet radiation, such as various forms of mercury-vapor lamps.

ultraviolet light *See* ultraviolet radiation.

ultraviolet microscope [OPTICS] A special type of microscope which uses electromagnetic radiation in the range 180–400 nanometers; it requires reflecting optics or special quartz and crystal objectives.

ultraviolet photoemission spectroscopy [SPECT] A spectroscopic technique in which photons in the energy range 10–200 electronvolts bombard a surface and the energy spectrum of the emitted electrons gives information about the states of electrons in atoms and chemical bonding. Abbreviated UPS.

ultraviolet photography [GRAPHICS] Photography in which the subject is illuminated with ultraviolet light, and either the resulting fluorescence (in the fluorescence method) or the reflected ultraviolet light (in the reflected ultraviolet method) is detected by the camera.

ultraviolet radiation [ELECTROMAG] Electromagnetic radiation in the wavelength range 4–400 nanometers; this range begins at the short-wavelength limit of visible light and overlaps the wavelengths of long x-rays (some scientists place the lower limit at higher values, up to 40 nanometers). Also known as ultraviolet light.

ultraviolet spectrometer [SPECT] A device which produces a spectrum of ultraviolet light and is provided with a calibrated scale for measurement of wavelength.

ultraviolet spectrophotometry [SPECT] Determination of the spectra of ultraviolet absorption by specific molecules in gases or liquids (for example, Cl_2, SO_2, NO_2, CS_2, ozone, mercury vapor, and various unsaturated compounds).

ultraviolet spectroscopy [SPECT] Absorption spectroscopy involving electromagnetic wavelengths in the range 4–400 nanometers.

ultraviolet spectrum [ELECTROMAG] **1.** The range of wavelengths of ultraviolet radiation, covering 4–400 nanometers. **2.** A display or graph of the intensity of ultraviolet radiation emitted or absorbed by a material as a function of wavelength or some related parameter.

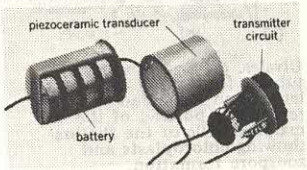
ultraviolet stabilizer *See* UV stabilizer.

ultraviolet telescope [OPTICS] An assemblage of mirrors, with special coatings imparting high ultraviolet reflectivity, which forms magnified ultraviolet images of objects in the same manner as an optical telescope forms images in visible light.

ultravulcanian [GEOL] A type of volcanic eruption characterized by periodic violent gaseous explosions of lithic dust and solid blocks, with little if any fiery scoria.

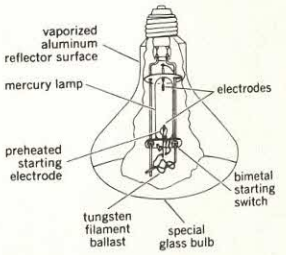
Ulvaceae [BOT] A large family of green algae in the order Ulvales.

ULTRASONIC TRANSMITTER



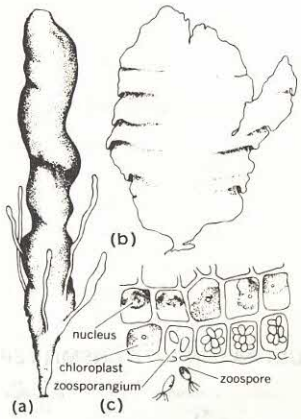
Components of an ultrasonic fish-tag transmitter. The ceramic cylinder in the center is 0.5 inch (1.27 centimeters) in diameter. *(Sensory Systems Laboratory, Tucson, Ariz.)*

ULTRAVIOLET LAMP



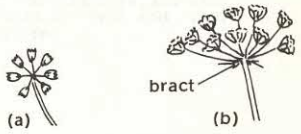
Features of a sunlamp, a type of ultraviolet lamp that produces radiation in the middle ultraviolet region (280–320 nanometers) together with infrared radiation and light from the filament.

ULVALES



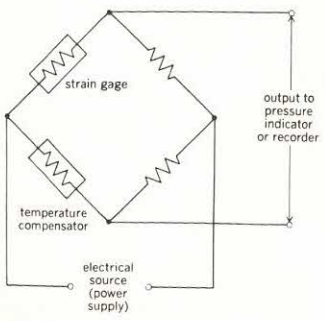
Ulvales. *(a) Enteromorpha*, a tubular form. *(b) Ulva*, the sea lettuce, an expanded thallus. *(c) Ulva*, a portion of the marginal cells of the thallus showing chloroplasts and zoospore formation.

UMBEL



Two types of umbel inflorescence: *(a)* simple; *(b)* compound.

UNBONDED STRAIN GAGE



Circuit diagram of an unbonded strain gage.

Ulvales [BOT] An order of algae in the division Chlorophyta in which the thalli are macroscopic, attached tubes or sheets.

umangite [MINERAL] Cu_3Se_2 A dark cherry red mineral consisting of copper selenide; occurs in massive form, in small grains or fine granular aggregates.

umbel [BOT] An indeterminate inflorescence with the pedicels all arising at the top of the peduncle and radiating like umbrella ribs; there are two types, simple and compound.

Umbellales [BOT] An order of dicotyledonous herbs or woody plants in the subclass Rosidae with mostly compound or conspicuously lobed or dissected leaves, well-developed schizogenous secretory canals, separate petals, and an inferior ovary.

Umbelliferae [BOT] A large family of aromatic dicotyledonous herbs in the order Umbellales; flowers have an ovary of two carpels, ripening to form a dry fruit that splits into two halves, each containing a single seed.

umbilical artery [EMBRYO] Either of a pair of arteries passing through the umbilical cord to carry impure blood from the mammalian fetus to the placenta.

umbilical connections [AERO ENG] Electrical and mechanical connections to a launch vehicle prior to lift off; the umbilical tower adjacent to the vehicle on the launch pad supports these connections which supply electrical power, control signals, data links, propellant loading, high pressure gas transfer, and air conditioning.

umbilical cord [AERO ENG] Any of the servicing electrical or fluid lines between the ground or a tower and an uprighted rocket vehicle before the launch. Also known as umbilical. [EMBRYO] The long, cylindrical structure containing the umbilical arteries and vein, and connecting the fetus with the placenta.

umbilical duct *See* vitelline duct.

umbilical hernia [MED] Herniation through the umbilical ring. Also known as annular hernia.

umbilical tower [AERO ENG] A vertical structure supporting the umbilical cords running into a rocket in launching position.

umbilical vein [EMBRYO] A vein passing through the umbilical cord and conveying purified, nutrient-rich blood from placenta to fetus.

Umbilicariaceae [BOT] The rock tripes, a family of Ascolichenes in the order Lecanorales having a large, circular, umbilicate thallus.

umbilicus [ANAT] The navel; the round, depressed cicatrix in the median line of the abdomen, marking the site of the aperture through which passed the fetal umbilical vessels.

umbo [ANAT] A rounded elevation of the surface of the tympanic membrane. [INV ZOO] A prominence above the hinge of a bivalve mollusk shell.

umbonate [BIOL] Having or forming an umbo.

umbra [ASTRON] The dark, central region of a sunspot. [OPTICS] That portion of a shadow which is screened from light rays emanating from any part of an extended source.

umbrella antenna [ELECTROMAG] Antenna in which the wires are guyed downward in all directions from a central pole or tower to the ground, somewhat like the ribs of an open umbrella.

Umbrept [GEOL] A suborder of the Inceptisol soil order; has dark A horizon more than 10 inches (25 centimeters) thick, brown B horizons, and slightly paler C horizons; soil is strongly acid, and clay minerals are crystalline; occurs in cool or temperate climates.

Umbriel [ASTRON] One of the five satellites of the planet Uranus, with a diameter of about 400 kilometers.

Umkehr effect [OPTICS] An anomaly of the relative zenith intensities of scattered sunlight at certain wavelengths in the ultraviolet as the sun approaches the horizon; it is due to the presence of the ozone layer.

Umklapp process [SOLID STATE] The interaction of three or more waves in a solid, such as lattice waves or electron waves, in which the sum of the wave vectors is not equal to zero but, rather, is equal to a vector in the reciprocal lattice. Also known as flip-over process.

UMP *See* uridylic acid.

umpire [MIN ENG] An assay made by a third party to settle the difference in assays made by the purchaser and the seller of ore.

unaka [GEOL] A large residual mass rising above a peneplain that is less well developed than one having a monodnock.

unakite [PETR] An altered igneous rock composed principally of epidote, pink orthoclase, and quartz.

unamplified back bias [ELECTR] Degenerative voltage developed across a fast time constant circuit within an amplifier stage itself.

unarmed [ORD] The condition of a fuse (or other firing device) in which the necessary steps to put it in condition to function have not taken place; while in the unarmed state the fuse is safe to handle, store, and transport.

unary operation [MATH] An operation in which only a single operand is required to produce a unique result; some examples are negation, complementation, square root, transpose, inverse, and conjugate.

unattended operation [COMPUT SCI] An operation in which components in the hardware of a communications terminal or data-processing system operate automatically, allowing handling of signals or data without human intervention.

unattended time [COMPUT SCI] Time during which a computer is turned off but is not undergoing maintenance. Also known as unused time.

unavailable energy [THERMO] That part of the energy which, when an irreversible process takes place, is initially in a form completely available for work and is converted to a form completely unavailable for work.

unavoidable delay [IND ENG] Any delay in a task, the occurrence of which is outside the control or responsibility of the worker.

unavoidable-delay allowance [IND ENG] An adjustment of standard time to allow for unavoidable delays in a task.

unavoidable set of configurations [MATH] A set of graphs such that any planar graph has at least one member of the set as a subgraph.

unbalanced cutter chain [MIN ENG] A cutter chain which carries more picks along the bottom line than along the top line.

unbalanced hoisting [MIN ENG] The method of hoisting in small one-compartment shafts with only one cage in operation, as opposed to balanced winding.

unbalanced line [ELEC] A transmission line in which the voltages on the two conductors are not equal with respect to ground; a coaxial line is an example.

unbalanced output [ELEC] An output in which one of the two input terminals is substantially at ground potential.

unbalanced shothole [MIN ENG] A shothole in which the explosive charge breaks down the coal at the back of the machine cut while leaving the front portion standing or in large blocks.

unbalanced wire circuit [ELEC] A wire circuit whose two sides are inherently electrically unlike.

unbiased estimate [STAT] An estimate for a parameter θ whose expected value is θ.

unblanking pulse [ELECTR] Voltage applied to a cathode-ray tube to overcome bias and cause trace to be visible.

unbonded strain gage [ENG] A type of strain gage that consists of a grid of fine wires strung under slight tension between a stationary frame and a movable armature; pressure applied to the bellows or to the diaphragm sensing element moves the armature with respect to the frame, increasing tension in one half of the filaments and decreasing tension in the rest.

unbounded manifold [MATH] A manifold with no boundary.

unbounded set of real numbers [MATH] A set with the property that if R is any positive real number, there is a number in the set which is smaller than $-R$ or a number larger than R.

unbounded wave [PHYS] A wave which propagates through a nondissipative, homogeneous medium which is infinite in extent, without any boundaries.

unbreakable cipher [COMMUN] A cipher for which the message or key cannot be obtained through cryptanalysis, even with an unlimited amount of computational power, data storage, and calendar time.

unbundling [COMPUT SCI] The separate pricing of software products and services from equipment charges.

uncage [ENG] To release the caging mechanism of a gyroscope, that is, the mechanism that erects the gyroscope or locks it in position.

uncertainty [SCI TECH] The estimated amount by which an observed or calculated value may depart from the true value.

uncertainty principle [QUANT MECH] The precept that the accurate measurement of an observable quantity necessarily produces uncertainties in one's knowledge of the values of other observables. Also known as Heisenberg uncertainty principle; indeterminacy principle.

uncertainty relation [QUANT MECH] The relation whereby, if one simultaneously measures values of two canonically conjugate variables, such as position and momentum, the product of the uncertainties of their measured values cannot be less than approximately Planck's constant divided by 2π. Also known as Heisenberg uncertainty relation.

uncharged [ELEC] Having no electric charge.

uncharged demolition target [ENG] A demolition target which has been prepared to receive the demolition agent, the necessary quantities of which have been calculated, packaged, and stored in a safe place.

uncharged species [CHEM] A chemical entity with no net electric charge. Also known as neutral species.

uncinate trophus [INV ZOO] A trophus in rotifers characterized by a hooked or curved uncus.

uncompetitive enzyme inhibition [BIOCHEM] The prevention of an enzymic process as a result of the interaction of an inhibitor with the enzyme-substrate complex or a subsequent intermediate form of the enzyme, but not with the free enzyme.

unconcentrated wash *See* sheet erosion.

unconditional [COMPUT SCI] Not subject to conditions external to the specific instruction.

unconditional convergence [MATH] A convergent series converges unconditionally if every series obtained by rearranging its terms also converges; equivalent to absolute convergence.

unconditional inequality [MATH] An inequality which holds true for all values of the variables involved, or which contains no variables; for example, $y + 2 > y$, or $4 > 3$. Also known as absolute inequality.

unconditional jump [COMPUT SCI] A digital-computer instruction that interrupts the normal process of obtaining instructions in an ordered sequence, and specifies the address from which the next instruction must be taken. Also known as unconditional transfer.

unconditional transfer *See* unconditional jump.

unconfined explosion [ENG] Explosion occurring in the open air where the (atmospheric) pressure is constant.

unconformable [GEOL] Pertaining to strata that do not conform in position, dip, or strike to the older underlying rocks.

unconformity [GEOL] The relation between adjacent rock strata whose time of deposition was separated by a period of nondeposition or of erosion; a break in a stratigraphic sequence.

unconformity iceberg [OCEAN] An iceberg consisting of more than one kind of ice, such as blue water-formed ice and névé; such an iceberg often contains many crevasses and silt bands.

unconscious [MED] Insensible; in a state lacking conscious awareness, with reflexes abolished. [PSYCH] **1.** Pertaining to behavior or experience not controlled by the ego. **2.** The part of the mind, mental functioning, or personality not in the immediate field of awareness.

unconsolidated material [GEOL] Loosely arranged or unstratified sediment whose particles are not cemented together.

unconstrained optimization problem [MATH] A nonlinear programming problem in which there are no constraint functions.

uncontrolled fragments [ORD] The segments of the casing propelled outward at detonation of an explosive device in which no design provision has been made to control the size and shape of the segments.

uncontrolled mosaic [GRAPHICS] A mosaic composed of uncorrected photographs, the details of which have been matched from print to print without ground control or other orientation; accurate measurement and direction cannot be accomplished.

unconventional warfare [ORD] A type of warfare that includes the interrelated fields of guerrilla warfare, evasion and escape, and subversion, in which operations are conducted within enemy or enemy-controlled territory by predominantly indigenous personnel, usually supported and directed in varying degrees by an external source.

uncorrecting [NAV] The process of converting true to magnetic, compass, or gyro direction, or magnetic to compass direction.

uncorrelated random variables [STAT] Two random variables whose correlation coefficient is zero.

uncountable set [MATH] An infinite set which can not be put in 1 to 1 correspondence with the set of integers; for example, the set of real numbers.

uncouple [ENG] To unscrew or disengage.

uncoupling phenomena [SPECT] Deviations of observed spectra from those predicted in a diatomic molecule as the magnitude of the angular momentum increases, caused by interactions which could be neglected at low angular momenta.

unctuous [MATER] Greasy, oily, or soapy to the touch.

undamped wave [PHYS] A continuous wave produced by oscillations having constant amplitude.

undecanal [ORG CHEM] $CH_3(CH_2)_9CHO$ A sweet-smelling, colorless liquid, soluble in oils and alcohol; used in perfumes and flavoring. Also known as hendecanal; *n*-undecyclic aldehyde.

***n*-undecane** [ORG CHEM] $CH_3(CH_2)_9CH_3$ A colorless, combustible liquid, boiling at 367°F (196°C), flash point at 149°F (65°C); used as a chemical intermediate and in petroleum research.

undecanoic acid [ORG CHEM] $CH_3(CH_2)_9COOH$ Colorless crystals, soluble in alcohol and ether, insoluble in water; melts at 29°C; used as a chemical intermediate. Also known as hendecanoic acid; *n*-undecylic acid.

2-undecanone *See* methyl nonyl ketone.

10-undecen-1-ol *See* undecylenic alcohol.

undecyl [ORG CHEM] $C_{11}H_{23}$ The radical of undecane. Also known as hendecyl.

undecylenic acid [ORG CHEM] $CH_2{\cdot}CH(CH_2)_8COOH$ A light-colored, combustible liquid with a fruity aroma; soluble in alcohol, ether, chloroform, and benzene, almost insoluble in water; used in medicine, perfumes, flavors, and plastics.

***n*-undecylenic acid** *See* undecylenic alcohol.

undecylenic alcohol [ORG CHEM] $C_{11}H_{22}O$ A colorless liquid with a citrus odor, soluble in 70% alcohol; used in perfumes. Also known as alcohol C-11; 10-undecen-1-ol; *n*-undecylenic acid.

undecylenyl acetate [ORG CHEM] $C_{13}H_{24}O_2$ A colorless liquid with a floral-fruity odor, soluble in 80% alcohol; used in perfumes and for flavoring. Also known as 10-hendecenyl acetate.

***n*-undecylic acid** *See* undecanoic acid.

***n*-undecylic aldehyde** *See* undecanal.

underbead crack [MET] A crack in the heat-affected zone of a weldment which usually does not reach the base-metal surface.

underbunching [ELECTR] In velocity-modulated electron streams, a condition representing less than the optimum bunching.

undercarriage [AERO ENG] The landing gear assembly for an aircraft. [ORD] Fixed or movable base on which the top carriage of a weapon moves.

undercast [METEOROL] A cloud layer of ten-tenths (1.0) coverage as viewed from an observation point above the layer; the term is used in pilot reporting of in-flight weather conditions. [MIN ENG] An air crossing in which one airway is deflected to pass under the other airway.

underchain haulage [MIN ENG] Haulage in which the chains are placed beneath the mine car at certain intervals with suitable hooks that thrust against the car axle.

underclay [GEOL] A layer of clay or other fine-grained detrital material underlying a coal bed or comprising the floor of a coal seam. Also known as coal clay; root clay; seat clay; seat earth; thill; underearth; warrant.

underclay limestone [GEOL] A thin, fresh-water limestone that is relatively free of fossils and is dense and nodular; found in underlying coal deposits.

undercliff [GEOL] A subordinate cliff or terrace formed by material which has fallen or slid from above.

undercoater [MATER] A type of solvent-thinned paint that is formulated to have good adhesion to a substrate and furnish a good base for additional coats of paint, and having a relatively small amount of pigment.

underconsolidation [GEOL] Less than normal consolidation of sedimentary material for the existing overburden.

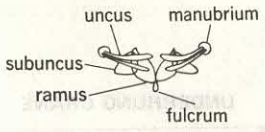
undercooling [MET] Cooling a metal below the transformation temperature without obtaining the transformation.

undercurrent [OCEANOGR] A water current flowing beneath a surface current at a different speed or in a different direction.

undercurrent relay [ELEC] A relay designed to operate when its coil current falls below a predetermined value.

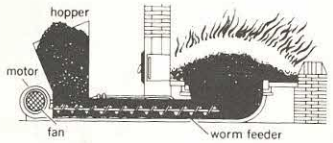
undercut [ENG] Underside recess either cut or molded into an object so as to leave a topside lip or protuberance. [MET] An unfilled groove melted into the base metal at the toe

UNCINATE TROPHUS



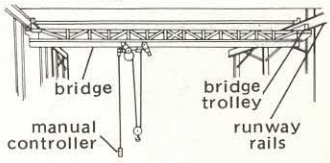
Uncinate trophus of a predacious rotifier, *Stephanoceros*.

UNDERFEED STOKER



Section through an underfeed stoker.

UNDERHUNG CRANE



An underhung crane, a basic type of overhead-traveling crane.

UNDERWATER CAMERA

A picture of a photographer using underwater motion picture camera, taken at a depth of 120 feet (37 meters) using high-speed Tri-X film and camera settings of 1/100 second and *f*/4.0.

of a weld. [MIN ENG] To cut below or in the lower part of a coal bed by chipping away the coal with a pick or mining machine; cutting is usually done on the level of the floor of the mine, extending laterally the entire face and 5 or 6 feet (1.5 or 1.8 meters) into the material.

undercutting [CHEM ENG] In distillation, the technique of taking the products coming off the distillation tower at a temperature below the desired ultimate boiling point range to prevent contaminating the products with the compound that would distill just beyond the ultimate boiling point range. [GEOL] Erosion of material at the base of a steep slope, cliff, or other exposed rock.

underdamping [PHYS] Condition of a system when the amount of damping is sufficiently small so that, when the system is subjected to a single disturbance, either constant or instantaneous, one or more oscillations are executed by the system.

underdeck tonnage [NAV ARCH] The enclosed volume of a vessel below the tonnage deck, expressed in tons of 100 cubic feet (approximately 2.8317 cubic meters).

underdevelopment [GRAPHICS] Insufficient development of a photographic print; processing to a degree lower than the optimum density.

underdraft [MET] Downward curving of a metal part on leaving the rolls because of higher speed of the upper roll.

underdrain [CIV ENG] A subsurface drain with holes into which water flows when the water table reaches the drain level.

underdrive press [MECH ENG] A mechanical press having the driving mechanism located within or under the bed.

underearth *See* underclay.

underfeed stoker [ENG] A coal-burning system in which green coal is fed from beneath the burning fuel bed.

underfill [MET] A depression on the face of the weld which falls below the surface of the adjacent base metal.

underfit stream [HYD] A misfit stream that appears to be too small to have eroded the valley in which it flows.

underfloor raceway [BUILD] A raceway for electric wires which runs beneath the floor.

underflow [COMPUT SCI] The generation of a result whose value is smaller than the smallest quantity that can be represented or stored by a computer.

underflow conduit [GEOL] A permeable deposit underlying a surface stream channel.

underground [ENG] Situated, done, or operating beneath the surface of the ground.

underground burst [ORD] The explosion of a nuclear weapon beneath the surface of the ground.

underground gasification *See* gasification.

underground geology *See* subsurface geology.

underground glory-hole method [MIN ENG] A mining method used in large deposits with a very strong roof: the deposit is divided by levels and on every level chutes are raised to the next level; mining starts from the mouth of the chutes in such a way as to develop a funnel-shaped excavation (mill, or glory) with slopes so steep that the broken ore falls into the chutes and thus to the cars on the lower level; a sufficiently strong pillar is left for protection at the higher level. Also known as underground milling.

underground ice *See* ground ice.

underground milling *See* underground glory-hole method.

underground stem [BOT] Any of the stems that grow underground and are often mistaken for roots; principal kinds are rhizomes, tubers, corms, bulbs, and rhizomorphic droppers.

underground stream [HYD] A subsurface body of water flowing in a definite current in a distinct channel.

underhand stoping [MIN ENG] Mining downward or from upper to lower level; the stope may start below the floor of a level and be extended by successive horizontal slices, either worked sequentially or simultaneously in a series of steps; the stope may be left as an open stope or supported by stulls or pillars.

underhand work [MIN ENG] Picking or drilling downward.

underhead crack [MET] A subsurface crack in the heat-affected zone of the base metal near a weld.

underhole [MIN ENG] To mine out a portion of the bottom of a seam, by pick or powder, thus leaving the top unsupported and ready to be blown down by shots, broken down by wedges, or mined with a pick or bar.

underhung crane [MECH ENG] An overhead traveling crane in which the end trucks carry the bridge suspended below the rails.

underlap [COMMUN] **1.** In facsimile transmission, the space between the recorded elemental area in one recording line and the adjacent elemental area in the next recording line, when these areas are smaller than normal; or the space between the elemental areas in the direction of the recording line. **2.** The amount by which the effective height of the scanning spot falls short of the nominal width of the scanning line.

underlay [GRAPHICS] The process of equalizing the impression of the press by inserting small pieces of paper beneath the type form.

underlay shaft [MIN ENG] A shaft sunk in the footwall and following the dip of a vein. Also known as footwall shaft; underlier.

underlie [GEOL] To lie or be situated under; to occupy a lower position, or to pass beneath.

underlier *See* underlay shaft.

undermelting [HYD] The melting from below of any floating ice.

undermine [MIN ENG] To excavate the earth beneath, especially for the purpose of causing to fall; to form a mine under.

undermining *See* sapping.

underpainting [GRAPHICS] A layer of paint that is intended to be seen through a subsequent paint layer; an underpainted section of red, for example, can be altered to a violet or purple color with the application of a thin blue glaze.

underpinning [CIV ENG] **1.** Permanent supports replacing or reinforcing the older supports beneath a wall or a column. **2.** Braced props temporarily supporting a structure. [MIN ENG] Building up the wall of a mine shaft to join that above it.

underplate [DES ENG] An unfinished plate which forms part of an armored front for a mortise lock, and which is fastened to the case.

underpunch [COMPUT SCI] A second hole in a card column which is below the original hole in IBM card code.

underream [ENG] To enlarge a drill hole below the casing.

undersaturated [PETR] Pertaining to igneous rock composed of unsaturated minerals, that is, without free silica.

undersaturated fluid [PHYS CHEM] Any fluid (liquid or gas) capable of holding additional vapor or liquid components in solution at specified conditions of pressure and temperature.

undersea mining [MIN ENG] The working of economic deposits (usually coal) situated in strata or rocks below the seabed.

undershot wheel [MECH ENG] A water wheel operated by the impact of flowing water against blades attached around the periphery of the wheel, the blades being partly or totally submerged in the moving stream of water.

undersize [ENG] That part of a crushed material (for example, ore) which passes through a screen.

underspin [MECH] Property of a projectile having insufficient rate of spin to give proper stabilization.

understressing [MET] Repeated stressing below the fatigue limit or below the final applied stress; can improve fatigue properties as a result of strain-aging effects.

underthrow distortion [COMMUN] Distortion occurring in facsimile when the maximum signal amplitude is too low.

underthrust [GEOL] A thrust fault in which the lower, active rock mass has been moved under the upper, passive rock mass.

undertow [OCEANOGR] A subsurface seaward movement by gravity flow of water carried up on a sloping beach by waves or breakers.

undervoltage protection [ELEC] An undervoltage relay which removes a motor from service when a low-voltage condition develops, so that the motor will not draw excessive current, or which prevents a large induction or synchronous motor from starting under low-voltage conditions.

undervoltage relay [ELEC] A relay designed to operate when its coil voltage falls below a predetermined value.

underwater acoustics [ACOUS] Study of the propagation of sound waves in water, especially in the oceans, and of phenomena produced by these sound waves. Also known as hydroacoustics.

underwater burst [ORD] The explosion of a nuclear weapon beneath the surface of the water.

underwater camera [OPTICS] A camera designed for use under the surface of the water; it is usually a conventional type enclosed in a casing to withstand water pressure, preferably with a correction lens to compensate for aberrations caused by the water.

underwater demolition [ORD] Destruction or fragmentation of underwater obstacles by use of explosive charges placed

by diver personnel; primarily employed as a short-range emergency measure to accomplish a military objective with promptness and economy of material.

underwater demolition team [ORD] Naval unit organized and equipped to perform beach reconnaissance and underwater demolition in an amphibious operation.

underwater mine [ORD] A mine designed to be located underwater and exploded by means of propeller vibration, magnetic attraction, contact, or remote control.

underwater mine extender mechanism [ORD] An item designed to extend the detonator into the booster for arming an underwater mine by means of hydrostatic pressure.

underwater mine fairing [ORD] An item designed to be mounted on an underwater mine; it is shaped to reduce or equally distribute air resistance when suspended and launched from an aircraft, and it may have collapsible fins.

underwater navigation [NAV] The navigation of a submerged vessel. Also known as submarine navigation.

underwater obstacle [NAV] A natural or artificial obstacle which is located to seaward of the high-water line and wholly or partly submerged, and which acts as a barrier or obstruction to the passage of ships, landing ships, craft, vehicles, or torpedoes.

underwater ordnance [ORD] Munitions designed for use underwater; for example, torpedoes.

underwater sound [ACOUS] The production, transmission, and reception of sounds in the ocean; used for locating submarines and other submerged objects, and to determine the physical structure of the ocean and its bottom, and to study organisms found in the sea.

underwater sound projector [ENG ACOUS] A transducer used to produce sound waves in water.

underwater telephone [COMMUN] A method of voice communication using underwater sound as a means of transmission; it functions similarly to a conventional telephone system except that the energy is carried by sound waves in the water rather than by electrical signals through a wire.

underwater television [COMMUN] The technique of using remotely controlled television equipment under the surface of the water.

underwater transducer [ENG ACOUS] A device used for the generation or reception of underwater sounds.

underway [NAV] **1.** A ship without moorings; not secured in any way to the ground or a wharf. **2.** Craft in motion, particularly the start of such motion after a standstill.

underway bottom sampler *See* underway sampler.

underway sampler [ENG] A device for collecting samples of sediment on the ocean bottom, consisting of a cup in a hollow tube; on striking the bottom, the cup scoops up a small sample which is forced into the tube which is then closed with a lid, and the device is hoisted to the surface. Also known as scoopfish; underway bottom sampler.

underwing [INV ZOO] Either of a pair of posterior wings on certain insects, as the moth.

Underwood chart [CHEM ENG] A graphical solution of mass balances for a single equilibrium stage in the calculation of a solvent-extraction operation.

Underwood distillation method [CHEM ENG] A method for calculation of liquid separations from binary distillation systems operated at partial reflux.

undetected error rate [COMMUN] The number of bits (or other units of information) which are received but are not detected or corrected by error-control equipment, divided by the total number of bits (or other units of information) transmitted. Also known as residual error rate.

undetermined multipliers *See* Lagrangian multipliers.

undistorted wave [COMMUN] Periodic wave in which both the attenuation and velocity of propagation are the same for all sinusoidal components, and in which no sinusoidal component is present at one point that is not present at all points.

undisturbed [ENG] Pertaining to a sample of material, as of soil, subjected to so little disturbance that it is suitable for determinations of strength, consolidation, permeability characteristics, and other properties of the material in place.

undisturbed motion [PHYS] The steady state of a system before perturbations are introduced.

undisturbed-one output [ELECTR] "One" output of a magnetic cell to which no partial-read pulses have been applied since that cell was last selected for writing.

undisturbed-zero output [ELECTR] "Zero" output of a magnetic cell to which no partial-write pulses have been applied since that cell was last selected for reading.

undulant fever *See* brucellosis.

undulating light [NAV] A continuously luminous light which alternately increases and decreases in brightness in cyclic sequence; the expression is applied primarily to aeronautical lights, the marine light equivalent being fixed and flashing light.

undulator [NUCLEO] A wiggler that has a relatively low magnetic field, resulting in coherent emission of radiation from all wiggles simultaneously, and has a relatively low-energy, directed or collimated beam of radiation that is comparable to a laser in many characteristics. Also known as interference wiggler.

undulatory extinction [OPTICS] Extinction that occurs successively in adjacent areas as the microscope stage is turned. Also known as oscillatory extinction; strain shadow; wavy extinction.

undulatus *See* billow cloud.

unexploded ordnance [ORD] An object containing explosives which did not function as intended, or an object which contains some type of delay-action device.

unfavorable current [NAV] A current flowing in such a direction as to decrease the speed of a vessel.

unfavorable winds [NAV] Winds which delay the progress of a craft in a desired direction; used chiefly in connection with sailing vessels.

unfinished bolt [DES ENG] One of three degrees of finish in which standard hexagon wrench-head bolts and nuts are available; only the thread is finished.

unfinished fabric [TEXT] A woolen fabric that is not fulled and sheared.

unfired pressure vessel [CHEM ENG] A pressure vessel that is not in direct contact with a heating flame.

unfired tube [ELECTR] Condition of a TR, ATR, or pre-TR tube in which there is no radio-frequency glow discharge at either the resonant gap or resonant window.

unfreezing [GEOL] The upward movement of stones to the surface as a result of repeated freezing and thawing of the containing soil.

ungemachite [MINERAL] $K_3Na_9Fe(SO_4)_6(OH)_3 \cdot 9H_2O$ A colorless to pale yellow, hexagonal mineral consisting of a hydrated basic sulfate of potassium, sodium, and iron; occurs in tabular form.

ungula [VERT ZOO] A nail, hoof, or claw.

ungulate [VERT ZOO] Referring to an animal that has hoofs.

ungulicutate [VERT ZOO] Having claws or nails.

unguligrade [VERT ZOO] Walking on hoofs.

uniaxial crystal [OPTICS] A doubly refracting crystal which has a single axis along which light can propagate without exhibiting double refraction.

uniaxial stress [MECH] A state of stress in which two of the three principal stresses are zero.

unicellular [BIOL] Composed of a single cell.

unicellular gland [ANAT] A gland consisting of a single cell.

unicuspid [ANAT] Having one cusp, as certain teeth.

unidentified flying object [SCI TECH] Any reported flying object which cannot be identified or explained. Abbreviated UFO. Also known as flying saucer.

unidirectional [PHYS] **1.** Flowing in only one direction, such as direct current. **2.** Radiating in only one direction.

unidirectional antenna [ELECTROMAG] An antenna that has a single well-defined direction of maximum gain.

unidirectional coupler [ELECTR] Directional coupler that samples only one direction of transmission.

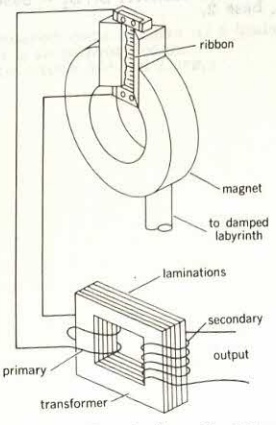
unidirectional hydrophone [ENG ACOUS] A hydrophone mainly sensitive to sound that is incident from a single solid angle of one hemisphere or less.

unidirectional log-periodic antenna [ELECTROMAG] Broad-band antenna in which the cut-out portions of a log-periodic antenna are mounted at an angle to each other, to give a unidirectional radiation pattern in which the major radiation is in the backward direction, off the apex of the antenna; impedance is essentially constant for all frequencies, as is the radiation pattern.

unidirectional microphone [ENG ACOUS] A microphone that is responsive predominantly to sound incident from one hemisphere, without picking up sounds from the sides or rear.

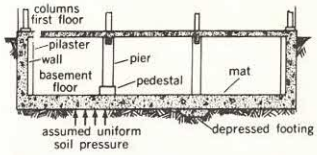
unidirectional pulse-amplitude modulation [COMMUN] Modulation of pulse-amplitude type in which all pulses rise in

UNIDIRECTIONAL MICROPHONE



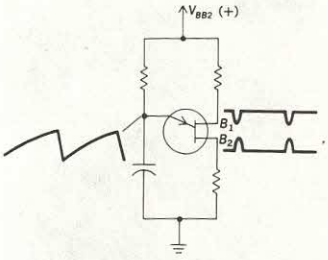
Elements of a single-unit ribbon-type unidirectional microphone showing the dynamic ribbon-type transducer.

UNIFORM MAT



Foundation construction with a uniform mat.

UNIJUNCTION TRANSISTOR



Circuit diagram of a unijunction transistor used as a relaxation oscillator. Sawtooth waveform on the left and output trigger waveform on the right. V_{BB2} = supply voltage of base 2 with respect to emitter; B_1, B_2 = base 1, base 2.

the same direction. Also known as single-polarity pulse-amplitude modulation.

unidirectional pulses [ELECTR] Single polarity pulses which all rise in the same direction.

unidirectional transducer [ELECTR] Transducer that measures stimuli in only one direction from a reference zero or rest position. Also known as unilateral transducer.

unified field theory [RELAT] Any theory which attempts to express gravitational theory and electromagnetic theory within a single unified framework; usually, an attempt to generalize Einstein's general theory of relativity from a theory of gravitation alone to a theory of gravitation and classical electromagnetism.

unified screw thread [DES ENG] Three series of threads: coarse (UNC), fine (UNF), and extra fine (UNEF); a ¼-inch (0.006 millimeter) diameter thread in the UNC series has 20 threads per inch, while in the UNF series it has 28.

unifilar suspension [ENG] The suspension of a body from a single thread, wire, or strip.

uniflow engine [MECH ENG] A steam engine in which steam enters the cylinder through valves at one end and escapes through openings uncovered by the piston as it completes its stroke.

uniform bound [MATH] A number M such that $|f_n(x)|<M$ for every x and for every function in a given sequence of functions $\{f_n(x)\}$.

uniform boundedness principle [MATH] A family of pointwise bounded, real-valued continuous functions on a complete metric space X is uniformly bounded on some open subset of X.

uniform circular motion [MECH] Circular motion in which the angular velocity remains constant.

uniform click track [ENG ACOUS] A click track with regularly spaced clicks.

uniform continuity [MATH] A property of a function f on a set, namely: given any $\epsilon > 0$ there is a $\delta > 0$ such that $|f(x_1) - f(x_2)| < \epsilon$ provided $|x_1 - x_2| < \delta$ for any pair x_1, x_2 in the set.

uniform convergence [MATH] A sequence of functions $\{f_n(x)\}$ converges uniformly on E to $f(x)$ if given $\epsilon > 0$ there is an N such that $|f_n(x) - f(x)| < \epsilon$ for all x in E provided $n > N$.

uniform corrosion [MET] Corrosion which takes place uniformly over the entire exposed surfaces.

uniform distribution [STAT] The distribution of a random variable in which each value has the same probability of occurrence. Also known as rectangular distribution.

uniform field [PHYS] A field which, at the instant under consideration, has the same value at every point in the region under consideration.

uniform field microtron [NUCLEO] A microtron with a small accelerating section which is placed in a uniform magnetic field that guides the electrons in circular orbits.

uniformitarianism [GEOL] Classically, the concept that the present is the key to the past; the principle that contemporary geologic processes have occurred in the same regular manner and with essentially the same intensity throughout geologic time, and that events of the geologic past can be explained by phenomena observable today. Also known as principle of uniformity.

uniform line [ELEC] Line which has substantially identical electrical properties through its length.

uniform load [MECH] A load distributed uniformly over a portion or over the entire length of a beam; measured in pounds per foot.

uniform luminance [OPTICS] Property of a surface for which the luminous intensity of any area of the surface is proportional to the area.

uniformly accessible storage *See* random-access memory.

uniformly most powerful test [STAT] A test which is simultaneously most powerful for all alternatives of interest in an experiment.

uniform mat [CIV ENG] A type of foundation mat, consisting of a reinforced concrete slab of constant thickness, supporting walls, and columns; it is thick, rigid, and strong.

uniform plane wave [ELECTROMAG] Plane wave in which the electric and magnetic intensities have constant amplitude over the equiphase surfaces; such a wave can only be found in free space at an infinite distance from the source.

uniform space [MATH] A topological space X whose topology is derived from a family of subsets of $X \times X$, called a uniformity; intuitively, this gives a notion of "nearness" which is uniform throughout the space.

uniform system of maritime buoyage [NAV] The international system of buoyage in accordance with fixed rules as to shape, color, lights, topmarks, position, and so forth.

uniform twist rifling [ORD] Rifling in which the degree of twist is constant from the origin of rifling to the muzzle, the path of the groove being a uniform spiral.

unijunction transistor [ELECTR] An n-type bar of semiconductor with a p-type alloy region on one side; connections are made to base contacts at either end of the bar and to the p-region. Abbreviated UJT. Formely known as double-base diode; double-base junction diode.

unilateral bearing [NAV] A bearing obtained with a radio direction finder which does not have a possible reciprocal ambiguity.

unilateral conductivity [ELECTR] Conductivity in only one direction, as in a perfect rectifier.

unilateral hermaphroditism [ZOO] A type of hermaphroditism in which there is a combination of ovatestis on one side of the body with an ovary or testis on the other side.

unilateralization [ELECTR] Use of an external feedback circuit in a high-frequency transistor amplifier to prevent undesired oscillation by canceling both the resistive and reactive changes produced in the input circuit by internal voltage feedback; with neutralization, only the reactive changes are canceled.

unilateral surface [MATH] A one-sided surface; equivalently, any nonorientable two-dimensional manifold such as the Möbius strip and the Klein bottle.

unilateral tolerance method [DES ENG] Method of dimensioning and tolerancing wherein the tolerance is taken as plus or minus from an explicitly stated dimension; the dimension represents the size or location which is nearest the critical condition (that is maximum material condition), and the tolerance is applied either in a plus or minus direction, but not in both directions, in such a way that the permissible variation in size or location is away from the critical condition.

unilateral transducer *See* unidirectional transducer.

unilocular [BIOL] Having a single cavity.

unimodular matrix [MATH] A unimodulus matrix with integer entries.

unimodulus matrix [MATH] A square matrix whose determinant is 1.

unimolecular reaction [PHYS CHEM] A chemical reaction involving only one molecular species as a reactant; for example, $2H_2O \rightarrow 2H_2 + O_2$, as in the electrolytic dissociation of water.

uninhibited bladder [MED] An abnormal urinary bladder that shows only a variable loss of cerebral inhibition over reflex bladder contractions, representing, of all neurogenic bladders, the least variance from normal.

uninterruptible power system [ELEC] A system that provides protection against primary alternating-current power failure and variations in power-line frequency and voltage. Abbreviated UPS.

union [DES ENG] A screwed or flanged pipe coupling usually in the form of a ring fitting around the outside of the joint. [MATH] A union of a given family of sets is a set consisting of those elements which are members of at least one set in the family.

union catalog [COMPUT SCI] A merged listing of the contents of two or more catalogs (of libraries, for example).

union cloth [TEXT] Fabric made by using one kind of fiber for the warp and another kind for the filling.

union dye [TEXT] A special dye used on union cloth.

Unionidae [INV ZOO] The fresh-water mussels, a family of bivalve mollusks in the subclass Eulamellibranchia; the larvae, known as glochidia, are parasitic on fish.

union joint [DES ENG] A threaded assembly used for the joining of ends of lengths of installed pipe or tubing where rotation of neither length is feasible.

union of sets [MATH] A set consisting of those elements which are members of at least one set in a given family of sets.

union shop [IND ENG] An establishment in which union membership is not a requirement for original employment but becomes mandatory after a specified period of time.

Uniontown method [ENG] A road-test method to determine the knock characteristics of motor fuels.

unipath *See* nonshared control unit.

unipolar [ELEC] Having but one pole, polarity, or direction;

when applied to amplifiers or power supplies, it means that the output can vary in only one polarity from zero and, therefore, must always contain a direct-current component.

Unipolarina [INV ZOO] A suborder of the protozoan order Myxosporida characterized by spores with one to six (never five) polar capsules located at the anterior end.

unipolar machine *See* homopolar generator.

unipolar transistor [ELECTR] A transistor that utilizes charge carriers of only one polarity, such as a field-effect transistor.

unipole [ELECTROMAG] A hypothetical antenna that radiates or receives signals equally well in all directions. Also known as isotropic antenna.

unipotential cathode *See* indirectly heated cathode.

unipotential electrostatic lens [ELECTR] An electrostatic lens in which the focusing is produced by application of a single potential difference; in its simplest form it consists of three apertures of which the outer two are at a common potential, and the central aperture is at a different, generally lower, potential.

unique factorization theorem [MATH] A positive integer may be expressed in precisely one way as a product of prime numbers.

Unisol process [CHEM ENG] A proprietary solvent-extraction process used in petroleum refineries to extract mercaptan sulfur and certain nitrogen compounds from sour gasolines or distillates.

unit [ENG] An assembly or device capable of independent operation, such as a radio receiver, cathode-ray oscilloscope, or computer subassembly that performs some inclusive operation or function. [ORD] **1.** Any military element whose structure is prescribed by competent authority, such as a table of organization and equipment; specifically, part of an organization. **2.** A standard of basic quantity into which an item of supply is divided, issued, or used. [PHYS] A quantity adopted as a standard of measurement.

unit-area acoustical ohm *See* rayl.

unitary air conditioner [MECH ENG] A small self-contained electrical unit enclosing a motor-driven refrigeration compressor, evaporative cooling coil, air-cooled condenser, filters, fans, and controls.

unitary decuplet [PARTIC PHYS] A collection of 10 hadrons whose isospin and hypercharge values form a symmetrical pattern, and which are related by unitary symmetry operations.

unitary group [MATH] The group of unitary transformations on a k-dimensional complex vector space. Usually denoted $U(k)$.

unitary octet [PARTIC PHYS] A collection of eight hadrons whose isospin and hypercharge values form a symmetrical pattern, and which are related by unitary symmetry operations.

unitary space *See* inner product space.

unitary spin [PARTIC PHYS] A quantum number associated with SU_3 symmetry and which determines the SU_3 supermultiplet to which a particle belongs, such as singlet, octet, or decuplet.

unitary symmetry [PARTIC PHYS] An approximate symmetry law obeyed by the strong interactions of elementary particles; it may be described as the equivalence of three fundamental particles, termed quarks, out of which all hadrons could be assumed to be composed. Also known as SU_3 symmetry.

unitary transformation [MATH] A linear transformation on a vector space which preserves inner products and norms; alternatively, a linear operator whose adjoint is equal to its inverse.

unit assembly [IND ENG] Assemblage of machine parts which constitutes a complete auxiliary part of an end item, and which performs a specific auxiliary function, and which may be removed from the parent item without itself being disassembled.

unit ball [MATH] The set of all points in euclidean n-space whose distance from the origin is at most 1.

unit binormal [MATH] A unit vector in the same direction as the binormal to a point on a surface or space curve.

unit cell [CRYSTAL] A parallelepiped which will fill all space under the action of translations which leave the crystal lattice unchanged. Also known as structure cell. [MIN ENG] In flotation, a single cell.

unit charge *See* statcoulomb.

unit circle [MATH] The locus of points in the plane which are precisely one unit from the origin.

unit construction [BUILD] An assembly comprising two or more walls, plus floor and ceiling construction, ready for shipping to a building site.

unit cost [IND ENG] Cost allocated to a specified unit of a product; computed as the cost over a period of time divided by the number of units produced.

unit delay [ELECTR] A network whose output is equal to the input delayed by one unit of time.

unit die [MET] A die block having more than one cavity insert and allowing several different castings to be made.

United States airways code [METEOROL] A synoptic code for communicating aviation weather observations. Also known as airways code.

United States standard dry seal thread [DES ENG] A modified pipe thread used for pressure-tight connections that are to be assembled without lubricant or sealer in refrigeration pipes, automotive and aircraft fuel-line fittings, and gas and chemical shells.

unitegmic [BOT] Referring to an ovule having a single integument.

unit element [MATH] An element in a ring which acts as a multiplicative identity.

uniterm [COMPUT SCI] A word, symbol, or number used as a description for retrieval of information from a collection; especially, such a description used in a coordinate indexing system.

uniterm system [COMPUT SCI] An information retrieval system which uses uniterm cards; cards representing words of interest in a search are selected and compared visually; if identical members are found to appear on the uniterm card undergoing comparison, those numbers represent documents to be examined in connection with the search.

unit heater [MECH ENG] A heater consisting of a fan for circulating air over a heat-exchange surface, all enclosed in a common casing.

unit impulse *See* delta function.

unitized body [ENG] An automotive body that has the body and frame in one unit; side members are designed on the principle of a bridge truss to gain stiffness, and sheet metal of the body is stressed so that it carries some of the load.

unitized cargo [IND ENG] Grouped cargo carried aboard a ship in pallets, containers, wheeled vehicles, and barges or lighters.

unitized film [GRAPHICS] Film which is filed or used by an individual frame or a group of frames under one classification.

unitized load [IND ENG] A single item or a number of items packaged, packed, or arranged in a specified manner and capable of being handled as a unit; unitization may be accomplished by placing the item or items in a container or by banding them securely together. Also known as unit load.

unit length [COMMUN] Basic element of time used in determining code speeds in message transmission.

unit load *See* unitized load.

unit loading [ORD] The loading of troop units with their equipment and supplies in the same ships, aircraft, or land vehicles.

unit magnetic pole [ELECTROMAG] Two equal magnetic poles of the same sign have unit value when they repel each other with a force of 1 dyne if placed 1 centimeter apart in a vacuum.

unit mold [ENG] A simple plastics mold composed of a simple cavity without further mold devices; used to produce sample containers having shapes difficult to blow-mold.

unit normal [MATH] A unit vector in the direction of the principal normal to a surface or space curve.

unit of coal [MIN ENG] The quantity of coal from which the sample is taken and which the sample represents.

unit of fire [ORD] A basic load of ammunition.

unit of issue [IND ENG] In reference to special storage, the quantity of an item, such as each number, dozen, gallon, pair, pound, ream, set, or yard. [ORD] The standard or basic quantity in which an item of supply is issued.

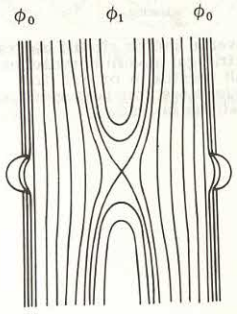
unit operations [CHEM ENG] The basic physical operations of chemical engineering in a chemical process plant, that is, distillation, fluid transport, heat and mass transfer, evaporation, extraction, drying, crystallization, filtration, mixing, size separation, crushing and grinding, and conveying.

unit operator [MATH] The identity operator.

unitor [COMPUT SCI] In computers, a device or circuit which performs a function corresponding to the Boolean operation of union.

unit power [MET] A unit describing machinability of a met-

UNIPOTENTIAL ELECTROSTATIC LENS

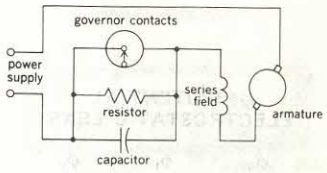


A unipotential electrostatic lens, a type of axially symmetric electrostatic lens. ϕ_0 = common potential for outer two apertures; ϕ_1 = lower potential for central aperture. *(From E. G. Ramberg and G. A. Morton, J. Appl. Phys., vol. 10, 1939, and V. K. Zworykin et al., Electron Optics and the Electron Microscope, Wiley, 1945)*

UNITIZED BODY

Unitized construction of a body for a four-door sedan. *(American Motors Corp.)*

UNIVERSAL MOTOR



Universal motor circuit diagram. Centrifugal governor switches small resistor in or out, to obtain more constant speed with variations in load.

UNIVERSAL PRODUCT CODE

The first five digits of the code identify the manufacturer; the second five digits identify the specific product.

al; the power needed to remove a unit volume in unit time, usually expressed as horsepower per cubic inch per minute.

unit procurement cost [IND ENG] The net basic cost paid or estimated to be paid for a unit of a particular item including, where applicable, the cost of government-furnished property and the cost of manufacturing operations performed at government-owned facilities.

unit pulse *See* baud.

unit record [COMPUT SCI] Any of a collection of records, all of which have the same form and the same data elements.

unit record device [COMPUT SCI] Any piece of equipment such as punch card readers, card punch, and line printers.

unit replacement [ORD] Method of repair in which a defective, worn, or damaged group of parts of a weapon or other equipment is replaced by a complete new group of parts.

unit reserves [ORD] Prescribed quantities of supplies carried by a unit as a reserve to cover emergencies.

unit sphere [MATH] The set of points in three-space (more generally n-space) which are precisely one unit distance from the origin.

unit strain [MECH] **1.** For tensile strain, the elongation per unit length. **2.** For compressive strain, the shortening per unit length. **3.** For shear strain, the change in angle between two lines originally perpendicular to each other.

unit strength [ORD] As applied to a friendly or enemy unit, relates to the number of personnel, amount of supplies, armament equipment and vehicles, and the total logistic capabilities.

unit stress [MECH] The load per unit of area.

unit string [COMPUT SCI] A string that has only one element.

unit systems [PHYS] Groups of units suitable for use in measurement of physical quantities and in the convenient statement of physical laws relating physical quantities.

unit tangent [MATH] A unit vector in the tangent plane at a point of a surface.

unit train [MIN ENG] A system for delivering coal in which a string of cars, with distinctive markings and loaded to full visible capacity, is operated without service frills or stops along the way for cars to be cut in and out.

unit vector [MATH] A vector whose length is one unit.

unity coupling [ELECTROMAG] Perfect magnetic coupling between two coils, so that all magnetic flux produced by the primary winding passes through the entire secondary winding.

unity gain bandwidth [ELECTR] Measure of the gain-frequency product of an amplifier; unity gain bandwidth is the frequency at which the open-loop gain becomes unity, based on 6 decibels per octave crossing.

unity power factor [ELEC] Power factor of 1.0, obtained when current and voltage are in phase, as in a circuit containing only resistance or in a reactive circuit at resonance.

univalent function *See* injection.

univariant system [THERMO] A system which has only one degree of freedom according to the phase rule.

universal algebra [MATH] The study of algebraic systems such as groups, rings, modules, and fields and the examination of what families of theorems are analogous in each system.

universal chuck [ENG] A self-centering chuck whose jaws move in unison when a scroll plate is rotated.

universal donor [IMMUNOL] An individual of O blood group; can give blood to persons of all blood types.

universal gas constant *See* gas constant.

universal grinding machine [MECH ENG] A grinding machine having a swivel table and headstock, and a wheel head that can be rotated on its base.

universal instrument *See* altazimuth.

universality [STAT MECH] The hypothesis that the critical exponents of a substance are the same within broad classes of substances of widely varying characteristics, and depend only on the microscopic symmetry properties of the substance.

universality class [STAT MECH] A class of substances which have the same critical exponents according to the universality hypothesis.

universal joint [MECH ENG] A linkage that transmits rotation between two shafts whose axes are coplanar but not coinciding.

universal mill [MET] A rolling mill having both horizontal and vertical sets of rolls.

universal motor [ELEC] A motor that may be operated at approximately the same speed and output on either direct current or single-phase alternating current. Also known as ac/dc motor.

universal output transformer [ENG ACOUS] An output transformer having a number of taps on its winding, to permit its use between the audio-frequency output stage and the loudspeaker of practically any radio receiver by proper choice of connections.

universal plotting sheet [NAV] A plotting sheet on which either the latitude or longitude lines are omitted, to be drawn in by the user, making it possible to quickly construct a plotting sheet for any part of the earth's surface.

Universal Polar Stereographic Grid [MAP] A particular grid based upon the polar stereographic projection according to specifications laid down by military authorities; it may be superimposed on any map.

universal product code [COMPUT SCI] **1.** A 10-digit bar code on the outside of a package for electronic scanning at supermarket checkout counters; each digit is represented by the ratio of the widths of adjacent stripes and white areas. **2.** The corresponding combinations of binary digits into which the scanned bars are converted for computer processing that provides continuously updated inventory data and printout of the register tape at the checkout counter.

universal receiver *See* ac/dc receiver.

universal recipient [IMMUNOL] An individual of AB blood group; can receive a blood transfusion of all blood types, A, AB, B, or O.

universal resonance curve [ELEC] A plot of Y/Y_0 against $Q_0\delta$ for a series-resonant circuit, or of Z/Z_0 against $Q_0\delta$ for a parallel-resonant circuit, where Y and Z are the admittance and impedance of a circuit, Y_0 and Z_0 are the values of these quantities at resonance, Q_0 is the Q value of the circuit at resonance, and δ is the deviation of the frequency from resonance divided by the resonant frequency; it can be applied to all resonant circuits.

universal set [MATH] A set that contains all the elements of concern in the study of a particular problem.

universal shunt *See* Ayrton shunt.

universal stage [OPTICS] A stage attached to the rotating stage of a polarizing microscope that has three, four, or five axes and thin sections of low-symmetry minerals to be tilted about two mutually perpendicular horizontal axes. Also known as Fedorov stage; U stage.

universal time *See* Greenwich mean time.

universal time 0 [ASTRON] The uncorrected time of the earth's rotation as measured by the transit of stars across the observer's meridian. Abbreviated UT 0.

universal time 1 [ASTRON] Universal time 0 corrected for polar motion; it is the true angular rotation. Abbreviated UT 1.

universal time 2 [ASTRON] Universal time 1 corrected for seasonal variations in the earth's rotation. Abbreviated UT 2.

universal time coordinated [ASTRON] The coordinated time kept by a uniformly running clock, approximating the measure UT 2. Abbreviated UTC.

universal transmission function [GEOPHYS] A mathematical relationship that attempts to describe quantitatively the complex infrared propagation (including absorption and reradiation) in the atmosphere.

universal transverse Mercator grid [MAP] A particular grid based upon a transverse Mercator projection, according to specifications laid down by military authorities; it may be superimposed on any map.

universal Turing machine [COMPUT SCI] A Turing machine that can simulate any Turing machine.

universal vise [ENG] A vise which has two or three swivel settings so that the workpiece can be set at a compound angle. Also known as toolmaker's vise.

universal wavelength function [OPTICS] One of four functions which enable one to compute easily, with reasonable accuracy, the refractive index of glass or other transparent material when this index is known for four standard wavelengths.

universe [ASTRON] The totality of astronomical things, events, relations, and energies capable of being described objectively.

univibrator *See* monostable multivibrator.

unlimited ceiling [METEOROL] A ceiling that exists when the total sky cover is less than 0.6%, or when the total transparent sky cover is 0.5% or more, or when surface-based obscuring phenomena are classed as partial obscuration (that is, they obscure 0.9% or less of the sky) and no layer aloft is reported as broken or overcast.

unloaded Q [ELECTR] The Q of a system when there is no external coupling to it.

unloader [MECH ENG] A power device for removing bulk materials from railway freight cars or highway trucks; in the case of railway cars, the car structure may aid the unloader; a transitional device between interplant transportation means and intraplant handling equipment.

unloading [CHEM ENG] **1.** The release downstream of a trapped contaminant. **2.** A filter medium failure and release of system pressure. **3.** The depressuring or emptying of a process unit.

unloading amplifer [ELECTR] Amplifier that is capable of reproducing or amplifying a given voltage signal while drawing negligible current from the voltage source.

unloading circuit [COMPUT SCI] In an analog computer, a computing element or combination of computing elements capable of reproducing or amplifying a given voltage signal while drawing negligible current from the voltage source.

unloading conveyor [MECH ENG] Any of several types of portable conveyors adapted for unloading bulk materials, packages, or objects from conveyances.

unmodified instruction *See* basic instruction.

unmyelinated [HISTOL] Lacking myelin, either as a normal condition or as the result of a disease.

unpack [COMPUT SCI] **1.** To recover the individual data items contained in packed data. **2.** More specifically, to convert a packed decimal number into individual digits (and sometimes a sign).

unpolarized light [OPTICS] Light in which the electric vector is oriented in a random, unpredictable fashion.

unpolarized particle beam [PHYS] A beam of particles with spin in which the directions of the spins are random.

unproductive development [MIN ENG] The drifts, tunnels, and crosscuts driven in stone, preparatory to opening out production faces in a coal seam or ore body.

unprotected reversing thermometer [ENG] A reversing thermometer for sea-water temperature which is not protected against hydrostatic pressure.

unproven area [MIN ENG] An area in which it has not been established by drilling operations whether oil or gas may be found in commercial quantities.

unrelated frequencies [STAT] The long run frequency of any result in one part of an experiment is approximately equal to the long run conditional frequency of that result, given that any specified result has occurred in the other part of the experiment.

unreserved minerals [MIN ENG] Minerals which belong to the owner of the land on which or in which they are located.

unresolved pneumonia *See* organizing pneumonia.

unrestricted visibility [METEOROL] The visibility when no obstruction to vision exists in sufficient quantity to reduce the visibility to less than 7 miles (11.3 kilometers).

uns-, unsym- [ORG CHEM] A chemical prefix denoting that the substituents of an organic compound are structurally unsymmetrical with respect to the carbon skeleton, or with respect to a function group (for example, double or triple bond).

unsaturated [MINERAL] Referring to a mineral that will not form in the presence of free silica.

unsaturated compound [CHEM] Any chemical compound with more than one bond between adjacent atoms, usually carbon, and thus reactive toward the addition of other atoms at that point; for example, olefins, diolefins, and unsaturated fatty acids.

unsaturated hydrocarbon [ORG CHEM] One of a class of hydrocarbons that have at least one double or triple carbon-to-carbon bond that is not in an aromatic ring; examples are ethylene, propadiene, and acetylene.

unsaturated standard cell [ELEC] One of two types of Weston standard cells (batteries); used for voltage calibration work not requiring an accuracy greater than 0.01%.

unsaturated zone *See* zone of aeration.

unsaturation [ORG CHEM] A state in which the atomic bonds of an organic compound's chain or ring are not completely satisfied (that is, not saturated); usually applies to carbon, but can include other ring or chain atoms; unsaturation usually results in a double bond (as for olefins) or a triple bond (as for the acetylenes).

unscheduled maintenance [IND ENG] Those unpredictable maintenance requirements that had not been previously planned or programmed but require prompt attention and must be added to, integrated with, or substituted for previously scheduled workloads.

unscrambler [IND ENG] A part of a feeding and packaging line that aids in arranging cartons for the filling machines; there are rotary, straight-line, and walking-beam types.

unseen fire [ORD] Fire which is continuously aimed at the future position of an aircraft, the aim being derived from radar sources.

unsettled [METEOROL] Pertaining to fair weather which may at any time become rainy, cloudy, or stormy.

Unsin engine [MECH ENG] A type of rotary engine in which the trochoidal rotors of eccentric-rotor engines are replaced with two circular rotors, one of which has a single gear tooth upon which gas pressure acts, and the second rotor has a slot which accepts the gear tooth.

unsprung axle [MECH ENG] A rear axle in an automobile in which the housing carries the right and left rear-axle shafts and the wheels are mounted at the outer end of each shaft.

unsprung weight [MECH ENG] The weight of the various parts of a vehicle that are not carried on the springs such as wheels, axles, brakes, and so forth.

unstable [PHYS] Capable of undergoing spontaneous change, as in a radioactive nuclide or an excited nuclear system.

unstable colon *See* irritable colon.

unstable equilibrium [PHYS] An equilibrium state of a system in which any departure of the system from equilibrium gives rise to forces or tendencies moving the system further away from equilibrium; for example, mechanical equilibrium in which the potential energy is a maximum, as a sphere sitting on top of a hill.

unstable isotope *See* radioisotope.

unstable particle [PARTIC PHYS] **1.** Any elementary particle that spontaneously decays into other particles. **2.** An elementary particle that can decay through the strong interactions, as opposed to a semistable particle; it has a lifetime on the order of 10^{-23} second.

unstable wave [PHYS] A wave motion whose amplitude increases with time or whose total energy increases at the expense of its environment.

unsteady flow [FL MECH] Fluid flow in which properties of the flow change with respect to time.

unsteady-state flow [FL MECH] A condition of fluid flow in which the volumetric ratios of two or more phases (liquid-gas, liquid-liquid, and so on) vary along the course of flow; can be the result of changes in temperature, pressure, or composition.

unstriated fibers *See* smooth muscle fibers.

unsurveyed area [MAP] An area on a map or chart where both relief and planimetric data are unavailable, and which is usually labeled unsurveyed; or an area on a map or chart which shows little or no charted data because accurate information is limited or not available.

untuned [ELEC] Not resonant at any of the frequencies being handled.

unused time *See* unattended time.

unwater [ENG] To remove or draw off water; to drain.

unwind [COMPUT SCI] In computers, to rearrange and code a sequence of instructions to eliminate red-tape operations.

up [GRAPHICS] A flat-bed term to indicate one or more documents being in position to photograph, for example, two up, and so on.

upcast [MIN ENG] **1.** The opening through which the return air ascends and is removed from the mine; the opposite of downcast or intake. **2.** An upward current of air passing through a shaft. **3.** Material that has been thrown up, as by digging.

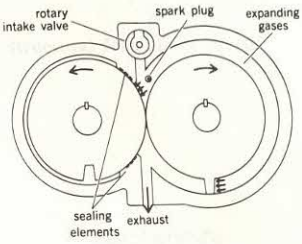
up-converter [ELECTR] Type of parametric amplifier which is characterized by the frequency of the output signal being greater than the frequency of the input signal.

update [COMPUT SCI] **1.** In computers, to modify an instruction so that the address numbers it contains are increased by a stated amount each time the instruction is performed. **2.** To change a record by entering current information; for example, to enter a new address or account number in the record pertaining to an employee or customer. Also known as posting.

up-Doppler [ENG ACOUS] The sonar situation wherein the target is moving toward the transducer, so the frequency of the echo is greater than the frequency of the reverberations received immediately after the end of the outgoing ping; opposite of down-Doppler.

updraft carburetor [MECH ENG] For a gasoline engine, a

UNSIN ENGINE



Section through an Unsin engine showing two circular rotors.

fuel-air mixing device in which both the fuel jet and the airflow are upward.

updraft furnace [MECH ENG] A furnace in which volumes of air are supplied from below the fuel bed or supply.

updrift [OCEANOGR] The direction which is opposite that of the prevailing movement of littoral material.

upflow [CHEM] In an ion-exchange unit, an operation in which solutions enter at the bottom of the unit and leave at the top.

upgrade [MIN ENG] **1.** To increase the commercial value of a coal or mineral product by appropriate treatment. **2.** To increase the quality rating of diamonds beyond or above the rating implied by their particular classification.

uphole [MIN ENG] A borehole collared in an underground working place and drilled in a direction pointed above the horizontal plane of the drill-machine swivel head.

uphole time [GEOPHYS] The time that a seismic pulse requires to travel from an explosion at some depth in a shot hole to the surface of the earth.

upland [GEOGR] **1.** An extensive region of high land. **2.** The higher ground of a region, in contrast to a valley, plain, or other low-lying land. **3.** The elevated land above the low areas along a stream or between hills.

uplift pressure [CIV ENG] Pressure in an upward direction against the bottom of a structure, as a dam, a road slab, or a basement floor.

uplink [COMMUN] The radio or optical transmission path upward from the earth to a communications satellite, or from the earth to aircraft.

upmilling [MECH ENG] Milling a workpiece by rotating the cutter against the direction of feed of the workpiece.

upper [GEOL] Pertaining to rocks or strata that normally overlie those of earlier formations of the same subdivision of rocks.

upper air [METEOROL] The region of the atmosphere which is above the lower troposphere; although no distinct lower limit is set, the term is generally applied to levels above that at which the pressure is 850 millibars.

upper-air chart *See* upper-level chart.

upper-air disturbance [METEOROL] A disturbance of the flow pattern in the upper air, particularly one which is more strongly developed aloft than near the ground. Also known as upper-level disturbance.

upper-air observation [METEOROL] A measurement of atmospheric conditions aloft, above the effective range of a surface weather observation. Also known as sounding; upper-air sounding.

upper-air sounding *See* upper-air observation.

upper anticyclone *See* upper-level anticyclone.

upper-arm circumference [ANTHRO] A measure of the horizontal circumference at the largest part of the biceps muscle.

upper atmosphere [METEOROL] The general term applied to the atmosphere above the troposphere.

upper atmosphere dynamics [METEOROL] Motion of the atmosphere above 500 kilometers; predominant dynamical phenomena are internal gravity waves, tides, sound waves, turbulence, and large-scale circulation.

upper band *See* upper bright band.

upper branch [GEOD] That half of a meridian or celestial meridian from pole to pole which passes through a place or its zenith.

upper bright band [METEOROL] A level of enhanced radar echo occasionally observed at a higher altitude than the bright band of the melting level; it is attributable to the growth of a layer of ice crystals in a supercooled cloud into snow pellets. Also known as radar upper band; upper band.

Upper Cambrian [GEOL] The latest epoch of the Cambrian period of geologic time, beginning approximately 510 million years ago.

Upper Carboniferous [GEOL] The European epoch of geologic time equivalent to the Pennsylvanian of North America.

upper consolute temperature *See* consolute temperature.

Upper Cretaceous [GEOL] The late epoch of the Cretaceous period of geologic time, beginning about 90 million years ago.

upper critical solution temperature *See* consolute temperature.

upper culmination *See* upper transit.

upper curtate [COMPUT SCI] The upper or top part of a punch card; on a standard card it contains the 11 (or X), 12 (or Y), and 0 punch positions, that is, the zone punch positions.

upper cyclone *See* upper-level cyclone.

Upper Devonian [GEOL] The latest epoch of the Devonian period of geologic time, beginning about 365 million years ago.

upper face height [ANTHRO] A measure of the distance from the nasion to the lower gum edge between the two central upper teeth.

upper front [METEOROL] A front which is present in the upper air but does not extend to the ground.

upper half-power frequency [ELECTR] The frequency on an amplifier response curve which is greater than the frequency for peak response and at which the output voltage is $1/\sqrt{2}$ (that is, 0.707) of its midband or other reference value.

upper high *See* upper-level anticyclone.

Upper Huronian *See* Animikean.

upper integral [MATH] The upper Riemann integral for a real-valued function $f(x)$ on an interval is computed to be the infimum of all finite sums over all partitions of the interval, the sums having terms given by $(x_i - x_{i-1})y_i$, where the x_i are from a partition, and y_i is the largest value of $f(x)$ over the interval from x_{i-1} to x_i.

upper inversion *See* tropopause inversion.

Upper Jurassic [GEOL] The latest epoch of the Jurassic period of geologic time, beginning approximately 155 million years ago.

upper-level anticyclone [METEOROL] An anticyclonic circulation existing in the upper air; this often refers to such anticyclones only when they are much more pronounced at upper levels than at and near the earth's surface. Also known as high aloft; high-level anticyclone; upper anticyclone; upper high; upper-level high.

upper-level chart [METEOROL] A synoptic chart of meteorological conditions in the upper air, almost invariably referring to a standard constant-pressure chart. Also known as upper-air chart.

upper-level cyclone [METEOROL] A cyclonic circulation existing in the upper air, and specifically, as seen on an upper-level constant-pressure chart; often restricted to describe cyclones associated with relatively little cyclonic circulation in the lower atmosphere. Also known as high-level cyclone; low aloft; upper cyclone; upper-level low; upper low.

upper-level disturbance *See* upper-air disturbance.

upper-level high *See* upper-level anticyclone.

upper-level low *See* upper-level cyclone.

upper-level ridge [METEOROL] A pressure ridge existing in the upper air, especially one that is stronger aloft than near the earth's surface. Also known as high-level ridge; ridge aloft; upper ridge.

upper-level trough [METEOROL] A pressure trough existing in the upper air, but sometimes restricted to the troughs that are much more pronounced aloft than near the earth's surface. Also known as high-level trough; trough aloft; upper trough.

upper-level winds *See* winds aloft.

upper limb [ASTRON] That half of the outer edge of a celestial body having the greatest altitude.

upper low *See* upper-level cyclone.

upper mantle [GEOL] The portion of the mantle lying above a depth of about 1000 kilometers. Also known as outer mantle; peridotite shell.

Upper Mississippian [GEOL] The latest epoch of the Mississippian period of geologic time.

upper mixing layer [METEOROL] The region of the upper mesophere between about 50 and 80 kilometers (that is, immediately above the mesopeak) through which there is a rapid decrease of temperature with height and where there appears to be considerable turbulence.

Upper Ordovician [GEOL] The latest epoch of the Ordovician period of geologic time, beginning approximately 440 million years ago.

Upper Pennsylvanian [GEOL] The latest epoch of the Pennsylvanian period of geologic time.

Upper Permian [GEOL] The latest epoch of the Permian period of geologic time, beginning about 245 million years ago.

upper punch [MET] In powder metallurgy, the member of the die assembly that moves downward into the die body to transmit pressure to the metal powder in the cavity.

upper ridge *See* upper-level ridge.

upper semicontinuous decomposition [MATH] A partition of a topological space with the property that for every

member D of the partition and for every open set U containing D there is an open set V containing D which is contained in U and is the union of members of the partition.

upper semicontinuous function [MATH] A real-valued function $f(x)$ is upper semicontinuous at a point x_0 if for any small positive ϵ, $f(x)$ always is less than $f(x_0) + \epsilon$ for all x in some neighborhood of x_0.

upper sideband [COMMUN] The higher of two frequencies or groups of frequencies produced by a modulation process.

Upper Silurian [GEOL] The latest epoch of the Silurian period of geologic time.

upper transit [ASTRON] The movement of a celestial body across a celestial meridian's upper branch. Also known as superior transit; upper culmination.

Upper Triassic [GEOL] The latest epoch of the Triassic period of geologic time, beginning about 200 million years ago.

upper trough *See* upper-level trough.

upper winds *See* winds aloft.

up quark [PARTIC PHYS] A quark with an electric charge of $+\frac{2}{3}$, baryon number of $\frac{1}{3}$, and 0 strangeness and charm. Symbolized u.

upright [CIV ENG] A vertical structural member, post, or stake.

uprush [METEOROL] The strong upward-flow air current in cumulus clouds during their stage of rapid development, often preceding a thunderstorm. Also known as vertical jet. [OCEANOGR] *See* swash.

UPS [ELEC] *See* uninterruptible power system. [SPECT] *See* ultraviolet photoemission spectroscopy.

upset [ENG] To increase the diameter of a rock drill by blunting the end. [MET] A localized increase in the cross-sectional area of a metal during working, caused by the application of pressure; enables a head to be formed on fasteners such as bolts. [MIN ENG] **1.** A narrow heading connecting two levels in inclined coal. **2.** A capsized or broken skip.

upsetting test [MET] A test used to identify the role of variables in forging, which demonstrates that the force to forge is a function of the strength of the material, coefficient of friction, and ratio of the lateral to thickness dimensions of the workpiece.

upsetted moraine *See* push moraine.

upset welding [MET] Pressure butt welding in which heat is generated by resistance to the passage of current across the joint.

upslope fog [METEOROL] A type of fog formed when air flows upward over rising terrain and, consequently, is adiabatically cooled to or below its dew point.

upslope time [MET] In resistance welding, the time associated with an increase in current when slope control is used.

upstream [CHEM ENG] That portion of a process stream that has not yet entered the system or unit under consideration; for example, upstream to a refinery or to a distillation column. [HYD] Toward the source of a stream.

upstream face [CIV ENG] The side of a dam nearer the source of water.

uptake [ENG] A large pipe for exhaust gases from a boiler furnace that runs upward to a chimney or smokestack.

upthrow [GEOL] **1.** The fault side that has been thrown upward. **2.** The amount of vertical fault displacement.

up time [COMPUT SCI] The time during which equipment is either producing work or is available for productive work.

Upupidae [VERT ZOO] The Old World hoopoes, a family of birds in the order Coraciiformes whose young are hatched with sparse down.

upward compatibility [COMPUT SCI] The ability of a newer or larger computer to accept programs from an older or smaller one.

upwarp [GEOL] A broad anticline with gently sloping limbs formed as a result of differential uplift.

upwelling [OCEANOGR] The process by which water rises from a deeper to a shallower depth, usually as a result of divergence of offshore currents.

upwind [METEOROL] In the direction from which the wind is flowing.

upwind effect [METEOROL] The effect of an orographic barrier in producing orographic precipitation windward of the base of the barrier, because the airflow is forced upward before the barrier slope is actually reached.

urachus [EMBRYO] A cord or tube of epithelium connecting the apex of the urinary bladder with the allantois; its connective tissue forms the median umbilical ligament.

uracil [BIOCHEM] $C_4H_4N_2O_2$ A pyrimidine base important as a component of ribonucleic acid.

Uralean [GEOL] A stage of geologic time in Russia: uppermost Carboniferous (above Gzhelian, below Sakmarian of Permian).

uralite [MINERAL] A green variety of secondary amphibole; it is usually fibrous or acicular and is formed by alteration of pyroxene.

uralitization [GEOL] **1.** A process of replacement whereby pyroxene undergoes alteration resulting in uralite. **2.** Development of amphibole from pyroxene.

uranate [INORG CHEM] A salt of uranic acid; for example, sodium uranate, Na_2UO_4.

urania *See* uranium dioxide.

uranic chloride *See* uranium tetrachloride.

uranic oxide *See* uranium dioxide.

Uraniidae [INV ZOO] A tropical family of moths in the superfamily Geometroidea including some slender-bodied, brilliantly colored diurnal insects which lack a frenulum and are often mistaken for butterflies.

uranin *See* uranine.

uranine [ORG CHEM] $Na_2C_{20}H_{10}O_5$ A brown or orange-red hygroscopic powder soluble in water; used as a yellow dye for silk and wool, a marker in the ocean to facilitate air and sea rescues, and as an analytical reagent. Also known as sodium fluorescein; uranin; uranine yellow.

uranine yellow *See* uranine.

uraninite [MINERAL] UO_2 A black, brownish-black, or dark-brown radioactive mineral that is isometric in crystallization; often contains impurities such as thorium, radium, cerium, and yttrium metals, and lead; the chief ore of uranium; hardness is 5.5–6 on Mohs scale, and specific gravity of pure UO_2 is 10.9, but that of most natural material is 9.7–7.5. Also known as coracite; ulrichite.

uranium [CHEM] A metallic element in the actinide series, symbol U, atomic number 92, atomic weight 238.03; highly toxic and radioactive; ignites spontaneously in air and reacts with nearly all nonmetals; melts at 1132°C, boils at 3818°C; used in nuclear fuel and as the source of U^{235} and plutonium. [MET] A dense, silvery, ductile, strongly electropositive metal.

uranium acetate *See* uranyl acetate.

uranium age [GEOL] The age of a mineral as calculated from the numbers of ionium atoms present originally, now, and when equilibrium is established with uranium.

uranium carbide [INORG CHEM] One of the carbides of uranium, such as uranium monocarbide; used chiefly as a nuclear fuel.

uranium decay series *See* uranium series.

uranium dioxide [INORG CHEM] UO_2 Black, highly toxic, spontaneously flammable, radioactive crystals; insoluble in water, soluble in nitric and sulfuric acids; melts at approximately 3000°C; used to pack nuclear fuel rods and in ceramics, pigments, and photographic chemicals. Also known as urania; uranic oxide; uranium oxide.

uranium enrichment [NUCLEO] A process carried out on uranium, in which the ratio of the abundance of the isotope uranium-235 to that of the isotope uranium-238 is increased above that found in natural uranium.

uranium hexafluoride [INORG CHEM] UF_6 Highly toxic, radioactive, corrosive, colorless crystals; soluble in carbon tetrachloride, fluorocarbons, and liquid halogens; it reacts vigorously with alcohol, water, ether, and most metals, and it sublimes; used to separate uranium isotopes in the gaseous-diffusion process.

uranium hydride [INORG CHEM] UH_3 A highly toxic, gray to black powder that ignites spontaneously in air, and that conducts electricity; used for making powdered uranium metal, for hydrogen-isotope separation, and as a reducing agent.

uranium-lead dating [GEOL] A method for calculating the geologic age of a material in years based on the radioactive decay rate of uranium-238 to lead-206 and of uranium-235 to lead-207.

uranium nitrate *See* uranyl nitrate.

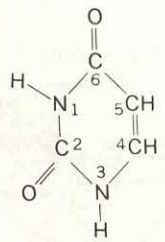
uranium ocher *See* gummite.

uranium oxide *See* uranium dioxide; uranium trioxide.

uranium-radium series *See* uranium series.

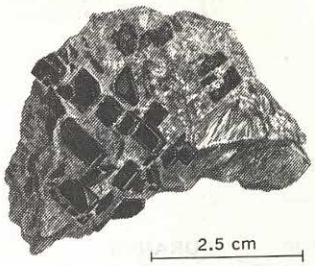
uranium reactor [NUCLEO] A nuclear reactor in which the principal fuel is uranium; the uranium may be natural, with the naturally occurring ratio of 1 atom of uranium-235 to about 139

URACIL



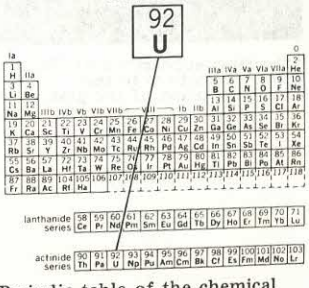
Structural formula of uracil.

URANINITE



Uraninite crystals in pegmatite, Chester, Pennsylvania. *(Specimen from Department of Geology, Bryn Mawr College)*

URANIUM



Periodic table of the chemical elements showing the position of uranium.

atoms of uranium-238, or may be enriched to have a higher proportion of fissile uranium-233 or uranium-235 atoms.

uranium series [NUC PHYS] The series of nuclides resulting from the decay of uranium-238, including uranium I, II, X_1, X_2, Y, and Z, and radium A, B, C, C′, C″, D, E, E″, F, and G. Also known as uranium decay series; uranium-radium series.

uranium sulfate *See* uranyl sulfate.

uranium tetrachloride [INORG CHEM] UCl_4 Poisonous, radioactive, hygroscopic, dark-green crystals; soluble in alcohol and water; melts at 590°C, boils at 792°C. Also known as uranic chloride.

uranium tetrafluoride [INORG CHEM] UF_4 Toxic, radioactive, corrosive green crystals; insoluble in water; melts at 1036°C; used in the manufacture of uranium metal. Also known as green salt.

uranium trioxide [INORG CHEM] UO_3 A poisonous, radioactive, red to yellow powder; soluble in nitric acid, insoluble in water; decomposes when heated; used in ceramics and pigments and for uranium refining. Also known as orange oxide; uranium oxide.

uranium yellow *See* sodium diuranate.

uran-mica *See* torbernite.

uranocircite [MINERAL] $Ba(UO_2)_2(PO_4)_2 \cdot 8H_2O$ A yellow-green, tetragonal mineral consisting of a hydrated phosphate of barium and uranium; occurs as crystals.

uranography [ASTRON] The science of mapping stars, groups of stars, and star clusters.

uranometry [ASTRON] The science of the measurement of the celestial sphere and celestial bodies.

uranophane [MINERAL] $Ca(UO_2)_2Si_2O_7 \cdot 6H_2O$ A yellow or orange-yellow radioactive secondary mineral; it is dimorphous with β-uranophane. Also known as uranotile.

uranopilite [MINERAL] $(UO_2)_6(SO_4)(OH)_{10} \cdot 12H_2O$ A bright yellow, lemon yellow, or golden yellow, monoclinic mineral consisting of a hydrated basic sulfate of uranium; occurs as encrustations and masses.

uranosphaerite [MINERAL] $Bi_2O_3 \cdot 2UO_3 \cdot 3H_2O$ An orange-yellow or brick red, orthorhombic mineral consisting of a hydrated oxide of bismuth and uranium.

uranospinite [MINERAL] $Ca(UO_2)_2(AsO_4)_2 \cdot 8H_2O$ A lemon yellow to siskin green, tetragonal mineral consisting of a hydrated arsenate of calcium and uranium; occurs in tabular form.

uranotantalite *See* samarskite.

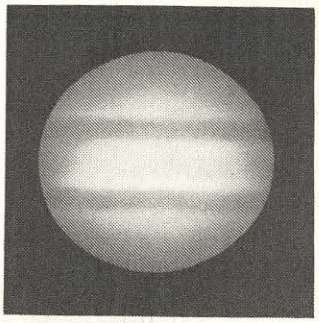
uranothorite [MINERAL] A uranium-bearing variety of thorite.

uranotile *See* uranophane.

uranous-uranic oxide *See* triuranium octoxide.

Uranus [ASTRON] A planet, seventh in the order of distance from the sun; it has five known satellites, and its equatorial diameter is about four times that of the earth.

URANUS



Telescopic appearance of Uranus, when the earth is in the equatorial plane of the globe.

uranyl acetate [INORG CHEM] $UO_2(C_2H_3O_2)_2 \cdot 2H_2O$ Poisonous, radioactive yellow crystals, decomposed by light; soluble in cold water, decomposes in hot water; loses water of crystallization at 110°C, decomposes at 275°C; used in medicine and as an analytical reagent and bacterial oxidant. Also known as uranium acetate.

uranyl nitrate [INORG CHEM] $UO_2(NO_3)_2 \cdot 6H_2O$ Toxic, explosive, unstable yellow crystals; soluble in water, alcohol, and ether; melts at 60°C and boils at 118°C; used in photography, in medicine, and for uranium extraction and uranium glaze. Also known as uranium nitrate; yellow salt.

uranyl salts [INORG CHEM] Salts of UO_3 that ionize to form UO_2^{++} and that are yellow in solution; for example, uranyl chloride, UO_2Cl_2.

uranyl sulfate [INORG CHEM] $UO_2SO_4 \cdot 3\frac{1}{2}H_2O$ and $UO_2SO_4 \cdot 3H_2O$ Poisonous, radioactive yellow crystals; soluble in water and concentrated hydrochloric acid; used as an analytical reagent. Also known as uranium sulfate.

uranyl uranate *See* triuranium octoxide.

urao *See* trona.

urate calculi [PATH] Kidney stones composed of uric acid salts and found particularly in people suffering from gout.

urbacid [ORG CHEM] $C_7H_{15}AsN_2S_3$ A colorless, crystalline compound with a melting point of 144°C; insoluble in water; used to control apple scale and diseases of coffee trees. Also known as bis(dimethylthiocarbamoylthio)methylarsine.

urban heat island [METEOROL] Increased urban temperatures of 1–2°C higher for daily maxima and 1–9°C for daily minima compared to rural environs resulting from changes in moisture balance due to impermeable surfaces, decreased humidity, or alteration in heat balance.

urbanization [CIV ENG] The state of being or becoming a community with urban characteristics.

urban renewal [CIV ENG] Redevelopment and revitalization of a deteriorated urban community.

urban typhus *See* murine typhus.

urceolate [BIOL] Shaped like an urn.

urea [ORG CHEM] $CO(HN_2)_2$ A natural product of protein metabolism found in urine; synthesized as white crystals or powder with a melting point of 132.7°C; soluble in water, alcohol, and benzene; used as a fertilizer, in plastics, adhesives, and flameproofing agents, and in medicine. Also known as carbamide.

urea anhydride *See* cyanamide.

urea dewaxing [CHEM ENG] A continuous, petroleum refinery process used to produce low-pour-point oils; urea forms a filterable solid complex (adduct) with the straight-chain wax paraffins in the stock.

urea-formaldehyde resin [ORG CHEM] A synthetic thermoset resin derived by the reaction of urea (carbamide) with formaldehyde or its polymers. Also known as urea resin.

urea nitrate [ORG CHEM] $CO(NH_2)_2 \cdot HNO_3$ Colorless, explosive, fire-hazardous crystals; soluble in alcohol, slightly soluble in water; decomposes at 152°C; used in explosives and to make urethane.

urea peroxide [ORG CHEM] $CO(NH_2)_2 \cdot H_2O_2$ An unstable, fire-hazardous white powder; soluble in water, alcohol, and ethylene glycol; decomposes at 75–85°C or by moisture; used as a source of water-free hydrogen peroxide, as a disinfectant, in cosmetics and pharmaceuticals, and for bleaching. Also known as carbamide peroxide.

urea resin *See* urea-formaldehyde resin.

urease [BIOCHEM] An enzyme that catalyzes the degradation of urea to ammonia and carbon dioxide; obtained from the seed of jack bean.

Urechinidae [INV ZOO] A family of echinoderms in the order Holasteroida which have an ovoid test lacking a marginal fasciole.

Uredinales [MYCOL] An order of parasitic fungi of the subclass Heterobasidiomycetidae characterized by the teleutospore, a spore with one or more cells, each of which is a modified hypobasidium; members cause plant diseases known as rusts.

uredinium [MYCOL] The aggregation of sporebearing hyphae and urediospores of a rust fungus that forms beneath the cuticle or epidermis of a host plant.

urediospore [MYCOL] A thin-walled spore produced by rust fungi; gives rise to a vegetative mycelium which may produce more urediospores.

(*para*-ureidophenylarsylenedithio)diacetic acid *See* thiocarbarsone.

(*para*-ureidophenylarsylenedithio)di-*ortho*-benzoic acid *See* thiocarbamazine.

ureilite [GEOL] An achondritic stony meteorite consisting principally of olivine and clinobronzite, with some nickel-iron, troilite, diamond, and graphite.

uremia [MED] A condition resulting from kidney failure and characterized by azotemia, chronic acidosis, anemia, and a variety of systemic signs and symptoms.

ureotelic [BIOL] Referring to animals that produce urea as their main nitrogenous excretion.

ureter [ANAT] A long tube conveying urine from the renal pelvis to the urinary bladder or cloaca in vertebrates.

urethane [ORG CHEM] $CO(NH_2)OC_2H_5$ A combustible, toxic, colorless powder; soluble in water and alcohol; melts at 49°C; used as a solvent and chemical intermediate and in biochemical research and veterinary medicine. Also known as ethyl carbamate; ethyl urethane.

urethra [ANAT] The canal in most mammals through which urine is discharged from the urinary bladder to the outside.

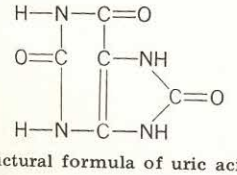
urethral gland [ANAT] One of the small, branched tubular mucous glands in the mucosa lining the urethra.

urethritis [MED] Inflammation of the urethra.

ureyite [MINERAL] $NaCrSi_2O_6$ A meteoritic mineral of the pyroxene group.

uric acid [BIOCHEM] $C_5H_4N_4O_3$ A white, crystalline compound, the excretory end product in amino acid metabolism by uricotelic species. Also known as 8-hydroxyxanthine.

URIC ACID



Structural formula of uric acid.

uricase [BIOCHEM] An enzyme present in the liver, spleen, and kidney of most mammals except man; converts uric acid to allantoin in the presence of gaseous oxygen.

uricotelism [PHYSIO] An adaptation of terrestrial reptiles and birds which effectively provides for detoxification of ammonia and also for efficient conservation of water due to a relatively low rate of glomerular filtration and active secretion of uric acid by the tubules to form a urine practically saturated with urate.

uridine [BIOCHEM] $C_9H_{12}N_2O_6$ A crystalline nucleoside composed of one molecule of uracil and one molecule of D-ribose; a component of ribonucleic acid.

uridine diphosphate [BIOCHEM] The chief transferring coenzyme in carbohydrate metabolism. Abbreviated UDP.

uridine diphosphoglucose [BIOCHEM] A compound in which α-glucopyranose is esterified, at carbon atom 1, with the terminal phosphate group of uridine-5′-pyrophosphate (that is, uridine diphosphate); occurs in animal, plant, and microbial cells; functions as a key in the transformation of glucose to other sugars. Abbreviated UDPG.

uridine monophosphate *See* uridylic acid.

uridine phosphoric acid *See* uridylic acid.

uridylic acid [BIOCHEM] $C_9H_{13}N_2O_9P$ Water- and alcohol-soluble crystals, melting at 202°C; used in biochemical research. Also known as uridine monophosphate (UMP); uridine phosphoric acid.

urinalysis [PATH] Analysis of the urine, involving chemical, physical, and microscopic tests.

urinary bladder [ANAT] A hollow organ which serves as a reservoir for urine.

urinary system [ANAT] The system which functions in the elaboration and excretion of urine in vertebrates; in man and most mammals, consists of the kidneys, ureters, urinary bladder, and urethra.

urination [PHYSIO] The discharge of urine from the bladder. Also known as micturition.

urine [PHYSIO] The fluid excreted by the kidneys.

uriniferous tubule [ANAT] One of the numerous winding tubules of the kidney. Also known as nephric tubule.

urn [BOT] The theca of a moss.

urobilin [BIOCHEM] A bile pigment produced by reduction of bilirubin by intestinal bacteria and excreted by the kidneys or removed by the liver.

urobilinogen [BIOCHEM] A chromogen, formed in feces and present in urine, from which urobilin is formed by oxidation.

urocanic acid [BIOCHEM] $C_6H_6N_2O_2$ A crystalline compound formed as an intermediate in the degradative pathway of histidine.

Urochordata [INV ZOO] The equivalent name for Tunicata.

urochrome [BIOCHEM] $C_{43}H_{51}O_{26}N$ Yellow pigment found in normal urine.

Urodela [VERT ZOO] The tailed amphibians or salamanders, an order of the class Amphibia distinguished superficially from frogs and toads by the possession of a tail, and from caecilians by the possession of limbs.

urogenital diaphragm [ANAT] The sheet of tissue stretching across the pubic arch, formed by the deep transverse perineal and the sphincter urethrae muscles. Also known as triangular ligament.

urogenital system [ANAT] The combined urinary and genital system in vertebrates, which are intimately related embryologically and anatomically. Also known as genitourinary system.

urography [MED] Radiography of any portion of the urinary tract; most often follows the intravenous administration of iodinated contrast material.

urokinase [BIOCHEM] An enzyme, present in human urine, that catalyzes the conversion of plasminogen to plasmin.

urolithiasis [MED] **1.** Condition associated with the presence of urinary calculi. **2.** Formation or presence of urinary calculi.

urology [MED] The scientific study of urine and the diseases and abnormalities of the urinary and urogenital tracts.

uronic acid [ORG CHEM] One of the compounds that are similar to sugars, except that the terminal carbon has been oxidized from the alcohol to a carboxyl group; for example, galacturonic acid and glucuronic acid.

uropepsin [BIOCHEM] The end product of the secretion of pepsinogen into the blood by gastric cells; occurs in urine.

uropod [INV ZOO] One of the flattened abdominal appendages of various crustaceans that with the telson forms the tail fan.

uroporphyrin [BIOCHEM] Any of several isomeric, metal-free porphyrins, occurring in small quantities in normal urine and feces; molecule has four acetic acid (—CH_2COOH) and four propionic acid (—CH_2CH_2COOH) groups.

Uropygi [INV ZOO] The tailed whip scorpions, an order of arachnids characterized by an elongate, flattened body which bears in front a pair of thickened, raptorial pedipalps set with sharp spines and used to hold and crush insect prey.

uropygial gland [VERT ZOO] A relatively large, compact, bilobed, secretory organ located at the base of the tail (uropygium) of most birds having a keeled sternum. Also known as oil gland; preen gland.

urostyle [VERT ZOO] An unsegmented bone representing several fused vertebrae and forming the posterior part of the vertebral column in Anura.

Urostylidae [INV ZOO] A family of hemipteran insects in the superfamily Pentatomoidea.

urotropin *See* cystamine.

Ursa Major [ASTRON] A northern constellation, right ascension 11 hours, declination 50°N; it contains a group of seven stars known as the Big Dipper.

Ursa Major cluster [ASTRON] A group of about 126 stars, including 5 stars of the constellation Ursa Major; the sun is passing through this cluster which occupies a spherical space of about 450 light-years in diameter.

Ursa Minor [ASTRON] A northern constellation, right ascension 15 hours, declination 70°N; its brightest star, Polaris, is almost at the north celestial pole; seven of the eight stars form a dipper ouline. Also known as Little Bear; Little Dipper.

Ursidae [VERT ZOO] A family of mammals in the order Carnivora including the bears and their allies.

ursids [ASTRON] A shower of meteors occurring about December 22 from a radiant in the constellation Ursa Minor.

ursolic acid [BIOCHEM] $C_{30}H_{48}O_3$ A pentacyclic terpene that crystallizes from absolute alcohol solution, found in leaves and berries of plants; used in pharmaceutical and food industries as an emulsifying agent.

urstromthal [GEOL] A large channel cut by a stream of water from melting ice, flowing along the edge of an ice sheet.

Urticaceae [BOT] A family of dicotyledonous herbs in the order Urticales characterized by a single unbranched style, a straight embryo, and the lack of milky juice (latex).

Urticales [BOT] An order of dicotyledons in the subclass Hamamelidae; woody plants or herbs with simple, usually stipulate leaves, and reduced clustered flowers that usually have a vestigial perianth.

urticaria [MED] Hives or nettle rash; a skin condition characterized by the appearance of intensely itching wheals or welts with elevated, usually white centers and a surrounding area of erythema. Also known as hives.

Urysohn lemma [MATH] If a and B are disjoint, closed sets in a normal space X, there is a real-valued function f such that $0 \leq f(x) \leq 1$ for all $x \epsilon X$, and $f(A) = 0$ and $f(B) = 1$.

usable iron ore [MET] A steel industry term for high-grade iron ore, concentrates, or agglomerates which can be used in blast furnaces or other processing plants.

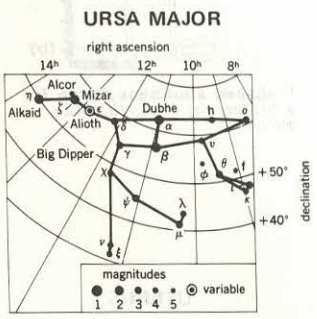
usable rate of fire [ORD] Normal rate of fire of a gun in actual use, measured in units of shots per minute; the usable rate of fire is considerably less than a gun's maximum rate of fire, which is a theoretical value based on the purely mechanical operation of a weapon.

U Sagittae [ASTRON] An eclipsing binary star in which one component has attained its Roche limit, while its mate is distinctly smaller than this limit.

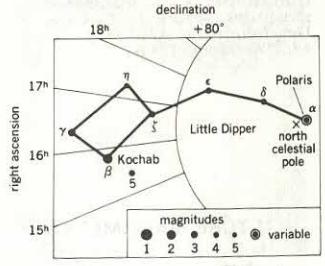
use-dilution test [MICROBIO] A bioassay method for testing disinfectants for use on surfaces where a substantial reduction of bacterial contamination is not achieved by prior cleaning; the test organisms *Salmonella choleraesuis* and *Staphylococcus aureus* are deposited in stainless steel cylinders which are then exposed to the action of the test disinfectant.

user [COMMUN] An individual, installation, or activity having access to a switching center through a local private branch exchange, or by dialing an access code. [COMPUT SCI] Anyone who requires the use of services of a computing system or its products.

user friendly [COMPUT SCI] Property of a computer system

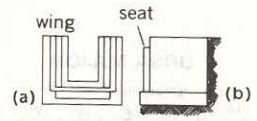


Line pattern of the constellation Ursa Major. The grid lines represent the coordinates of the sky. The apparent brightness, or magnitude, of the stars is shown by the sizes of the dots, which are graded by appropriate numbers as indicated.



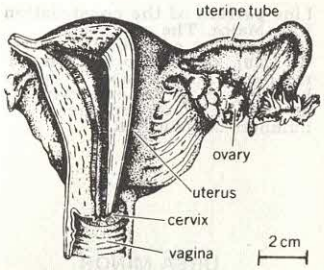
Line pattern of the constallation Ursa Minor. The grid lines represent the coordinates of the sky. The apparent brightness, or magnitude, of the stars is shown by the sizes of the dots, which are graded by appropriate numbers as indicated.

U-SHAPED ABUTMENT



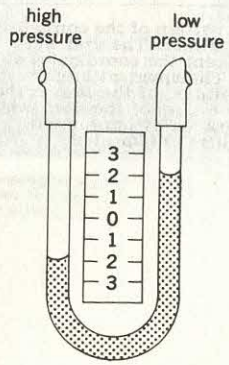
U-shaped abutment design for a bridge. *(a)* Plan. *(b)* Side elevation.

UTERUS



Human uterus and associated structures. *(From L. B. Arey, Developmental Anatomy, 7th ed., Saunders, 1965)*

U-TUBE MANOMETER



Components of U-tube manometer for measuring liquid flow.

that is easy to use and sets up an easily understood dialog between the user and the computer.

user group [COMPUT SCI] An organization of users of the computers of a particular vendor, which shares information and ideas, and may develop system software and influence vendors to change their products.

user mode [COMPUT SCI] The mode of operation exercised by the user programs of a computer system in which there is a class of privileged instructions that is not permitted, since these can be executed only by the operating system or executive system. Also known as slave mode.

user-to-user service [COMMUN] Method of switching that enables direct user-to-user connection that does not provide for message store-and-forward service.

U-shaped abutment [CIV ENG] A bridge abutment with wings perpendicular to the face which act as counterforts; a very stable abutment, often used for architectural effect.

U-shaped valley [GEOL] A type of valley with a broad floor and steep walls produced by glacial erosion. Also known as trough valley; U valley.

using agency [ORD] Any element of the U.S. Armed Forces having command or service functions, and requiring materiel for use in performance of its mission.

Usneaceae [BOT] The beard lichens, a family of Ascolichenes in the order Lecanorales distinguished by their conspicuous fruticose growth form.

usnic acid [BIOCHEM] $C_{18}H_{16}O_7$ Yellow crystals, insoluble in water, slightly soluble in alcohol and ether, melts about 198°C; found in lichens; used as an antibiotic. Also known as usninic acid.

usninic acid *See* usnic acid.

USP acid test [ANALY CHEM] A United States Pharmacopoeia test to determine the carbonizable substances present in petroleum white oils.

U.S. Survey foot [GEOD] The foot used by the U.S. Coast and Geodetic Survey in which 1 inch is equal to 2.540005 centimeters.

U stage *See* universal stage.

Ustalf [GEOL] A suborder of the soil order Alfisol; red or brown soil formed in a ustic moisture regime and in a mesic or warmer temperature regime.

Ustert [GEOL] A suborder of the Vertisol soil order; has a faint horizon and is dry for an appreciable period or more than one period of the year.

Ustilaginaceae [MYCOL] A family of fungi in the order Ustilaginales in which basidiospores bud from the sides of the septate epibasidium.

Ustilaginales [MYCOL] An order of the subclass Heterobasidiomycetidae comprising the smut fungi which parasitize plants and cause diseases known as smut or bunt.

Ustoll [GEOL] A suborder of the soil order Mollisol; formed in a ustic moisture regime and in a mesic or warmer temperature regime; may have a calcic, petrocalcic, or gypsic horizon.

Ustox [GEOL] A suborder of the soil order Oxisol that is low to moderate in organic matter, well drained, and dry for at least 90 cumulative days each year.

Ustult [GEOL] A suborder of the soil order Ultisol; brownish or reddish, with low to moderate organic-carbon content; a well-drained soil of warm-temperate and tropical climates with moderate or low rainfall.

UT 0 *See* universal time 0.

UT 1 *See* universal time 1.

UT 2 *See* universal time 2.

utahite *See* jarosite.

UTC *See* universal time coordinated.

uterus [ANAT] The organ of gestation in mammals which receives and retains the fertilized ovum, holds the fetus during development, and becomes the principal agent of its expulsion at term.

uterus bicornis [ANAT] A uterus divided into two horns or compartments; an abnormal condition in humans but normal in many mammals, such as carnivores.

utilidor [CIV ENG] An insulated, heated conduit built below the ground surface or supported above the ground surface to protect the contained water, steam, sewage, and fire lines from freezing.

utility [ENG] One of the nonprocess (support) facilities for a manufacturing plant; usually considered as facilities for steam, cooling water, deionized water, electric power, refrigeration, compressed and instrument air, and effluent treatment.

utility routine [COMPUT SCI] A program or routine of general usefulness, usually not very complicated, and applicable to many jobs or purposes.

utilization factor [ELEC] In electric power distribution, the maximum demand of a system or part of a system divided by its rated capacity.

utilization rate [AERO ENG] The amount of flying time produced in a specific period expressed in hours per period per aircraft. Also known as flying hour rate.

utilization ratio [COMPUT SCI] The ratio of the effective time on a computer to the total up time.

utricle *See* utriculus.

utriculus [ANAT] **1.** That part of the membranous labyrinth of the ear into which the semicircular canals open. **2.** A small, blind pouch extending from the urethra into the prostate. Also known as utricle.

U-tube heat exchanger [CHEM ENG] A heat-exchanger system consisting of a bundle of U tubes (hairpin tubes) surrounded by a shell (outer vessel); one fluid flows through the tubes, and the other fluid flows through the shell, around the tubes.

U-tube manometer [ENG] A manometer consisting of a U-shaped glass tube partly filled with a liquid of known specific gravity; when the legs of the manometer are connected to separate sources of pressure, the liquid rises in one leg and drops in the other; the difference between the levels is proportional to the difference in pressures and inversely proportional to the liquid's specific gravity. Also known as liquid-column gage.

UV *See* ultraviolet.

uvala [GEOGR] Broad-bottomed lowlands.

U valley *See* U-shaped valley.

uvanite [MINERAL] $U_2V_6O_{21}\cdot 15H_2O$ A brownish-yellow, orthorhombic mineral consisting of a hydrated uranium vanadate; occurs as crystalline masses and coatings.

uvarovite [MINERAL] $Ca_3Cr_2(SiO_4)_3$ The emerald-green, calcium-chromium end member of the garnet group. Also known as ouvarovite; uwarowite.

UV Ceti stars [ASTRON] A class of stars that have brief outbursts of energy over their surface areas; they may have an increase of about 1 magnitude for periods of 1 hour; the type star is UV Ceti. Also known as flare stars.

uvea [ANAT] The pigmented, vascular layer of the eye: the iris, ciliary body, and choroid.

uveitis *See* iridocyclochoroiditis.

uviol glass [MATER] A type of glass that is highly transparent to ultraviolet radiation.

UV stabilizer [CHEM] Any chemical compound that, admixed with a thermoplastic resin, selectively absorbs ultraviolet rays; used to prevent ultraviolet degradation of polymers. Also known as ultraviolet stabilizer.

uvula [ANAT] **1.** A fingerlike projection in the midline of the posterior border of the soft palate. **2.** A lobe of the vermiform process of the lower surface of the cerebellum.

uwarowite *See* uvarovite.

V

V *See* vanadium; volt.

V-1 [ORD] A German robot bomb provided with wings, a horizontal stabilizer, a vertical stabilizer, a rudder, and elevators, and powered by a pulse-jet engine mounted on its back; used in World War II. Also known as buzz bomb.

V-2 [ORD] A large, German, liquid-fuel rocket developed as a ballistic missile during World War II; first launched against England on September 8, 1944, it developed 60,000 pounds (27,000 kilogram-force or 27,000 newtons) of thrust from its rocket engine. Also known as A-4.

VA *See* volt-ampere.

vac *See* millibar.

vacancy [SOLID STATE] A defect in the form of an unoccupied lattice position in a crystal.

vaccination [IMMUNOL] Inoculation of viral or bacterial organisms or antigens to produce immunity in the recipient.

vaccination encephalitis [MED] Encephalitis caused by vaccination with rabies vaccine.

vaccine [IMMUNOL] A suspension of killed or attenuated bacteria or viruses or fractions thereof, injected to produce active immunity.

vaccinia [VET MED] A contagious disease of cows which is characterized by vesicopustular lesions of the skin that are prone to appear on the teats and udder, and which is transmissible to humans by handling infected cows and by vaccination; confers immunity against smallpox. Also known as cowpox.

vacuole [CYTOL] A membrane-bound cavity within a cell; may function in digestion, storage, secretion, or excretion. [GEOL] *See* vesicle.

vacuum [PHYS] **1.** Theoretically, a space in which there is no matter. **2.** Practically, a space in which the pressure is far below normal atmospheric pressure so that the remaining gases do not affect processes being carried on in the space.

vacuum behavior [PSYCH] The carrying out of a series of model action patterns in apparent absence of any obviously appropriate behavior.

vacuum brake [MECH ENG] A form of air brake which operates by maintaining low pressure in the actuating cylinder; braking action is produced by opening one side of the cylinder to the atmosphere so that atmospheric pressure, aided in some designs by gravity, applies the brake.

vacuum brazing [MET] Brazing utilizing a chamber at subatmospheric pressure.

vacuum breaker [ENG] A device used to relieve a vacuum formed in a water supply line to prevent backflow. Also known as backflow preventer.

vacuum capacitor [ELEC] A capacitor with separated metal plates or cylinders mounted in an evacuated glass envelope to obtain a high breakdown voltage rating.

vacuum casting [MET] Metal casting in a vacuum.

vacuum circuit breaker [ELEC] A circuit breaker in which a pair of contacts is hermetically sealed in a vacuum envelope; the contacts are separated by using a bellows to move one of them; an arc is produced by metallic vapor boiled from the electrodes, and is extinguished when the vapor particles condense on solid surfaces.

vacuum cleaner [MECH ENG] An electrically powered mechanical appliance for the dry removal of dust and loose dirt from rugs, fabrics, and other surfaces.

vacuum concrete [CIV ENG] Concrete poured into a framework that is fitted with a vacuum mat to remove water not required for setting of the cement; in this framework, concrete attains its 28-day strength in 10 days and has a 25% higher crushing strength.

vacuum condensing point [CHEM] Temperature at which the sublimate (vaporized solid) condenses in a vacuum. Abbreviated vcp.

vacuum cooling [FOOD ENG] A system of cooling fruits and vegetables prior to shipping; water is caused to evaporate from the surfaces of the food by producing a vacuum around it.

vacuum correction [PHYS] The correction to the reading of a mercury barometer required by the imperfections in the vacuum above the mercury column, due to the presence of water vapor and air; this correction is a function of both temperature and pressure.

vacuum crystallizer [CHEM ENG] Crystallizer in which a warm saturated solution is fed to a lagged, closed vessel maintained under vacuum; the solution evaporates and cools adiabatically, resulting in crystallization.

vacuum degassing [MET] A process for removing gases from a metal either by melting or heating the solid metal in a vacuum.

vacuum deposition [MET] Deposition of a thin coating of metal by condensation on a cool work surface in vacuum.

vacuum diffusion [ELECTR] Diffusion of impurities into a semiconductor material in a continuously pumped hard vacuum.

vacuum distillation [CHEM ENG] Liquid distillation under reduced (less than atmospheric) pressure; used to lower boiling temperatures and lessen the risk of thermal degradation during distillation. Also known as reduced-pressure distillation.

vacuum drying [ENG] The removal of liquid from a solid material in a vacuum system; used to lower temperatures needed for evaporation to avoid heat damage to sensitive material.

vacuum evaporation [ENG] Deposition of thin films of metal or other materials on a substrate, usually through openings in a mask, by evaporation from a boiling source in a hard vacuum.

vacuum evaporator [ENG] A vacuum device used to evaporate metals and spectrographic carbon to coat (replicate) a specimen for electron spectroscopic analysis or for electron microscopy.

vacuum filter [ENG] A filter device into which a liquid-solid slurry is fed to the high-pressure side of a filter medium, with liquid pulled through to the low-pressure side of the medium and a cake of solids forming on the outside of the medium.

vacuum filtration [ENG] The separation of solids from liquids by passing the mixture through a vacuum filter.

vacuum flashing [CHEM ENG] The heating of a liquid that, upon release to a lower pressure (vacuum), undergoes considerable vaporization (flashing). Also known as flash vaporization.

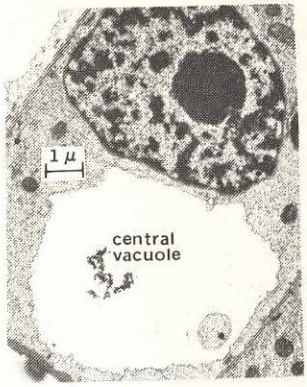
vacuum fluorescent lamp [ELECTR] An evacuated display tube in which the anodes are coated with a phosphor that glows when electrons from the cathode strike it, to create a display.

vacuum forming [ENG] Plastic-sheet forming in which the sheet is clamped to a stationary frame, then heated and drawn down into a mold by vacuum.

vacuum frame [GRAPHICS] In platemaking, a contact printing device that holds copy and reproduction material by means of a vacuum to attain a uniform pressure during exposure.

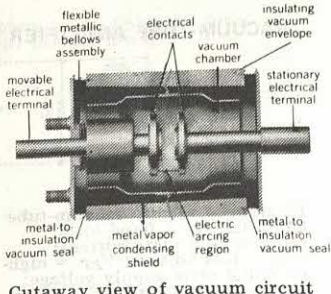
vacuum freeze dryer [ENG] A type of indirect batch dryer used to dry materials that would be destroyed by the loss of

VACUOLE



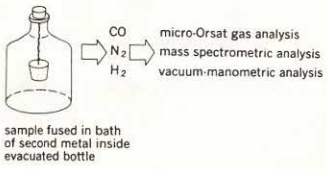
Electron micrograph of a partially mature cell from a developing root tip showing the central vacuole. The osmotic pressure in this vacuole is responsible for the turgor and provides the force to expand the cell to its mature size.

VACUUM CIRCUIT BREAKER



Cutaway view of vacuum circuit breaker showing component parts.

VACUUM FUSION



Apparatus used in the vacuum fusion method for analysis of metals. Oxygen is released from the metal as carbon monoxide by reaction of oxides or dissolved oxygen with carbon from the graphite crucible at high temperature.

VACUUM-TUBE AMPLIFIER

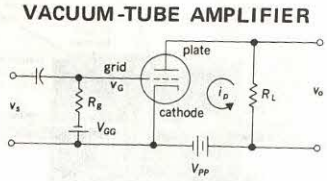


Diagram of a basic vacuum-tube amplifier. R_L = fixed load resistor; i_p = plate current; V_{GG} = bias voltage; V_{PP} = high-potential plate supply voltage; v_G = instantaneous grid voltage; v_s = signal voltage; v_o = output voltage.

volatile ingredients or by drying temperatures above the freezing point.

vacuum fusion [MET] A technique for determining the oxygen, hydrogen, and sometimes nitrogen content of metals; can be applied to a wide variety of metals with the exception of alkali and alkaline earth metals.

vacuum gage [ENG] A device that indicates the absolute gas pressure in a vacuum system.

vacuum heating [MECH ENG] A two-pipe steam heating system in which a vacuum pump is used to maintain a suction in the return piping, thus creating a positive return flow of air and condensate.

vacuum mat [CIV ENG] A rigid flat metal screen faced by a linen filter, the back of which is kept under partial vacuum; used to suck out surplus air and water from poured concrete to produce a dense, well-shrunk concrete.

vacuum measurement [ENG] The determination of a fluid pressure less in magnitude than the pressure of the atmosphere.

vacuum metallurgy [MET] The melting, shaping, and treating of metals and alloys under reduced pressure that ranges from subatmospheric pressure to ultra-high vacuum.

vacuum pan salt [CHEM ENG] A salt made from salt brine boiled at reduced pressure in a triple-effect evaporator.

vacuum pencil [ENG] A pencillike length of tubing connected to a small vacuum pump, for picking up semiconductor slices or chips during fabrication of solid-state devices.

vacuum phototube [ELECTR] A phototube that is evacuated to such a degree that its electrical characteristics are essentially unaffected by gaseous ionization; in a gas phototube, some gas is intentionally introduced.

vacuum plating [MET] Producing a surface film of metal on a heated surface, often in a vacuum, either by decomposition of the vapor of a compound at the work surface, or by direct reaction between the work surface and the vapor. Also known as vapor deposition.

vacuum polarization [QUANT MECH] A process in which an electromagnetic field gives rise to virtual electron-positron pairs that effectively alter the distribution of charges and currents that generated the original electromagnetic field.

vacuum printing frame [GRAPHICS] A frame employed in the graphic arts to keep materials flat or to keep them in absolute contact with one another; the frame is useful in making positives, contact prints, screened tints, and plates.

vacuum pump [MECH ENG] A compressor for exhausting air and noncondensable gases from a space that is to be maintained at subatmospheric pressure.

vacuum relay [ELEC] A sensitive relay having its contacts mounted in a highly evacuated glass housing, to permit handling radio-frequency voltages as high as 20,000 volts without flashover between contacts even though contact spacing is but a few hundredths of an inch when open.

vacuum relief valve [ENG] A pressure relief device which is designed to allow fluid to enter a pressure vessel in order to avoid extreme internal vacuum.

vacuum shelf dryer [ENG] A type of indirect batch dryer which generally consists of a vacuum-tight cubical or cylindrical chamber of cast-iron or steel plate, heated supporting shelves inside the chamber, a vacuum source, and a condenser; used extensively for drying pharmaceuticals, temperature-sensitive or easily oxidizable materials, and small batches of high-cost products where any product loss must be avoided.

vacuum support [MECH ENG] That portion of a rupture disk device which prevents deformation of the disk resulting from vacuum or rapid pressure change.

vacuum switch [ELEC] A switch having its contacts in an evacuated envelope to minimize sparking.

vacuum thermobalance [ANALY CHEM] An instrument used in thermogravimetry consisting of a precision balance and furnace that have been adapted for continuously measuring or recording changes in weight of a substance as a function of temperature; used in many types of physicochemical reactions where rates of reaction and energies of activation for vaporization, sublimation, and chemical reaction can be obtained.

vacuum tube [ELECTR] An electron tube evacuated to such a degree that its electrical characteristics are essentially unaffected by the presence of residual gas or vapor.

vacuum-tube amplifier [ELECTR] An amplifier employing one or more vacuum tubes to control the power obtained from a local source.

vacuum-tube circuit [ELECTR] An electric circuit in which a vacuum tube is connected.

vacuum-tube clipping circuit [ELECTR] A circuit in which a vacuum tube is used to achieve clipping action; the bias at the input is set at such a level that output current cannot flow during a portion of the amplitude excursion of the input voltage or current waveform.

vacuum-tube electrometer [ELECTR] An electrometer in which the ionization current in an ionization chamber is amplified by a special vacuum triode having an input resistance above 10,000 megohms.

vacuum-tube keying [ELECTR] Code-transmitter keying system in which a vacuum tube is connected in series with the plate supply lead of a frequency-controlling stage of the transmitter; when the key is open, the tube blocks, interrupting the plate supply to the output stage; closing the key allows the plate current to flow through the keying tube and the output tubes.

vacuum-tube modulator [ELECTR] A modulator employing a vacuum tube as a modulating element for impressing an intelligence signal on a carrier.

vacuum-tube oscillator [ELECTR] A circuit utilizing a vacuum tube to convert direct-current power into alternating-current power at a desired frequency.

vacuum-tube rectifier [ELECTR] A rectifier in which rectification is accomplished by the unidirectional passage of electrons from a heated electrode to one or more other electrodes within an evacuated space.

vacuum-tube voltmeter [ENG] Any of several types of instrument in which vacuum tubes, acting as amplifiers or rectifiers, are used in circuits for the measurement of alternating-current or direct-current voltage. Abbreviated VTVM. Also known as tube voltmeter.

vacuum-type insulation [CHEM ENG] Highly reflective double-wall structure with high vacuum between the walls; used as insulation for cryogenic systems; Dewar flasks have vacuum-type insulation.

vacuum ultraviolet radiation [ELECTROMAG] Ultraviolet radiation with a wavelength of less than 200 nanometers; absorption of radiation in this region by air and other gases requires the use of evacuated apparatus for transmission. Also known as extreme ultraviolet radiation.

vacuum ultraviolet spectroscopy [SPECT] Absorption spectroscopy involving electromagnetic wavelengths shorter than 200 nanometers; so called because the interference of the high absorption of most gases necessitates work with evacuated equipment.

vadose water [HYD] Water in the zone of aeration. Also known as kremastic water; suspended water; wandering water.

vadose zone *See* zone of aeration.

vaesite [MINERAL] NiS_2 An isometric mineral with pyrite structure composed of sulfide of nickel.

vagility [ECOL] The ability of organisms to disseminate.

vagina [ANAT] The canal from the vulvar opening to the cervix uteri.

vagina fibrosa tendinis [ANAT] A fibrous sheath surrounding the tendon of a muscle and usually confining the tendon in a bony groove.

vaginal protocele *See* rectocele.

vaginate [BIOL] Invested in a sheath.

vaginismus [MED] Painful vaginal spasm.

vaginitis [MED] **1.** Inflammation of the vagina. **2.** Inflammation of a tendon sheath.

vagotonine [BIOCHEM] An endocrine substance which is thought to be elaborated by cells of the pancreas and which regulates autonomic tonus.

vagus [ANAT] The tenth cranial nerve; either of a pair of sensory and motor nerves forming an important part of the parasympathetic system in vertebrates.

Väisälä period [ACOUS] The natural period of oscillation of a small parcel of air which is displaced adiabatically in a vertical direction, in an isothermal atmosphere horizontally stratified by gravity; equal to 337 seconds for a sound velocity of 333 meters per second.

valais wind [METEOROL] The notable valley wind that blows along the Rhone Valley from the upper end of Lake Geneva (Valais Canton); it is sufficiently strong and regular to distort the growth of trees.

valence [BIOCHEM] The relative ability of a biological substance to react or combine. [CHEM] A positive number that characterizes the combining power of an element for other

elements, as measured by the number of bonds to other atoms which one atom of the given element forms upon chemical combination; hydrogen is assigned valence 1, and the valence is the number of hydrogen atoms, or their equivalent, with which an atom of the given element combines. [MATH] The number of lines incident on a specified point of a graph.

valence angle *See* bond angle.

valence band [SOLID STATE] The highest electronic energy band in a semiconductor or insulator which can be filled with electrons.

valence bond [PHYS CHEM] The bond formed between the electrons of two or more atoms.

valence-bond method [PHYS CHEM] A method of calculating binding energies and other parameters of molecules by taking linear combinations of electronic wave functions, some of which represent covalent structures, others ionic structures; the coefficients in the linear combination are calculated by the variational method. Also known as valence-bond resonance method.

valence-bond resonance method *See* valence-bond method.

valence-bond theory [CHEM] A theory of the structure of chemical compounds according to which the principal requirements for the formation of a covalent bond are a pair of electrons and suitably oriented electron orbitals on each of the atoms being bonded; the geometry of the atoms in the resulting coordination polyhedron is coordinated with the orientation of the orbitals on the central atom.

valence crystal *See* covalent crystal.

valence electron [ATOM PHYS] An electron that belongs to the outermost shell of an atom. [SOLID STATE] *See* conduction electron.

valence number [CHEM] A number that is equal to the valence of an atom or ion multiplied by $+1$ or -1, depending on whether the ion is positive or negative, or equivalently on whether the atom in the molecule under consideration has lost or gained electrons from its free state.

valence shell [ATOM PHYS] The electrons that form the outermost shell of an atom.

valence transition [PHYS CHEM] A change in the electronic occupation of the $4f$ or $5f$ orbitals of the rare-earth or actinide atoms in certain substances at a certain temperature, pressure, or composition.

valencianite [MINERAL] A variety of potassium feldspar from Mexico.

valentinite [MINERAL] Sb_2O_3 A colorless to snow white mineral consisting of antimony trioxide.

valeral *See* *n*-valeraldehyde.

***n*-valeraldehyde** [ORG CHEM] $CH_3(CH_2)_3CHO$ A flammable liquid, soluble in ether and alcohol, slightly soluble in water; boils at 102°C; used in flavors and as a rubber accelerator. Also known as amyl aldehyde; valeral; valeric aldehyde.

valeramide [ORG CHEM] $CH_3(CH_2)_3CONH_2$ Water-soluble, colorless crystals, melting at 127°C. Also known as pentanamide; valeric amide.

valerianic acid *See* valeric acid.

valerian oil [MATER] A combustible, yellow to brown liquid with a penetrating aroma; soluble in alcohol, acetone, and other organic solvents; derived from the roots and rhizome of the garden heliotrope (*Valeriana officinalis*), the main components being pinene, camphene, borneol, and esters; used in medicine, flavors, and industrial odorants and to perfume tobacco.

valeric acid [ORG CHEM] $CH_3(CH_2)_3COOH$ A combustible, toxic, colorless liquid with a penetrating aroma; soluble in water, alcohol, and ether; boils at 185°C; used to make flavors, perfumes, lubricants, plasticizers, and pharmaceuticals. Also known as *n*-pentanoic acid; valerianic acid.

valeric aldehyde *See* *n*-valeraldehyde.

valeric amide *See* valeramide.

γ-valerolactone [ORG CHEM] $C_5H_8O_2$ A combustible, mostly immiscible, colorless liquid, boiling at 205°C; used as a dye-bath coupling agent, in brake fluids and cutting oils, and as a solvent for adhesives, lacquers, and insecticides.

valid [SYST] Describing a taxon classified on the basis of distinctive characters of accepted importance.

validation [COMPUT SCI] The act of testing for compliance with a standard.

validity [MATH] Correctness; especially the degree of closeness by which iterated results approach the correct result.

validity check [COMPUT SCI] Computer check of input data, based on known limits for variables in given fields.

valid program [COMPUT SCI] A computer program whose statements, individually and together, follow the syntactical rules of the programming language in which it is written, so that they are capable of being translated into a machine language program.

valine [BIOCHEM] $C_5H_{11}NO_2$ An amino acid considered essential for normal growth of animals, and biosynthesized from pyruvic acid. Also known as 2-aminoisovaleric acid; α-aminoisovaleric acid; 2-amino-3-methylbutyric acid.

vallate papilla [ANAT] One of the large, flat papillae, each surrounded by a trench, in a group anterior to the sulcus terminalis of the tongue. Also known as circumvallate papilla.

vallerite [MINERAL] $CuFeS_2$ A sulfide mineral found in meteorites.

valley [BUILD] An inside angle formed where two sloping sides intersect. [GEOGR] A generally broad area of flat, low-lying land bordered by higher ground. [GEOL] A relatively shallow, wide depression of the sea floor with gentle slopes. Also known as submarine valley.

valley attenuation [ELECTR] For an electric filter with an equal ripple characteristic, the maximum attenuation occurring at a frequency between two frequencies where the attenuation reaches a minimum value.

valley bottom *See* valley floor.

valley breeze [METEOROL] A gentle wind blowing up a valley or mountain slope in the absence of cyclonic or anticyclonic winds, caused by the warming of the mountainside and valley floor by the sun.

valley fill [GEOL] Unconsolidated sedimentary deposit which fills or partly fills a valley.

valley flat [GEOL] The small plain at the bottom of a narrow valley with steep sides.

valley floor [GEOL] The broad, flat bottom of a valley. Also known as valley bottom; valley plain.

valley glacier [HYD] A glacier that flows down the walls of a mountain valley.

valley iceberg [OCEANOGR] An iceberg weathered in such a manner that a large U-shaped slot extends through the iceberg. Also known as drydock iceberg.

valley line *See* thalweg.

valley plain *See* valley floor.

valley rafter [BUILD] A part of the roof frame that extends diagonally from an inside corner plate to the ridge board at the intersection of two roof surfaces.

valley train [GEOL] A long, narrow body of outwash, deposited by meltwater far beyond the margin of an active glacier and extending along the floor of a valley. Also known as outwash train.

valley wind [METEOROL] A wind which ascends a mountain valley (up-valley wind) during the day; the daytime component of a mountain and valley wind system.

Valoniaceae [BOT] A family of green algae in the order Siphonocladales consisting of plants that are essentially unicellular, coenocytic vesicles, spherical or clavate, and up to 6 centimeters in diameter.

valuation [MATH] A scalar function of a field which has properties similar to those of absolute value.

value [SCI TECH] The magnitude of a quantity.

value-added network [COMMUN] A communications network that provides not only communications channels but also other services such as automatic error detection and correction, protocol conversions, and store-and-forward message services.

value analysis *See* value engineering.

value control *See* value engineering.

value engineering [IND ENG] The systematic application of recognized techniques which identify the function of a product or service, and provide the necessary function reliably at lowest overall cost. Also known as value analysis; value control.

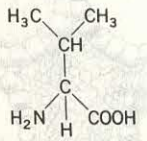
value of isotope mixture [CHEM] A measure of the effort required to prepare a quantity of an isotope mixture; it is proportional to the amount of the mixture, and also depends on the composition of the mixture to be prepared and the composition of the original mixture.

value theory [SYS ENG] A concept normally associated with decision theory; it strives to evaluate relative utilities of simple and mixed parameters which can be used to describe outcomes.

Valvatacea [PALEON] A superfamily of extinct gastropod mollusks in the order Prosobranchia.

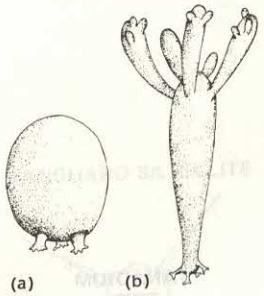
valvate [BOT] Having valvelike parts, as those which meet edge to edge or which open as if by valves.

VALINE



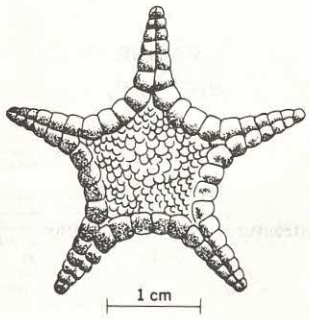
Structural formula of valine.

VALONIACEAE



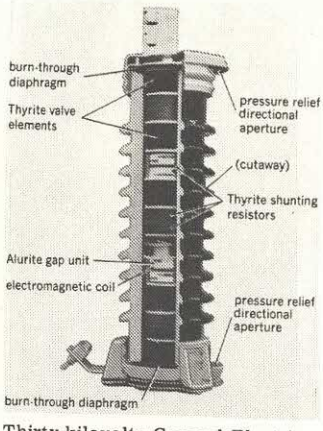
Valonia. *(a)* Spherical form. *(b)* Clavate form.

VALVATINA



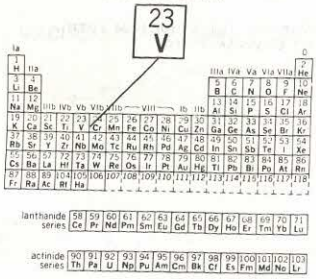
A representative valvate starfish, *Iconaster pierectus. (After A. G. Fisher, 1919)*

VALVE ARRESTER



Thirty-kilovolts General Electric Alugard station lightning arrester, of valve type. *(General Electric Co.)*

VANADIUM



Periodic table of the chemical elements showing the position of vanadium.

Valvatida [INV ZOO] An order of echinoderms in the subclass Asteroidea.

Valvatina [INV ZOO] A suborder of echinoderms in the order Phanerozonida in which the upper marginals lie directly over, and not alternate with, the corresponding lower marginals.

valve [ANAT] A flat of tissue, as in the veins or between the chambers in the heart, which permits movement of fluid in one direction only. [BOT] **1.** A segment of a dehiscing capsule or legume. **2.** The lidlike portion of certain anthers. [ELECTR] *See* electron tube. [INV ZOO] **1.** One of the distinct, articulated pieces composing the shell of certain animals, such as barnacles and brachiopods. **2.** One of two shells encasing the body of a bivalve mollusk or a diatom. [MECH ENG] A device used to regulate the flow of fluids in piping systems and machinery.

valve arrester [ELEC] A type of lightning arrester which consists of a single gap or multiple gaps in series with current-limiting elements; gaps between spaced electrodes prevent flow of current through the arrester except when the voltage across them exceeds the critical gap flashover.

valve follower [MECH ENG] A linkage between the cam and the push rod of a valve train.

valve guide [MECH ENG] A channel which supports the stem of a poppet valve for maintenance of alignment.

valve head [MECH ENG] The disk part of a poppet valve that gives a tight closure on the valve seat.

valve-in-head engine *See* overhead-valve engine.

valve lifter [MECH ENG] A device for opening the valve of a cylinder as in an internal combustion engine.

valve positioner [CONT SYS] A pneumatic servomechanism which is used as a component in process control systems to improve operating characteristics of valves by reducing hysteresis. Also known as pneumatic servo.

valve seat [DES ENG] The circular metal ring on which the valve head of a poppet valve rests when closed.

valve stem [MECH ENG] The rod by means of which the disk or plug is moved to open and close a valve.

valve train [MECH ENG] The valves and valve-operating mechanism for the control of fluid flow to and from a piston-cylinder machine, for example, steam, diesel, or gasoline engine.

Valvifera [INV ZOO] A suborder of isopod crustaceans distinguished by having a pair of flat, valvelike uropods which hinge laterally and fold inward beneath the rear part of the body.

valvula [BIOL] A small valve. [INV ZOO] One of the small processes forming a sheath for the ovipositor in certain insects.

valvulate [BIOL] Having valvules.

vamidothion [ORG CHEM] $C_7H_{16}NO_4PS_2$ A white wax with a melting point of 40°C; very soluble in water; used to control pests in orchards, vineyards, rice, cotton, and ornamentals. Also known as *O,O*-dimethyl-*S*-{2-[(1-methylcarbamoylethyl)thio]ethyl}phosphorodithioate.

vampire [VERT ZOO] The common name for bats making up the family Desmodontidae which have teeth specialized for cutting and which subsist on a blood diet.

Vampyrellidae [INV ZOO] A family of protozoans in the order Proteomyxida including species which invade filamentous algae and sometimes higher plants.

Vampyromorpha [INV ZOO] An order of dibranchiate cephalopod mollusks represented by *Vampyroteuthis infernalis*, an inhabitant of the deeper waters of tropical and temperate seas.

van [MIN ENG] **1.** A test of the value of an ore, made by washing (vanning) a small quantity, after powdering it, on the point of a shovel. **2.** To separate, as ore from veinstone, by washing it on the point of a shovel. **3.** A shovel used in ore dressing.

vanadate [MINERAL] Any of several mineral compounds characterized by pentavalent vanadium and oxygen in the anion; an example is vanadinite.

vanadic acid [INORG CHEM] Any of various acids that do not exist in a pure state and are found in various alkali and other metal vanadates; forms are meta- (HVO_3), ortho- (H_3VO_4), and pyro- ($H_4V_2O_7$).

vanadic acid anhydride *See* vanadium pentoxide.

vanadic sulfate *See* vanadyl sulfate.

vanadic sulfide *See* vanadium sulfide.

vanadinite [MINERAL] $Pb_5(VO_4)_3Cl$ A red, yellow, or brown opatite mineral often occurring as globular masses encrusting other minerals in lead mines; an ore of vanadium and lead hardness is 2.75–3 on Mohs scale, and specific gravity is 6.66–7.10.

vanadium [CHEM] A metal in group Vb, symbol V, atomic number 23; soluble in strong acids and alkalies; melts at 1900°C, boils about 3000°C; used as a catalyst. [MET] A silvery-white, ductile metal resistant to corrosion; used in alloy steels and as an x-ray target.

vanadium carbide [INORG CHEM] VC Hard, black crystals, melting at 2800°C, boiling at 3900°C; insoluble in acids, except nitric acid; used in cutting-tool alloys and as a steel additive.

vanadium dichloride [INORG CHEM] VCl_2 Toxic, green crystals, soluble in alcohol and ether; decomposes in hot water; used as a reducing agent. Also known as vanadous chloride.

vanadium oxide [INORG CHEM] A compound of vanadium with oxygen, for example, vanadium tetroxide (V_2O_4), vanadium trioxide or sesquioxide (V_2O_3), vanadium oxide (VO), and vanadium pentoxide (V_2O_5).

vanadium oxydichloride *See* vanadyl chloride.

vanadium oxytrichloride [INORG CHEM] $VOCl_3$ A toxic, yellow liquid that dissolves or reacts with many organic substances; hydrolyzes in moisture; boils at 126°C; used as an olefin-polymerization catalyst and in organovanadium synthesis.

vanadium pentasulfide *See* vanadium sulfide.

vanadium pentoxide [INORG CHEM] V_2O_5 A toxic, yellow to red powder, soluble in alkalies and acids, slightly soluble in water; melts at 690°C; used in medicine, as a catalyst, as a ceramics coloring, for ultraviolet-resistant glass, photographic developers, textiles dyeing, and nuclear reactors. Also known as vanadic acid anhydride.

vanadium sesquioxide *See* vanadium trioxide.

vanadium steel [MET] A low-alloy steel containing 0.10–0.15% vanadium.

vanadium sulfate *See* vanadyl sulfate.

vanadium sulfide [INORG CHEM] V_2S_5 A toxic, black-green powder; insoluble in water, soluble in alkalies and acids; decomposes when heated; used to make vanadium compounds. Also known as vanadic sulfide; vanadium pentasulfide.

vanadium tetrachloride [INORG CHEM] VCl_4 A toxic, red liquid; soluble in ether and absolute alcohol; boils at 154°C; used in medicine and to manufacture vanadium and organovanadium compounds.

vanadium tetraoxide [INORG CHEM] V_2O_4 A toxic blue-black powder; insoluble in water, soluble in alkalies and acids; melts at 1967°C; used as a catalyst.

vanadium trichloride [INORG CHEM] VCl_3 Toxic, deliquescent, pink crystals; soluble in ether and absolute alcohol; decomposes in water and when heated; used to prepare vanadium and organovanadium compounds.

vanadium trioxide [INORG CHEM] V_2O_3 Toxic, black crystals; soluble in alkalies and hydrofluoric acid, slightly soluble in water; melts at 1970°C; used as a catalyst. Also known as vanadium sesquioxide.

vanadous chloride *See* vanadium dichloride.

vanadyl chloride [INORG CHEM] $V_2O_2Cl_4 \cdot 5H_2O$ Toxic, deliquescent, water- and alcohol-soluble green crystals; used to mordant textiles. Also known as divanadyl tetrachloride; vanadium oxydichloride; vanadyl dichloride.

vanadyl dichloride *See* vanadyl chloride.

vanadyl sulfate [INORG CHEM] $VOSO_4 \cdot 2H_2O$ Blue, toxic, water-soluble crystals; used as a reducing agent, catalyst, glass and ceramics colorant, and mordant. Also known as vanadic sulfate; vanadium sulfate.

Van Allen radiation belt [GEOPHYS] One of the belts of intense ionizing radiation in space about the earth formed by high-energy charged particles which are trapped by the geomagnetic field.

Van Atta array [ELECTROMAG] Antenna array in which pairs of corner reflectors or other elements equidistant from the center of the array are connected together by a low-loss transmission line in such a way that the received signal is reflected back to its source in a narrow beam to give signal enhancement without amplification.

vancomycin [MICROBIO] A complex antibiotic substance produced by *Streptomyces orientalis;* useful for treatment of severe staphylococcic infections.

van Crevald–von Gierke's disease *See* von Gierke's disease.

Van Deemter rate theory [ANALY CHEM] A theory that the

sample phase in gas chromatography flows continuously, not stepwise.

Van de Graaff accelerator [ELECTR] A Van de Graaff generator equipped with an evacuated tube through which charged particles may be accelerated.

Van de Graaff generator [ELECTR] A high-voltage electrostatic generator in which electrical charge is carried from ground to a high-voltage terminal by means of an insulating belt and is discharged onto a large, hollow metal electrode.

Van den Bergh reaction [PATH] A liver function test in which diazotized serum or plasma is compared with a standard solution of diazotized bilirubin.

vandenbrandite [MINERAL] $CuO{\cdot}UO_3{\cdot}2H_2O$ A dark green to black mineral consisting of a hydrated oxide of copper and uranium; occurs in small crystals and massive form.

Vandermonde determinant [MATH] The determinant of the $n \times n$ matrix whose ith row appears as $1, x_i, x_i^2, \ldots, x_i^{n-1}$ where the x_i^k appear as variables in a given polynomial equation; this provides information about the roots.

Vandermonde's theorem [MATH] Represents a binomial $(x + y)^a$, where a is an exponent involving the variables x and y, in terms of a sum of expressions $x^c y^d$ where the exponents c and d involve the variables x and y also.

Van der Pol oscillator [ELECTR] A type of relaxation oscillator which has a single pentode tube and an external circuit with a capacitance that causes the device to switch between two values of the screen voltage. [PHYS] A vibrating system that is governed by an equation of the form $\ddot{x} + \epsilon(-x + \frac{1}{3}x^3) + x = 0$.

van der Waals adsorption [PHYS CHEM] Adsorption in which the cohesion between gas and solid arises from van der Waals forces.

van der Waals attraction *See* van der Waals force.

van der Waals covolume [PHYS CHEM] The constant b in the Van der Waals equation, which is approximately four times the volume of an atom of the gas in question multiplied by Avogadro's number.

van der Waals equation [PHYS CHEM] An empirical equation of state which takes into account the finite size of the molecules and the attractive forces between them: $p = [RT/(v - b)] - (a/v^2)$, where p is the pressure, v is the volume per mole, T is the absolute temperature, R is the gas constant, and a and b are constants.

van der Waals force [PHYS CHEM] An attractive force between two atoms or nonpolar molecules, which arises because a fluctuating dipole moment in one molecule induces a dipole moment in the other, and the two dipole moments then interact. Also known as dispersion force; London dispersion force; van der Waals attraction.

van der Waals–London interactions [PHYS CHEM] The interaction associated with the van der Waals force.

van der Waals structure [CRYSTAL] The structure of a molecular crystal.

van der Waals surface tension formula [THERMO] An empirical formula for the dependence of the surface tension on temperature: $\gamma = Kp_c^{2/3}T_c^{1/3}(1 - T/T_c)^n$, where γ is the surface tension, T is the temperature, T_c and p_c are the critical temperature and pressure, K is a constant, and n is a constant equal to approximately 1.23.

Van Dorn sampler [ENG] A sediment sampler that consists of a Plexiglas cylinder closed at both ends by rubber force cups; in the armed position the cups are pulled outside the cylinder and restrained by a releasing mechanism, and after the sample is taken, a length of surgical rubber tubing connecting the cups is sufficiently prestressed to permit the force cups to retain the sample in the cylinder.

vandyke [GRAPHICS] A process used for photocopying; the material is paper-sensitized with ferric iron and silver salts and then exposed to strong light; upon processing, a negative print of white lines on a brown background results; from this a brown-line print can be made.

vane [AERO ENG] A device that projects ahead of an aircraft to sense gusts or other actions of the air so as to create impulses or signals that are transmitted to the control system to stabilize the aircraft. [MECH ENG] A flat or curved surface exposed to a flow of fluid so as to be forced to move or to rotate about an axis, to rechannel the flow, or to act as the impeller; for example, in a steam turbine, propeller fan, or hydraulic turbine. [NAV] A sight on an instrument used for observing bearings, such as on a pelorus or azimuth circle.

vane anemometer [ENG] A portable instrument used to measure low wind speeds and airspeeds in large ducts; consists of a number of vanes radiating from a common shaft and set to rotate when facing the wind.

vane-anode magnetron [ELECTR] Cavity magnetron in which the walls between adjacent cavities have parallel plane surfaces.

vane attenuator *See* flap attenuator.

vane feather *See* contour feather.

vane motor rotary actuator [MECH ENG] A type of rotary motor actuator which consists of a rotor with several spring-loaded sliding vanes in an elliptical chamber; hydraulic fluid enters the chamber and forces the vanes before it as it moves to the outlets.

vane-type instrument [ENG] A measuring instrument utilizing the force of repulsion between fixed and movable magnetized iron vanes, or the force existing between a coil and a pivoted vane-shaped piece of soft iron, to move the indicating pointer.

Vaneyellidae [INV ZOO] A family of holothurian echinoderms in the order Dactylochirotida.

vang [NAV ARCH] **1.** A rope which supports or holds steady a boom or spar. **2.** In particular, one of the two ropes which run from the top of the gaff and steady it when the sail is not set.

Vanguard satellite [AERO ENG] One of three artificial satellites launched by the United States in 1958 and 1959, using a modified Viking rocket, as a part of the International Geophysical Year program; *Vanguard 1* was the first spacecraft to use solar cells.

Vanhorniidae [INV ZOO] A monospecific family of the Hymenoptera in the superfamily Proctotrupoidea.

vanilla extract [FOOD ENG] Flavoring prepared from vanilla beans with or without the addition of sugar, dextrose, or glycerol; contains soluble matter from not less than 10 grams of vanilla beans in 100 milliliters.

vanillic aldehyde *See* vanillin.

vanillin [ORG CHEM] $C_8H_8O_3$ A combustible solid, soluble in water, alcohol, ether, and chloroform; melts at 82°C; used in pharmaceuticals, perfumes, and flavors, and as an analytical reagent. Also known as vanillic aldehyde.

vanishing tide [OCEANOGR] When a high water and low water "melt" together into a period of several hours with a nearly constant water level.

vanner [MIN ENG] A machine for dressing ore; the name is given to various patented devices in which the peculiar motions of the shovel in the miner's hands in the operation of making a van are, or are supposed to be, successfully imitated. Also known as vanning machine.

vanning machine *See* vanner.

vanoxite [MINERAL] $V_4^{4}\,V_2^{5}\,O_{13}{\cdot}8H_2O$ A black mineral consisting of a hydrous oxide of vanadium; occurs as microscopic crystals and in massive form.

V antenna [ELECTROMAG] An antenna having a V-shaped arrangement of conductors fed by a balanced line at the apex; the included angle, length, and elevation of the conductors are proportioned to give the desired directivity. Also spelled vee antenna.

van't Hoff equation [PHYS CHEM] An equation for the variation with temperature T of the equilibrium constant K of a gaseous reaction in terms of the heat of reaction at constant pressure, ΔH: $d(\ln K)/dT = \Delta H/RT^2$, where R is the gas constant. Also known as van't Hoff isochore.

van't Hoff factor [PHYS] The ratio of the observed osmotic pressure of a solution to that predicted by van't Hoff's law.

van't Hoff formula [ORG CHEM] The expression that the number of stereoisomers of a sugar molecule is equal to 2^n, where n is the number of asymmetric carbon atoms.

van't Hoff isochore *See* van't Hoff equation.

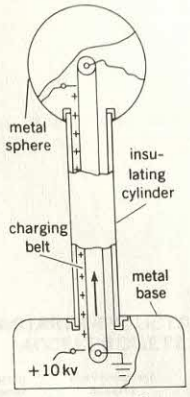
van't Hoff isotherm [PHYS CHEM] An equation for the change in free energy during a chemical reaction in terms of the reaction, the temperature, and the concentration and number of molecules of the reactants.

vanthoffite [MINERAL] $Na_6Mg(SO_4)_4$ A colorless mineral consisting of a sulfate of sodium and magnesium; occurs in massive form.

van't Hoff's law [PHYS] The law that the osmotic pressure of a dissolved substance equals the gas pressure it would exert if it were an ideal gas that occupied the same volume as that of the solution.

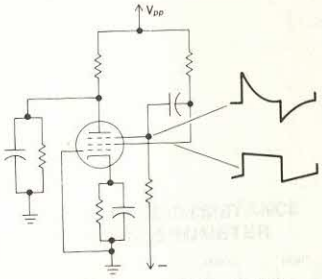
Van Vleck equation [QUANT MECH] An equation based on

VAN DE GRAAFF GENERATOR



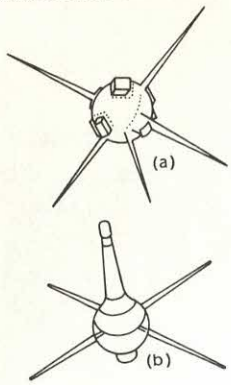
Schematic drawing of Van de Graaff generator for operation in air at atmospheric pressure.

VAN DER POL OSCILLATOR



Circuit diagram of Van der Pol oscillator showing waveform. V_{pp} = plate supply voltage.

VANGUARD SATELLITE



Two spacecraft in the Vanguard program: *(a) Vanguard 1; (b) Vanguard 3.*

quantum theory for the molar paramagnetism of a magnetically susceptible material from magnetic moment, absolute temperature, and various constants.

Van Vleck paramagnetism [QUANT MECH] The paramagnetism of a collection of atoms, ions, or molecules, as computed by quantum theory; the atoms, ions, or molecules in a magnetic field are distributed among the various allowed energy levels according to a Boltzmann distribution, and the magnetization of the system is computed by finding the average component of angular momentum parallel to the field.

vapor [THERMO] A gas at a temperature below the critical temperature, so that it can be liquefied by compression, without lowering the temperature.

vapor barrier [CIV ENG] A layer of material applied to the inner (warm) surface of a concrete wall or floor to prevent absorption and condensation of moisture.

vapor blasting [MET] Cleaning the surface of a metal with a fine abrasive suspended in water and propelled at high speed by air or steam. Also known as liquid honing; vapor honing.

vapor-compression cycle [MECH ENG] A refrigeration cycle in which refrigerant is circulated through a machine which allows for successive boiling (or vaporization) of liquid refrigerant as it passes through an expansion valve, thereby producing a cooling effect in its surroundings, followed by compression of vapor to liquid.

vapor cycle [THERMO] A thermodynamic cycle, operating as a heat engine or a heat pump, during which the working substance is in, or passes through, the vapor state.

vapor degreasing [ENG] A type of cleaning procedure for metals to remove grease, oils, and lightly attached solids; a solvent such as trichloroethylene is boiled, and its vapors are condensed on the metal surfaces.

vapor deposition *See* vacuum plating.

vapor-dominated hydrothermal reservoir [GEOL] Any geothermal system mainly producing dry steam; the Geysers area of northern California and the Larderelle region of Italy are two examples.

vapor-filled thermometer [ENG] A gas- or vapor-filled temperature measurement device that moves or distorts in response to temperature-induced pressure changes from the expansion or contraction of the sealed, vapor-containing chamber.

vapor honing *See* vapor blasting.

vaporimeter [ENG] An instrument used to measure a substance's vapor pressure, especially that of an alcoholic liquid, in order to determine its alcohol content.

vaporization *See* volatilization.

vaporization cooling [ENG] Cooling by volatilization of a nonflammable liquid having a low boiling point and high dielectric strength; the liquid is flowed or sprayed on hot electronic equipment in an enclosure where it vaporizes, carrying the heat to the enclosure walls, radiators, or heat exchanger. Also known as evaporative cooling.

vaporizer [CHEM ENG] A process vessel in which a liquid is heated until it vaporizes; heat can be indirect (steam or heat-transfer fluid) or direct (hot gases or submerged combustion).

vapor lamp *See* discharge lamp.

vapor-liquid equilibrium *See* liquid-vapor equilibrium.

vapor-liquid separation [CHEM ENG] The removal of liquid droplets from a flowing stream of gas or vapor; accomplished by impingement, cyclonic action, and absorption or adsorption operations.

vapor lock [FL MECH] Interruption of the flow of fuel in a gasoline engine caused by formation of vapor or gas bubbles in the fuel-feeding system.

vapor-phase reactor [CHEM ENG] A heavy steel vessel for carrying out chemical reactions on an industrial scale where efficient control over a vapor phase is needed, for example, in an oxidation process.

vapor pressure [METEOROL] The partial pressure of water vapor in the atmosphere. [THERMO] For a liquid or solid, the pressure of the vapor in equilibrium with the liquid or solid.

vapor-pressure deficit *See* saturation deficit.

vapor-pressure osmometer [ANALY CHEM] A device for the determination of molecular weights by the decrease of vapor pressure of a solvent upon addition of a soluble sample.

vapor-pressure thermometer [ENG] A thermometer in which the vapor pressure of a homogeneous substance is measured and from which the temperature can be determined; used mostly for low-temperature measurements.

vapor rate [CHEM ENG] In distillation, the upward flow rate of vapor through a distillation column.

vapor-recovery unit [ENG] **1.** A device or system to catch vaporized materials (usually fuels or solvents) as they are vented. **2.** In petroleum refining, a process unit to which gases and vaporized gasoline from various processing operations are charged, separated, and recovered for further use.

vapor suppression [NUCLEO] A safety system that can be incorporated in the design of structures housing water-cooled nuclear reactors: the space surrounding the reactor is vented into pools of water open to the outside air; if surges of hot vapor are released from the reactor in an accident, their energy is dissipated in the pools of water; gases not condensed are scrubbed clean of radioactive particles by the bubbling. Also known as pressure suppression.

vapor trail *See* condensation trail.

vapor volume equivalent [PETRO ENG] The volume of vapor to which a specified amount of liquid would be equivalent at designated standard conditions (for example, 14.65 psia and 60°F, or 15.5°C); used in the petroleum industry to calculate the specific gravity of fluids from gas-condensate wells.

var *See* volt-ampere reactive.

VAR *See* visual-aural range.

vara [CIV ENG] A surveyors' unit of length equal to 33⅓ inches (84.7 centimeters).

varactor [ELECTR] A semiconductor device characterized by a voltage-sensitive capacitance that resides in the space-charge region at the surface of a semiconductor bounded by an insulating layer. Also known as varactor diode; variable-capacitance diode; varicap; voltage-variable capacitor.

varactor diode *See* varactor.

varactor tuning [ELECTR] A method of tuning in which varactor diodes are used to vary the capacitance of a tuned circuit.

Varanidae [VERT ZOO] The monitors, a family of reptiles in the suborder Sauria found in the hot regions of Africa, Asia, Australia, and Malaya.

vardar [METEOROL] A cold fall wind blowing from the northwest down the Vardar valley in Greece to the Gulf of Salonica; it occurs when atmospheric pressure over eastern Europe is higher than over the Aegean Sea, as is often the case in winter. Also known as vardarac.

vardarac *See* vardar.

var hour [ELEC] A unit of the integral of reactive power over time, equal to a reactive power of 1 var integrated over 1 hour; equal in magnitude to 3600 joules. Also known as reactive volt-ampere hour; volt-ampere-hour reactive.

variable [COMPUT SCI] A data item, or specific area in main memory, that can assume any of a set of values. [MATH] A symbol which is used to represent some undetermined element from a given set, usually the domain of a function.

variable-area exhaust nozzle [AERO ENG] On a jet engine, an exhaust nozzle of which the exhaust exit opening can be varied in area by means of some mechanical device, permitting variation in the jet velocity.

variable-area meter [ENG] A flowmeter that works on the principle of a variable restrictor in the flowing stream being forced by the fluid to a position to allow the required flow-through.

variable-area track [ENG ACOUS] A sound track divided laterally into opaque and transparent areas; a sharp line of demarcation between these areas corresponds to the waveform of the recorded signal.

variable attenuator [ELECTR] An attenuator for reducing the strength of an alternating-current signal either continuously or in steps, without causing appreciable signal distortion, by maintaining a substantially constant impedance match.

variable-bandwidth filter [ELECTR] An electric filter whose upper and lower cutoff frequencies may be independently selected, so that almost any bandwidth may be obtained; it usually consists of several stages of *RC* filters, each separated by buffer amplifiers; tuning is accomplished by varying the resistance and capacitance values.

variable-block [COMPUT SCI] Pertaining to an arrangement of data in which the number of words or characters in a block can vary, as determined by the programmer.

variable-capacitance diode *See* varactor.

variable capacitor [ELEC] A capacitor whose capacitance can be varied continuously by moving one set of metal plates with respect to another.

variable carrier modulation *See* controlled carrier modulation.

variable ceiling [METEOROL] After United States weather-observing practice, a condition in which the ceiling rapidly increases and decreases while the ceiling observation is being made; the average of the observed values is used as the reported ceiling, and it is reported only for ceilings of less than 3000 feet (914 meters).

variable click track [ENG ACOUS] A click track with irregularly spaced clicks.

variable connector [COMPUT SCI] A flow chart symbol representing a sequence connection which is not fixed, but which can be varied by the flow-charted procedure itself; it corresponds to an assigned GO TO in a programming language such as FORTRAN.

variable costs [IND ENG] Costs which vary directly with the number of units produced; direct labor and material are examples.

variable coupling [ELEC] Inductive coupling that can be varied by moving one coil with respect to another.

variable-cycle engine [AERO ENG] A type of gas turbine jet engine whose cycle parameters, such as pressure ratio, temperature, gas flow paths, and air-handling characteristics, can be varied between those of a turbojet and a turbofan, enabling it to combine the advantages of both.

variable-cycle operation [COMPUT SCI] An operation that requires a variable number of regularly timed execution cycles for its completion.

variable-density sound track [ENG ACOUS] A constant-width sound track in which the average light transmission varies along the longitudinal axis in proportion to some characteristic of the applied signal.

variable-depth sonar [ENG] Sonar in which the projector and receiving transducer are mounted in a watertight pod that can be lowered below a vessel to an optimum depth for minimizing thermal effects when detecting underwater targets.

variable diode function generator [ELECTR] An improvement of a diode function generator in which fully adjustable potentiometers are used for breakpoint and slope resistances, permitting the programming of analytic, arbitrary, and empirical functions, including inflections. Abbreviated VDFG.

variable field [COMPUT SCI] A field of data whose length is allowed to vary within certain specified limits. [PHYS] Field which changes during the time under consideration.

variable flow [FL MECH] Fluid flow in which the velocity changes both with time and from point to point.

variable-focal-length lens *See* zoom lens.

variable-focus condenser [OPTICS] A condenser that is used to obtain a large illuminated field area, and has two lenses, the first of which can be adjusted to bring light to a focus between the lenses.

variable force [MECH] A force whose direction or magnitude or both change with time.

variable geometry aircraft [AERO ENG] Aircraft with variable profile geometry, such as variable sweep wings.

variable inductance *See* variable inductor.

variable-inductance accelerometer [ENG] An accelerometer consisting of a differential transformer with three coils and a mass which passes through the coils and is suspended from springs; the center coil is excited from an external alternating-current power source, and two end coils connected in series opposition are used to produce an ac output which is proportional to the displacement of the mass.

variable inductor [ELECTROMAG] A coil whose effective inductance can be changed. Also known as variable inductance.

variable-length field [COMPUT SCI] A data field in which the number of characters varies, the length of the field being stored within the field itself.

variable-length record [COMPUT SCI] A data or file format that allows each record to be exactly as long as needed.

variable-mu tube [ELECTR] An electron tube in which the amplification factor varies in a predetermined manner with control-grid voltage; this characteristic is achieved by making the spacing of the grid wires vary regularly along the length of the grid, so that a very large negative grid bias is required to block anode current completely. Also known as remote-cutoff tube.

variable nebula [ASTRON] A nebula whose shape and brightness vary; an example is in the constellation Monoceros.

variable parameter [PHYS] A parameter which may be varied to assume any value in some range.

variable-pitch propeller [ENG] A controllable-pitch propeller whose blade angle may be adjusted to any angle between the low and high pitch limits.

variable point [COMPUT SCI] A system of numeration in which the location of the decimal point is indicated by a special character at that position.

variable radio-frequency radiosonde [ENG] A radiosonde whose carrier frequency is modulated by the magnitude of the meteorological variables being sensed.

variable recoil [ORD] In recoil systems, the variation of the length of recoil according to the elevation in such manner as to prevent the gun from striking the ground when fired at high angles.

variable reduction [GRAPHICS] A characteristic of microfilming cameras; the ability to produce various sized images of a single original.

variable-reluctance microphone *See* magnetic microphone.

variable-reluctance pickup [ENG ACOUS] A phonograph pickup that depends for its operation on variations in the reluctance of a magnetic circuit due to the movements of an iron stylus assembly that is a part of the magnetic circuit. Also known as magnetic cartridge; magnetic pickup; reluctance pickup.

variable-reluctance stepper motor [ELEC] A stepper motor having a soft iron rotor with teeth or poles so positioned that they cannot simultaneously align with all the stator poles.

variable-reluctance transducer [ELECTROMAG] A transducer in which a slug of magnetic material is moved between two coils by the displacement being monitored; this changes the reluctance of the coils, thereby changing their impedance.

variable-resistance accelerometer [ENG] Any accelerometer which operates on the principle that electrical resistance of any conductor is a function of its dimensions; when the dimensions of the conductor are varied mechanically, as constant current flows through it, the voltage across it varies as a function of this mechanical excitation; examples include the strain-gage accelerometer, and an accelerometer making use of a slide-wire potentiometer.

variable resistor *See* rheostat.

variable speech control [ELECTR] A method of removing small portions of speech from a tape recording at regular intervals and stretching the remaining sounds to fill the gaps, so that recorded speech can be played back at twice or even 2½ times the original speed without changing pitch and without significant loss of intelligibility. Abbreviated VSC.

variable-speed drive [MECH ENG] A mechanism transmitting motion from one shaft to another that allows the velocity ratio of the shafts to be varied continuously.

variable-speed scanning [ELECTR] Scanning method whereby the speed of deflection of the scanning beam in the cathode-ray tube of a television camera is governed by the optical density of the film being scanned.

variable star [ASTRON] A star that has a detectable change in its intensity which is often accompanied by other physical changes; changes in brightness may be a few thousandths of a magnitude to 20 magnitudes or even more.

variable thickness microbridge [CRYO] A Josephson junction formed by a short, narrow constriction in a thin superconducting film, which is thinner than the rest of the film.

variable-time fuse *See* proximity fuse.

variable-transconductance circuit [ELECTR] A circuit used in four-quadrant multipliers that employs a simple differential transistor pair in which one variable input to the base of one transistor controls the device's gain or transconductance, and one transistor amplifies the other's variable input, applied to the common emitter point, in proportion to the control input.

variable transformer [ELEC] An iron-core transformer having provisions for varying its output voltage over a limited range or continuously from zero to maximum output voltage, generally by means of a contact arm moving along exposed turns of the secondary winding. Also known as adjustable transformer; continuously adjustable transformer.

variable visibility [METEOROL] After United States weather observing practice, a condition in which the prevailing visibility fluctuates rapidly while the observation is being made; the average of the observed values is used as the reported visibility, and it is reported only for visibilities of less than 3 miles (4.8 kilometers).

VARIABLE-INDUCTANCE ACCELEROMETER

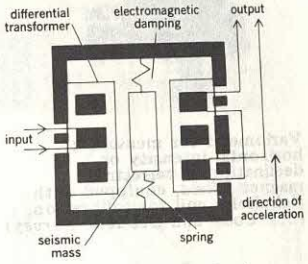


Diagram of variable-inductance accelerometer.

VARIABLE-RESISTANCE ACCELEROMETER

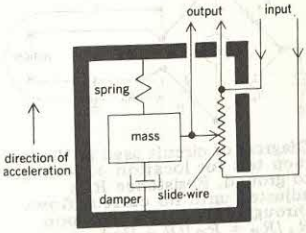

Diagram of type of variable-resistance accelerometer that makes use of slide-wire potentiometer.

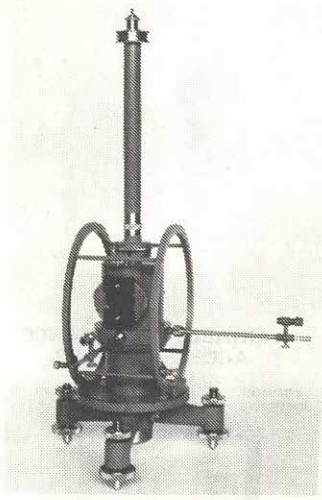
VARIOMETER



Variometer for measuring horizontal intensity or declination of terrestrial magnetic field, equipped with Helmholtz coil for calibration. *(U.S. Coast and Geodetic Survey)*

VARLEY LOOP TEST

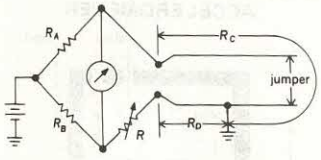


Diagram of circuit used in Varley loop test for location of leakage to ground. Resistance R is adjusted until no current flows through detector, whereupon $R_A/R_B = R_C/(R + R_D)$.

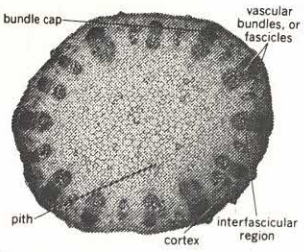
VASCULAR BUNDLE



Cross section of sunflower *(Helianthus)* stem showing vascular bundles.

variable word length [COMPUT SCI] A phrase referring to a computer in which the number of characters addressed is not a fixed number but is varied by the data or instruction.

variance [STAT] The square of the standard deviation.

variance ratio test [STAT] A technique for comparing the spreads or variabilities of two sets of figures to determine whether the two sets of figures were drawn from the same population. Also known as F test.

variant [COMMUN] **1.** One of two or more cipher or code symbols which have the same plain text equivalent. **2.** One of several plain text meanings that are represented by a single code group.

variate difference method [STAT] A technique for estimating the correlation between the random parts of two given time series.

variation *See* declination.

variational inequality [ASTRON] An inequality in the moon's motion, due mainly to the tangential component of the sun's attraction.

variational method [QUANT MECH] A method of calculating an upper bound on the lowest energy level of a quantum-mechanical system and an approximation for the corresponding wave function; in the integral representing the expectation value of the Hamiltonian operator, one substitutes a trial function for the true wave function, and varies parameters in the trial function to minimize the integral.

variational principle [MATH] A technique for solving boundary value problems that is applicable when the given problem can be rephrased as a minimization problem.

variation diagram [PETR] A diagram constructed by plotting the chemical compositions of rocks in an igneous rock series in order to show the genetic relationships and the nature of the processes that have affected the series. Also known as Harker diagram.

variation of latitude [GEOPHYS] Change of the latitude of a place on earth because of the irregular movement of the north and south poles; the movement is caused by the earth's shifting on its axis.

variation per day [GEOPHYS] The change in the value of any geophysical quantity during 1 day.

variation per hour [GEOPHYS] The change in the value of any geophysical quantity during 1 hour.

variation per minute [GEOPHYS] The change in the value of any geophysical quantity during 1 minute.

varicap *See* varactor.

varicella *See* chickenpox.

varicocele [MED] Dilatation of the veins of the pampiniform plexus of the spermatic cord, forming a soft, elastic, often uncomfortable swelling.

varicose [MED] Pertaining to blood vessels that are dilated, knotted, and tortuous.

varicose vein [ANAT] An enlarged tortuous blood vessel that occurs chiefly in the superficial veins and their tributaries in the lower extremities. Also known as varicosity.

varicosity *See* varicose vein.

variegate [BIOL] Having irregular patches of diverse colors.

variegated position effect [GEN] A phenomenon observed in some cases when a chromosome aberration causes a wild-type gene from the euchromatin to be relocated adjacent to heterochromatin; the phenotypic expression of the wild-type allele will be unstable, producing patches of phenotypically mutant tissue that differ from the surrounding wild-type tissue.

variety [SYS ENG] The logarithm (usually to base 2) of the number of discriminations that an observer or a sensing system can make relative to a system. [SYST] A taxonomic group or category inferior in rank to a subspecies.

varifocal lens *See* zoom lens.

Varignon's theorem [MECH] The theorem that the moment of a force is the algebraic sum of the moments of its vector components acting at a common point on the line of action of the force.

varindor [ELECTROMAG] Inductor in which the inductance varies markedly with the current in the winding.

variocoupler [ELECTROMAG] In radio practice, a transformer in which the self-impedance of windings remains essentially constant while the mutual impedance between the windings is adjustable.

variograph [ENG] A recording variometer.

variola *See* smallpox.

variole [GEOL] A spherule the size of a pea, usually consisting of radiating plagioclase or pyroxene crystals.

variolitic [PETR] Referring to the texture of basic igneous rock composed of varioles in a finer-grained matrix.

variolosser [ELEC] Device in which loss can be controlled by a voltage or current.

variometer [ELECTROMAG] A variable inductance having two coils in series, one mounted inside the other, with provisions for rotating the inner coil in order to vary the total inductance of the unit over a wide range. [ENG] A geomagnetic device for detecting and indicating changes in one of the components of the terrestrial magnetic field vector, usually magnetic declination, the horizontal intensity component, or the vertical intensity component.

varioplex [ELEC] Telegraph switching system that establishes connections on a circuit-sharing basis between a multiplicity of telegraph transmitters in one locality and respective corresponding telegraph receivers in another locality over one or more intervening telegraph channels; maximum use of channel capacity is secured by momentarily storing the signals and allocating circuit time in rotation among the transmitters having information in storage.

Variscan orogeny [GEOL] The late Paleozoic orogenic era in Europe, extending through the Carboniferous and Permian. Also known as Hercynian orogeny.

varistor [ELECTR] A two-electrode semiconductor device having a voltage-dependent nonlinear resistance; its resistance drops as the applied voltage is increased. Also known as voltage-dependent resistor.

varix [INV ZOO] A conspicuous ridge across each whorl of certain univalves marking the ancestral position of the outer lip of the aperture. [MED] A dilated and tortuous vein, artery, or lymphatic vessel.

Varley loop test [ELEC] A method of using a Wheatstone bridge to determine the distance from the test point to a fault in a telephone or telegraph line or cable.

var measurement [ELEC] The measurement of reactive power in a circuit.

varmeter [ENG] An instrument for measuring reactive power in vars. Also known as reactive volt-ampere meter.

varnish [MATER] A transparent surface coating which is applied as a liquid and then changes to a hard solid; all varnishes are solutions of resinous materials in a solvent.

varnished cambric [TEXT] Linen or cotton fabric that has been impregnated with varnish or insulating oil and baked; used for electrical insulating purposes, especially for between-layer insulation in transformers.

varnish makers' and painters' naphtha [MATER] A petroleum naphtha that has a narrow boiling range and is used mainly as a thinner in paint and varnish. Abbreviated VM & P naphtha.

varnish paper *See* insulating paper.

varnish tree [BOT] *Rhus vernicifera*. A member of the sumac family (Anacardiaceae) cultivated in Japan; the cut bark exudes a juicy milk which darkens and thickens on exposure and is applied as a thin film to become a varnish of extreme hardness. Also known as lacquer tree.

varulite [MINERAL] $(Na,Ca)(Mn,Fe)_2(PO_4)_2$ An olive green, orthorhombic mineral consisting of a phosphate of sodium, calcium, manganese, and iron; occurs in massive form.

varve [GEOL] A sedimentary bed, layer, or sequence of layers deposited in a body of still water within a year's time, and usually during a season. Also known as glacial varve.

varve clay *See* varved clay.

varved clay [GEOL] A lacustrine sediment of distinct layers consisting of varves. Also known as varve clay.

vasa vasorum [ANAT] The blood vessels supplying the walls of arteries and veins.

vascular bundle [BOT] A strandlike part of the plant vascular system containing xylem and phloem.

vascular cambium [BOT] The lateral meristem which produces secondary xylem and phloem.

vascular nevus [MED] A birthmark arising either as a developmental abnormality or as a postnatal benign neoplasm of a blood vessel.

vascular ray [BOT] A ray derived from cambium and found in the stele of some vascular plants, often separating vascular bundles.

vascular retinopathy [MED] Pathological changes in the retina associated with diseases such as arterial hypertension,

chronic nephritis, eclampsia, and advanced arteriosclerosis. Also known as retinal retinitis.

vascular tissue [BOT] The conducting tissue found in higher plants, consisting principally of xylem and phloem.

vas deferens [ANAT] The portion of the excretory duct system of the testis which runs from the epididymal duct to the ejaculatory duct. Also known as ductus deferens.

vasectomy [MED] Cutting, or removing a section from, the ductus deferens.

vashegyite [MINERAL] $2Al_4(PO_4)_3(OH)_3 \cdot 27H_2O$ A white or pale green to yellow and brownish mineral consisting of a hydrous basic aluminum phosphate; occurs in massive and microcrystalline forms.

vasoconstrictor [PHYSIO] A nerve or an agent that causes blood vessel constriction.

vasodilator [PHYSIO] A nerve or an agent that causes blood vessel dilation.

vasogenic shock [MED] Failure of peripheral circulation due to vasodilation of arterioles and capillaries.

vasomotor center [PHYSIO] A large, diffuse area in the reticular formation of the lower brainstem; stimulation of different portions of this center causes either a rise in blood pressure and tachycardia (pressor area) or a fall in blood pressure and bradycardia (depressor area).

vasopressin [BIOCHEM] A peptide hormone which is elaborated by the posterior pituitary and which has a pressor effect; used medicinally as an antidiuretic. Also known as antidiuretic hormone (ADH).

vasospasm [MED] A spasm of the blood vessels. Also known as angiospasm.

vasotocin [BIOCHEM] A hormone from the neurosecretory cells of the posterior pituitary of lower vertebrates; increases permeability to water in amphibian skin and in bladder.

vat dye [MATER] One of the dyes that are easily reduced to a soluble and colorless form in which they easily impregnate fibers; subsequent oxidation produces the final color; examples are indigo and indanthrene blue.

vaterite [MINERAL] $CaCO_3$ A rare hexagonal mineral consisting of unstable calcium carbonate; it is trimorphous with calcite and aragonite.

vat printing assistant [MATER] The carrier for the dye in the printing of fabrics with vat dyes; a mixture of gums and reducing and wetting agents to assist in penetrating the fabric.

vaudaire [METEOROL] A violent south wind; a foehn of Lake Geneva in Switzerland. Also known as vauderon.

vauderon *See* vaudaire.

vault [ARCH] An arched masonry structure usually forming a ceiling or a roof. [BIOL] An anatomical structure that is arched or dome-shaped.

vauquelinite [MINERAL] $Pb_2Cu(CrO_4)PO_4(OH)$ A monoclinic mineral of varying color, consisting of a basic chromate-phosphate of lead and copper.

vauxite [MINERAL] $FeAl_2(PO_4)_2(OH)_2 \cdot 7H_2O$ A sky blue to Venetian blue, triclinic mineral consisting of a hydrated basic phosphate of iron and aluminum.

V band [ELECTROMAG] A radio-frequency band of 46.0 to 56.0 gigahertz. [SPECT] Absorption bands that appear in the ultraviolet part of the spectrum due to color centers produced in potassium bromide by exposure of the crystal at temperature of liquid nitrogen (81 K) to intense penetrating x-rays.

V-beam radar [ELECTROMAG] A volumetric radar system that uses two fan beams to determine the distance, bearing, and height of a target: one beam is vertical and the other inclined; the beams intersect at ground level and rotate continuously about a vertical axis; the time difference between the arrivals of the echoes of the two beams is a measure of target elevation.

V belt [DES ENG] An endless power-transmission belt with a trapezoidal cross section which runs in a pulley with a V-shaped groove; it transmits higher torque at less width and tension than a flat belt. [MECH ENG] A belt, usually endless, with a trapezoidal cross section which runs in a pulley with a V-shaped groove, with the top surface of the belt approximately flush with the top of the pulley.

V-bend die [MECH ENG] A die with a triangular cross-sectional opening to provide two edges over which bending is accomplished.

V block [ENG] A square or rectangular steel block having a 90° V groove through the center, and sometimes provided with clamps to secure round workpieces.

v-body *See* nucleosome.

V-bucket carrier [MECH ENG] A conveyor consisting of two strands of roller chain separated by V-shaped steel buckets; used for elevating and conveying nonabrasive materials, such as coal.

VCO *See* voltage-controlled oscillator.

V coefficient [QUANT MECH] Either of two coefficients used in the coupling of eigenfunctions of two angular momenta, differing from the Wigner 3-*j* symbol by at most a sign. Symbolized V and $\bar{V}$.

V connection *See* open-delta connection.

vcp *See* vacuum condensing point.

V cut [ENG] In mining and tunneling, a cut where the material blasted out in plan is like the letter V; usually consists of six or eight holes drilled into the face, half of which form an acute angle with the other half.

VD *See* venereal disease.

VDFG *See* variable diode function generator.

VDT *See* display terminal.

veatchite [MINERAL] $Sr_2B_{11}O_{16}(OH)_5 \cdot H_2O$ A white mineral consisting of hydrous strontium borate.

Vectian *See* Aptian.

vectograph [GRAPHICS] A picture or drawing having self-contained light polarization; at each point of such a picture, one can control the direction and magnitude of polarization, and the image can be expressed as a nonuniform vector field.

vectopluviometer [ENG] A rain gage or array of rain gages designed to measure the inclination and direction of falling rain; vectopluviometers may be constructed in the fashion of a wind vane so that the receiver always faces the wind, or they may consist of four or more receivers arranged to point in cardinal directions.

vector [MATH] An element of a vector space. [MED] An agent, such as an insect, capable of mechanically or biologically transferring a pathogen from one organism to another. [NAV] To guide a pilot, navigator, aircraft, or missile from one point to another within a given time by means of a direction communicated to the craft. [PHYS] A quantity which has both magnitude and direction, and whose components transform from one coordinate system to another in the same manner as the components of a displacement. Also known as polar vector.

vector analysis [MATH] The formal study of vectors.

vectorcardiogram [PHYSIO] The part of the pathway of instantaneous vectors during one cardiac cycle. Also known as monocardiogram.

vectorcardiography [PHYSIO] A method of recording the magnitude and direction of the instantaneous cardiac vectors.

vector coupling coefficient [QUANT MECH] One of the coefficients used to express an eigenfunction of the sum of two angular momenta in terms of sums of products of eigenfunctions of the original two angular momenta. Also known as Clebsch-Gordan coefficient; Wigner coefficient.

vector current [PARTIC PHYS] A current which behaves as a vector under Lorentz transformations, rather than as an axial vector.

vectored attacks [ORD] Attacks in which a weapon carrier (air, surface, or subsurface) not holding contact on the target, is vectored to the weapon delivery point by a unit (air, surface, or subsurface) which holds contact on the target.

vector equation [MATH] An equation involving vectors.

vector field [MATH] **1.** The field of vectors arising from considering a system of differential equations on a differentiable manifold. **2.** A function whose range is in a vector space. [PHYS] A field which is characterized by a vector function.

vector function [PHYS] A function of position and time whose value at each point is a vector. Also known as vector point function.

vector graphics [COMPUT SCI] A computer graphics image-coding technique which codes only the image itself as a series of lines, according to the cartesian coordinates of the lines' origins and terminations.

vector gunsight [ORD] A gunsight that contains a device that computes the vector required for the bullet to follow if it is to strike its target; used especially in firing at moving targets.

vectorial structure *See* directional structure.

vector impedance meter [ENG] An instrument that not only determines the ratio between voltage and current, to give the magnitude of impedance, but also determines the phase difference between these quantities, to give the phase angle of impedance.

vector meson [PARTIC PHYS] A meson which has spin quan-

VECTOGRAPH

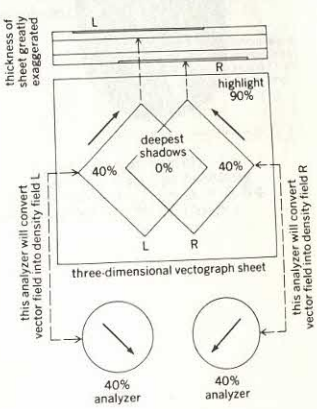


Diagram of superposed stereoscopic vectographs. The solid arrows show the axes of polarization; L indicates the left-eye image; R, the right-eye image. The percentages refer to light transmission.

tum number 1 and negative parity, and may be described by a vector field; examples include the ω, ρ, ϕ, and K^* mesons.

vector model of atomic structure [ATOM PHYS] A model of atomic structure in which spin and orbital angular momenta of the electrons are represented by vectors, with special rules for their addition imposed by underlying quantum-mechanical considerations.

vector momentum *See* momentum.

vector point function *See* vector function.

vector potential [ELECTROMAG] A vector function whose curl is equal to the magnetic induction. Symbolized **A**. Also known as magnetic vector potential. [PHYS] Any vector function whose curl is equal to some solenoidal vector field.

vector power [ELEC] Vector quantity equal in magnitude to the square root of the sum of the squares of the active power and the reactive power.

vector-power factor [ELEC] Ratio of the active power to the vector power; it is the same as power factor in the case of simple sinusoidal quantities.

vector product *See* cross product.

vector resolver *See* resolver.

vector space [MATH] A system of mathematical objects which have an additive operation producing a group structure and which can be multiplied by elements from a field in a manner similar to contraction or magnification of directed line segments in euclidean space. Also known as linear space.

vector steering [AERO ENG] A steering method for rockets and spacecraft wherein one or more thrust chambers are gimbal-mounted so that the direction of the thrust force (thrust vector) may be tilted in relation to the center of gravity of the vehicle to produce a turning movement.

vector voltmeter [ENG] A two-channel high-frequency sampling voltmeter that measures phase as well as voltage of two input signals of the same frequency.

vee antenna *See* V antenna.

vee path [ENG] In ultrasonic testing, the path of an angle beam from an ultrasonic search unit in which the waves are reflected off the opposite surface of the test piece and returned to the examination surface in a manner which has the appearance of the letter V.

veer [NAV ARCH] To pay or let out, as to veer anchor chain.

veering [METEOROL] **1.** In international usage, a change in wind direction in a clockwise sense (for example, south to southwest to west) in either hemisphere of the earth. **2.** According to widespread usage among United States meteorologists, a change in wind direction in a clockwise sense in the Northern Hemisphere, counterclockwise in the Southern Hemisphere.

Vega [ASTRON] One of the brightest stars, apparent magnitude 0.1; it is a main sequence star of spectral type A0, distance is 8 parsecs, and it is 40 times brighter than the sun. Also known as α Lyrae.

Vegard's Law [MET] Linear relation between lattice parameters and composition of solid solution alloys expressed as atomic percentage.

vegetable [AGR] The edible portion of a usually herbaceous plant; customarily served with the main course of a meal. [BOT] Resembling or relating to plants.

vegetable black [MATER] Carbon made by the incomplete combustion or destructive distillation of vegetable matter, for example, wood.

vegetable diastase *See* diastase.

vegetable dye [MATER] Any colorant that is obtained from a vegetable source; for example, indigo or madder.

vegetable fat [MATER] A semisolid vegetable oil, used chiefly for food; for example, Suari fat, ucuhuba tallow, Mahuba fat, gamboge butter (gurgi, murga), Sierra Leone butter (kamga, lamy), and Mafura tallow.

vegetable glue [MATER] Mostly starch- or dextrine-based glues mixed with gums, resins, or antioxidants; tapioca paste is the most common; used on cheaper plywoods, postage stamps, envelopes, and labels.

vegetable ivory [MATER] A material from the ivory nut, a seed of the palm *Phytelephas macrocarpa*, which grows in tropical America; the nut has a white color and fine texture and is used to make buttons and similar small articles.

vegetable jelly *See* ulmin.

vegetable oil [MATER] An edible, mixed glyceride oil derived from plants (fruit, leaves, and seeds), including cottonseed, linseed, tung, and peanut; used in food oils, shortenings, soaps, and medicine, and as a paint drying oil.

vegetable parchment [MATER] A paperlike material made from a base of cotton rags or alpha cellulose called waterleaf, and containing no sizing or filling materials; used for documents and food packaging.

vegetable tanning [ENG] Leather tanning using plant extracts, such as tannic acid.

vegetable wax [MATER] A waxy substance of vegetable origin, composed of fatty acids in combination with higher alcohols (instead of glycerin, as in fats and oils); includes Japan wax, jojoba oil, candelilla, and carnauba wax.

vegetation [BOT] The total mass of plant life that occupies a given area.

vegetational plant geography [ECOL] A field of study concerned with the mapping of vegetation regions and the interpretation of these in terms of environmental or ecological influences.

vegetation and ecosystem mapping [BOT] An art and a science concerned with the drawing of maps which locate different kinds of plant cover in a geographic area.

vegetation management [ECOL] The art and practice of manipulating vegetation such as timber, forage, crops, or wild life, so as to produce a desired part or aspect of that material in higher quantity or quality.

vegetation zone [ECOL] **1.** An extensive, even transcontinental, band of physiognomically similar vegetation on the earth's surface. **2.** Plant communities assembled into regional patterns by the area's physiography, geological parent material, and history.

vegetative [BIOL] Having nutritive or growth functions, as opposed to reproductive.

vegetative propagation [BOT] Production of a new plant from a portion of another plant, such as a stem or branch.

vehicle [AERO ENG] **1.** A structure, machine, or device, such as an aircraft or rocket, designed to carry a burden through air or space. **2.** More restrictively, a rocket vehicle. [GRAPHICS] The fluid component of a printing ink; acts as a carrier for the pigment. [MECH ENG] A self-propelled wheeled machine that transports people or goods on or off roads; automobiles and trucks are examples.

vehicle control system [AERO ENG] A system, incorporating control surfaces or other devices, which adjusts and maintains the altitude and heading, and sometimes speed, of a vehicle in accordance with signals received from a guidance system. Also known as flight control system.

vehicle mass ratio [AERO ENG] The ratio of the final mass of a vehicle after all propellant has been used, to the initial mass.

vehicular telephony [COMMUN] The transmission of speech signals to and from mobile frequency-modulation radio stations installed in automotive vehicles; typically, each station is equipped with a transmitter and a receiver.

veil [METEOROL] A very thin cloud through which objects are visible.

Veillonella [MICROBIO] The type genus of the family Veillonellaceae; small cells occurring in pairs, chains, and clusters.

Veillonellaceae [MICROBIO] The single family of gram-negative, anaerobic cocci; characteristically occur in pairs with adjacent sides flattened; parasites of homotherms, including humans, rodents, and pigs.

Veil Nebula [ASTRON] A nebula in the constellation Cygnus; speculation is that the nebula is the remnant of a gigantic supernova which occurred 30,000 years ago.

vein [ANAT] A relatively thin-walled blood vessel that carries blood from capillaries to the heart in vertebrates. [BOT] One of the vascular bundles in a leaf. [GEOL] A mineral deposit in tabular or shell-like form filling a fracture in a host rock. [INV ZOO] **1.** One of the thick, stiff ribs providing support for the wing of an insect. **2.** A venous sinus in invertebrates.

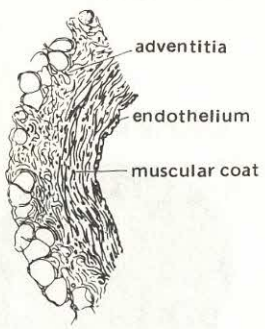
veined gneiss [PETR] A composite gneiss with irregular layering.

veining [MET] Lines in a polished and etched metal surface marking slight imperfections in structure of an otherwise single grain.

veinite [GEOL] A genetic type of veined gneiss in which the vein material was secreted from the rock itself.

vein quartz [PETR] A rock composed chiefly of sutured

VEIN



Portion of cross section through common digital vein of a human. *(From A. A. Maximow and W. Bloom, A Textbook of Histology, 6th ed., Saunders, 1953)*

quartz crystals of pegmatitic or hydrothermal origin of variable size.

Vela [ASTRON] A southern constellation, right ascension 9 hours, declination 50°S. Also known as Sail.

velamen [BOT] The corky epidermis covering the aerial roots of an epiphytic orchid.

Vela pulsar [ASTRON] A pulsar with a period of 80 milliseconds, about 1500 light-years (1.4×10^{19} meters) away in the constellation Vela, whose variation has been detected at radio, gamma-ray, and optical wavelengths.

velarium [INV ZOO] The velum of certain scyphozoans and cubomedusans distinguished by the presence of canals lined with endoderm.

veld *See* veldt.

veldt [ECOL] Grasslands of eastern and southern Africa that are usually level and mixed with trees and shrubs. Also spelled veld.

veliger [INV ZOO] A mollusk larval stage following the trochophore, distinguished by an enlarged girdle of ciliated cells (velum).

Veliidae [INV ZOO] A family of the Hemiptera in the subdivision Amphibicorisae composed of small water striders which have short legs and a longitudinal groove between the eyes.

vellum [MATER] A high-grade paper made to resemble genuine parchment.

vellus [ANAT] Fine body hair that is present until puberty.

velocimeter [ENG] An instrument for measuring the speed of sound in water; two transducers transmit acoustic pulses back and forth over a path of fixed length, each transducer immediately initiating a pulse upon receiving the previous one; the number of pulses occurring in a unit time is measured.

Velocipedidae [INV ZOO] A tropical family of hemipteran insects in the superfamily Cimicoidea.

velocity [MECH] **1.** The time rate of change of position of a body; it is a vector quantity having direction as well as magnitude. Also known as linear velocity. **2.** The speed at which the detonating wave passes through a column of explosives, expressed in meters or feet per second.

velocity analysis [MECH] A graphical technique for the determination of the velocities of the parts of a mechanical device, especially those of a plane mechanism with rigid component links.

velocity coefficient [FL MECH] The ratio of the actual velocity of gas emerging from a nozzle to the velocity calculated under ideal conditions; it is less than 1 because of friction losses. Also known as coefficient of velocity.

velocity constant [CONT SYS] The ratio of the rate of change of the input command signal to the steady-state error, in a control system where these two quantities are proportional.

velocity control *See* rate control.

velocity curve [ASTRON] A graphical representation of the line-of-sight velocity (versus time) of a star or components of a spectroscopic binary system.

velocity discontinuity *See* seismic discontinuity.

velocity-distance relation [ASTRON] The relation wherein all the exterior galaxies are moving away from the galaxy that the sun is part of, with velocities that are greater with increasing distance of the galaxy.

velocity distribution [STAT MECH] For the molecules of a gas, a function of velocity whose value at any velocity v is proportional to the number of molecules with velocities in an infinitesimal range about v, per unit velocity range.

velocity filter [ELECTR] Storage tube device which blanks all targets that do not move more than one resolution cell in less than a predetermined number of antenna scans.

velocity fire [ORD] Preparatory fire conducted to determine the velocity for a particular combination of weapon, propellant, projectile, and fuse.

velocity-focusing mass spectrograph *See* velocity spectrograph.

velocity gradient [FL MECH] The rate of change of velocity of propagation with distance normal to the direction of flow. [GEOPHYS] *See* seismic gradient.

velocity head [FL MECH] The square of the speed of flow of a fluid divided by twice the acceleration of gravity; it is equal to the static pressure head corresponding to a pressure equal to the kinetic energy of the fluid per unit volume.

velocity-head tachometer [ENG] A type of tachometer in which the device whose speed is to be measured drives a pump or blower, producing a fluid flow, which is converted to a pressure.

velocity hydrophone [ENG ACOUS] A hydrophone in which the electric output essentially matches the instantaneous particle velocity in the impressed sound wave.

velocity level [ACOUS] A sound rating in decibels, equal to 20 times the logarithm to the base 10 of the ratio of the particle velocity of the sound to a specified reference particle velocity.

velocity microphone [ENG ACOUS] A microphone whose electric output depends on the velocity of the air particles that form a sound wave; examples are a hot-wire microphone and a ribbon microphone.

velocity-modulated oscillator [ELECTR] Oscillator which employs velocity modulation to produce radio-frequency power. Also known as klystron oscillator.

velocity modulation [ELECTR] **1.** Modulation in which a time variation in velocity is impressed on the electrons of a stream. **2.** A television system in which the intensity of the electron beam remains constant throughout a scan, and the velocity of the spot at the screen is varied to produce changes in picture brightness (not in general use).

velocity of light *See* speed of light.

velocity of sound *See* speed of sound.

velocity pickup [ELEC] A device that generates a voltage proportional to the relative velocity between two principal elements of the pickup, the two elements usually being a coil of wire and a source of magnetic field.

velocity potential [FL MECH] For a fluid flow, a scalar function whose gradient is equal to the velocity of the fluid.

velocity pressure *See* wind pressure.

velocity profile [FL MECH] A graph of the speed of a fluid flow as a function of distance perpendicular to the direction of flow.

velocity ratio [MECH ENG] The ratio of the velocity given to the effort or input of a machine to the velocity acquired by the load or output. [OCEANOGR] The ratio of the speed of tidal current at a subordinate station to the speed of the corresponding current at the reference station.

velocity resonance *See* phase resonance.

velocity servomechanism [CONT SYS] A servomechanism in which the feedback-measuring device generates a signal representing a measured value of the velocity of the output shaft. Also known as rate servomechanism.

velocity shaped canceler *See* cascaded feedback canceler.

velocity spectrograph [PHYS] A mass spectrograph in which only positive ions having a certain velocity pass through all three slits and enter a chamber where they are deflected by a magnetic field in proportion to their charge-to-mass ratio. Also known as velocity-focusing mass spectrograph.

velocity-type flowmeter [ENG] A turbine-type fluid-flow measurement device in which the fluid flow actuates the movement of a wheel or turbine-type impeller, giving a volume-time reading. Also known as current meter; rotating meter.

velour [TEXT] A fabric with a short pile on the surface.

velour paper [MATER] A paper with a velvetlike finish, produced by flocking the surface with fine bits of rayon, nylon, cotton, or wool; it is sometimes embossed in various patterns.

Velox [GRAPHICS] The trade name of one of the chloride printing papers made by Eastman Kodak; this term is sometimes used as a general reference to a photographic print.

velum [BIOL] A veil- or curtainlike membrane. [INV ZOO] A swimming organ on the larva of certain marine gastropod mollusks that develops as a contractile ciliated collar-shaped ridge. [METEOROL] An accessory cloud veil of great horizontal extent draped over or penetrated by cumuliform clouds; velum occurs with cumulus and cumulonimbus.

velvet [TEXT] A fabric with a short, thick-set pile of silk, cotton, or other fiber on a back that is closely woven and of the same or different fibers.

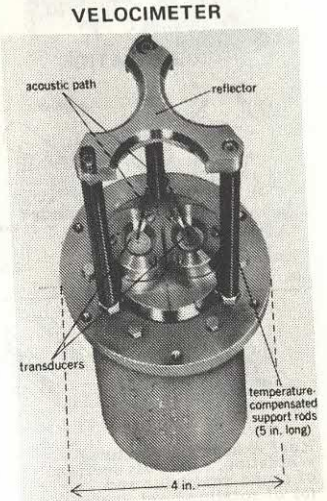
velveteen [TEXT] Cotton or rayon pile fabric with short, close-filling loops cut by sharp knives to create an erect, velvety pile; unlike velvet, which is woven face to face, velveteen is woven singly.

vena cava [ANAT] One of two large veins which in air-breathing vertebrates conveys blood from the systemic circulation to the right atrium.

vena contracta [FL MECH] The contraction of a jet of liquid which comes out of an opening in a container to a cross section smaller than the opening.

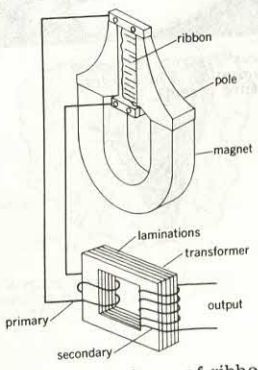
venation [BOT] The system or pattern of veins in the tissues

VELOCIMETER



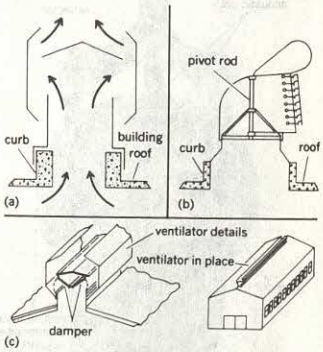
A typical commercial velocimeter with protecting cage removed (1 inch = 2.54 centimeters). *(NUS Corp.)*

VELOCITY MICROPHONE



Velocity microphone of ribbon type. Motion of ribbon in magnetic field induces voltage between two ends of ribbon.

VENTILATION



Roof exhausts for natural ventilation. *(a)* Cross section of round ventilator and *(b)* of rotating-head ventilator. *(c)* Continuous roof ventilator.

VENUS' FLYTRAP

Venus' flytrap *(Dionaea muscipula)*. The leaves capture insects.

of a leaf. [INV ZOO] The arrangement of veins in an insect wing.

vendaval [METEOROL] A stormy southwest wind on the southern Mediterranean coast of Spain and in the Straits of Gibraltar; it occurs with a low advancing from the west in late autumn, winter, or early spring, and is often accompanied by thunderstorms and violent squalls.

veneer [MATER] **1.** A thin sheet of wood of uniform thickness used for facing furniture or, bonded to make plywood. **2.** A facing, as of brick or marble, on the outside of a wall.

Venera space program [AERO ENG] A series of unmanned space vehicle flights to probe the conditions near and on the planet Venus; the program was initiated by the Soviet Union.

venereal bubo *See* lymphogranuloma venereum.

venereal disease [MED] Any of several contagious diseases generally acquired during sexual intercourse; includes gonorrhea, syphilis, chancroid, granuloma inguinale, and lymphogranuloma venereum. Abbreviated VD.

venereal wart [MED] A warty growth of the penis, frequent in some parts of the world, and probably acquired during sexual intercourse.

venetian cloth [TEXT] A wool or cotton fabric with a smooth texture and a warp face.

Venetian red [INORG CHEM] A pigment with a true red hue; contains 15–40% ferric oxide and 60–80% calcium sulfate.

venetian rose point *See* rose point.

venite [PETR] Migmatite having mobile portions which were formed by exudation from the rock itself.

Venn diagram [MATH] A pictorial representation of set theoretic operations such as union, intersection, and complementation of sets.

venom [PHYSIO] Any of various poisonous materials secreted by certain animals, such as snakes or bees.

venous pressure [PHYSIO] Tension of the blood within the veins.

vent [ENG] **1.** A small passage made with a needle through stemming, for admitting a squib to enable the charge to be lighted. **2.** A hole, extending up through the bearing at the top of the core-barrel inner tube, which allows the water and air in the upper part of the inner tube to escape into the borehole. **3.** A small hole in the upper end of a core-barrel inner tube that allows water and air in the inner tube to escape into the annular space between the inner and outer barrels. **4.** An opening provided for the discharge of pressure or the release of pressure from tanks, vessels, reactors, processing equipment, and so on. [GEOL] The opening of a volcano on the surface of the earth. [MET] A small opening in a casting mold to allow for the escape of gases. [ZOO] The external opening of the cloaca or rectum, especially in fish, birds, and amphibians.

vent da Mùt [METEOROL] A strong, wet wind of Lake Garda in Italy.

vent des dames [METEOROL] A daily sea breeze of about 15 miles (24 kilometers) per hour from the southwest in summer on the Mediterranean coast east of the Rhone delta, extending some 20 miles (32 kilometers) inland.

vent du midi [METEOROL] A south wind in the center of the Massif Central and the southern Cevennes (France); it is warm, moist, and generally followed by a southwest wind with heavy rain.

vented baffle *See* reflex baffle.

vented battery [ELEC] A nickel-cadmium or other battery which lacks provisions for recombination of gases produced during normal operation, so that these gases must be vented to the atmosphere to avoid rupture of the cell case.

venter [ANAT] The abdomen, or other body cavity containing organs. [BOT] The thickened basal portion of an archegonium. [INV ZOO] **1.** The undersurface of an arthropod's abdomen. **2.** The outer, convex part of a curved or coiled gastropod or cephalopod shell.

ventifact [GEOL] A stone or pebble whose shape, wear, faceting, cut, or polish is the result of sandblasting. Also known as glyptolith; rillstone; wind-cut stone; wind-grooved stone; wind-polished stone; wind-scoured stone; wind-shaped stone.

ventilation [ENG] Provision for the movement, circulation, and quality control of air in an enclosed space. [METEOROL] The process of causing representative air to be in contact with the sensing elements of observing instruments; especially applied to producing a flow of air past the bulb of a wet-bulb thermometer.

ventilator [ENG] A device with an adjustable aperture for regulating the flow of fresh or stagnant air. [MECH ENG] A mechanical apparatus for producing a current of air, as a blowing or exhaust fan.

vento di sotto [METEOROL] Breezes blowing up-lake on Lake Garda in Italy.

ventral [BOT] On the lower surface of a dorsiventral plant structure, such as a leaf. [ZOO] On or belonging to the lower or anterior surface of an animal, that is, on the side opposite the back.

ventral aorta [VERT ZOO] The arterial trunk or trunks between the heart and the first aortic arch in embryos or lower vertebrates.

ventral hernia [MED] A hernia of the abdominal wall not involving the umbilical, femoral, or inguinal openings. Also known as abdominal hernia.

ventral light reflex [INV ZOO] A basic means of orientation in aquatic invertebrates, such as shrimp, which swim belly up toward the light.

ventral rib [VERT ZOO] Any of the ribs which lie in the septa dividing the trunk musculature into segments in fish. Also known as pleural rib.

ventricle [ANAT] **1.** A chamber, or one of two chambers, in the vertebrate heart which receives blood from the atrium and forces it into the arteries by contraction of the muscular wall. **2.** One of the interconnecting, fluid-filled chambers of the vertebrate brain that are continuous with the canal of the spinal cord. [ZOO] A cavity in a body part or organ.

ventricose [BIOL] Swollen or distended, especially on one side.

ventricular depolarization complex *See* QRS complex.

ventricular septum *See* interventricular septum.

ventriculus [ZOO] A ventricle that performs digestive functions, such as a stomach or a gizzard.

ventromedial nucleus [ANAT] A central nervous system nucleus in the hypothalamus that appears to be the satiation center; bilateral surgical damage to this nucleus results in overeating.

vent stack [BUILD] The portion of a soil stack above the highest fixture.

Venturian [GEOL] A North American stage of middle Pliocene geologic time, above Repettian and below Wheelerian.

venturi flume [ENG] An open flume with a constricted flow which causes a drop in the hydraulic grade line; used in flow measurement.

venturi meter [ENG] An instrument for efficiently measuring fluid flow rate in a piping system; a nozzle section increases velocity and is followed by an expanding section for recovery of kinetic energy.

venturi scrubber [CHEM ENG] A gas-cleaning device in which liquid injected at the throat of a venturi is used to scrub dust and mist from the gas flowing through the venturi.

venturi tube [ENG] A constriction that is placed in a pipe and causes a drop in pressure as fluid flows through it, consisting essentially of a short straight pipe section or throat between two tapered sections; it can be used to measure fluid flow rate (a venturi meter), or to draw fuel into the main flow stream, as in a carburetor.

venule [ANAT] A small vein.

Venus [ASTRON] The planet second in distance from the sun; the linear diameter, about 12,200 kilometers, includes the top of a cloud layer; the diameter of the solid globe is about 50 kilometers less; the mass is about 0.815 (earth = 1).

Venus' flytrap [BOT] *Dionaea muscipula*. An insectivorous plant (order Sarraceniales) of North and South Carolina; the two halves of a leaf blade can swing upward and inward as though hinged, thus trapping insects between the closing halves of the leaf blade.

Venus hairstone *See* rutilated quartz.

Venus probe [AERO ENG] A probe for exploring and reporting on conditions on or about the planet Venus, such as Pioneer and Mariner probes of the United States, and Venera probes of the Soviet Union.

veranillo [CLIMAT] The lesser dry season, made up of a few weeks of hot dry weather, that breaks up the summer rainy season on the Pacific coast of Mexico and Central America.

verano [CLIMAT] In Mexico and Central America, the main dry season, generally occurring from November through April.

veratria *See* veratrine.

veratrine [MATER] An alkaloid mixture from the seeds of

sabadilla (*Schoenocaulon officinale*); which is toxic, colorless, soluble in alcohol and ether, very slightly soluble in water, and melts at about 150°C; used in medicine. Also known as veratria.

verb [COMPUT SCI] In COBOL, the action indicating part of an unconditional statement.

verbal learning [PSYCH] A field of experimental psychology which studies the formation of certain verbal associations; deals with acquisition of the associations.

Verbeekinidae [PALEON] A family of extinct marine protozoans in the superfamily Fusulinacea.

Verbenaceae [BOT] A family of variously woody or herbaceous dicotyledons in the order Lamiales characterized by opposite or whorled leaves and regular or irregular flowers, usually with four or two functional stamens.

verbena oil [MATER] A volatile oil from lemon verbena leaves; contains 30% citral; used to make perfumes.

verdant zone *See* frostless zone.

Verdet constant [OPTICS] A constant of proportionality in the equation of the Faraday effect; it is equal to the angle of rotation of plane-polarized light in a magnetized substance divided by the product of the length of the light path in the substance and the strength of the magnetic field.

verdigris *See* cupric acetate.

verge [BUILD] The edge of a sloping roof which projects over a gable.

vergeboard [BUILD] One of the boards utilized as the finish of the eaves on the gable end of a structure.

vergence [GEOL] The direction of overturning or of inclination of a fold.

verglas *See* glaze.

verification [COMPUT SCI] The process of checking the results of one data transcription against the results of another data transcription; both transcriptions usually involve manual operations.

verification fire [ORD] Preparatory fire to test the mechanical adjustment of guns and fire-control equipment, and to measure the accuracy of corrections determined by calibration and trial fire.

verifier [COMPUT SCI] A device for checking card punching semimechanically; it mimics keypunch machine operation, but reads prepunched cards without punching any new holes, and signals if the card does not agree with data entered through the verifier keyboard in some column.

verify [COMMUN] To ensure that the meaning and phraseology of the transmitted message convey the exact intention of the originator. [COMPUT SCI] To determine whether an operation has been completed correctly, and in particular, to check the accuracy of keypunching by using a verifier.

Vermes [INV ZOO] An artificial taxon considered to be a phylum in some systems of classification, but variously defined as including all invertebrates except arthropods, or including all vermiform invertebrates.

vermiculite [MINERAL] $(Mg,Fe,Al)_3(Al,Si)_4O_{10}(OH)_2 \cdot 4H_2O$ A clay mineral constituent similar to chlorite and montmorillonite, and consisting of trioctahedral mica sheets separated by double water layers; sometimes used as a textural material in painting, or as an aggregate in certain plaster formulations used in sculpture.

vermiform [BIOL] Wormlike; resembling a worm.

vermiform appendix [ANAT] A small, blind sac projecting from the cecum. Also known as appendix.

vermifuge [PHARM] An agent that expels worms or intestinal animal parasites.

Vermilingua [VERT ZOO] An infraorder of the mammalian order Edentata distinguished by lack of teeth and in having a vermiform tongue; includes the South American true anteaters.

vermilion *See* mercuric sulfide.

vermiphobia [PSYCH] An abnormal fear of worms or of infection by worms.

vermis [ANAT] The median lobe of the cerebellum.

vernadskite *See* antlerite.

vernal [GEOPHYS] Pertai ning to spring.

vernal equinox [ASTRON] The sun's position on the celestial sphere about March 21; at this time the sun's path on the ecliptic crosses the celestial equator. Also known as first point of Aries; March equinox; spring equinox.

vernalization [BOT] The induction in plants of the competence or ripeness to flower by the influence of cold, that is, at temperatures below the optimal temperature for growth.

vernation [BOT] The characteristic arrangement of young leaves within the bud. Also known as prefoliation.

vernier [ENG] A short, auxiliary scale which slides along the main instrument scale to permit accurate fractional reading of the least main division of the main scale.

vernier caliper [ENG] A caliper rule with an attached vernier scale.

vernier capacitor [ELEC] Variable capacitor placed in parallel with a larger tuning capacitor to provide a finer adjustment after the larger unit has been set approximately to the desired position.

vernier dial [ENG] A tuning dial in which each complete rotation of the control knob causes only a fraction of a revolution of the main shaft, permitting fine and accurate adjustment.

vernier engine [AERO ENG] A rocket engine of small thrust used primarily to obtain a fine adjustment in the velocity and trajectory of a rocket vehicle just after the thrust cutoff of the last sustainer engine, and used secondarily to add thrust to a booster or sustainer engine. Also known as vernier rocket.

vernier rocket *See* vernier engine.

vernier sextant [NAV] A marine sextant providing a precise reading by means of a vernier used directly with the arc, and having either a clamp screw or an endless tangent screw for controlling the position of the index arm.

vernine *See* guanosine.

vernitel [ELECTR] Precision device which makes possible the transmission of data with high accuracy over standard frequency modulated-frequency modulated telemetering systems.

vernix caseosa [EMBRYO] A cheesy deposit on the surface of the fetus derived from the stratum corneum, sebaceous secretion, and remnants of the epitrichium.

vernolate [ORG CHEM] $C_{10}H_{21}NOS$ An amber liquid, used to control weeds in sweet potatoes, peanuts, soybeans, and tobacco. Also known as *S*-propyldipropylthiocarbamate.

Veronal [PHARM] A trade name for barbital.

verrou *See* riegel.

verruca [BIOL] A wartlike elevation on the surface of a plant or animal.

verruca peruana *See* verruca peruviana.

verruca peruviana [MED] A benign eruptive form of bartonellosis with chronic cutaneous lesions. Also known as verruca peruana.

Verrucariaceae [BOT] A family of crustose lichens in the order Pyrenulales typically found on rocks, especially in intertidal or salt-spray zones along rocky coastlines.

Verrucomorpha [INV ZOO] A suborder of the crustacean order Thoracica composed of sessile, asymmetrical barnacles.

verrucose [BIOL] Having the surface covered with wartlike protuberances.

verrucous endocarditis [MED] Small thrombotic, nonbacterial, wartlike lesions on the heart valves and endocardium, occurring frequently in systemic lupus erythematosus. Also known as terminal endocarditis.

vers *See* versed sine.

versatile anther [BOT] An anther whose attachment is near its middle, thus enabling it to swing freely.

versatile automatic test equipment [ELECTR] Computer-controlled tester, for missile electronic systems, that troubleshoots faults by deductive logic and isolates them to the plug-in module or component level.

versed cosine *See* coversed sine.

versed sine [MATH] The versed sine of A is $1 - \text{cosine } A$. Denoted vers. Also known as versine.

versine *See* versed sine.

verso [GRAPHICS] **1.** A left-hand page in a book, usually carrying an even page number. **2.** The side of a page that is to be read second.

vertebra [ANAT] One of the bones that make up the spine in vertebrates.

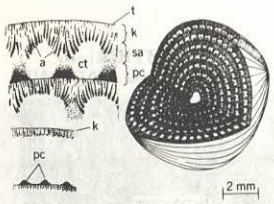
vertebral arch [ANAT] An arch formed by the paired pedicles and laminas of a vertebra; the posterior part of a vertebra which together with the anterior part, the body, encloses the vertebral foramen in which the spinal cord is lodged in vertebrates. Also known as neural arch.

vertebral column *See* spine.

Vertebrata [VERT ZOO] The major subphylum of the phylum Chordata including all animals with backbones, from fish to man.

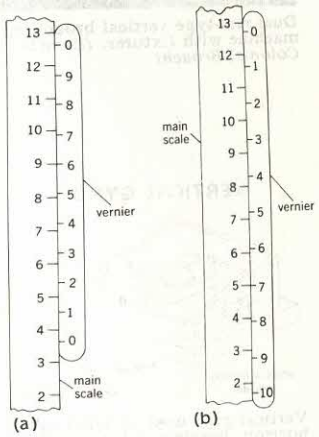
vertebrate zoology [ZOO] That branch of zoology concerned with the study of members of the Vertebrata.

VERBEEKINIDAE



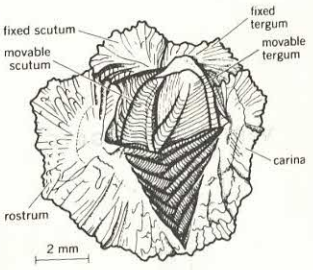
Cutaway diagram of representative species of Verbeekinidae; t = tectum, k = keriotheca, sa = septula, pc = parachromata, a = alveoli, and ct = chamberlets.

VERNIER



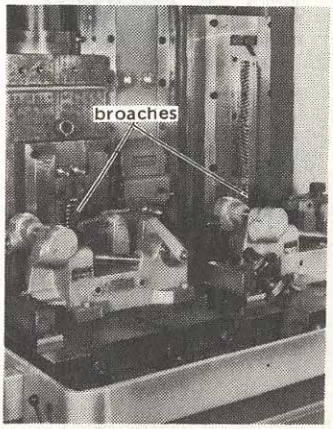
Two types of vernier scales. (*a*) Direct (reading 3.6). (*b*) Retrograde (reading 12.7).

VERRUCOMORPHA



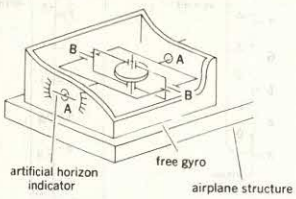
Verruca stroemia, a Recent species of Verrucomorpha. (*O. Müller*)

VERTICAL BROACHING MACHINE



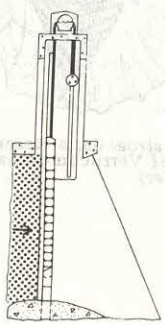
Dual ram-type vertical broaching machine with fixtures. *(Bendix-Colonial Broach)*

VERTICAL GYRO



Vertical gyro used as artificial horizon. Bearings AA and BB are made to have smallest possible friction so that axis of rotor remains vertical.

VERTICAL-LIFT GATE



Cross-sectional diagram of vertical-lift gate. Arrow indicates direction of water pressure. *(U.S. Army Corps of Engineers and U.S. Bureau of Reclamation)*

vertebratus [METEOROL] A cloud variety (applied mainly to the genus cirrus), the elements of which are arranged in a manner suggestive of vertebrae, ribs, or a fish skeleton.

vertex [ASTRON] **1.** The highest point that a celestial body attains. **2.** On a great circle, that point that is closest to a pole. [MATH] For a polygon or polyhedron, any of those finitely many points which together with line segments or plane pieces determine the figure or solid. [OPTICS] One of the points where the surface of a lens intersects the optical axis.

vertex power [OPTICS] The reciprocal of the back focal length of a lens.

vertical air photograph [GRAPHICS] An air photograph taken with the optical axis of the camera perpendicular to the earth's surface.

vertical anemometer [METEOROL] An instrument which records the vertical component of the wind speed.

vertical angles [MATH] The two angles produced by a pair of intersecting lines and lying on opposite sides of the point of intersection.

vertical antenna [ELECTROMAG] A vertical metal tower, rod, or suspended wire used as an antenna.

vertical axis [NAV ARCH] The vertical line near the center of gravity of a craft, perpendicular to both the longitudinal and lateral axes, around which it yaws.

vertical-axis propeller [NAV ARCH] A type of propeller wheel that consists of a circular horizontal disk set flush into a vessel's bottom, rotates about a vertical axis, and carries near its periphery a number of spadelike vertical blades.

vertical band saw [MECH ENG] A band saw whose blade operates in the vertical plane; ideal for contour cutting.

vertical blanking [ELECTR] Blanking of a television picture tube during the vertical retrace.

vertical boiler [MECH ENG] A fire-tube boiler having vertical tubes between top head and tube sheet, connected to the top of an internal furnace.

vertical boring mill [MECH ENG] A large type of boring machine in which a rotating workpiece is fastened to a horizontal table, which resembles a four-jaw independent chuck with extra radial T slots, and the tool has a traverse motion.

vertical broaching machine [MECH ENG] A broaching machine having the broach mounted in the vertical plane.

vertical centering control [ELECTR] The centering control provided in a television receiver or cathode-ray oscilloscope to shift the position of the entire image vertically in either direction on the screen.

vertical center keelson [NAV ARCH] The lower middle line girder, which, in conjunction with a flat plate keel on the bottom and a rider plate on top, forms the principal fore-and-aft strength member in the bottom of a ship.

vertical circle [ASTRON] A great circle of the celestial sphere, through the zenith and nadir of the celestial sphere; vertical circles are perpendicular to the horizon.

vertical compliance [ENG ACOUS] The ability of a stylus to move freely in a vertical direction while in the groove of a phonograph record.

vertical component effect *See* antenna effect.

vertical conveyor [MECH ENG] A materials-handling machine designed to move or transport bulk materials or packages upward or downward.

vertical-current recorder [ENG] An instrument which records the vertical electric current in the atmosphere.

vertical curve [CIV ENG] A curve inserted between two lengths of a road or railway which are at different slopes.

vertical danger angle [NAV] The maximum or minimum angle between the top and bottom of an object of known height, as observed from a craft, indicating the limit of safe approach to an off-lying danger.

vertical definition *See* vertical resolution.

vertical deflection oscillator [ELECTR] The oscillator that produces, under control of the vertical synchronizing signals, the sawtooth voltage waveform that is amplified to feed the vertical deflection coils on the picture tube of a television receiver. Also known as vertical oscillator.

vertical deviation [ORD] In antiaircraft artillery, the distance between the target and the point of burst in the plane normal to the line of position along a line perpendicular to the lateral deviation.

vertical differential chart [METEOROL] A synoptic chart showing the difference in value of a meteorological element between two levels in the atmosphere; a common example is the thickness chart.

vertical dip slip *See* vertical slip.

vertical drop [MECH] The drop of an object in trajectory or along a plumb line, measured vertically from its line of departure to the object.

vertical earth rate [NAV] To compensate for the effect of earth rate, the rate at which a gyroscope must be turned about its vertical axis to permit the spin axis to remain in the meridian; it is maximum at the poles, zero at the equator, and varies as the sine of the latitude.

vertical-face breakwater [CIV ENG] A breakwater whose mound of rubble does not rise above the water, but is surmounted by a vertical-face superstructure of masonry or concrete; may be built without mound rubble, provided sea bed is firm.

vertical feed [COMPUT SCI] A card feed in which punch cards are placed in a hopper and enter and traverse a card track, all in a vertical position.

vertical field balance [ENG] An instrument that measures the vertical component of the magnetic field by means of the torque that the field component exerts on a horizontal permanent magnet.

vertical field-strength diagram [ELECTROMAG] Representation of the field strength at a constant distance from an antenna and in a vertical plane passing through the antenna.

vertical firing [MECH ENG] The discharge of fuel and air perpendicular to the burner in a furnace.

vertical force instrument *See* heeling adjuster.

vertical guide idlers [MECH ENG] Idler rollers about 3 inches (8 centimeters) in diameter so placed as to make contact with the edge of the belt conveyor should it run too much to one side.

vertical gyro [AERO ENG] A two-degree-of-freedom gyro with provision for maintaining its spin axis vertical; output signals are produced by gimbal angular displacements which correspond to components of the angular displacements of the base about two orthogonal axes; used in aircraft to measure both bank angle and pitch attitude.

vertical hold control [ELECTR] The hold control that changes the free-running period of the vertical deflection oscillator in a television receiver, so the picture remains steady in the vertical direction.

vertical illuminator [OPTICS] A microscope designed for observing surfaces of opaque substances such as metals, which has a mechanism for passing light down through the objective lens in order to illuminate the surface to be observed with a beam perpendicular to the surface.

vertical-incidence transmission [ELECTROMAG] Transmission of a radio wave vertically to the ionosphere and back.

vertical instruction [COMPUT SCI] An instruction in machine language to carry out a single operation or a time-ordered series of a fixed number and type of operation on a single set of operands.

vertical intensity [GEOPHYS] The magnetic intensity of the vertical component of the earth's magnetic field, reckoned positive if downward, negative if upward.

vertical intensity variometer [ENG] A variometer employing a large permanent magnet and equipped with very fine steel knife-edges or pivots resting on agate planes or saddles and balanced so that its magnetic axis is horizontal. Also known as Z variometer.

vertical interval reference [ELECTR] A reference signal inserted into a television program signal every 1/60 second, in line 19 of the vertical blanking period between television frames, to provide references for luminance amplitude, black-level amplitude, sync amplitude, chrominance amplitude, and color-burst amplitude and phase. Abbreviated VIR.

vertical jet *See* uprush.

vertical launch [ORD] A launch in which the missile or vehicle starts from a vertical position.

vertical lead [ORD] The vertical angle by which the gun must be moved from the line of position in order for the trajectory to pass through the target; it is the algebraic sum of the principal vertical deflection, the vertical pointing correction, and the superelevation.

vertical-lift bridge [CIV ENG] A movable bridge with a span that rises on towers, lifted by steel ropes.

vertical-lift gate [CIV ENG] A dam spillway gate of which the movable parts are raised and lowered vertically to regulate water flow.

vertical linearity control [ELECTR] A linearity control that permits narrowing or expanding the height of the image on the upper half of the screen of a television picture tube, to give linearity in the vertical direction so circular objects appear as true circles; usually mounted at the rear of the receiver.

vertically stacked loops *See* stacked loops.

vertical metal oxide semiconductor technology [ELECTR] For semiconductor devices, a technology that involves essentially the formation of four diffused layers in silicon and etching of a V-shaped groove to a precisely controlled depth in the layers, followed by deposition of metal over silicon dioxide in the groove to form the gate electrode. Abbreviated VMOS technology.

vertical obstacle sonar [ENG] An active sonar used to determine heights of objects in the path of a submersible vehicle; its beam sweeps along a vertical plane, about 30° above and below the direction of the vehicle's motion. Abbreviated VOS.

vertical oscillator *See* vertical deflection oscillator.

vertical parity check *See* lateral parity check.

vertical polarization [COMMUN] Transmission of radio waves so that the electric lines of force are vertical, while the magnetic lines of force are horizontal; with this polarization, transmitting and receiving dipole antennas are placed in a vertical plane.

vertical-position welding [MET] Welding in which the weld axis is essentially vertical.

vertical recording [ENG ACOUS] A type of disk recording in which the groove modulation is perpendicular to the surface of the recording medium, so the cutting stylus moves up and down rather than from side to side during recording. Also known as hill-and-dale recording.

vertical redundancy check *See* lateral parity check.

vertical resolution [ELECTR] The number of distinct horizontal lines, alternately black and white, that can be seen in the reproduced image of a television or facsimile test pattern; it is primarily fixed by the number of horizontal lines used in scanning. Also known as vertical definition.

vertical retort process [MET] A zinc-smelting method using a vertical retort of silicon carbide brick. Also known as New Jersey retort process.

vertical retrace [ELECTR] The return of the electron beam to the top of the screen at the end of each field in television.

vertical scale [DES ENG] The ratio of the vertical dimensions of a laboratory model to those of the natural prototype; usually exaggerated in relation to the horizontal scale.

vertical seismograph [ENG] An instrument that records the vertical component of the ground motion during an earthquake.

vertical separation [AERO ENG] A specified vertical distance measured in terms of space between aircraft in flight at different altitudes or flight levels. [GEOL] The vertical component of the dip slip in a fault.

vertical separator [PETRO ENG] A gas-oil separator in the form of a vertical cylindrical tank.

vertical slip [GEOL] The vertical component of the net slip in a fault. Also known as vertical dip slip.

vertical speed indicator *See* rate-of-climb indicator.

vertical stability *See* static stability.

vertical stretching [METEOROL] A process in which ascending vertical motion of air increases with altitude, or descending motion decreases with (increasing) altitude.

vertical sweep [ELECTR] The downward movement of the scanning beam from top to bottom of the picture being televised.

vertical synchronizing pulse [ELECTR] One of the six pulses that are transmitted at the end of each field in a television system to keep the receiver in field-by-field synchronism with the transmitter. Also known as picture synchronizing pulse.

vertical tail [AERO ENG] A part of the tail assembly of an aircraft; consists of a fin (a symmetrical airfoil in line with the center line of the fuselage) fixed to the fuselage or body and a rudder which is movable by the pilot.

vertical takeoff and landing [AERO ENG] A flight technique in which an aircraft rises directly into the air and settles vertically onto the ground. Abbreviated VTOL.

vertical tower launcher *See* tower launcher.

vertical turbine pump *See* deep-well pump.

vertical turret lathe [DES ENG] Similar in principle to the horizontal turret lathe but capable of handling heavier, bulkier workpieces; it is constructed with a rotary, horizontal worktable whose diameter (30–74 inches, or 76–188 centimeters) normally designates the capacity of the machine; a crossrail mounted above the worktable carries a turret, which indexes in a vertical plane with tools that may be fed either across or downward.

vertical visibility [METEOROL] According to United States weather observing practice, the distance that an observer can see vertically into a surface-based obscuring phenomenon, such as fog, rain, or snow.

vertical vorticity [FL MECH] The vertical component of the vorticity vector.

verticillate [BOT] Whorled, in an arrangement resembling the spokes of a wheel.

vertigo [MED] The sensation that the outer world is revolving about the patient (objective vertigo) or that the patient is moving in space (subjective vertigo).

Vertisol [GEOL] A soil order formed in regoliths high in clay; subject to marked shrinking and swelling with changes in water content; low in organic content and high in bases.

very close pack ice [OCEANOGR] Sea ice so concentrated that there is little if any open water.

very-high-frequency [COMMUN] The band of frequencies from 30 to 300 megahertz in the radio spectrum, corresponding to wavelengths of 1 meter to 10 meters. Abbreviated VHF.

very-high-frequency omnidirectional radio range [NAV] A radio navigation aid operating at very-high-frequency and supplying bearing information for the entire 360° of azimuth. Abbreviated VOR.

very-high-frequency oscillator [ELECTR] An oscillator whose frequency lies in the range from a few to several hundred megahertz; it uses distributed, rather than lumped, impedances, such as parallel wire transmission lines or coaxial cables.

very-high-frequency tuner [ELECTR] A tuner in a television receiver for reception of stations transmitting in the very-high-frequency band; it generally has 12 discrete positions corresponding to channels 2–13.

very large crude carrier [NAV ARCH] A liquid-cargo vessel in the 100,000 to 250,000 ton range. Abbreviated VLCC.

very-long-baseline interferometry [ELECTR] A method of improving angular resolution in the observation of radio sources; these are simultaneously observed by two radio telescopes which are very far apart, and the signals are recorded on magnetic tapes which are combined electronically or on a computer. Abbreviated VLBI.

very-long-range material requirements [ORD] Items required by operational and organizational concepts established for a period 10 years hence and beyond.

very-long-range radar [ELECTR] Equipment whose maximum range on a reflecting target of 1 square meter normal to the signal path exceeds 800 miles (1300 kilometers), provided line-of-sight exists between the target and the radar.

very-low-frequency [COMMUN] The band of frequencies from 3 to 30 kilohertz in the radio spectrum, corresponding to wavelengths of 10 to 100 kilometers. Abbreviated VLF.

very open pack ice [OCEANOGR] Sea ice whose concentration ranges between one-tenth and three-tenths of the sea surface.

very-short-range radar [ELECTR] Equipment whose range on a reflecting target of 1 square meter normal to the signal path is less than 50 miles (80 kilometers), provided line-of-sight exists between the target and the radar.

vesicant [PHARM] An agent that causes blistering.

vesication [MED] **1.** A blister. **2.** Formation of a blister.

vesicle [BIOL] A small, thin-walled bladderlike cavity, usually filled with fluid. [GEOL] A cavity in lava formed by entrapment of a gas bubble during solidification. Also known as air sac; bladder; saccus; vacuole; wing.

vesicular [SCI TECH] Characterized by abundant vesicles.

vesicular film [GRAPHICS] A film that is sensitive to ultraviolet light and is developed by heat, without chemicals.

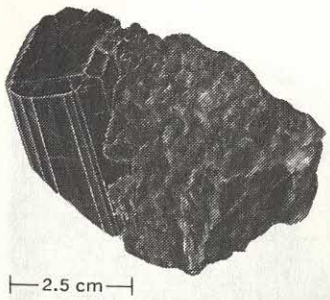
vesicular structure [PETR] A structure that is common in many volcanic rocks and which forms when magma is brought to or near the earth's surface; may form a structure with small cavities, or produce a pumiceous structure or a scoriaceous structure.

Vespertilionidae [VERT ZOO] The common bats, a large cosmopolitan family of the Chiroptera characterized by a long tail, extending to the edge of the uropatagium; almost all members are insect-eating.

vespertine [VERT ZOO] Active in the evening.

Vespidae [INV ZOO] A widely distributed family of

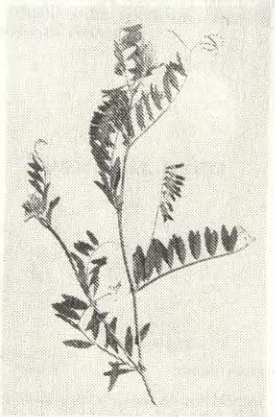
VESUVIANITE



2.5 cm

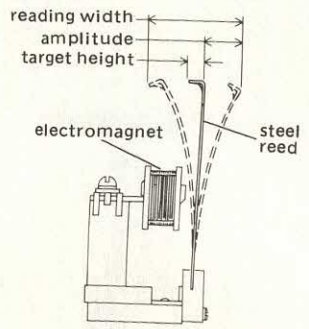
A crystal of vesuvianite found in Christiansand, Norway. *(Specimen from Department of Geology, Bryn Mawr College)*

VETCH



Purple vetch *(Vicia bengalensis)*, a representative species of vetch, showing characteristic features. *(USDA)*

VIBRATING-REED FREQUENCY METER



Actuating system of a Frahm vibrating-reed frequency meter, consisting of electromagnet and steel reed.

Hymenoptera in the superfamily Vespoidea including hornets, yellow jackets, and potter wasps.

Vespoidea [INV ZOO] A superfamily of wasps in the suborder Apocrita.

vessel [ENG] A container or structural envelope in which materials are processed, treated, or stored; for example, pressure vessels, reactor vessels, agitator vessels, and storage vessels (tanks). [NAV ARCH] Any craft that can carry people or cargo over the surface of the water.

Vesta [ASTRON] The third-largest asteroid with a diameter of about 500 kilometers, mean distance from the sun of 2.362 astronomical units, and a unique surface composition resembling basaltic, achondritic meteorites.

vestibular apparatus [ANAT] The anatomical structures concerned with the vestibular portion of the eighth cranial nerve; includes the saccule, utricle, semicircular canals, vestibular nerve, and vestibular nuclei of the ear.

vestibular membrane of Reissner *See* Reissner's membrane.

vestibular nerve [ANAT] A somatic sensory branch of the auditory nerve, which is distributed about the ampullae of the semicircular canals, macula sacculi, and macula utriculi.

vestibular reflexes [PHYSIO] The responses of the vestibular apparatus to strong stimulation; responses include pallor, nausea, vomiting, and postural changes.

vestibule [ANAT] **1.** The central cavity of the bony labyrinth of the ear. **2.** The parts of the membranous labyrinth within the cavity of the bony labyrinth. **3.** The space between the labia minora. **4.** *See* buccal cavity. [BUILD] A hall or chamber between the outer door and the interior, or rooms, of a building.

vestibule school [IND ENG] A school organized by an industrial concern to train new employees in specific tasks or prepare employees for promotion.

vestibule training [IND ENG] A procedure used in operator training in which the training location is separate from the main productive areas of the plant; includes student carrels, lecture rooms, and in many instances the same type of equipment that the trainee will use in the work station.

vestibulocerebellar [ANAT] Pertaining to the vestibular fibers and the cerebellum.

vestibulocochlear nerve *See* auditory nerve.

vestibulospinal tract [ANAT] A tract of nerve fibers that originates principally from the lateral vestibular nucleus and descends in the anterior funiculus of the spinal cord.

vestige [BIOL] A degenerate anatomical structure or organ that remains from one more fully developed and functional in an earlier phylogenetic form of the individual.

vestigial [BIOL] Of, being, or resembling a vestige.

vestigial sideband [COMMUN] The transmitted portion of an amplitude-modulated sideband that has been largely suppressed by a filter having a gradual cutoff in the neighborhood of the carrier frequency; the other sideband is transmitted without much suppression. Abbreviated VSB.

vestigial-sideband filter [ELECTR] A filter that is inserted between a transmitter and its antenna to suppress part of one of the sidebands.

vestigial-sideband transmission [COMMUN] A type of radio signal transmission for amplitude modulation in which the normal complete sideband on one side of the carrier is transmitted, but only a part of the other sideband is transmitted. Also known as asymmetrical-sideband transmission.

vesuvian *See* leucite; vesuvianite.

Vesuvian eruption *See* Vulcanian eruption.

Vesuvian garnet *See* leucite.

vesuvianite [MINERAL] $Ca_{10}Mg_2Al_4(SiO_4)_5(Si_2O_7)_2(OH)_4$ A brown, yellow, or green mineral found in contact-metamorphosed limestones. Also known as idocrase; vesuvian.

veszelyite [MINERAL] $(Cu,Zn)_3(PO_4)(OH)_3 \cdot 2H_2O$ A greenish-blue to dark blue, monoclinic mineral consisting of a hydrated basic phosphate of copper and zinc.

vetch [BOT] Any of a group of mostly annual legumes, especially of the genus *Vicia*, with weak viny stems terminating in tendrils and having compound leaves; some varieties are grown for their edible seed.

veterinary medicine [MED] The branch of medical practice which treats of the diseases and injuries of animals.

vetiver oil [MATER] A combustible, viscous essential oil from partially dried roots of *Vetiveria zizanioides* (East Indian grass), with a violet scent; soluble in fixed oils; used in perfumery. Also known as cuscus oil; vetivert.

vetivert *See* vetiver oil.

VF *See* voice frequency.

V factor [MICROBIO] Phosphopyridine nucleotide, a growth factor required by the parasitic bacteria of the genus *Haemophilus*.

V flume [MIN ENG] A V-shaped flume, supported by trestlework, and used by miners for bringing down timber and wood from the high mountains; the flume water is also used for mining purposes.

V format [COMPUT SCI] A data record format in which the logical records are of variable length and each record begins with a record length indication.

VFR *See* visual flight rules.

VFR between layers [AERO ENG] A flight condition wherein an aircraft is operated under modified visual flight rules while in flight between two layers of clouds or obscuring phenomena, each of which constitutes a ceiling.

VFR on top [AERO ENG] A flight condition wherein an aircraft is operated under modified visual flight rules while in flight above a layer of clouds or an obscuring phenomenon sufficient to constitute a ceiling.

VFR terminal minimums [AERO ENG] A set of operational weather limits at an airport, that is, the minimum conditions of ceiling and visibility under which visual flight rules may be used.

VFR weather [METEOROL] In aviation terminology, route or terminal weather conditions which allow operation of aircraft under visual flight rules.

VGC *See* viscosity-gravity constant.

V guide [MECH ENG] A V-shaped groove serving to guide a wedge-shaped sliding machine element.

VHF *See* very-high-frequency.

VI *See* viscosity index.

viaduct [CIV ENG] A bridge structure supported on high towers with short masonry or reinforced concrete arched spans.

Vianaidae [INV ZOO] A small family of South American Hemiptera in the superfamily Tingordea.

vibraculum [INV ZOO] A specially modified bryozoan zooid with a bristlelike seta that sweeps debris from the surface of the colony.

vibrating capacitor [ELEC] A capacitor whose capacitance is varied in a cyclic manner to produce an alternating voltage proportional to the charge on the capacitor; used in a vibrating-reed electrometer.

vibrating conveyor *See* oscillating conveyor.

vibrating coring tube [ENG] A sediment corer made to vibrate in order to eliminate the resistance of compacted ocean floor sediments, sands, and gravel.

vibrating feeder [MECH ENG] A feeder for bulk materials (pulverized or granulated solids), which are moved by the vibration of a slightly slanted, flat vibrating surface.

vibrating grizzlies [MECH ENG] Bar grizzlies mounted on eccentrics so that the entire assembly is given a forward and backward movement at a speed of some 100 strokes a minute.

vibrating needle [ENG] A magnetic needle used in compass adjustment to find the relative intensity of the horizontal components of the earth's magnetic field and the magnetic field at the compass location.

vibrating pebble mill [MECH ENG] A size-reduction device in which feed is ground by the action of vibrating, moving pebbles.

vibrating-reed electrometer [ENG] An instrument using a vibrating capacitor to measure a small charge, often in combination with an ionization chamber.

vibrating-reed frequency meter [ENG] A frequency meter consisting of steel reeds having different and known natural frequencies, all excited by an electromagnet carrying the alternating current whose frequency is to be measured. Also known as Frahm frequency meter; reed frequency meter; tuned-reed frequency meter.

vibrating-reed magnetometer [ENG] An instrument that measures magnetic fields by noting their effect on the vibration of reeds excited by an alternating magnetic field.

vibrating-reed tachometer [ENG] A tachometer consisting of a group of reeds of different lengths, each having a specific natural frequency of vibration; observation of the vibrating reed when in contact with a moving mechanical device indicates the frequency of vibration for the device.

vibrating screen [MECH ENG] A sizing screen which is vi-

brated by solenoid or magnetostriction, or mechanically by eccentrics or unbalanced spinning weights.

vibrating screen classifier [MECH ENG] A classifier whose screening surface is hung by rods and springs, and moves by means of electric vibrators.

vibrating wire transducer [ENG] A device for measuring ocean depth, consisting of a very fine tungsten wire stretched in a magnetic field so that it vibrates at a frequency that depends on the tension in the wire, and thereby on pressure and depth.

vibration [MECH] A continuing periodic change in a displacement with respect to a fixed reference.

vibrational energy [PHYS CHEM] For a diatomic molecule, the difference between the energy of the molecule idealized by setting the rotational energy equal to zero, and that of a further idealized molecule which is obtained by gradually stopping the vibration of the nuclei without placing any new constraint on the motions of electrons.

vibrational level [PHYS CHEM] An energy level of a diatomic or polyatomic molecule characterized by a particular value of the vibrational energy.

vibrational quantum number [PHYS CHEM] A quantum number v characterizing the vibrational motion of nuclei in a molecule; in the approximation that the molecule behaves as a quantum-mechanical harmonic oscillator, the vibrational energy is $h(v + \frac{1}{2})f$, where h is Planck's constant and f is the vibration frequency.

vibrational spectrum [SPECT] The molecular spectrum resulting from transitions between vibrational levels of a molecule which behaves like the quantum-mechanical harmonic oscillator.

vibrational sum rule [SPECT] **1.** The rule that the sums of the band strengths of all emission bands with the same upper state is proportional to the number of molecules in the upper state, where the band strength is the emission intensity divided by the fourth power of the frequency. **2.** The sums of the band strengths of all absorption bands with the same lower state is proportional to the number of molecules in the lower state, where the band strength is the absorption intensity divided by the frequency.

vibration damping [MECH ENG] The processes and techniques used for converting the mechanical vibrational energy of solids into heat energy.

vibration drilling [MECH ENG] Drilling in which a frequency of vibration in the range of 100 to 20,000 hertz is used to fracture rock.

vibration galvanometer [ENG] An alternating-current galvanometer in which the natural oscillation frequency of the moving element is equal to the frequency of the current being measured.

vibration isolation [ENG] The isolation, in structures, of those vibrations or motions that are classified as mechanical vibration; involves the control of the supporting structure, the placement and arrangement of isolators, and control of the internal construction of the equipment to be protected.

vibration machine [MECH ENG] A device for subjecting a system to controlled and reproducible mechanical vibration. Also known as shake table.

vibration meter *See* vibrometer.

vibration pickup [ELEC] An electromechanical transducer capable of converting mechanical vibrations into electrical voltages.

vibration puddling [CIV ENG] A technique used to achieve proper consolidation of concrete; vibrating machines may be drawn vertically through the cement, or used on the surface, or placed against the form holding the concrete in place. Also known as mechanical puddling.

vibration separation [MECH ENG] Classification or separation of grains of solids in which separation through a screen is expedited by vibration or oscillatory movement of the screening mediums.

vibrato [ACOUS] A musical embellishment that depends primarily on periodic variations of frequency which are often accompanied by variations in amplitude and waveform.

vibrator [ELEC] An electromechanical device used primarily to convert direct current to alternating current but also used as a synchronous rectifier; it contains a vibrating reed which has a set of contacts that alternately hit stationary contacts attached to the frame, reversing the direction of current flow; the reed is activated when a soft-iron slug at its tip is attracted to the pole piece of a driving coil. [MECH ENG] An instrument which produces mechanical oscillations.

vibrator power supply [ELEC] A power supply using a vibrator to produce the varying current necessary to actuate a transformer, the output of which is then rectified and filtered.

vibrator-type inverter [ELEC] A device that uses a vibrator and an associated transformer or other inductive device to change direct-current input power to alternating-current output power.

vibratory centrifuge [MECH ENG] A high-speed rotating device to remove moisture from pulverized coal or other solids.

vibratory equipment [MECH ENG] Reciprocating or oscillating devices which move, shake, dump, compact, settle, tamp, pack, screen, or feed solids or slurries in process.

vibratory hammer [MECH ENG] A type of pile hammer which uses electrically activated eccentric cams to vibrate piles into place.

vibratory saw [MED] A hand-operated saw, used in surgery, that can cut through hard materials such as bone or a cast, but leaves soft tissue such as skin or muscle untouched.

Vibrio [MICROBIO] A genus of bacteria in the family Vibrionaceae; short, motile, asporogenous rods, occasionally united into S-shaped groups; some species are human pathogens.

Vibrionaceae [MICROBIO] A family of gram-negative, facultatively anaerobic rods; cells are straight or curved and usually motile by polar flagella; generally found in water.

vibriosis [VET MED] An infectious bacterial disease, primarily of cattle, sheep, and goats, caused by *Vibrio fetus* and characterized by abortion, retained placenta, and metritis.

vibrissae [VERT ZOO] Hairs with specialized erectile tissue; found on all mammals except man. Also known as sinus hairs; tactile hairs; whiskers.

vibroenergy separator [MECH ENG] A screen-type device for classification or separation of grains of solids by a combination of gyratory motion and auxiliary vibration caused by balls bouncing against the lower surface of the screen cloth.

vibrograph [ENG] An instrument that provides a complete oscillographic record of a mechanical vibration; in one form a moving stylus records the motion being measured on a moving paper or film.

vibrometer [ENG] An instrument designed to measure the amplitude of a vibration. Also known as vibration meter.

vibrotron [ELECTR] A triode electron tube having an anode that can be moved or vibrated by an externally applied force.

vic- [ORG CHEM] A chemical prefix indicating vicinal (neighboring or adjoining) positions on a carbon structure (ring or chain); used to identify the location of substituting groups when naming derivatives.

vicariants [ECOL] Two or more closely related taxa, presumably derived from one another or from a common immediate ancestor, that inhabit geographically distinct areas.

Vicat needle [ENG] An apparatus used to determine the setting time of cement by measuring the pressure of a special needle against the cement surface.

vicinal [ORG CHEM] Referring to neighboring or adjoining positions on a carbon structure (ring or chain).

vicinal faces [CRYSTAL] Macroscopic crystal faces which are inclined only a few minutes of arc to crystal faces with low Miller indices, and which therefore must have high Miller indices themselves.

Vickers hardness test *See* diamond pyramid hardness test.

Victaulic coupling [DES ENG] A development in which a groove is cut around each end of pipe instead of the usual threads; two ends of pipe are then lined up and a rubber ring is fitted around the joint; two semicircular bands, forming a sleeve, are placed around the ring and are drawn together with two bolts, which have a ridge on both edges to fit into the groove of the pipe; as the bolts are tightened, the rubber ring is compressed, making a watertight joint, while the ridges fitting in the grooves make it strong mechanically.

Victoria blue [ORG CHEM] $C_{33}H_{31}N_3 \cdot HCl$ Bronze crystals, soluble in hot water, alcohol, and ether; used as a dye for silk, wool, and cotton, as a biological stain, and to make pigment toners.

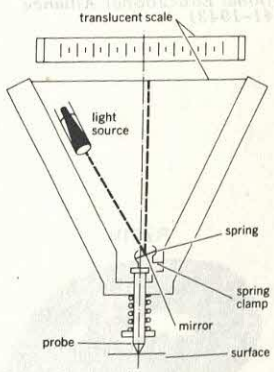
vicuna [VERT ZOO] *Lama vicugna*. A rare, wild ruminant found in the Andes mountains; the fiber of the vicuna is strong, resilient, and elastic but is the softest and most delicate of animal fibers.

video [ELECTR] **1.** Pertaining to picture signals or to the sections of a television system that carry these signals in either

VIBRATING SCREEN CLASSIFIER

Vibrating screen classifier with electric vibrator and suspension consisting of rods and springs. *(Jeffrey Mfg. Div., Dresser Industries, Inc.)*

VIBROMETER



Mechanooptical vibrometer. The motion given to the probe by the vibrating surface is used to rock a mirror and thereby actuate an optical lever arm. A light beam reflected from the mirror and focused onto the scale provides an indication of the vibration amplitude. *(General Electric Co.)*

unmodulated or modulated form. **2.** Pertaining to the demodulated radar receiver output that is applied to a radar indicator.

video amplifier [ELECTR] A low-pass amplifier having a band-width on the order of 2–10 megahertz, used in television and radar transmission and reception; it is a modification of an RC-coupled amplifier, such that the high-frequency half-power limit is determined essentially by the load resistance, the internal transistor capacitances, and the shunt capacitance in the circuit.

Videocomp [GRAPHICS] A method developed by Radio Corporation of America for composing type electronically; instructions for writing various characters are contained in a computer data bank; the computer controls a buffer unit which supplies drive and deflection voltages to a cathode-ray tube to write and locate the character on its face, where the character is photographed.

video correlator [ELECTR] Radar circuit that enhances automatic target detection capability, provides data for digital target plotting, and gives improved immunity to noise, interference, and jamming.

video data digital processing [COMMUN] Digital processing of video signals for pictures transmitted over a television link; the computer compares each scanned line with adjacent lines and eliminates extreme changes caused by electromagnetic interference.

video discrimination [ELECTR] Radar circuit used to reduce the frequency band of the video amplifier stage in which it is used.

video disk recorder [ELECTR] A video recorder that records television visual signals and sometimes aural signals on a magnetic, optical, or other type of disk which is usually about the size of a long-playing phonograph record.

video disk storage *See* optical disk storage.

video display terminal *See* display terminal.

video frequency [COMMUN] One of the frequencies existing in the output of a television camera when an image is scanned; it may be any value from almost zero to well over 4 megahertz.

Videograph [ELECTR] Trademark of A. B. Dick Company for a high-speed cathode-ray character generator and electrostatic printer, used for printing magazine address labels under control of magnetic tape files of computer-processed addresses; the moving electron beam applies a charge on a dielectric-coated paper to form electrostatic images of characters; powder is then attracted to the image areas and fused to give readable addresses.

video integrator [ELECTR] **1.** Electric counter-countermeasures device that is used to reduce the response to nonsynchronous signals such as noise, and is useful against random pulse signals and noise. **2.** Device which uses the redundancy of repetitive signals to improve the output signal-to-noise ratio, by summing the successive video signals.

video masking [ELECTR] Method of removing chaff echoes and other extended clutter from radar displays.

video player [ELECTR] A player that converts a video disk, videotape, or other type of recorded television program into signals suitable for driving a home television receiver.

video recorder [ELECTR] A magnetic tape recorder capable of storing the video signals for a television program and feeding them back later to a television transmitter or directly to a receiver.

video replay [ELECTR] Also known as video tape replay. **1.** A procedure in which the audio and video signals of a television program are recorded on magnetic tape and then the tape is run through equipment later to rebroadcast the live scene. **2.** A similar procedure in which the scene is rebroadcast almost immediately after it occurs. Also known as instant replay.

video sensing [COMPUT SCI] In optical character recognition, a scanning technique in which the document is flooded with light from an ordinary light source, and the image of the character is reflected onto the face of a cathode-ray tube, where it is scanned by an electron beam.

video signal [COMMUN] In television, the signal containing all of the visual information together with blanking and synchronizing pulses. [ELECTROMAG] *See* target signal.

video tape [ELECTR] A heavy-duty magnetic tape designed primarily for recording the video signals of television programs.

video tape recording [ELECTR] A method of recording television video signals on magnetic tape for later rebroadcasting of television programs. Abbreviated VTR.

video tape replay *See* video replay.

video telephone [COMMUN] A communication instrument which transmits visual images along with the attendant speech.

videotex [COMMUN] A computer communication service which uses standard television information from a data base, and which allows the user, equipped with a limited computer terminal, to interact with the service in selecting information to be displayed, so as to provide electronic mail, teleshopping, financial services, calculation services, and such.

video transformer [ELECTR] A transformer designed to transfer, from one circuit to another, the signals containing picture information in television.

video transmitter *See* visual transmitter.

vidicon [ELECTR] A camera tube in which a charge-density pattern is formed by photoconduction and stored on a photoconductor surface that is scanned by an electron beam, usually of low-velocity electrons; used chiefly in industrial television cameras.

Vienna definition language [COMPUT SCI] A language for defining the syntax and semantics of programming languages; consists of a syntactic metalanguage for defining the syntax of programming and data structures, and a semantic metalanguage which specifies programming language semantics operationally in terms of the computations to which programs give rise during execution.

view camera [OPTICS] A camera that can be focused at both front and back, with adjustments for tilts, swings, shifts, and rise and fall, to control the shape of the subject in the image; it has a groundglass on the back which enables the photographer to view the image to be recorded.

viewdata [COMMUN] Alphanumeric characters or graphics which are produced on a home television screen by a special decoder in response to digital signals sent over a telephone line.

viewfinder [ELECTR] An auxiliary optical or electronic device attached to a television camera so the operator can see the scene as the camera sees it. [OPTICS] A device which provides the user of a camera with the view of the subject that is focused by the lens.

viewing screen *See* screen.

viewing storage tube *See* direct-view storage tube.

viewing time [ELECTR] Time during which a storage tube is presenting a visible output corresponding to the stored information.

view printer [GRAPHICS] In microfilm technology, a reader with built-in facilities to expose and process enlargements.

vigia [NAV] **1.** A rock or shoal whose existence or position is doubtful. **2.** A warning note of a vigia condition on a chart.

Vigilante [AERO ENG] A United States supersonic, twin-engine, turbojet tactical, all-weather attack aircraft designed to operate from aircraft carriers, and capable of delivering nuclear or nonnuclear weapons; it has electronic countermeasures equipment, long-range radar, automatic pilot guidance features, inflight refueling capabilities, and a crew of pilot and bombardier. Designated A-5.

vignette [GRAPHICS] To lighten the edges of a photograph or a halftone illustration so it gradually disappears into the surrounding white of the paper, leaving no sharp edge.

vignetting [OPTICS] Reduction in intensity of illumination near the edges of an optical instrument's field of view caused by obstruction of light rays by the edge of the aperture.

vigoureux printing [TEXT] Printing worsted fibers before spinning in order to achieve a mixture of light and dark shades in the finished fabric.

Vigreaux column [ANALY CHEM] An obsolete apparatus used in laboratory fractional distillation; it is a long glass tube with indentation in its walls; a thermometer is placed at the top of the tube and a side arm is attached to a condenser.

Viking spacecraft [AERO ENG] A series of two United States spacecraft, each consisting of one module which remained in orbit around Mars and another which landed on the planet's surface in 1976.

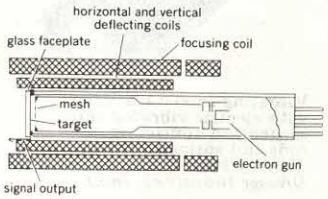
Villari effect [PHYS] A change of magnetic induction within a ferromagnetic substance in a magnetic field when the substance is subjected to mechanical stress.

Villari reversal [PHYS] A change in the sign of the Villari effect which occurs with some ferromagnetic materials when the magnetic field strength reaches a certain value.

villiaumite [MINERAL] NaF A carmine, isometric mineral consisting of sodium fluoride; occurs in masssive form.

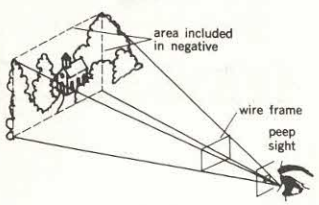
villous adenoma [MED] A slow-growing, potentially ma-

VIDICON



Cross section of vidicon tube and its associated deflection and focusing coils. Target consists of transparent signal electrode deposited on faceplate of tube and thin layer of photoconductive material deposited over electrode. Mesh ensures uniform deceleration and collimation of electron beam.

VIEWFINDER



Frame or peep-sight finder, the simplest type of viewfinder. *(Illustration provided by Eastman Kodak Co., from Willard D. Morgan, ed., The Complete Photographer, National Educational Alliance, 1941–1943)*

lignant neoplasm of the mucosa of the rectum; manifested by bleeding and mucoid diarrhea.

villous placenta *See* epitheliochorial placenta.

villous tenosynovitis [MED] A chronic inflammatory reaction of a tendon sheath producing hypertrophy of the lining, with the formation of redundant folds and villi.

villus [ANAT] A fingerlike projection from the surface of a membrane.

vinal [TEXT] Any manufactured fiber made of a long-chain synthetic polymer composed of at least 50% by weight of vinyl alcohol units, with the total of the vinyl alcohol units and various acetate units being at least 85% by weight of the fiber.

vinasse [MATER] Residue from the fermentation of molasses or grapes; used as a fertilizer and a source of potassium salts. Also known as schlempe.

vinblastine [PHARM] $C_{46}H_{58}O_9N_4$ An alkaloid obtained from the periwinkle plant (*Vinca rosea*) and used, as the sulfate salt, as an antineoplastic drug.

Vincent's angina [MED] Vincent's infection involving tissues of the pharynx and tonsils.

Vincent's infection [MED] A noncontagious bacterial infection of the oral mucosa characterized by ulceration and formation of a gray pseudomembrane; caused by certain fusiform bacteria and spirochetes.

vincristine [PHARM] $C_{46}H_{56}O_{10}N_4$ An alkaloid extracted from the periwinkle plant (*Vinca rosea*) and used, as the sulfate salt, as an antineoplastic drug. Also known as leurocristine.

Vindobonian [GEOL] A European stage of geologic time, middle Miocene.

vine [BOT] A plant having a stem that is too flexible or weak to support itself.

vinegar [MATER] The product of the incomplete oxidation to acetic acid of ethyl alcohol produced by a primary fermentation of vegetable materials; contains not less than 4 grams of acetic acid per gallon; used in preparation of pickled fruits and vegetables and in salad dressing.

vinegar bacteria *See* Acetobacter.

vinegar eel [INV ZOO] *Turbatrix aceti*. A very small nematode often found in large numbers in vinegar fermentation. Also known as vinegar worm.

vinegar worm *See* vinegar eel.

vinetine *See* oxyacanthine.

vinyl acetal resin [ORG CHEM] $[CH_2CH(OC_2H_5)]_x$ A colorless, odorless, light-stable thermoplastic that is unaffected by water, gasoline, or oils; soluble in lower alcohols, benzene, and chlorinated hydrocarbons; used in lacquers, coatings, and molded objects. Also known as polyvinyl acetal resin.

vinyl acetate [ORG CHEM] $CH_3COOCH{:}CH_2$ A colorless, water-insoluble, flammable liquid that boils at 73°C; used as a chemical intermediate and in the production of polymers and copolymers (for example, the polyvinyl resins).

vinyl acetate resin [ORG CHEM] $(CH_2{:}CHOOCCH_3)_x$ An odorless thermoplastic formed by the polymerization of vinyl acetate; resists attack by water, gasoline, and oils; soluble in lower alcohols, benzene, and chlorinated hydrocarbons; used in lacquers, coatings, and molded products.

vinylacetonitrile *See* allyl cyanide.

vinylacetylene [ORG CHEM] $H_2CCHCCH$ A combustible dimer of acetylene, boiling at 5°C; used for the manufacture of neoprene rubber and as a chemical intermediate.

vinyl alcohol [ORG CHEM] $CH_2{:}CHOH$ A flammable, unstable liquid found only in ester or polymer form. Also known as ethenol.

vinylation [CHEM] Formation of a vinyl-derived product by reaction with acetylene; for example, vinylation of alcohols gives vinyl ethers, such as vinyl ethyl ether.

vinylbenzene *See* styrene.

vinyl chloride [ORG CHEM] $CH_2{:}CHCl$ A flammable, explosive gas with an ethereal aroma; soluble in alcohol and ether, slightly soluble in water; boils at −14°C; an important monomer for polyvinyl chloride and its copolymers; used in organic synthesis and in adhesives. Also known as chloroethene; chloroethylene.

vinyl chloride resin [ORG CHEM] $(CH_2CHCl)_x$ A white-power polymer made by the polymerization of vinyl chloride; used to make chemical-resistant pipe (when unplasticized) or bottles and parts (when plasticized).

vinylcyanide *See* acrylonitrile.

vinyl ether [ORG CHEM] $CH_2{:}CHOCH{:}CH_2$ A colorless, light-sensitive, flammable, explosive liquid; soluble in alcohol, acetone, ether, and chloroform, slightly soluble in water; boils at 39°C; used as an anesthetic and a comonomer in polyvinyl chloride polymers. Also known as divinyl ether; divinyl oxide.

vinyl ether resin [ORG CHEM] Any of a group of vinyl ether polymers; for example, polyvinyl methyl ether, polyvinyl ethyl ether, and polyvinyl butyl ether.

vinyl group [ORG CHEM] $CH_2{=}CH{-}$ A group of atoms derived when one hydrogen atom is removed from ethylene.

vinylidene chloride [ORG CHEM] $CH_2{:}CCl_2$ A colorless, flammable, explosive liquid, insoluble in water; boils at 37°C; used to make polymers copolymerized with vinyl chloride or acrylonitrile (Saran).

vinylidene resin [ORG CHEM] A polymer made up of the $(-H_2CCX_2-)$ unit, with X usually a chloride, fluoride, or cyanide radical. Also known as polyvinylidene resin.

Vinylite [TEXT] Trade name for a resin made from high-molecular-weight vinyl chloride by the Union Carbide Corporation.

vinylog [ORG CHEM] Any of the organic compounds that differ from each other by a vinylene linkage (—CH =CH—); for example, ethyl crotonate is a vinylog of ethyl acetate and of the next higher vinylog, ethyl sorbate.

vinyl plastic *See* polyvinyl resin.

vinyl polymerization [ORG CHEM] Addition polymerization where the unsaturated monomer contains a $CH_2{=}C{-}$ group.

vinylpyridine [ORG CHEM] $C_5H_4NCH{:}CH_2$ A toxic, combustible liquid; soluble in water, alcohol, hydrocarbons, esters, ketones, and dilute acids; used to manufacture elastomers and pharmaceuticals.

***N*-vinyl-2-pyrrolidone** [ORG CHEM] C_6H_9ON A colorless, toxic, combustible liquid, boiling at 148°C (100 mm Hg); used as a chemical intermediate and to make polyvinyl pyrrolidone.

vinylstyrene *See* divinylbenzene.

vinyltoluene [ORG CHEM] $CH_2{:}CHC_6H_4CH_3$ A colorless, flammable, moderately toxic liquid; soluble in ether and methanol, slightly soluble in water; boils at 170°C; used as a chemical intermediate and solvent. Also known as methyl styrene.

vinyl trichloride *See* 1,1,2-trichloroethane.

vinyl trichlorosilone [ORG CHEM] $CH_2CH_3SiCl_3$ A liquid that boils at 90.6°C and is soluble in organic solvents; used in silicones and adhesives.

vinyon [TEXT] Any manufactured fiber made of a long-chain synthetic polymer composed of at least 85% by weight of vinyl chloride units.

Viocin [MICROBIO] A trademark for viomycin.

Violaceae [BOT] A family of dicolyledonous plants in the order Violales characterized by polypetalous, mostly perfect, hypogynous flowers with a single style and five stamens.

Violales [BOT] A heterogeneous order of dicotyledons in the subclass Dilleniidae distinguished by a unilocular, compound ovary and mostly parietal placentation.

violarite [MINERAL] Ni_2FeS_4 A violet-gray mineral of the linnaeite group consisting of a sulfide of nickel and iron; found in meteorites.

violet [OPTICS] The hue evoked in an average observer by monochromatic radiation having a wavelength in the approximate range from 390 to 455 nanometers; however, the same sensation can be produced in a variety of other ways.

violet layer [ASTRON] A layer of particles in the upper Martian atmosphere that scatter and absorb electromagnetic radiation at shorter wavelengths, making the atmosphere opaque to blue, violet, and ultraviolet light.

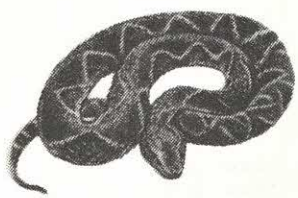
violle [OPTICS] A unit of luminous intensity, equal to the luminous intensity of 1 square centimeter of platinum at its temperature of solidification; it is found experimentally to be equal to 20.17 candelas.

viologen display [ELECTR] An electrochromic display based on an electrolyte consisting of an aqueous solution of a dipositively charged organic salt, containing a colorless cation that undergoes a one-electron reduction process to produce a purple radical cation, upon application of a negative potential to the electrode.

viomycin [MICROBIO] A polypeptide antibiotic or mixture of antibiotic substances produced by strains of *Streptomyces griseus* var. *purpureus* (*Streptomyces puniceus*); the sulfate salt is administered intramuscularly for treatment of tuberculosis resistant to other therapy.

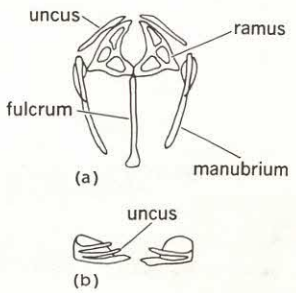
viper [VERT ZOO] The common name for reptiles of the family Viperidae; thick-bodied poisonous snakes having a pair of

VIPER



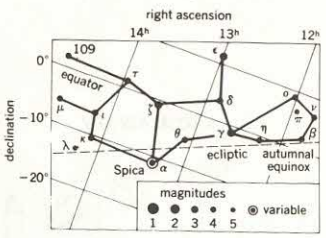
The fer-de-lance (*Bothrops atrox*) is from 5 to 6 feet (1.5 to 1.8 meters) in length; ranges from southern Mexico to northern South America and is found in the West Indies.

VIRGATE TROPHUS



Virgate trophus of *Notommata*. *(a)* Ventral view and *(b)* upper view, showing thin, slightly toothed structure. *(After Meyers)*

VIRGO



Line pattern of the constellation Virgo. The grid lines represent the coordinates of the sky. The apparent brightness, or magnitude, of the stars is shown by the sizes of the dots, which are graded by appropriate numbers as indicated.

long fangs, present on the anterior part of the upper jaw, which fold against the roof of the mouth when the jaws are closed.

Viperidae [VERT ZOO] A family of reptiles in the suborder Serpentes found in Eurasia and Africa; all species are proglyphodont.

VIR *See* vertical interval reference.

viral encephalomyelitides [MED] A group of several encephalitis diseases caused by various viruses; includes epidemic encephalitis, equine encephalitides, and Japanese B encephalitis.

viral gastroenteritis [MED] An acute infectious gastroenteritis thought to be caused by various viruses and characterized by diarrhea, nausea, vomiting, and variable systemic symptoms.

viral hepatitis [MED] A type of hepatitis caused by two distinct viruses, A and B; type A is also known as infectious hepatitis, type B as serum hepatitis.

viral pneumonia [MED] A form of pneumonia caused by a virus of various types, in which the inflammatory reaction predominates in the septa, and the alveoli contain fibrin, edema fluid, and some inflammatory cells.

virazon [METEOROL] **1.** The very strong southwesterly sea breeze experienced where the coastal chains of the Andes Mountains descend steeply to the sea; it sets in about 10 a.m. and reaches its greatest strength at about 3 p.m. **2.** A westerly sea breeze of Spain and Portugal.

viremia [MED] Presence of viral particles in the blood.

Vireonidae [VERT ZOO] The vireos, a family of New World passeriform birds in the suborder Oscines.

virga [METEOROL] Wisps or streaks of water or ice particles falling out of a cloud but evaporating before reaching the earth's surface as precipitation. Also known as fall streaks; Fallstreifen; precipitation trails.

virgate [BOT] Banded.

virgate trophus [INV ZOO] A piercing type of trophus in rotifers that is thin and slightly toothed.

virgin *See* straight-run.

Virgin *See* Virgo.

virgin medium [COMPUT SCI] A material designed to have data recorded on it which is as yet completely lacking any information, such as a paper tape without any punched holes, not even feed holes; in contrast to an empty medium.

virgin neutron [NUCLEO] A neutron from any source, before it makes a collision.

virgin stock [MATER] A petroleum-derived liquid stream processed from natural (virgin) crude oil; it contains no cracked or otherwise chemically modified material. Also known as straight-run stock.

virgin wool [TEXT] Wool used for the first time, directly after clipping from sheep.

Virgo [ASTRON] A constellation, right ascension 13 hours, declination 0°. Also known as Virgin.

Virgo A [ASTRON] A radio galaxy; it is associated with the galaxy M 87 (NGC 4486).

Virgo cluster [ASTRON] A cluster of galaxies which is the nearest to the galaxy that includes the sun; the cluster is centered in the constellation Virgo and is about 16,000,000 light-years (1.51×10^{23} m) from earth.

virgo-forcipate trophus [INV ZOO] A type of muscular chamber in rotifers containing jaws of a cuticular material intermediate between a piercing and grasping type of structure.

Virgo supercluster *See* Local supercluster.

virial coefficients [THERMO] For a given temperature T, one of the coefficients in the expansion of P/RT in inverse powers of the molar volume, where P is the pressure and R is the gas constant.

virial of a system [STAT MECH] The average over a long period of time of $-\frac{1}{2}$ the sum over the particles in the system of the scalar product of the total force acting on the particle and its radius vector.

virial theorem *See* Clausius virial theorem.

viridans streptococci [MICROBIO] A group of pathogenic and saprophytic streptococci including strains not causing beta hemolysis, although many cause alpha hemolysis, and none which elaborate a C substance.

virilism [MED] *See* gynandry. [PSYCH] **1.** Masculinity. **2.** Manifestation of male behavioral patterns in the female.

virion [VIROL] The complete, mature virus particle.

Virmel engine [MECH ENG] A cat-and-mouse engine that employs vanelike pistons whose motion is controlled by a gear-and-crank system; each set of pistons stops and restarts when a chamber reaches the spark plug.

viroid [MICROBIO] The smallest known agents of infectious disease, characterized by the absence of encapsidated proteins.

virology [MICROBIO] The study of submicroscopic organisms known as viruses.

virotoxin [BIOCHEM] One of a group of toxins present in the mushroom *Amanita virosa*.

virtual address [COMPUT SCI] A symbol that can be used as a valid address part but does not necessarily designate an actual location.

virtual cathode [ELECTR] The locus of a space-charge-potential minimum such that only some of the electrons approaching it are transmitted, the remainder being reflected back to the electron-emitting cathode.

virtual decimal point *See* assumed decimal point.

virtual direct-access storage [COMPUT SCI] A device used with mass-storage systems, whereby data are retrieved prior to usage by a batch-processing program and automatically transcribed onto disk storage.

virtual displacement [MECH] **1.** Any change in the positions of the particles forming a mechanical system. **2.** An infinitesimal change in the positions of the particles forming a mechanical system, which is consistent with the geometrical constraints on the system.

virtual entropy [THERMO] The entropy of a system, excluding that due to nuclear spin. Also known as practical entropy.

virtual gravity [METEOROL] The force of gravity on a parcel of air, reduced by centrifugal force due to the motion of the parcel relative to the earth.

virtual height [GEOPHYS] The apparent height of a layer in the ionosphere, determined from the time required for a radio pulse to travel to the layer and return, assuming that the pulse propagates at the speed of light. Also known as equivalent height.

virtual image [OPTICS] An optical image from which rays of light only appear to diverge, without actually being focused there.

virtual leak [ENG] The semblance of the vacuum system leak caused by a gradual desorptive release of gas at a rate which cannot be accurately predicted.

virtual level [NUC PHYS] The energy of a virtual state.

virtual memory [COMPUT SCI] A combination of primary and secondary memories that can be treated as a single memory by programmers because the computer itself translates a program or virtual address to the actual hardware address.

virtual meridian [NAV] The meridian in which the spin axis of a gyro compass will settle as a result of speed-course-latitude error.

virtual orbital [PHYS CHEM] An orbital that is either empty or unoccupied while in the ground state.

virtual particle *See* virtual quantum.

virtual PPI reflectoscope [ENG] A device for superimposing a virtual image of a chart on a plan position indicator (PPI) pattern; the chart is usually prepared with white lines on a black background to the scale of the plan position indicator range scale.

virtual pressure [METEOROL] The pressure of a parcel of moist air when it has the same density as a parcel of dry air at the same temperature.

virtual process [QUANT MECH] A process which contributes in a stage of a theoretical model but is not, by itself, physically realizable.

virtual quantum [QUANT MECH] A photon or other particle in an intermediate state which appears in matrix elements connecting initial and final states in second- and higher-order perturbation theory; energy is not conserved in the transitions to or from the intermediate state. Also known as virtual particle.

virtual source [ACOUS] A source of sound which is composed of the same material as that in which the sound propagates and which does not have sharply delineated boundaries; such sources include thermal sources (such as lightning and thermoacoustic arrays), turbulence (as in rocket and jet engines), and sound itself (as in a parametric acoustic array).

virtual state [NUC PHYS] An unstable state of a compound nucleus which has a lifetime many times longer than the time it takes a nucleon, with the same energy as it has in the virtual state, to cross the nucleus.

virtual temperature [METEOROL] In a system of moist air,

the temperature of dry air having the same density and pressure as the moist air.

virtual work [MECH] The work done on a system during any displacement which is consistent with the constraints on the system.

virtual work principle *See* principle of virtual work.

virulence [MICROBIO] The disease-producing power of a microorganism; infectiousness.

virus [VIROL] A large group of infectious agents ranging from 10 to 250 nanometers in diameter, composed of a protein sheath surrounding a nucleic acid core and capable of infecting all animals, plants, and bacteria; characterized by total dependence on living cells for reproduction and by lack of independent metabolism.

virus hepatitis *See* infectious hepatitis.

virus interference [MICROBIO] A phenomenon which may be defined as protection of host cells against one virus, conferred as a result of prior infection with a different virus.

visbreaking *See* viscosity breaking.

viscera [ANAT] The organs within the cavities of the body of an organism.

visceral arch [ANAT] One of the series of mesodermal ridges covered by epithelium bounding the lateral wall of the oral and pharyngeal regions of vertebrates; embryonic in higher forms, they contribute to formation of the face and neck. [VERT ZOO] One of the first two arches of the series in gill-bearing forms.

visceral leishmaniasis [MED] A severe, generalized, and often fatal infection, caused by any of three pathogenic hemoflagellates of the genus *Leishmania*, affecting organs rich in endothelial cells; accompanied by fever, spleen and liver enlargement, anemia, leukopenia, skin pigmentation, and changes in plasma protein.

visceral peritoneum [ANAT] That portion of the peritoneum covering the organs of the abdominal cavity.

visceral pouch *See* pharyngeal pouch.

visceratonia [PSYCH] The behavioral type assigned to the endomorphic somatotype, manifested by a desire for assimilation and the conservation of energy through social interactions, relaxation, and love of food.

visceroptosis [MED] Prolapse of a viscus, especially the intestine; downward displacement of the intestine in the abdominal cavity. Also known as enteroptosis.

viscid [BOT] Having a sticky surface, as certain leaves.

viscoelastic fluid [FL MECH] A fluid that displays viscoelasticity.

viscoelasticity [MECH] Property of a material which is viscous but which also exhibits certain elastic properties such as the ability to store energy of deformation, and in which the application of a stress gives rise to a strain that approaches its equilibrium value slowly.

viscoelastic theory [MECH] The theory which attempts to specify the relationship between stress and strain in a material displaying viscoelasticity.

viscometer [ENG] An instrument designed to measure the viscosity of a fluid.

viscometer gage [ENG] A vacuum gage in which the gas pressure is determined from the viscosity of the gas.

viscometric analysis [FL MECH] Measurement of the flow properties of substances by viscometry.

viscometry [ENG] A branch of rheology; the study of the behavior of fluids under conditions of internal shear; the technology of measuring viscosities of fluids.

viscose process [CHEM ENG] A process for the manufacture of rayon by treating cellulose with caustic soda, and with carbon disulfide to form cellulose xanthate, which is then dissolved in a weak caustic solution to form the viscose; fibers are used as silk substitutes.

viscosity [FL MECH] The resistance that a gaseous or liquid system offers to flow when it is subjected to a shear stress. Also known as flow resistance.

viscosity blending chart [CHEM ENG] A graphical means for estimating the viscosity at a given temperature of a blend of petroleum products.

viscosity breaking [CHEM ENG] A petroleum refinery process used to lower or break the viscosity of high-viscosity residuum by thermal cracking of molecules at relatively low temperatures. Also known as visbreaking.

viscosity coefficient [FL MECH] An empirical number used in equations of fluid mechanics to account for the effects of viscosity.

viscosity conversion table [CHEM ENG] A table or chart with which kinematic viscosity, in centistokes, can be converted to Saybolt viscosity, in seconds, at the same temperature.

viscosity curve [FL MECH] A graph showing the viscosity of a liquid or gaseous material as a function of temperature.

viscosity-gravity constant [CHEM ENG] An index of the chemical composition of crude oil; defined as the general relation between specific gravity and Saybolt Universal viscosity; the constant is low for paraffinic crude oils, high for naphthenic crude oils. Abbreviated VGC.

viscosity index [CHEM ENG] An arbitrary scale used to show the magnitude of viscosity changes in lubricating oils with changes in temperature. Abbreviated VI.

viscosity-temperature chart [CHEM ENG] A chart with which the kinematic or Saybolt viscosity of a petroleum oil at any temperature within a limited range may be ascertained, provided viscosities at two temperatures are known.

viscous damping [MECH ENG] A method of converting mechanical vibrational energy of a body into heat energy, in which a piston is attached to the body and is arranged to move through liquid or air in a cylinder or bellows that is attached to a support.

viscous dissipation function [FL MECH] A quadratic function of spatial derivatives of components of fluid velocity which gives the rate at which mechanical energy is converted into heat in a viscous fluid per unit volume. Also known as dissipation function.

viscous drag [FL MECH] That part of the rearward force on an aircraft that results from the aircraft carrying air forward with it through viscous adherence.

viscous-drag gas-density meter [ENG] A device to measure gas-mixture densities; driven impellers in sample and standard chambers create measurable turbulences (drags) against respective nonrotating impellers.

viscous fillers [MECH ENG] A packaging machine that fills viscous product into cartons; there are two basic types, straight-line and rotary plunger; the former operates intermittently on a given number of containers, while the latter fills and discharges containers continuously.

viscous flow [FL MECH] **1.** The flow of a viscous fluid. **2.** The flow of a fluid through a duct under conditions such that the mean free path is small in comparison with the smallest, transverse section of the duct.

viscous fluid [FL MECH] A fluid whose viscosity is sufficiently large to make the viscous forces a significant part of the total force field in the fluid.

viscous force [FL MECH] The force per unit volume or per unit mass arising from viscous effects in fluid flow.

viscous impingement filter [ENG] A filter made up of a relatively loosely arranged medium, such that the airstream is forced to change direction frequently as it passes through the filter medium; the medium usually consists of spun-glass fibers, metal screens, or layers of crimped expanded metal whose surfaces are coated with a tacky oil.

viscous lubrication *See* complete lubrication.

viscous magnetization *See* viscous remanent magnetization.

viscous neutral oil [MATER] The bottoms from reducing, by distillation, of a petroleum neutral oil fraction; such oils are frequently blended with bright stock to make finished oils of various viscosities.

viscous remanent magnetization [GEOPHYS] A process in which grains of magnetic minerals, which are either too small or too finely divided by undergrowths of different chemical composition to retain a permanent magnetization indefinitely, acquire a new direction of magnetization when the direction of the earth's magnetic field changes. Abbreviated VRM. Also known as viscous magnetization.

viscus [ANAT] Singular of viscera.

vise [DES ENG] A tool consisting of two jaws for holding a workpiece; opened and closed by a screw, lever, or cam mechanism.

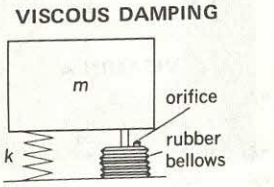
Viséan [GEOL] A European stage of lower Carboniferous geologic time forming the lowermost Upper Mississippian, above Tournaisian and below lower Namurian.

visibility [METEOROL] In weather observing practice, the greatest distance in a given direction at which it is just possible to see and identify with the unaided eye, in the daytime, a prominent dark object against the sky at the horizon and, at

VISCOMETER

Picture of a Laray viscometer; used to measure viscosity and other rheological properties of ink.

VISCOUS DAMPING



System employing viscous damping with air, used to reduce vibration of body with mass m, attached to spring with force constant k.

nighttime, a known, preferably unfocused, moderately intense light source.

visibility factor [ELECTR] The ratio of the minimum signal input detectable by ideal instruments connected to the output of a receiver, to the minimum signal power detectable by a human operator through a display connected to the same receiver. Also known as display loss.

visibility function *See* luminosity function.

visibility meter [ENG] An instrument for making direct measurements of visual range in the atmosphere or of the physical characteristics of the atmosphere which determine the visual range. [OPTICS] A type of photometer that operates on the principle of artificially reducing the visibility of objects to threshold values (borderline of seeing and not seeing) and measuring the amount of the reduction on an appropriate scale.

visible absorption spectrophotometry [SPECT] Study of the spectra produced by the absorption of visible-light energy during the transformation of an electron from the ground state to an excited state as a function of the wavelength causing the transformation.

visible bearing [NAV] A bearing obtained by visual observation using a pelorus or azimuth circle.

visible horizon [ASTRON] That line where earth and sky appear to meet, and the projection of this line upon the celestial sphere.

visible radiation *See* light.

visible spectrophotometry [SPECT] In spectrophotometric analysis, the use of a spectrophotometer with a tungsten lamp that has an electromagnetic spectrum of 380–780 nanometers as a light source, glass or quartz prisms or gratings in the monochromator, and a photomultiplier cell as a detector.

visible spectrum [SPECT] **1.** The range of wavelengths of visible radiation. **2.** A display or graph of the intensity of visible radiation emitted or absorbed by a material as a function of wavelength or some related parameter.

vision [PHYSIO] The sense which perceives the form, color, size, movement, and distance of objects. Also known as sight.

vision slit [ORD] A narrow opening or slit in armor to permit viewing, especially one in a tank or other armored vehicle.

visor tin [MINERAL] Twin crystals of cassiterite characterized by a notch.

visual achromatism [OPTICS] In an optical system, the removal of chromatic aberration or chromatic differences of magnification between light at the wavelength of the Fraunhofer C line at 656.3 nanometers and the F line at 486.1 nanometers in order to minimize these defects at wavelengths at which the human eye is most sensitive. Also known as optical achromatism.

visual acuity [PHYSIO] The ability to see fine details of an object; specifically, the ability to see an object whose angle subtended at the eye is 1 minute of arc.

visual aid to navigation [NAV] An object such as a tower or tripod target whose position is indicated on government-approved navigation charts and on which bearings may be taken by the naked eye or with optical assistance; the aid may or may not be illuminated.

visual angle [OPTICS] The angle which an object subtends at the nodal point of the eye of an observer.

visual-aural range [NAV] A very-high-frequency radio range that provides one course for display to the pilot on a zero-center left-right indicator and another course, at right angles to the first, in the form of aural A-N radio range signals; the A-N aural signals provide a means for differentiating between the two directions of the visual course. Abbreviated VAR.

visual binaries [ASTRON] Binary stars that to the naked eye seem to be single stars, but when viewed through the telescope, are separated into pairs. Also known as visual doubles.

visual bombing [ORD] Bombing done by sighting on an aiming point, under conditions where the aiming point is visible from the bombing aircraft.

visual bombsight [ORD] A bombsight designed for aiming a bomb when the aiming point is visible.

visual colorimetry [ANALY CHEM] A procedure for the determination of the color of an unknown solution by visual comparison to color standards (solutions or color-tinted disks).

visual comparator *See* optical comparator.

visual display unit *See* display tube.

visual doubles *See* visual binaries.

visual fire control [ORD] Technical control of some artillery fire using an optical tracking instrument.

visual fix [NAV] A fix established by visual observation of fixed objects.

visual flight [AERO ENG] An aircraft flight occurring under conditions which allow navigation by visual reference to the earth's surface at a safe altitude and with sufficient horizontal visibility, and operating under visual flight rules. Also known as VFR flight.

visual flight rules [AERO ENG] A set of regulations set down by the U.S. Civil Aeronautics Board (in Civil Air Regulations) to govern the operational control of aircraft during visual flight. Abbreviated VFR.

visual Herschel effect *See* Herschel effect.

visual learning [PSYCH] A type of sensory learning that is controlled by the cortical visual areas of the brain.

visual line of position [NAV] A line of position determined by visual observation of a landmark or aid to navigation.

visually coupled display *See* helmet-mounted display.

visual magnitude [ASTRON] A celestial body's magnitude as seen by the eye of the observer.

visual photometer [OPTICS] A photometer in which the luminance of two surfaces is compared by human vision; it usually utilizes the Lummer-Brodhun sightbox or some adaptation of its principles.

visual pigment [BIOCHEM] Any of various photosensitive pigments of vertebrate and invertebrate photoreceptors.

visual projection area [PHYSIO] The receptive center for visual images in the cortex of the brain, located in the walls and margins of the calcarine sulcus of the occipital lobe. Also known as Brodmann's area 17.

visual purple *See* rhodopsin.

visual radio range [NAV] Any range facility whose course is flown by visual instrumentation not associated with aural reception.

visual range [METEOROL] The distance, under daylight conditions, at which the apparent contrast between a specified type of target and its background becomes just equal to the threshold contrast of an observer.

visual-righting reflex [PHYSIO] A reflex mechanism whereby righting of the head and body is caused by visual stimuli. Also known as optical-righting reflex.

visual scanner [ELECTR] Device that optically scans printed or written data and generates an analog or digital signal.

visual seizure [MED] A form of epileptic seizure in which the patient experiences visual sensations in the form of light flashes, sometimes of varied colors.

visual storage tube [ELECTR] Any electrostatic storage tube that also provides a visual readout.

visual telephony [COMMUN] The transmission of picture information (television) over telephone lines.

visual transmitter [ELECTR] Those parts of a television transmitter that act on picture signals, including parts that act on the audio signals as well. Also known as picture transmitter; video transmitter.

visual yellow [BIOCHEM] An intermediary substance formed from rhodopsin in the retina after exposure to light; it is ultimately broken down to retinene and vitamin A.

Vitaceae [BOT] A family of dicotyledonous plants in the order Rhamnales; mostly tendril-bearing climbers with compound or lobed leaves, as in grapes (*Vitis*).

vital capacity [PHYSIO] The volume of air that can be forcibly expelled from the lungs after the deepest inspiration.

vitalism [BIOL] The theory that the activities of a living organism are under the guidance of an agency which has none of the attributes of matter or energy.

vitamin [BIOCHEM] An organic compound present in variable, minute quantities in natural foodstuffs and essential for the normal processes of growth and maintenance of the body; vitamins do not furnish energy, but are essential for energy transformation and regulation of metabolism.

vitamin A [BIOCHEM] $C_{20}H_{29}OH$ A pale-yellow alcohol that is soluble in fat and insoluble in water; found in liver oils and carotenoids, and produced synthetically; it is a component of visual pigments and is essential for normal growth and maintenance of epithelial tissue. Also known as antiinfective vitamin; antixerophthalmic vitamin; retinol.

vitamin A aldehyde *See* retinal.

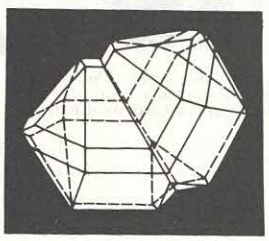
vitamin B_1 *See* thiamine.

vitamin B_2 *See* riboflavin.

vitamin B_3 *See* pantothenic acid.

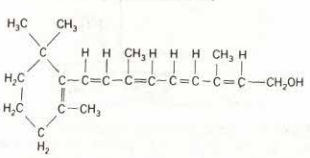
vitamin B_6 [BIOCHEM] A vitamin which exists as three

VISOR TIN



Visor tin with characteristic notch. *(From C. S. Hurlbut, Jr., Dana's Manual of Mineralogy, 17th ed., Wiley, 1959)*

VITAMIN A



Structural formula for vitamin A (retinol).

chemically related and water-soluble forms found in food: pyridoxine, pyridoxal, and pyridoxamine; dietary requirements and physiological activities are uncertain.

vitamin B_{12} [BIOCHEM] A group of closely related polypyrrole compounds containing trivalent cobalt; the antipernicious anemia factor, essential for normal hemopoiesis. Also known as cobalamin; cyanocobalamin; extrinsic factor.

vitamin B complex [BIOCHEM] A group of water-soluble vitamins that include thiamine, riboflavin, nicotinic acid, pyridoxine, panthothenic acid, inositol, *p*-aminobenzoic acid, biotin, folic acid, and vitamin B_{12}.

vitamin B_6 hydrochloride *See* pyridoxine hydrochloride.

vitamin B_2 phosphate *See* riboflavin 5′-phosphate.

vitamin C *See* ascorbic acid.

vitamin D [BIOCHEM] Either of two fat-soluble, sterol-like compounds, calciferol or ergocalciferol (vitamin D_2) and cholecalciferol (vitamin D_3); occurs in fish liver oils and is essential for normal calcium and phosphorus deposition in bones and teeth. Also known as antirachitic vitamin.

vitamin D_3 *See* cholecalciferol.

vitamin E [BIOCHEM] $C_{29}H_{50}O_2$ Any of a series of eight related compounds called tocopherols, α-tocopherol having the highest biological activity; occurs in wheat germ and other oils and is believed to be needed in certain human physiological processes.

vitamin G *See* riboflavin.

vitamin K [BIOCHEM] Any of three yellowish oils which are fat-soluble, nonsteroid, and nonsaponifiable; it is essential for formation of prothrombin. Also known as antihemorrhagic vitamin; prothrombin factor.

vitamin K_1 *See* phytonadione.

vitamin P [BIOCHEM] A substance, such as citrin or one or more of its components, believed to be concerned with maintenance of the normal state of the walls of small blood vessels.

vitamin P complex *See* bioflavanoid.

vitavite *See* moldavite.

vitellarium [INV ZOO] The part of the ovary in certain rotifers and flatworms that produces nutritive cells filled with yolk. Also known as yolk larva.

vitelline artery [EMBRYO] An artery passing from the yolk sac to the primitive aorta in young vertebrate embryos. Also known as omphalomesenteric artery.

vitelline duct [EMBRYO] The constricted part of the yolk sac opening into the midgut region of the future ileum. Also known as omphalomesenteric duct; umbilical duct.

vitelline membrane [CYTOL] The cytoplasmic membrane on the surface of the mammalian ovum.

vitelline vein [EMBRYO] Any of the embryonic veins in vertebrates uniting the yolk sac and the sinus venosus; their proximal fused ends form the portal vein. Also known as omphalomesenteric vein.

vitellogenesis [PHYSIO] The process by which yolk is formed in the ooplasm of an oocyte.

viticulture [AGR] That division of horticulture concerned with grape growing, studies of grape varieties, methods of culture, and insect and disease control.

vitiligo [MED] A skin disease characterized by an acquired ochromia in areas of various sizes and shapes.

vitrain [GEOL] A brilliant black coal lithotype with vitreous luster and cubical cleavage. Also known as pure coal.

Vitreoscilla [MICROBIO] A genus of bacteria in the family Beggiatoaceae; filaments are individual and contain cylindrical cells.

Vitreoscillaceae [MICROBIO] Formerly a family of bacteria in the order Beggiatoales; included organisms which have a filamentous habit and move by gliding, but never store sulfur, and rely on organic nutrients in their metabolism.

vitreous body *See* vitreous humor.

vitreous chamber [ANAT] A cavity of the eye posterior to the crystalline lens and anterior to the retina, which is filled with vitreous humor.

vitreous copper *See* chalcocite.

vitreous enamel [MATER] A glass coating applied to a metal by covering the surface with a powdered glass frit and heating until fusion occurs. Also known as porcelain enamel.

vitreous humor [PHYSIO] The transparent gel-like substance filling the greater part of the globe of the eye, the vitreous chamber. Also known as vitreous body.

vitreous luster [OPTICS] A type of luster resembling that of glass.

vitreous silica *See* silica glass.

vitreous silver *See* argentite.

vitreous state [SOLID STATE] A solid state in which the atoms or molecules are not arranged in any regular order, as in a crystal, and which crystallizes only after an extremely long time. Also known as glassy state.

vitric [GEOL] Referring to a pyroclastic material which is characteristically glassy, that is, contains more than 75% glass.

vitric tuff [GEOL] Tuff composed principally of volcanic glass fragments.

vitrification [GEOL] Formation of a glassy or noncrystalline material.

vitrified-clay pipe [MATER] A pipe, made of clay treated in a kiln to induce vitrification, with the surface glazed for watertightness; used for drainage.

vitrified wheel [DES ENG] A grinding wheel with a glassy or porcelanic bond.

vitrinite [GEOL] A maceral group that is rich in oxygen and composed of humic material associated with peat formation; characteristic of vitrain.

vitrinoid [GEOL] Vitrinite occurring in bituminous coking coals; characterized by a reflectance of 0.5–2.0%.

vitrophyre [PETR] Any porphyritic igneous rock whose groundmass is glassy. Also known as glass porphyry.

vittate [BOT] **1.** Having longitudinal stripes. **2.** Bearing specialized oil tubes (vittae).

viuga [METEOROL] A cold north or northeast storm of the Russian steppes, lasting about 3 days.

vivax malaria [MED] Malaria caused by *Plasmodium vivax* and characterized by typical paroxysms occurring every few days, commonly every 2 days. Also known as benign tertian malaria; tertian malaria.

Viverridae [VERT ZOO] A family of carnivorous mammals in the superfamily Feloidea composed of the civets, genets, and mongooses.

vivianite [MINERAL] $Fe_3(PO_4)_2 \cdot 8H_2O$ A colorless, blue, or green mineral in the unaltered state (darkens upon oxidation); crystallizes in the monoclinic system and occurs in earth form and as globular and encrusting fibrous masses. Also known as blue iron earth; blue ocher.

Viviparidae [INV ZOO] A family of fresh-water gastropod mollusks in the order Pectinibranchia.

viviparous [PHYSIO] Bringing forth live young.

vixen file [DES ENG] A flat file with curved teeth; used for filing soft metals.

Viyella [TEXT] Registered name of a wool and cotton blend in woven or knitted fabrics.

V jewels [DES ENG] Jewel bearings used in conjunction with a conical pivot, the bearing surface being a small radius located at the apex of a conical recess; found primarily in electric measuring instruments.

Vlasov equation [PL PHYS] A modification of the Boltzmann transport equation for the study of a plasma, in which particles interact only through the mutually induced space-charge field, and collisions are assumed to be negligible. Also known as collisionless Boltzmann equation.

VLBI *See* very-long-baseline interferometry.

VLCC *See* very large crude carrier.

VLF *See* very-low-frequency.

VM & P naphtha *See* varnish makers' and painters' naphtha.

VMOS technology *See* vertical metal oxide semiconductor technology.

V-notch weir *See* triangular-notch weir.

vocal cord *See* vocal fold.

vocal fold [ANAT] Either of a pair of folds of tissue covered by mucous membrane in the larynx. Also known as vocal cord.

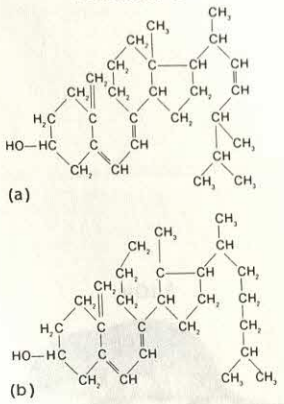
vocal sac [VERT ZOO] An expansible pocket of skin beneath the chin or behind the jaws of certain frogs; may be inflated to a great volume and serves as a resonator.

Vochysiaceae [BOT] A family of dicotyledonous plants in the order Polygalales characterized by mostly three carpels, usually stipulate leaves, one fertile stamen, and capsular fruit.

vocoder [ELECTR] A system of electronic apparatus for synthesizing speech according to dynamic specifications derived from an analysis of that speech.

vodas [ELECTR] A voice-operated switching device used in transoceanic radiotelephone circuits to suppress echoes and singing sounds automatically; it connects a subscriber's line automatically to the transmitting station as soon as he starts speaking and simultaneously disconnects it from the receiving

VITAMIN D



Structural fomulas for the two vitamin D compounds. *(a)* Vitamin D_2 (calciferol). *(b)* Vitamin D_3 (cholecalciferol).

VOCAL SAC

Toad of the genus *Bufo* giving mating call with vocal sac expanded. *(American Museum of Natural History photograph)*

station, thereby permitting the use of one radio channel for both transmitting and receiving without appreciable switching delay as the parties alternately talk. Derived from voice-operated device anti-singing.

voder [ELECTR] An electronic system that uses electron tubes and filters, controlled through a keyboard, to produce voice sounds artificially. Derived from voice operation demonstrator.

vodka [FOOD ENG] A colorless and unaged alcoholic beverage distilled from rye or wheat mash or sometimes from potatoes; it is highly rectified during distillation and thus is a very pure neutral spirit without a pronounced taste.

vogad [ELECTR] An automatic gain control circuit used to maintain a constant speech output level in long-distance radiotelephony. Derived from voice-operated gain-adjusted device.

Vogel-Colson-Russell effect *See* Russell effect.

vogesite [PETR] A syenitic lamprophyre composed of phenocrysts of hornblende in a groundmass of orthoclase and hornblende.

Voges-Proskauer test [MICROBIO] One of the four tests of the IMVIC test; a qualitative test for the formation of acetyl methylcarbinol from glucose, in which solutions of α-naphthol, potassium hydroxide, and creatinine are added to an incubated culture of test organisms in a glucose broth, and a pink to rose color indicates a positive reaction.

voglite [MINERAL] An emerald green to grass green, triclinic mineral consisting of a hydrated carbonate of calcium, copper, and uranium; occurs as coatings of scales.

voice call sign [COMMUN] A call sign provided primarily for voice communications.

voice channel [COMMUN] A communication channel having sufficient bandwidth to carry voice frequencies intelligibly; the minimum bandwidth for a voice channel is about 3000 hertz.

voice coder [ELECTR] Device that converts speech input into digital form prior to encipherment for secure transmission and converts the digital signals back to speech at the receiver.

voice coil [ENG ACOUS] The coil that is attached to the diaphragm of a moving-coil loudspeaker and moves through the air gap between the pole pieces due to interaction of the fixed magnetic field with that associated with the audio-frequency current flowing through the voice coil. Also known as loudspeaker voice coil; speech coil (British usage).

voice/data system [COMMUN] Integrated communications system for transmitting both voice and digital data.

voice digitization [ELECTR] The conversion of analog voice signals to digital signals.

voice frequency [COMMUN] An audio frequency in the range essential for transmission of speech of commercial quality, from about 300 to 3400 hertz. Abbreviated VF. Also known as speech frequency.

voice-frequency carrier telegraphy [COMMUN] Carrier telegraphy in which the carrier currents have frequencies such that the modulated currents may be transmitted over a voice-frequency telephone channel.

voice-frequency dialing [ELECTR] Method of dialing by which the direct-current pulses from the dial are transformed into voice-frequency alternating-current pulses.

voice-frequency telegraph system [COMMUN] Telegraph system permitting the use of many channels on a single circuit; a different audio frequency is used for each channel, being keyed in the conventional manner; the various audio frequencies at the receiving end are separated by suitable filter circuits and fed to their respective receiving circuits.

voice-grade channel [COMMUN] A channel whose bandwidth is large enough to transmit voice-frequency signals.

voice-operated device [ELECTR] Any of several devices in a telephone system which are brought into operation by a sound signal, or some characteristic of such a signal.

voice-operated device anti-singing *See* vodas.

voice-operated gain-adjusted device *See* vogad.

voice-operated loss control and suppressor [ELECTR] Voice-operated device which switches loss out of the transmitting branch and inserts loss in the receiving branch under control of the subscriber's speech.

voice operation demonstrator *See* voder.

voice print [ENG ACOUS] A voice spectrograph that has individually distinctive patterns of voice characteristics that can be used to identify one person's voice from other voice patterns.

voice recognition unit [COMMUN] A computer peripheral device that recognizes a limited number of spoken words and converts them into equivalent digital signals which can serve as computer input or initiate other desired actions.

voice response [COMPUT SCI] A computer-controlled recording system in which basic sounds, numerals, words, or phrases are individually stored for playback under computer control as the reply to a keyboarded query. [ENG ACOUS] The process of generating an acoustic speech signal that communicates an intended message, such that a machine can respond to a request for information by talking to a human user.

voice synthesizer [ELECTR] A synthesizer that simulates speech in any language by assembling a language's elements or phonemes under digital control, each with the correct inflection, duration, pause, and other speech characteristics.

void [COMPUT SCI] In optical character recognition, an island of insufficiently inked paper within the area of the intended character stroke.

void channels [ENG] The open passages of a porous or packed medium through which liquid or gas can flow.

void coefficient [NUCLEO] A rate of change in the reactivity of a water reactor system resulting from a formation of steam bubbles as the power level and temperature increase.

void ratio [GEOL] The ratio of the volume of void space to the volume of solid substance in any material consisting of void space and solid material, such as a soil sample, a sediment, or a sedimentary rock.

void swelling [NUCLEO] An increase in the external dimension of solid materials after irradiation.

Voigt body *See* Kelvin body.

Voigt effect [OPTICS] Double refraction of light passing through a substance that is placed in a magnetic field perpendicular to the direction of light propagation.

Voigt notation [MECH] A notation employed in the theory of elasticity in which elastic constants and elastic moduli are labeled by replacing the pairs of letters *xx, yy, zz, yz, zx,* and *xy* by the number 1, 2, 3, 4, 5, and 6 respectively.

voile [TEXT] A lightweight sheer fabric, made of cotton, worsted, silk, rayon, or acetate, with a crisp feel and airy appearance, woven from yarns having considerably more twist than warp yarns.

Voith-Schneider propulsion system [NAV ARCH] A system for ship propulsion, serving both as propeller and rudder, that consists of one or two vertical-axis rotors located underwater at the stern; rotor disks are flush with the shell plating which is approximately horizontal, and five to eight spadelike vertical-impeller blades are fitted near the periphery of the disks.

vol *See* volume.

Volan [ASTRON] A southern constellation, right ascension 8 hours, declination 70°S. Also known as Flying Fish; Pisces Volan.

volar [ANAT] Pertaining to, or on the same side as, the palm of the hand or the sole of the foot.

volatile [CHEM] Readily passing off by evaporation.

volatile component [GEOL] A component of magma whose vapor pressures are high enough to allow them to be concentrated in any gaseous phase. Also known as volatile flux.

volatile file [COMPUT SCI] Any file in which data are rapidly added or deleted.

volatile fluid [CHEM] A liquid with the tendency to become vapor at specified conditions of temperature and pressure.

volatile flux *See* volatile component.

volatile laurel oil [MATER] A bright-yellow liquid with an aromatic aroma, distilled from the leaves or berries of the laurel, *Laurus nobilis;* main components are cineole and pinene; soluble in alcohol, ether, benzene, and chloroform; used in perfumes, flavors, and medicine. Also known as sweet bay oil.

volatile memory *See* volatile storage.

volatile-oil reservoir [PETRO ENG] A type of bubble-point oil reservoir in which the temperature is high and the liquid density is low (leading to a volatilized oil situation), reducing the amount of producible liquids.

volatile storage [COMPUT SCI] A storage device that must be continuously supplied with energy, or it will lose its retained data. Also known as volatile memory.

volatility [THERMO] The quality of having a low boiling point or subliming temperature at ordinary pressure or, equivalently, of having a high vapor pressure at ordinary temperatures.

volatility product [CHEM] The product of the concentrations

of two or more molecules or ions that react to form a volatile substance.

volatilization [THERMO] The conversion of a chemical substance from a liquid or solid state to a gaseous or vapor state by the application of heat, by reducing pressure, or by a combination of these processes. Also known as vaporization.

volborthite [MINERAL] $Cu_3(UO_4)_2 \cdot 3H_2O$ An olive green to green and yellowish-green, monoclinic mineral consisting of hydrated copper vanadate.

volcanello *See* spatter cone.

volcanic ash [GEOL] Fine pyroclastic material; particle diameter is less than 4 millimeters.

volcanic bombs [GEOL] Pyroclastic ejecta; the lava fragments, liquid or plastic at the time of ejection, acquire rounded forms, markings, or internal structure during flight or upon landing.

volcanic breccia [PETR] A pyroclastic rock that is composed of angular volcanic fragments having a diameter larger than 2 millimeters and that may or may not have a matrix.

volcanic foam *See* pumice.

volcanic gases [GEOL] Volatile matter composed principally of about 90% water vapor, and carbon dioxide, sulfur dioxide, hydrogen, carbon monoxide, and nitrogen, released during an eruption of a volcano.

volcanic glass [GEOL] Natural glass formed by the cooling of molten lava, or one of its liquid fractions, too rapidly to allow crystallization.

volcanicity *See* volcanism.

volcaniclastic rock [PETR] Clastic rock containing volcanic material in any proportion.

volcanic mud [GEOL] Sediment containing large quantities of ash from a volcanic eruption, mixed with water.

volcanic mudflow [GEOL] The flow of volcanic mud down the slope of a volcano.

volcanic rift zone [GEOL] A zone comprising volcanic fissures with underlying dike assemblages; occurs in Hawaii.

volcanic rock [GEOL] Finely crystalline or glassy igneous rock resulting from volcanic activity at or near the surface of the earth. Also known as extrusive rock.

volcanics [PETR] Igneous rocks that solidified after reaching or nearing the earth's surface.

volcanic theory [ASTRON] A theory which holds that most features of the moon's surface were formed by volcanic eruptions, lava flows, and subsidences when lunar rocks were plastic. Also known as igneous theory; plutonic theory.

volcanic vent [GEOL] The channelway or opening of a volcano through which magma ascends to the surface; two general types are fissure and pipelike vents.

volcanism [GEOL] The movement of magma and its associated gases from the interior into the crust and to the surface of the earth. Also known as volcanicity.

volcano [GEOL] **1.** A mountain or hill, generally with steep sides, formed by the accumulation of magma extruded through openings or volcanic vents. **2.** The vent itself.

volcanology [GEOL] The branch of geology that deals with volcanism.

vole [VERT ZOO] Any of about 79 species of rodent in the tribe Microtini of the family Cricetidae; individuals have a stout body with short legs, small ears, and a blunt nose.

Volhard titration [ANALY CHEM] Determination of the halogen content of a solution by titration with a standard thiocyanate solution.

volley [ENG] A round of holes fired at any one time. [ORD] Burst of fire, especially a salute fired by a detachment of riflemen.

volley bombing [ORD] Simultaneous or nearly simultaneous release of a number of bombs.

volley fire [ORD] Artillery fire in which each piece fires a specified number of rounds without regard to the other pieces and as fast as accuracy will permit.

volt [ELEC] The unit of potential difference or electromotive force in the meter-kilogram-second system, equal to the potential difference between two points for which 1 coulomb of electricity will do 1 joule of work in going from one point to the other. Symbolized V.

Volta effect *See* contact potential difference.

voltage [ELEC] Potential difference or electromotive force measured in volts.

voltage amplification [ELECTR] The ratio of the magnitude of the voltage across a specified load impedance to the magnitude of the input voltage of the amplifier or other transducer feeding that load; often expressed in decibels by multiplying the common logarithm of the ratio by 20.

voltage amplifier [ELECTR] An amplifier designed primarily to build up the voltage of a signal, without supplying appreciable power.

voltage-amplitude-controlled clamp [ELECTR] A single diode clamp in which the diode functions as a clamp whenever the potential at point A rises above V_R; the diode is then in its forward-biased condition and acts as a very low resistance.

voltage coefficient [ELEC] For a resistor whose resistance varies with voltage, the ratio of the fractional change in resistance to the change in voltage.

voltage-controlled oscillator [ELECTR] An oscillator whose frequency of oscillation can be varied by changing an applied voltage. Abbreviated VCO.

voltage corrector [ELEC] Active source of regulated power placed in series with an unregulated supply to sense changes in the output voltage (or current), and to correct for these changes by automatically varying its own output in the opposite direction, thereby maintaining the total output voltage (or current) constant.

voltage-current dual [ELEC] A pair of circuits in which the elements of one circuit are replaced by their dual elements in the other circuit according to the duality principle; for example, currents are replaced by voltages, capacitances by resistances.

voltage-dependent resistor *See* varistor.

voltage derating [ELEC] The reduction of a voltage rating to extend the lifetime of an electric device or to permit operation at a high ambient temperature.

voltage divider [ELEC] A tapped resistor, adjustable resistor, potentiometer, or a series arrangement of two or more fixed resistors connected across a voltage source; a desired fraction of the total voltage is obtained from the intermediate tap, movable contact, or resistor junction. Also known as potential divider.

voltage doubler [ELECTR] A transformerless rectifier circuit that gives approximately double the output voltage of a conventional half-wave vacuum-tube rectifier by charging a capacitor during the normally wasted half-cycle and discharging it in series with the output voltage during the next half-cycle. Also known as doubler.

voltage drop [ELEC] The voltage developed across a component or conductor by the flow of current through the resistance or impedance of that component or conductor.

voltage feed [ELECTROMAG] Excitation of a transmitting antenna by applying voltage at a point of maximum potential (at a voltage loop or antinode).

voltage flare [ELEC] A higher than normal voltage purposely supplied to exposure lamps for a short period to produce full brilliance.

voltage gain [ELECTR] The difference between the output signal voltage level in decibels and the input signal voltage level in decibels; this value is equal to 20 times the common logarithm of the ratio of the output voltage to the input voltage.

voltage generator [ELECTR] A two-terminal circuit element in which the terminal voltage is independent of the current through the element.

voltage gradient [ELEC] The voltage per unit length along a resistor or other conductive path.

voltage level [ELEC] At any point in a transmission system, the ratio of the voltage existing at that point to an arbitrary value of voltage used as a reference.

voltage measurement [ELEC] Determination of the difference in electrostatic potential between two points.

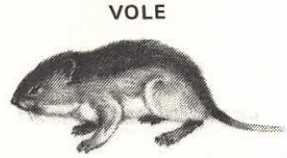
voltage multiplier [ELEC] *See* instrument multiplier. [ELECTR] A rectifier circuit capable of supplying a direct-current output voltage that is two or more times the peak value of the alternating-current voltage.

voltage-multiplier circuit [ELEC] A rectifier circuit capable of supplying a direct-current output voltage that is two or more times the peak value of the alternating-current input voltage; useful for high-voltage, low-current supplies.

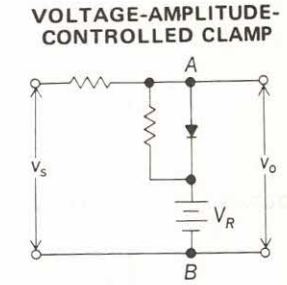
voltage node [ELECTROMAG] Point having zero voltage in a stationary wave system, as in an antenna or transmission line; for example, a voltage node exists at the center of a half-wave antenna.

voltage phasor [ELEC] A line whose length represents the magnitude of a sinusoidally varying voltage and whose angle with the positive x-axis represents its phase.

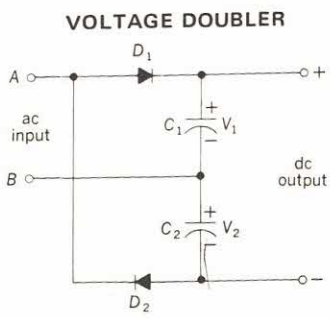
voltage quadrupler [ELECTR] A rectifier circuit, containing



Vole showing characteristic features.

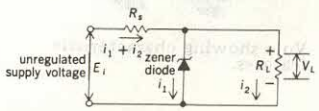


Circuit diagram of voltage-amplitude-controlled clamp circuit between terminals A and B. Diode functions as clamp whenever potential at A starts to rise above reference voltage V_R. Here v_s = signal voltage source; v_o = output voltage.



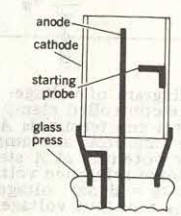
Circuit diagram of full-wave voltage doubler. When alternating-current input voltage is positive at terminal A, diode D_1 conducts, producing voltage V_1 across capacitor C_1. On other half cycle, diode D_2 conducts, producing voltage V_2 across capacitor C_2.

VOLTAGE REGULATOR



Circuit diagram of Zener-diode voltage regulator. Output load voltage V_L across load resistance R_L is maintained constant despite variation in input E_i. Current through series resistance R_S is sum of diode current i_1 and i_2.

VOLTAGE-REGULATOR TUBE



Construction of a typical voltage-regulator tube. Cathode is large cylinder; anode is thin wire.

four diodes, which supplies a direct-current output voltage which is four times the peak value of the alternating-current input voltage.

voltage-range multiplier *See* instrument multiplier.

voltage rating [ELEC] The maximum sustained voltage that can safely be applied to an electric device without risking the possibility of electric breakdown. Also known as working voltage.

voltage ratio [ELEC] The root-mean-square primary terminal voltage of a transformer divided by the root-mean-square secondary terminal voltage under a specified load.

voltage reflection coefficient [ELECTROMAG] The ratio of the phasor representing the magnitude and phase of the electric field of the backward-traveling wave at a specified cross section of a waveguide to the phasor representing the forward-traveling wave at the same cross section.

voltage-regulating transformer [ELECTROMAG] Saturated-core type of transformer which holds output voltage to within a few percent (5% above or below normal) with input variations up to 20% above or below normal; considerable harmonic distortion results unless extensive filters are employed.

voltage regulation [ELEC] The ratio of the difference between no-load and full-load output voltage of a device to the full-load output voltage, expressed as a percentage.

voltage regulator [ELECTR] A device that maintains the terminal voltage of a generator or other voltage source within required limits despite variations in input voltage or load. Also known as automatic voltage regulator; voltage stabilizer.

voltage-regulator diode [ELECTR] A diode that maintains an essentially constant direct voltage in a circuit despite changes in line voltage or load.

voltage-regulator tube [ELECTR] A glow-discharge tube in which the tube voltage drop is approximately constant over the operating range of current; used to maintain an essentially constant direct voltage in a circuit despite changes in line voltage or load. Also known as VR tube.

voltage saturation *See* anode saturation.

voltage stabilizer *See* voltage regulator.

voltage transformer [ELEC] An instrument transformer whose primary winding is connected in parallel with a circuit in which the voltage is to be measured or controlled. Also known as potential transformer.

voltage-tunable tube [ELECTR] Oscillator tube whose operating frequency can be varied by changing one or more of the electrode voltages, as in a backward-wave magnetron.

voltage-variable capacitor *See* varactor.

voltaic cell [ELEC] A primary cell consisting of two dissimilar metal electrodes in a solution that acts chemically on one or both of them to produce a voltage.

voltaic pile [ELEC] An early form of primary battery, consisting of a pile of alternate pairs of dissimilar metal disks, with moistened pads between pairs.

voltaite [MINERAL] A greenish-black to black, isometric mineral consisting of a hydrated potassium iron sulfate.

voltametry [PHYS CHEM] Any electrochemical technique in which a faradaic current passing through the electrolysis solution is measured while an appropriate potential is applied to the polarizable or indicator electrode; for example, polarography.

voltammeter [ELEC] An instrument that may be used either as a voltmeter or ammeter.

volt-ampere [ELEC] The unit of apparent power in the International System; it is equal to the apparent power in a circuit when the product of the root-mean-square value of the voltage, expressed in volts, and the root-mean-square value of the current, expressed in amperes, equals 1. Abbreviated VA.

volt-ampere hour [ELEC] A unit for expressing the integral of apparent power over time, equal to the product of 1 volt-ampere and 1 hour, or to 3600 joules.

volt-ampere-hour reactive *See* var hour.

volt-ampere reactive [ELEC] The unit of reactive power in the International System; it is equal to the reactive power in a circuit carrying a sinusoidal current when the product of the root-mean-square value of the voltage, expressed in volts, by the root-mean-square value of the current, expressed in amperes, and by the sine of the phase angle between the voltage and the current, equals 1. Abbreviated var. Also known as reactive volt-ampere.

Volta series *See* displacement series.

volt box [ELEC] A series of resistors arranged so that a desired fraction of a voltage can be measured, and the voltage thereby computed.

Volterra dislocation [SOLID STATE] A model of a dislocation which is formed in a ring of crystalline material by cutting the ring, moving the cut surfaces over each other, and then rejoining them.

Volterra equations [MATH] Given functions $f(x)$ and $K(x,y)$, these are two types of equations with unknown function y:

$$f(x) = \int_a^x K(x,t)y(t)dt$$

$$y(x) = f(x) + \lambda \int_a^x K(x,t)y(t)dt$$

voltmeter [ENG] An instrument for the measurement of potential difference between two points, in volts or in related smaller or larger units.

voltmeter-ammeter [ENG] A voltmeter and an ammeter combined in a single case but having separate terminals.

voltmeter-ammeter method [ELEC] A method of measuring resistance in which simultaneous readings of the voltmeter and ammeter are taken, and the unknown resistance is calculated from Ohm's law.

voltmeter sensitivity [ELEC] Ratio of the total resistance of the voltmeter to its full scale reading in volts, expressed in ohms per volt.

volt-ohm-milliammeter [ENG] A test instrument having a number of different ranges for measuring voltage, current, and resistance. Also known as circuit analyzer; multimeter; multiple-purpose tester.

voltzite [MINERAL] Zn_5S_4O A rose red, yellowish, or brownish mineral consisting of an oxysulfide of zinc; occurs in implanted spherical globules and as a crust.

volume [ACOUS] The intensity of a sound. [COMPUT SCI] A single unit of external storage, all of which can be read or written by a single access mechanism or input/output device. [ENG ACOUS] The magnitude of a complex audio-frequency current as measured in volume units on a standard volume indicator. [MATH] A measure of the size of a body or definite region in three-dimensional space; it is equal to the least upper bound of the sum of the volumes of nonoverlapping cubes that can be fitted inside the body or region, where the volume of a cube is the cube of the length of one of its sides. Abbreviated vol.

volume acoustic wave *See* bulk acoustic wave.

volume compressor [ENG ACOUS] An audio-frequency circuit that limits the volume range of a radio program at the transmitter, to permit using a higher average percent modulation without risk of overmodulation; also used when making disk recordings, to permit a closer groove spacing without overcutting. Also known as automatic volume compressor.

volume control [ENG ACOUS] A potentiometer used to vary the loudness of a reproduced sound by varying the audio-frequency signal voltage at the input of the audio amplifier.

volume control system [ENG ACOUS] An electronic system that regulates the signal amplification or limits the output of a circuit, such as a volume compressor or a volume expander.

volume dose *See* integral dose.

volume expander [ENG ACOUS] An audio-frequency control circuit sometimes used to increase the volume range of a radio program or recording by making weak sounds weaker and loud sounds louder; the expander counteracts volume compression at the transmitter or recording studio. Also known as automatic volume expander.

volume flow rate [FL MECH] The volume of the fluid that passes through a given surface in a unit time.

volume indicator [ENG ACOUS] A standardized instrument for indicating the volume of a complex electric wave such as that corresponding to speech or music; the reading in volume units is equal to the number of decibels above a reference level which is realized when the instrument is connected across a 600-ohm resistor that is dissipating a power of 1 milliwatt at 100 hertz. Also known as volume unit meter.

volume integral [MATH] An integral of a function of several variables with respect to volume measure taken over a three-dimensional subset of the domain of the function.

volume lifetime [SOLID STATE] Average time interval between the generation and recombination of minority carriers in a homogeneous semiconductor.

volume-limiting amplifier [ELECTR] Amplifier containing

an automatic device that functions only when the input signal exceeds a predetermined level, and then reduces the gain so the output volume stays substantially constant despite further increases in input volume; the normal gain of the amplifier is restored when the input volume returns below the predetermined limiting level.

volume meter [ENG] Any flowmeter in which the actual flow is determined by the measurement of a phenomenon associated with the flow.

volume phase *See* surface phase.

volume range [ELEC] In a transmission system, the difference, expressed in decibels, between the maximum and minimum volumes that can be satisfactorily handled by the system. [ENG ACOUS] The difference, expressed in decibels, between the maximum and minimum volumes of a complex audio-frequency signal occurring over a specified period of time.

volume resistivity [ELEC] Electrical resistance between opposite faces of a 1-centimeter cube of insulating material, commonly expressed in ohm-centimeters. Also known as specific insulation resistance.

volume shift *See* field shift.

volume susceptibility [PHYS CHEM] The magnetic susceptibility of a specified volume (for example, 1 cubic centimeter) of a magnetically susceptible material.

volume table of contents [COMPUT SCI] An index record near the beginning of each volume, which records the name, location, and extent of every file or data set residing on that particular volume; usually not found on magnetic tapes, but often required on all disk packs and drums. Abbreviated VTOC.

volume target [ELECTROMAG] A radar target composed of a large number of objects too close together to be resolved.

volume test [COMPUT SCI] The processing of a volume of actual data to check for program malfunction.

volume transport [OCEANOGR] The volume of moving water measured between two points of reference and expressed in cubic meters per second.

volumetric analysis [ANALY CHEM] Quantitative analysis of solutions of known volume but unknown strength by adding reagents of known concentration until a reaction end point (color change or precipitation) is reached; the most common technique is by titration.

volumetric efficiency [MECH ENG] In describing an engine or gas compressor, the ratio of volume of working substance actually admitted, measured at a specified temperature and pressure, to the full piston displacement volume; for a liquid-fuel engine, such as a diesel engine, volumetric efficiency is the ratio of the volume of air drawn into a cylinder to the piston displacement.

volumetric flask [ANALY CHEM] A laboratory flask primarily intended for the preparation of definite, fixed volumes of solutions, and therefore calibrated for a single volume only.

volumetric performance [PETRO ENG] The volume production of gas and oil from a reservoir; usually expressed as gas-oil ratio.

volumetric pipet [ANALY CHEM] A graduated glass tubing used to measure quantities of a solution; the tube is open at the top and bottom, and a slight vacuum (suction) at the top pulls liquid into the calibrated section; breaking the vacuum allows liquid to leave the tube.

volumetric radar [ENG] Radar capable of producing three-dimensional position data on a multiplicity of targets.

volumetric strain [MECH] One measure of deformation; the change of volume per unit of volume.

volume unit [ENG ACOUS] A unit for expressing the audio-frequency power level of a complex electric wave, such as that corresponding to speech or music; the power level in volume units is equal to the number of decibels above a reference level of 1 milliwatt as measured with a standard volume indicator. Abbreviated VU.

volume unit meter *See* volume indicator.

volume velocity [ACOUS] The rate of flow of a medium through a specified area due to a sound wave.

voluntary muscle [PHYSIO] A muscle directly under the control of the will of the organism.

volute [DES ENG] A spiral casing for a centrifugal pump or a fan designed so that speed will be converted to pressure without shock.

volute pump [MECH ENG] A centrifugal pump housed in a spiral casing.

Volutidae [INV ZOO] A family of gastropod mollusks in the order Neogastropoda.

volutin [BIOCHEM] A basophilic substance, thought to be a nucleic acid, occurring as granules in the cytoplasm and vacuoles of algae and other microorganisms.

volva [MYCOL] A cuplike membrane surrounding the base of the stipe in certain gill fungi.

volvent nematocyst [INV ZOO] A nematocyst in the form of an unarmed, coiled tube that is closed at the end.

Volvocales [BOT] An order of one-celled or colonial green algae in the division Chlorophyta; individuals are motile with two, four, or rarely eight whiplike flagella.

Volvocida [INV ZOO] An order of the protozoan class Phytamastigophorea; individuals are grass-green or colorless, have one, two, four, or eight flagella, and thick cell walls of cellulose.

volvulus [MED] A twisting of the bowel upon itself so as to occlude the lumen and, in severe cases, compromise its circulation.

Vombatidae [VERT ZOO] A family of marsupial mammals in the order Diprotodonta in some classification systems.

vomer [ANAT] A skull bone below the ethmoid region constituting part of the nasal septum in most vertebrates.

vomeronasal cartilage [ANAT] A strip of hyaline cartilage extending from the anterior nasal spine upward and backward on either side of the septal cartilage of the nose and attached to the anterior margin of the vomer. Also known as Jacobson's cartilage.

vomiting gas [MATER] Any one of a group of toxic gases, such as adamsite, that causes coughing, sneezing, sometimes vomiting, and other effects.

von Arx current meter [ENG] A type of current-measuring device using electromagnetic induction to determine speed and, in some models, direction of deep-sea currents.

von Gierke's disease [MED] A form of glycogenosis characterized by marked diminution in or absence of hepatic glucose-6-phosphatase, resulting in hepatic glycogenosis, hypoglycemia, and acidosis. Also known as glycogen storage disease; hepatic glycogenosis; type I of Cori; van Crevald–von Gierke's disease.

von Kármán vortex street *See* Kármán vortex street.

von Neumann machine [COMPUT SCI] A stored-program computer equipped with a program counter.

VOR *See* very-high-frequency omnidirectional radio range.

Vorce diaphragm cell [CHEM ENG] A cylindrical cell with graphite anodes and asbestos-covered cathode, used in the electrolytic process for the manufacture of chlorine.

vorobievite *See* vorobyevite.

vorobyevite [MINERAL] A rose-red, purplish-red, or pinkish cesium-containing variety of beryl; used as a gem. Also known as morganite; rosterite; vorobievite; worobieffite.

Vortac [NAV] A ground radio station consisting of a collocated very-high-frequency omnidirectional radio range (VOR) and Tacan facility; this station permits obtaining polar coordinates by the use of VOR receiver and distance-measuring equipment, or by Tacan equipment alone.

vortex [FL MECH] **1.** Any flow possessing vorticity; for example, an eddy, whirlpool, or other rotary motion. **2.** A flow with closed streamlines, such as a free vortex or line vortex. **3.** *See* vortex tube.

vortex amplifier [ENG] A fluidic device in which the supply flow is introduced at the circumference of a shallow cylindrical chamber; the vortex field developed can substantially reduce or throttle flow; used in fluidic diodes, throttles, pressure amplifiers, and a rate sensor.

vortex burner [ENG] Combustion device in which the combustion air is fed tangentially into the burner, creating a spin (vortex) to mix it with the fuel as it is injected.

vortex cage meter [ENG] In flow measurement, a type of quantity meter which exerts only a slight retardation on the flowing fluid; the elements rotate at a speed that is linear with fluid velocity; revolutions are counted either by coupling to a local mounted counter or by a proximity detector for remote transmission.

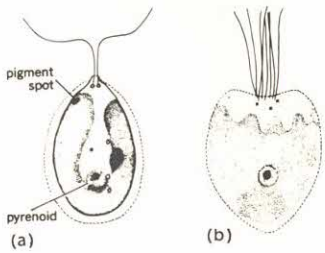
vortex distribution method [FL MECH] An analytic method used in ideal aerodynamics which ignores the thickness of the profile of the aerodynamic figure being studied.

vortex filament [FL MECH] The line of concentrated vorticity in a line vortex. Also known as vortex line.

VOLVENT NEMATOCYST

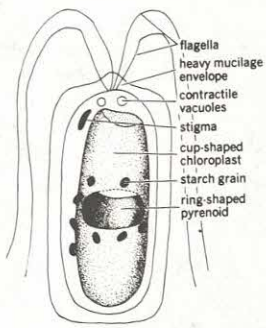
Volvent nematocyst of *Hydra*. *(After Schulze, from T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

VOLVOCALES



Unicellular algae of the order Volvocales. *(a) Chlamydomonas*, a unicellular organism with two flagella. *(b) Polyblepharides*, showing massive chloroplast and eight flagella.

VOLVOCIDA



Representative species of Volvocida, in genus *Carteria*, with four equal flagella.

VORTEX CAGE METER

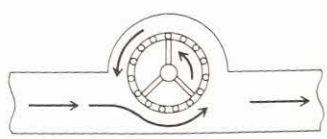


Diagram of vortex cage meter. Arrows indicate direction of fluid flow.

vortex line [FL MECH] **1.** A line drawn through a fluid such that it is everywhere tangent to the vorticity. **2.** *See* vortex filament.

vortex precession flowmeter [ENG] An instrument for measuring gas flows from the rate of precession of vortices generated by a fixed set of radial vanes placed in the flow. Also known as swirl flowmeter.

vortex ring [FL MECH] A line vortex in which the line of concentrated vorticity is a closed curve. Also known as collar vortex; ring vortex.

vortex shedding [FL MECH] In the flow of fluids past objects, the shedding of fluid vortices periodically downstream from the restricting object (for example, smokestacks, pipelines, or orifices).

vortex-shedding meter [ENG] A flowmeter in which fluid velocity is determined from the frequency at which vortices are generated by an obstruction in the flow.

vortex sheet [FL MECH] A surface across which there is a discontinuity in fluid velocity, such as in slippage of one layer of fluid over another; the surface may be regarded as being composed of vortex filaments.

vortex street [FL MECH] A series of vortices which are systematically shed from the downstream side of a body around which fluid is flowing rapidly. Also known as vortex trail; vortex train.

vortex thermometer [ENG] A thermometer, used in aircraft, which automatically corrects for adiabatic and frictional temperature rises by imparting a rotary motion to the air passing the thermal sensing element.

vortex trail *See* vortex street.

vortex train *See* vortex street.

vortex tube [FL MECH] A tubular surface consisting of the collection of vortex lines which pass through a small closed curve. Also known as vortex.

vorticity [FL MECH] For a fluid flow, a vector equal to the curl of the velocity of flow.

vorticity equation [FL MECH] An equation of fluid mechanics describing horizontal circulation in the motion of particles around a vertical axis: $(d/dt)(S + f) = -(S + f)\,\mathrm{div}_h c$, where $(S + f)$ is the absolute vorticity and $\mathrm{div}_h c$ is the horizontal divergence of the fluid velocity.

vorticity-transport hypothesis [FL MECH] The hypothesis that, owing to the existence of pressure fluctuations, vorticity, and not momentum, is conservative in turbulent eddy flux.

VOS *See* vertical obstacle sonar.

Voskhod program [AERO ENG] The multimanned spaceflight program of the Soviet Union which began with the flight of *Voskhod 1*, October 12, 1964.

Vostok spacecraft [AERO ENG] One of a series of manned artificial satellites launched by the Soviet Union; *Vostok 1* launched on April 12, 1961, was the first manned spacecraft.

votator [MECH ENG] Efficient heat-exchange units for chilling and mechanically working a continuous stream of emulsion; used in food industries in preparation of margarine.

vougesite [PETR] A lamprophyre having an orthoclase and hornblende groundmass in which are embedded hornblende phenocrysts.

voyage [NAV] **1.** The outward and homeward passage of a trip by sea. **2.** A trip by sea.

V particle [PARTIC PHYS] The name first used for the unstable particles whose decay is responsible for the production of characteristic V-shaped tracks observed in cloud chambers exposed to cosmic radiation; they are neutral semistable particles such as neutral K mesons or Λ hyperons.

VPR chart [NAV] A type of radar chart for use with VPR (virtual plan position indicator reflectoscope).

vrbaite [MINERAL] $Tl_4Hg_3Sb_2As_8S_{20}$ A dark gray-black, orthorhombic mineral that occurs in small crystals.

VRC *See* lateral parity check.

vriajem *See* friagem.

VRM *See* viscous remanent magnetization.

VR tube *See* voltage-regulator tube.

VSB *See* vestigial sideband.

VSC *See* variable speech control.

V-shaped depression [METEOROL] On a surface chart, a low or trough about which the isobars display a pronounced V shape, with the point of the V usually extending equatorward from the parent low.

V-shaped valley [GEOL] A valley having a cross-sectional profile in the form of the letter V, commonly produced by stream erosion. Also known as V valley.

vt fuse *See* proximity fuse.

VTOC *See* volume table of contents.

VTOL *See* vertical takeoff and landing.

VTR *See* video tape recording.

VTVM *See* vacuum-tube voltmeter.

VU *See* volume unit.

vug [PETR] A small cavity in a vein or rock usually lined with minerals differing in composition from those of the enclosing rock. Also known as bughole.

Vulcan [ASTRON] A hypothetical planet that was supposed to have an orbit within the orbit of Mercury; its existence was considered about 1859 and in the next few years, but it is generally considered by present-day astronomers to be nonexistent.

Vulcanian eruption [GEOL] A volcanic eruption characterized by periodic explosive events. Also known as paroxysmal eruption; Plinian eruption; Vesuvian eruption.

vulcanization [CHEM ENG] A chemical reaction of sulfur (or other vulcanizing agent) with rubber or plastic to cause cross-linking of the polymer chains; it increases strength and resiliency of the polymer.

vulcanized fiber [MATER] A laminated plastic made by chemically treating layers of 100% rag-content paper to gelatinize the paper and fuse the layers into a solid mass; when dried under pressure, it forms a hard, tough material having good electrical properties along with mechanical strength and dimensional stability.

vulcan power [MATER] A high explosive composed of 30% nitroglycerin, 52.5% sodium nitrate, 10.5% charcoal, and 7% sulfur.

vulgar establishment *See* high-water full and change.

Vulpecula [ASTRON] A northern constellation, right ascension 20 hours, declination 25°N. Also known as Little Fox.

vulture [VERT ZOO] The common name for any of various birds of prey in the families Cathartidae and Accipitridae of the order Falconiformes; the head of these birds is usually naked.

vulva [ANAT] The external genital organs of women.

vulval gland [ANAT] A scent gland in the vulval tissues of the human female.

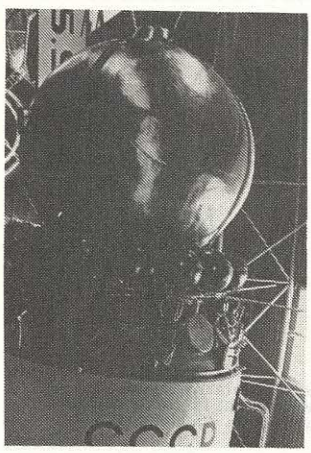
vulvovaginitis [MED] Simultaneous inflammation of the vulva and the vagina.

vuthan [METEOROL] In southern South America, an intense storm.

V valley *See* V-shaped valley.

V weapon [ORD] Either the V-1 bomb or the V-2 bomb, used by the Germans in World War II.

VOSTOK SPACECRAFT



Vostok spacecraft, a Soviet manned artificial satellite. *(NASA)*

W

W *See* tungsten; watt.

wacke [PETR] Sandstone composed of a mixture of angular and unsorted or poorly sorted fragments of minerals and rocks and an abundant matrix of clay and fine silt.

Wacker process [CHEM ENG] A process for the oxidation of ethylene to acetaldehyde by oxygen in the presence of palladium chloride and cupric chloride.

wad [MINERAL] A massive, generally soft, amorphous, earthy, dark-brown or black mineral composed principally of manganese oxides with some other minerals, and formed by decomposition of manganese minerals. Also known as black ocher; bog manganese; earthy manganese. [ORD] A felt or cardboard pad used to secure the propellant in place in cartridges. Also known as wadding.

wad cutter [ORD] Bullet designed for target shooting, shaped to cut a clean hole in a paper target.

wadding *See* wad.

wader *See* shore bird.

wadi [GEOL] In the desert regions of southwestern Asia and northern Africa, a stream bed or channel, or a steep-sided ravine, gulley, or valley, which carries water only during the rainy season. Also spelled wady.

wading bird [VERT ZOO] Any of the long-legged, long-necked birds composing the order Ciconiiformes, including storks, herons, egrets, and ibises.

Wadsworth mounting [OPTICS] **1.** A device in which light passes through a prism and is then reflected from a plane mirror; it has the effect of a constant-deviation prism. **2.** A mounting for a diffraction grating in which the slit is placed at the principal focus of a concave mirror, so that the light falling on the grating is in a parallel beam; it greatly reduces astigmatism.

wady *See* wadi.

wafer [ELECTR] A thin semiconductor slice on which matrices of microcircuits can be fabricated, or which can be cut into individual dice for fabricating single transistors and diodes. [ENG] A flat element for a process unit, as in a series of stacked filter elements.

wafer lever switch [ELECTR] A lever switch in which a number of contacts are arranged on one or both sides of one or more wafers, for engaging one or more contacts on a movable wafer segment actuated by the operating lever.

wafer socket [ELECTR] An electron-tube socket consisting of one or two wafers of insulating material having holes in which are spring metal clips that grip the terminal pins of a tube.

waffle weave [TEXT] Weave pattern of fabrics that resembles the cellular honeybee comb. Also known as honeycomb weave.

wage curve [IND ENG] A graphic representation of the relationship between wage rates and point values for key jobs.

wage incentive plan [IND ENG] A wage system which provides additional pay for qualitative and quantitative performance which exceeds standard or normal levels. Also known as incentive wage system.

Wagner earth connection *See* Wagner ground.

Wagner ground [ELEC] A ground connection used with an alternating-current bridge to minimize stray capacitance errors when measuring high impedances; a potentiometer is connected across the bridge supply oscillator, with its movable tap grounded. Also known as Wagner earth connection.

wagnerite [MINERAL] $Mg_2(PO_4)F$ A yellow, grayish, flash-red, or greenish, monoclinic mineral consisting of magnesium fluophosphate.

Wagner's reagent [ANALY CHEM] An aqueous solution of iodine and potassium iodide; used for microchemical analysis of alkaloids. Also known as Wagner's solution.

Wagner's solution *See* Wagner's reagent.

wagon drill [MECH ENG] **1.** A vertically mounted, pneumatic, percussive-type rock drill supported on a three- or four-wheeled wagon. **2.** A wheel-mounted diamond drill machine.

wagonhead vault *See* barrel vault.

wagon vault *See* barrel vault.

Wahl correlation [PETRO ENG] A pressure-volume-temperature (PVT) correlation used to estimate the total oil recovery from a solution-gas-drive oil reservoir; it is based on assumed PVT data, and may be in error.

Waidner-Burgess standard [OPTICS] A unit of luminous intensity equal to the luminous intensity of 1 square centimeter of a blackbody at the melting point of platinum, or to 60 candelas.

wairakite [MINERAL] $CaAl_2Si_4O_{12}\cdot 2H_2O$ A zeolite mineral that is isostructural with analcime.

waist [ENG] The center portion of a vessel or container that has a smaller cross section than the adjacent areas.

waiting line [IND ENG] A line formed by units waiting for service. Also known as queue.

waiting time *See* idle time.

wait state [COMPUT SCI] The state of a computer program in which it cannot use the central processing unit normally because the unit is waiting to complete an input/output operation.

wake [FL MECH] The region behind a body moving relative to a fluid in which the effects of the body on the fluid's motion are concentrated.

wake flow [FL MECH] Turbulent eddying flow that occurs downstream from bluff bodies.

wake gain [NAV ARCH] The increase in the effective thrust of a propeller, for a given power delivered thereto, because of the forward motion of the water dragged along behind a vessel's hull.

wake stream theory [OCEANOGR] The theory that, in a stratified ocean, a compensation current must develop on the right side of a wake stream, flowing in the same direction, and a countercurrent in the opposite direction must appear to the left.

Walden's rule [PHYS CHEM] A rule which states that the product of the viscosity and the equivalent ionic conductance at infinite dilution in electrolytic solutions is a constant, independent of the solvent; it is only approximately correct.

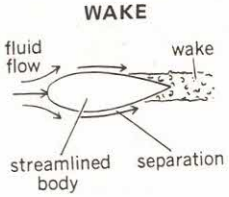
Waldeyer's ring [ANAT] A circular arrangement of the lymphatic tissues formed by the palatine and pharyngeal tonsils and the lymphatic follicles at the base of the tongue and behind the posterior pillars of the fauces.

wale [TEXT] **1.** A rib or raised cord in a woven fabric. **2.** A lengthwise row of loops in a knitted fabric.

waler [CIV ENG] A horizontal reinforcement utilized to keep newly poured concrete forms from bulging outward. Also spelled whaler.

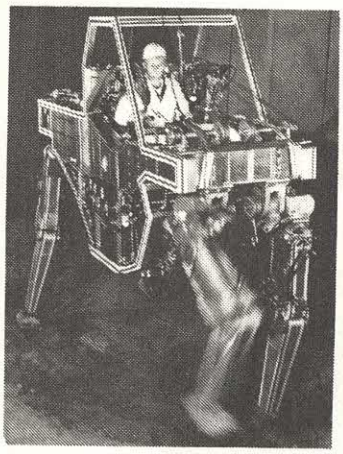
walk [MATH] In graph theory, a set of vertices $(v_0, v_1, \ldots, v_n)$ in a graph, such that v_i and v_{i+1} are joined by a common edge for $i = 0, 1, \ldots, n-1$. Also known as path.

walk down [ELECTR] A malfunction in a magnetic core of a computer storage in which successive drive pulses or digit pulses cause charges in the magnetic flux in the core that persist after the magnetic fields associated with pulses have been removed. Also known as loss of information.



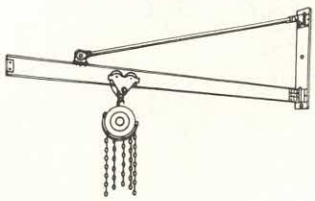
Wake formed downstream from a streamlined body.

WALKING MACHINE



Research prototype of four-legged walking machine which was developed for use over various types of terrain. *(General Electric Co.)*

WALL CRANE



Wall crane, showing mounting on wall.

WANKEL ENGINE

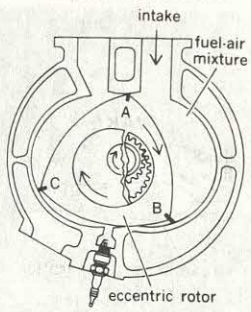


Diagram of Wankel engine showing gears on rotor and shaft. Rotor divides inner volume into three chambers, each analogous to cyclinder in standard piston engine. Here, chamber AB is terminating the intake phase and commencing the compression phase, chamber BC is terminating the compression phase, and chamber CA is commencing the exhaust phase.

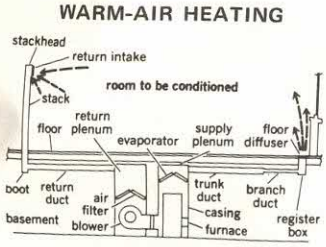
WARM-AIR HEATING



Air passage in a warm-air duct system. *(From S. Konzo, J. R. Carroll, and H. D. Bareither, Winter Air Conditioning, Industrial Press, 1958)*

walkie-talkie *See* pack unit.

walking beam [MECH ENG] A lever that oscillates on a pivot and transmits power in a manner producing a reciprocating or reversible motion; used in rock drilling and oil well pumping.

walking bird [VERT ZOO] Any bird of the order Columbiformes, including the pigeons, doves, and sandgrouse.

walking dragline [MECH ENG] A large-capacity dragline built with moving feet; disks 20 feet (6 meters) in diameter support the excavator while working.

walking machine [MECH ENG] A machine designed to carry its operator over various types of terrain; the operator sits on a platform carried on four mechanical legs, and movements of his arms control the front legs of the machine while movements of his legs control the rear legs of the machine.

walking props *See* self-advancing supports.

walk-off [GRAPHICS] In lithography, the failure of part of the image to stick to the metal plate while printing.

wall [ENG] A vertical structure or member forming an enclosure or defining a space. [GEOL] The side of a cave passage. [MIN ENG] **1.** The side of a level or drift. **2.** The country rock bounding a vein laterally. **3.** The face of a long-wall working or stall, commonly called coal wall.

Wallach transformation [ORG CHEM] By the use of concentrated sulfuric acid, an azoxybenzene is converted into a *para*-hydroxyazobenzene.

wall anchor [BUILD] A steel strap fastened to the end of every second or third common joist and built into the brickwork of a wall to provide lateral support. Also known as joist anchor.

wall-attachment amplifier [FL MECH] A bistable fluidic device utilizing two walls set back from the supply jet port, control ports, and channels to define two downstream outputs. Also known as flip-flop amplifier.

wallboard [MATER] Panels of various materials for surfacing ceilings and walls, including asbestos cement sheet, plywood, gypsum plasterboard, and laminated plastics.

wall cake [PETRO ENG] In drilling operations, the solid deposit along the hole wall due to filtration of the fluid part of the mud into the formation.

wall crane [MECH ENG] A jib crane mounted on a wall.

wall effect [ELECTR] The contribution to the ionization in an ionization chamber by electrons liberated from the walls.

wall energy [SOLID STATE] The energy per unit area of the boundary between two ferromagnetic domains which are oriented in different directions.

waller *See* pack builder.

Walley engine [MECH ENG] A multirotor engine employing four approximately elliptical rotors that turn in the same clockwise sense, leading to excessively high rubbing velocities.

wall friction [FL MECH] The drag created in the flow of a liquid or gas because of contact with the wall surfaces of its conductor, such as the inside surfaces of a pipe.

Wallis formulas [MATH] Formulas that determine the values of the definite integrals from 0 to $\pi/2$ of the functions $\sin^n(x)$, $\cos^n(x)$, and $\cos^m(x)\sin^n(x)$ for positive integers m and n. Also known as Wallis theorem.

Wallis product [MATH] An infinite product representation of $\pi/2$, namely,

$$\frac{\pi}{2} = \frac{2}{1}\,\frac{2}{3}\,\frac{4}{3}\,\frac{4}{5}\,\cdots\,\frac{2n}{2n-1}\,\frac{2n}{2n+1}$$

Wallis theorem *See* Wallis formulas.

wall off [ENG] To seal cracks or crevices in the wall of a borehole with cement, mud cake, compacted cuttings, or casing.

wall outlet [ELEC] An outlet mounted on a wall, from which electric power can be obtained by inserting the plug of a line cord.

wall plate [BUILD] A piece of timber laid flat along the tip of the wall; it supports the rafters.

wallplate [MIN ENG] A horizontal timber supported by posts resting on sills and extending lengthwise on each side of the tunnel; roof supports rest on the wallplates.

wall ratio [DES ENG] Ratio of the outside radius of a gun, a tube, or jacket to the inside radius; or ratio of the corresponding diameters.

wall reef [GEOL] A linear, steep-sided coral reef constructed on a reef wall.

wall rock [GEOL] Rock that encloses a vein.

wall rock alteration [GEOL] Alteration of wall rock adjacent to hydrothermal veins by the fluid responsible for formation of the mineral deposit.

wall-sided glacier [HYD] A glacier unconfined by a marked ravine or valley.

wall tie [BUILD] A rigid, corrosion-resistant metal tie fitted into the bed joints across the cavity of a cavity wall.

walnut [BOT] The common name for about a dozen species of deciduous trees in the genus *Juglans* characterized by pinnately compound, aromatic leaves and chambered or laminate pith; the edible nut of the tree is distinguished by a deeply furrowed or sculptured shell.

walpurgite [MINERAL] $Bi_4(UO_2)(AsO_4)_2O_4 \cdot 3H_2O$ A wax yellow to straw yellow, triclinic mineral consisting of a hydrated arsenate of bismuth and uranium. Also known as waltherite.

walrus [VERT ZOO] *Odobenus rosmarus*. The single species of the pinniped family Odobenidae distinguished by the upper canines in both sexes being prolonged as tusks.

Walter engine [MECH ENG] A multirotor rotary engine that uses two different-sized elliptical rotors.

waltherite *See* walpurgite.

wander *See* apparent wander; scintillation.

wander correction [NAV] A correction to compensate for wander error in bubble sextant readings.

wandering dune [GEOL] A sand dune that has moved as a unit in the leeward direction of the prevailing winds, and that is characterized by the lack of vegetation to anchor it. Also known as migratory dune; traveling dune.

wandering sequence [MET] A welding sequence in which the increments of weld bead are longitudinally deposited in a random fashion.

wandering water *See* vadose water.

waning moon [ASTRON] The moon between full and new when its visible part is decreasing.

Wankel engine [MECH ENG] An eccentric-rotor-type internal combustion engine with only two primary moving parts, the rotor and the eccentric shaft; the rotor moves in one direction around the trochoidal chamber containing peripheral intake and exhaust ports.

Wannier function [SOLID STATE] The Fourier transform of a Bloch function defined for an entire band, regarded as a function of the wave vector.

want *See* nip.

wardite [MINERAL] $NaCaAl_{12}(PO_4)_8(OH)_{18} \cdot 6H_2O$ A blue-green to pale green, tetragonal mineral consisting of a hydrated basic phosphate of sodium, calcium, and aluminum.

Ward-Leonard speed-control system [CONT SYS] A system for controlling the speed of a direct-current motor in which the armature voltage of a separately excited direct-current motor is controlled by a motor-generator set.

warehouse [IND ENG] A building used for storing merchandise and commodities.

warfarin [ORG CHEM] $C_{19}H_{16}O_4$ A white, crystalline compound with a melting point of 161°C; insoluble in water; used as a rodenticide. Also known as 3-(α-acetonylbenzyl)-4-hydroxy-coumarin; coumafene.

war game [ORD] A simulation, by whatever means, of a military operation involving two or more opposing forces, using rules, data, and procedures designed to depict an actual or assumed real-life situation.

war gas [ORD] A toxic or irritant chemical agent, regardless of its physical state, whose properties may be effectively exploited in the field of war.

warhead [ORD] An item which is designed to be mounted in or on a torpedo, guided missile, rocket, or bomb; it may contain high-explosive, nuclear, chemical, biological, or inert materials.

warhead installation [ORD] A warhead plus those additionally required items (contained in the adaptation kit) that are needed to mate the warhead with a specific carrier.

warm-air drop *See* warm pool.

warm-air heating [MECH ENG] Heating by circulating warm air; system contains a direct-fired furnace surrounded by a bonnet through which air circulates to be heated.

warm air mass [METEOROL] An air mass that is warmer than the surrounding air; an implication that the air mass is warmer than the surface over which it is moving.

warm anticyclone *See* warm high.

warm-blooded *See* homoiothermal.

warm braw [METEOROL] A warm, dry, foehn wind which

persists for up to 8 days during the east monsoon in the Schouten Islands off the north coast of New Guinea.

warm-core anticyclone *See* warm high.

warm-core cyclone *See* warm low.

warm-core high *See* warm high.

warm-core low *See* warm low.

warm cyclone *See* warm low.

warm drop *See* warm pool.

warm front [METEOROL] Any nonoccluded front, or portion thereof, which moves in such a way that warmer air replaces colder air.

warm high [METEOROL] At a given level in the atmosphere, any high that is warmer at its center than at its periphery. Also known as warm anticyclone; warm-core anticyclone; warm-core high.

warm low [METEOROL] At a given level in the atmosphere, any low that is warmer at its center than at its periphery; the opposite of a cold low. Also known as warm-core cyclone; warm-core low; warm cyclone.

warm pool [METEOROL] A region, or pool, of relatively warm air surrounded by colder air; the opposite of a cold pool; commonly applied to warm air of appreciable vertical extent isolated in high latitudes when a cutoff high is formed. Also known as warm-air drop; warm drop.

warm sector [METEOROL] The area of warm air, within the circulation of a wave cyclone, which lies between the cold front and warm front of a storm.

warm tongue [METEOROL] A pronounced poleward extension or protrusion of warm air.

warm-tongue steering [METEOROL] The steering influence apparently exerted upon a tropical cyclone by an upper-level warm tongue which often extends a considerable distance into regions adjacent to the cyclone.

warm wave *See* heat wave.

warning agent *See* odorant.

warning beacon *See* warning radio beacon.

warning device [COMPUT SCI] A visible or audible alarm to inform the operator of a machine condition.

warning net [COMMUN] A communication system established for the purpose of disseminating warning information of enemy movement or action to all interested commands.

warning radio beacon [NAV] An auxiliary radio beacon that is located at a lightship to warn vessels of their proximity to the lightship; it is of short range, and sounds a warbling note for 1 minute immediately following the main radio beacon on the same frequency. Also known as warning beacon.

warning-receiver system [ELECTR] An electronic countermeasure system, carried on a tactical or transport aircraft, which is programmed to alert a pilot when his aircraft is being illuminated by a specific radar signal above predetermined power thresholds.

warning stage [HYD] The stage, on a fixed river gage, at which it is necessary to begin issuing warnings or river forecasts if adequate precautionary measures are to be taken before flood stage is reached.

warp [GEOL] **1.** An upward or downward flexure of the earth's crust. **2.** A layer of sediment deposited by water. [NAV] To move a vessel or other waterborne object from one point to another by pulling on lines fastened to a fixed buoy, wharf, or such. [TEXT] Yarn extending lengthwise, under tension on a loom. Also known as end.

warpage [MECH] The action, process, or result of twisting or turning out of shape.

warp-faced fabric [TEXT] A fabric whose face has more ends than picks on it, the face being formed by warp yarns.

warp knitting [TEXT] A knitting process in which a group of yarns form rows running lengthwise by an interlocking process.

warp prints [TEXT] Blurred designs achieved in woven fabrics by printing the warp threads before fabrics are woven; subsequent weaving gives the soft blurred effect.

warrant *See* underclay.

Warren truss [CIV ENG] A truss having only sloping members between the top and bottom horizontal members.

war reserves [ORD] Stocks of material amassed in peacetime to meet the increase in military requirements consequent upon an outbreak of war, and intended to provide the interim support essential to sustain operations until resupply can be effected.

warringtonite *See* brochantite.

Warrior *See* Orion.

war surplus [ORD] A military article of supply or piece of equipment that has been declared surplus because it is obsolete, unserviceable, or excess to current and reserve military requirements.

wart [MED] A papillomatous growth which occurs singly or in groups on the skin surface; thought to be caused by a viral agent.

warwickite [MINERAL] $(Mg,Fe)_3Ti(BO_4)_2$ A hair brown to dull black, orthorhombic mineral consisting of a titanoborate of magnesium and iron; occurs as prismatic crystals.

Wasatch winds [METEOROL] Strong, easterly, jet-effect winds blowing out of the mouths of the canyons of the Wasatch Mountains onto the plains of Utah.

wash [AERO ENG] The stream of air or other fluid sent backward by a jet engine or a propeller. [ENG] **1.** To clean cuttings or other fragmental rock materials out of a borehole by the jetting and buoyant action of a copious flow of water or a mud-laden liquid. **2.** The erosion of core or drill string equipment by the action of a rapidly flowing stream of water or mud-laden drill-circulation liquid. [FL MECH] The surge of disturbed air or other fluid resulting from the passage of something through the fluid. [GEOL] **1.** An alluvial placer. **2.** A piece of land washed by a sea or river. **3.** *See* alluvial cone. [GRAPHICS] To dip negatives and prints in water after fixing to remove the soluble silver halide–fixing agent complexes. [MET] **1.** A coating applied to the face of a mold prior to casting. **2.** A sand expansion defect on the surface finish of a casting due to radiation from the metal rising in the mold and causing increased volume and shear of the interface sand on the upper layers.

washability [MIN ENG] Coal properties determining the amenability of a coal to improvement in quality by cleaning.

wash-and-strain ice foot [OCEANOGR] An ice foot formed from ice casts and slush and attached to a shelving beach, between the high and low waterlines; high waves and spray may cause it to build up above the high waterline.

washboard [GRAPHICS] An expression for the appearance of film images having narrowly spaced, diffused dark and light areas, running crosswise of the film.

washboard course [ENG] A test course for vehicles consisting of a series of waves or convolutions having arbitrary amplitude and frequency; a common type is the so-called sine-wave course.

wash boring *See* jet drilling.

wash-built terrace *See* alluvial terrace.

washer [DES ENG] A flattened, ring-shaped device used to improve the tightness of a screw fastener.

washer thermistor [ELECTR] A thermistor in the shape of a washer, which may be as large as 0.75 inch (1.9 centimeters) in diameter and 0.50 inch (1.3 centimeters) thick; it is formed by pressing and sintering an oxide-binder mixture.

washing [ANALY CHEM] **1.** In the purification of a laboratory sample, the cleaning of residual liquid impurities from precipitates by adding washing solution to the precipitates, mixing, then decanting, and repeating the operation as often as needed. **2.** The removal of soluble components from a mixture of solids by using the effect of differential solubility. [CHEM ENG] In a process operation, cleaning of a solids bed (settler) or cake (filter) with a liquid in which the solid is not soluble.

washing plant [MIN ENG] A plant where slimes are removed from relatively coarse ore by washing, tumbling, or scrubbing.

washing soda *See* sal soda.

Washita stone [MATER] A relatively porous and not very dense oilstone, used chiefly for whetstones and for sharpening coarse tools.

wash load [GEOL] The finer part of the total sediment load of a stream which is supplied from bank erosion or an external upstream source, and which can be carried in large quantities.

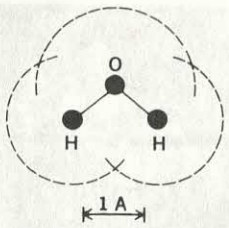
wash metal [MET] Molten metal used to clean out a furnace, ladle, or other container.

Washoe zephyr [METEOROL] The chinook on the Nevada side of the Sierra Nevada Mountains of northern California.

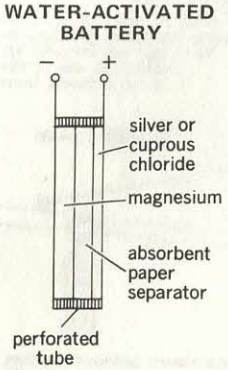
wash oil *See* absorption oil.

washout [ENG] **1.** An overlarge well bore caused by the solvent and erosional action of drilling fluid. **2.** A fluid-cut opening resulting from leaking fluid. [MIN ENG] *See* horseback.

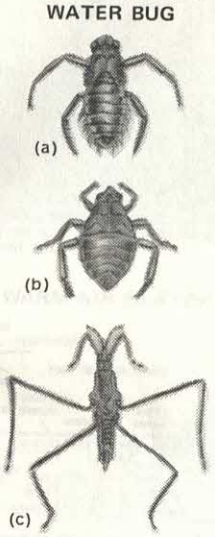
washover [GEOL] Material deposited by overwash, especially a small delta produced by storm waves and built on the



Water molecule, showing positions of atoms. Dotted circles show effective sizes of isolated atoms.



Schematic diagram of cell of water-activated battery.



Water bugs of order Hemiptera. *(a)* Water boatman. *(b)* Giant water bug, small species. *(c)* Water strider.

landward side of a bar or barrier. Also known as storm delta; wave delta.

wash plain *See* outwash plain to alluvial plain.

wash primer [MET] A synthetic vehicle primer containing phosphoric acid and zinc chromate; used as a corrosion-inhibiting first paint coat on metals.

wash water [CHEM ENG] Water contacted with process streams (liquid or gas), packed beds, or filter cakes to flush or dissolve out impurities.

wasp [INV ZOO] The common name for members of 67 families of the order Hymenoptera; all are important as parasites or predators of injurious pests.

Wasserman test [IMMUNOL] A complement-fixation test for syphilis using sensitized lipid extracts of beef heart as antigen.

waste [ENG] **1.** Rubbish from a building. **2.** Dirty water from mining, industrial, and domestic use. **3.** The amount of excavated material exceeding fill. [MIN ENG] **1.** The barren rock in a mine. **2.** The refuse from ore dressing and smelting plants. **3.** The fine coal made in mining and preparing coal for market.

waste acid *See* sludge acid.

waste bank [MIN ENG] A bank made of earth excavated during the digging of a ditch and laid parallel to it.

waste filling [MIN ENG] Material used for support in heavy ground and in large stopes to prevent failure of rock walls and to minimize or control subsidence and to make it possible to extract pillars of ore left in the earlier stages of mining; material used for filling includes waste rock sorted out in the stopes or mined from rock walls, milltailing, sand and gravel, smelter slag, and rock from surface open cuts or quarries.

waste heat [ENG] Sensible heat in gases not subject to combustion and used for processes downstream in a system.

waste-heat boiler [CHEM ENG] A heat-retrieval unit using hot by-product gas or oil from chemical processes; used to produce steam in a boiler-type system. Also known as gas-tube boiler.

waste lubrication [ENG] A method in which a lubricant is delivered to a bearing surface by the wicking action of cloth waste or yarn.

waste pipe [CIV ENG] A pipe to carry waste water from a basin, bath, or sink in a building.

waste plain *See* alluvial plain.

waste raise [MIN ENG] An excavation in the mine in which barren rock and other material is broken up for use as filling at a stope.

waste rock [MIN ENG] Valueless rock that must be fractured and removed in order to gain access to or upgrade ore. Also known as muck; mullock.

waste silk [TEXT] Short silk filaments which are left on a reel after removing the long filaments; used for spun silk.

watch [COMMUN] The service performed by a qualified operator when on duty in the radio room of a vessel. Also known as radio watch. [HOROL] A small timepiece of a size convenient to be carried on the person.

watch buoy *See* station buoy.

watch error [HOROL] The amount by which watch time differs from the correct time; it is usually expressed as seconds per day and labeled fast (F) and slow (S).

watch rate [HOROL] The amount gained or lost by a watch or clock in unit time; it is usually expressed in seconds per 24 hours, to an accuracy of 0.1 second, and labeled gaining or losing. Also known as daily rate.

watch time [HOROL] The hour of the day as indicated by a watch or clock.

water [CHEM] H_2O Clear, odorless, tasteless liquid that is essential for most animal and plant life and is an excellent solvent for many substances; melting point 0°C (32°F), boiling point 100°C (212°F); the chemical compound may be termed hydrogen oxide.

water absorption tube [ANALY CHEM] A glass tube filled with a solid absorbent (calcium chloride or silica gel) to remove water from gaseous streams during or after chemical analyses.

water-activated battery [ELEC] A primary battery that contains the electrolyte but requires the addition of or immersion in water before it is usable.

water atmosphere [METEOROL] The concept of a separate atmosphere composed only of water vapor.

water ballast [NAV ARCH] Water confined to double-bottom tanks, peak tanks, or other designated compartments, for use in obtaining satisfactory draft, trim, or stability.

water ballast tank [NAV ARCH] A tank in which sea water for ballast is confined.

water-base mud [PETRO ENG] Oil-well drilling mud in which the liquid component is water, into which are mixed the thickeners and other additives.

water-base paint [MATER] Paint in which the vehicle or binder is dissolved in water or in which the vehicle or binder is dispersed as an emulsion; an example of the dispersion type is latex paint. Also known as water-thinned paint.

Water Bearer *See* Aquarius.

water-bearing strata [GEOL] Ground layers below the standing water level.

water block [PETRO ENG] The tendency of accumulated water-oil emulsion around the lower (producing) end of an oil well borehole to block the movement of formation fluids through the formation and toward the borehole.

water boiler *See* water-boiler reactor.

water-boiler reactor [NUCLEO] A homogeneous reactor that uses enriched uranium as fuel and ordinary water as moderator; the fuel is uranyl sulfate dissolved in water. Also known as water boiler.

waterborne [SCI TECH] Floating on or transported by water.

waterborne disease [MED] Disease transmitted by drinking water or by contact with potable or bathing water.

water brake [ENG] An absorption dynamometer for measuring power output of an engine shaft; the mechanical energy is converted to heat in a centrifugal pump, with a free casing where turning moment is measured.

water break [MET] A break in the continuity of the film of water on the surface of a metal withdrawn from an aqueous bath.

water budget *See* hydrologic accounting.

water bug [INV ZOO] Any insect which lives in an aquatic habitat during all phases of its life history.

water calorimeter [ENG] A calorimeter that measures radio-frequency power in terms of the rise in temperature of water in which the r-f energy is absorbed.

water clock [HOROL] An ancient device to estimate time; the operation depended upon the slow emptying of water from one graduated vessel into another, and the graduations marked the time periods.

water cloud [METEOROL] Any cloud composed entirely of liquid water drops; to be distinguished from an ice-crystal cloud and from a mixed cloud.

watercolor [MATER] A pigment ground in a solution of gum arabic, water, and plasticizer, such as glycerin; the glycerin film retards drying in the tube and prevents brittleness in the paint film.

watercolor paper [MATER] A special drawing paper with a surface texture suitable to accept watercolors; the better grades can withstand the harsh scraping that is sometimes necessary to produce highlights; for permanent painting, the paper should be 100% rag, not wood pulp.

watercolor pigment [INORG CHEM] A permanent pigment used in watercolor painting, for example, titanium oxide (white).

water column [MECH ENG] A tubular column located at the steam and water space of a boiler to which protective devices such as gage cocks, water gage, and level alarms are attached.

water conservation [ECOL] The protection, development, and efficient management of water resources for beneficial purposes.

water content [HYD] The liquid water present within a sample of snow (or soil) usually expressed in percent by weight; the water content in percent of water equivalent is 100 minus the quality of snow. Also known as free-water content; liquid-water content.

water-cooled condenser [MECH ENG] A steam condenser which is for the maintenance of vacuum, and in which water is the heat-receiving fluid.

water-cooled furnace [MECH ENG] A fuel-fired furnace containing tubes in which water is circulated to limit heat loss to the surroundings, control furnace temperature, and generate steam.

water-cooled reactor [NUCLEO] A nuclear reactor in which water is used as a primary coolant.

water-cooled tube [ELECTR] An electron tube that is cooled by circulating water through or around the anode structure.

water cooling [ELECTR] Cooling the electrodes of an

electron tube by circulating water through or around them. [ENG] Cooling in which the primary coolant is water.

watercourse [HYD] **1.** A stream of water. **2.** A natural channel through which water may run or does run.

watercress [BOT] *Nasturtium officinale*. A perennial cress generally grown in flooded soil beds and used for salads and food garnishing.

water curb *See* garland.

water cycle *See* hydrologic cycle.

water demineralizing [CHEM ENG] The removal of minerals (for example, compounds of Ca, Mg, and Na) from water by chemical, ion-exchange, or distillation procedures.

water-drive reservoir [PETRO ENG] An oil or gas reservoir in which pressure is maintained to a greater or lesser extent by an influx of water as the oil or gas is removed.

water equivalent [METEOROL] The depth of water that would result from the melting of the snowpack or of a snow sample; thus, the water equivalent of a new snowfall is the same as the amount of precipitation represented by that snowfall.

water exchange [OCEANOGR] The volume and rate of water exchange between air and a body of water in a specific location, or between several bodies of water, controlled by such factors as tides, winds, river discharge, and currents.

waterfall [HYD] A perpendicular or nearly perpendicular descent of water in a stream.

waterfall lake *See* plunge pool.

waterflooding *See* flooding.

water-flow pyrheliometer [ENG] An absolute pyrheliometer, in which the radiation-sensing element is a blackened, water calorimeter; it consists of a cylinder, blackened on the interior, and surrounded by a special chamber through which water flows at a constant rate; the temperatures of the incoming and outgoing water, which are monitored continuously by thermometers, are used to compute the intensity of the radiation.

waterfowl [VERT ZOO] Aquatic birds which constitute the order Anseriformes, including the swans, ducks, geese, and screamers.

water front [GEOGR] An area partly bounded by water.

water gage [ENG] A gage glass with attached fittings which indicates water level in a vessel.

water gap [GEOL] A deep and narrow pass that cuts to the base of a mountain ridge, and through which a stream flows; the Delaware Water Gap is an example.

water garland *See* garland.

water gas [MATER] A mixture of carbon monoxide and methane produced by passing steam through deep beds of incandescent coal; used for industrial heating and as a gas engine fuel.

water-gas coke [MATER] Coke which is used in the manufacture of water gas, and which should have a low ash content, a softening temperature of about 2500°F (1370°C), a low sulfur content, and a size larger than 2 inches (5 centimeters).

water gas reaction [CHEM ENG] A method used to prepare carbon monoxide by passing steam over hot coke or coal at 600–1000°C.

water glass *See* sodium silicate.

water hammer [FL MECH] Pressure rise in a pipeline caused by a sudden change in the rate of flow or stoppage of flow in the line.

water heater [MECH ENG] A tank for heating and storing hot water for domestic use.

Waterhouse-Frederikson syndrome [MED] The association of bacteremia, particularly acute meningococcemia, massive skin hemorrhage, shock, and acute adrenal hemorrhage and insufficiency.

water influx [PETRO ENG] **1.** The incursion of water (natural or injected) into oil- or gas-bearing formations. **2.** One of the mechanisms of oil production in which the water movement (drive) displaces and moves the reservoir fluids toward the well borehole.

water jacket [ENG] A casing for circulation of cooling water.

water knockout drum [PETRO ENG] A device for removal of water from oil well fluids (gas, or gas with oil). Also known as water knockout trap; water knockout vessel.

water knockout trap *See* water knockout drum.

water knockout vessel *See* water knockout drum.

water lane [NAV] A designated lane or strip of water marked and maintained for the takeoff and landing of seaplanes.

water leg [ENG] The vertical area of a vessel or accessory to a vessel for the collection of water. Also known as sump.

water level *See* water table.

waterline [GEOL] *See* shoreline. [HYD] *See* water table. [NAV ARCH] **1.** The intersection of the surface of the water with the side of a ship. **2.** A line painted on the hull of a ship showing the level of the water when the ship is properly trimmed.

water load [ELECTROMAG] A matched waveguide termination in which the electromagnetic energy is absorbed in water; the resulting rise in the temperature of the water is a measure of the output power.

water loss *See* evapotranspiration.

water main [CIV ENG] The water pipe in a street from which water is delivered to individual service pipes supplying domestic property.

watermark [GRAPHICS] A localized modification of the structure and opacity of a sheet of paper so that a pattern or design can be seen when the sheet is held to the light.

water mass [OCEANOGR] A body of water identified by its temperature-salinity curve or chemical composition, and normally consisting of a mixture of two or more water types.

watermelon [BOT] *Citrullus vulgaris*. An annual trailing vine with light-yellow flowers and leaves having five to seven deep lobes; the edible, oblong or roundish fruit has a smooth, hard, green rind filled with sweet, tender, juicy, pink to red tissue containing many seeds.

water meter [ENG] An instrument for measuring the amount of water passing a specified point in a piping system.

water microbiology [MICROBIO] An aspect of microbiology that deals with the normal and adventitious microflora of natural and artificial water bodies.

water moccasin [VERT ZOO] *Agkistrodon piscivorus*. A semiaquatic venomous pit viper; skin is brownish or olive on the dorsal aspect, paler on the sides, and has indistinct black bars. Also known as cottonmouth.

water-moderated reactor [NUCLEO] A nuclear reactor in which water is the principal moderator.

Water Monster *See* Hydra.

water noise [ACOUS] Underwater acoustic energy resulting primarily from the movement of the water itself.

water of hydration [CHEM] Water present in a definite amount and attached to a compound to form a hydrate; can be removed, as by heating, without altering the composition of the compound.

water opal *See* hyalite.

water opening [OCEANOGR] A break in sea ice, revealing the sea surface.

water paint [MATER] A paint in which the vehicle or binder is dissolved in water; examples are calcimine in which the vehicle is glue, and casein paints in which the vehicle is casein.

water path [ENG] In ultrasonic testing, distance from an ultrasonic search unit to the test piece in an immersion or water column examination.

water plane [NAV ARCH] A plane coincident with or parallel to the surface of the water and limited by the line of its intersection with the vessel's hull.

water-plane area [NAV ARCH] The area of the water plane at which the ship floats.

water plane coefficient [NAV ARCH] The ratio of the area of the water plane of a ship at the surface of the water to the product of its beam and its length on the waterline.

water pollution [ECOL] Contamination of water by materials such as sewage effluent, chemicals, detergents, and fertilizer runoff.

waterpower [MECH] Power, usually electric, generated from an elevated water supply by the use of hydraulic turbines.

waterproof [ENG] Impervious to water.

waterproof grease [MATER] A viscous lubricating material that does not dissolve in water and that resists being washed out of bearings or gears; it usually has a low content of oil and metallic soaps of aluminum, barium, calcium, or strontium.

waterproofing agent [MATER] A substance used to make textiles, paper, wood, and other porous or absorbent materials impervious to penetration by water.

water-pump lubricant [MATER] A lubricating grease suitable for the types of automotive water pumps that require grease lubrication.

water purification [CIV ENG] Any of several processes in which undesirable impurities in water are removed or neutralized; for example, chlorination, filtration, primary treatment, ion exchange, and distillation.

water repellent [MATER] Chemicals used to treat textiles,

leather, paper, or wood to make them resistant (but not proof) to wetting by water; includes various types of resins, aluminum of zirconium acetates, or latexes.

water requirement [HYD] The total quantity of water required to mature a specified crop under field conditions; includes applied irrigation, water precipitation, and groundwater available to the crop.

water rheostat *See* electrolytic rheostat.

water right [ENG] The right to use water for mining, agricultural, or other purposes.

water ring *See* garland.

water sample [ENG] A portion of water brought up from a depth to determine its composition.

water saturation [CHEM] **1.** A solid adsorbent that holds the maximum possible amount of water under specified conditions. **2.** A liquid solution in which additional water will cause the appearance of a second liquid phase. **3.** A gas that is at or just under its dew point because of its water content.

water scrubber [CHEM ENG] A device or system in which gases are contacted with water (either by spray or bubbling through) to wash out traces of water-soluble components of the gas stream.

water seal [ENG] A seal formed by water to prevent the passage of gas.

water-sealed holder [ENG] A low-pressure gas holder which consists of cylindrical sections or lifts telescoping into a pit or tank filled with water; the inside section is closed in on top.

watershed [HYD] The drainage area of a stream.

water sky [METEOROL] The dark appearance of the underside of a cloud layer when it is over a surface of open water.

water smoke *See* steam fog.

Water Snake *See* Hydrus.

water snow [HYD] Snow that, when melted, yields a more than average amount of water; thus, any snow with a high water content.

water softening [CHEM] Removal of scale-forming calcium and magnesium ions from hard water, or replacing them by the more soluble sodium ions; can be done by chemicals or ion exchange.

waterspout [ENG] A pipe or orifice through which water is discharged or by which it is conveyed. [METEOROL] A tornado occurring over water; rarely, a lesser whirlwind over water, comparable in intensity to a dust devil over land.

water-supply engineering [CIV ENG] A branch of civil engineering concerned with the development of sources of supply, transmission, distribution, and treatment of water.

water swivel [DES ENG] A device connecting the water hose to the drill-rod string and designed to permit the drill string to be rotated in the borehole while water is pumped into it to create the circulation needed to cool the bit and remove the cuttings produced. Also known as gooseneck; swivel neck.

water table [HYD] The planar surface between the zone of saturation and the zone of aeration. Also known as free-water elevation; free-water surface; groundwater level; groundwater surface; groundwater table; level of saturation; phreatic surface; plane of saturation; saturated surface; water level; waterline.

water-thinned paint *See* water-base paint.

watertight subdivision [NAV ARCH] A part of a ship that can be sealed off so that water cannot enter it.

water tower [CIV ENG] A tower or standpipe for storing water in areas where ordinary water pressure is inadequate for distribution to consumers.

water trap [GEOL] A chamber or part of a cave system that is filled with water, due to the dipping of the roof or ceiling below the water level.

water treatment [CIV ENG] Purification of water to make it suitable for drinking or for any other use.

water-tube boiler [MECH ENG] A steam boiler in which water circulates within tubes and heat is applied from outside the tubes to generate steam.

water tunnel [AERO ENG] A device similar to a wind tunnel, but using water as the working fluid instead of air or other gas. [CIV ENG] A tunnel to transport water in a water-supply system.

water type [OCEANOGR] Ocean water of a specified temperature and salinity.

water vapor [PHYS] Water in the form of a vapor, especially when below the boiling point and diffused.

water-vapor absorption [METEOROL] The absorption of certain wavelengths of infrared radiation by atmospheric water vapor; a process of fundamental importance in the energy budget of the earth's atmosphere.

water-vapor laser [OPTICS] A laser whose active substance is water vapor, and which emits infrared radiation at wavelengths of 27.97, 47.7, 78.46, and 118.6 micrometers.

water-vascular system [INV ZOO] An internal closed system of reservoirs and ducts containing a watery fluid, found only in echinoderms.

waterwall [MECH ENG] The side of a boiler furnace consisting of water-carrying tubes which absorb radiant heat and thereby prevent excessively high furnace temperatures.

waterway [CIV ENG] A channel for the escape or passage of water. [NAV] A navigable stream or canal.

water well [CIV ENG] A well sunk to extract water from a zone of saturation.

water-wettable [CHEM] Denoting the capability of a material to accept water, or of being hydrophilic or hydrophoric.

waterwheel [MECH ENG] A vertical wheel on a horizontal shaft that is made to revolve by the action or weight of water on or in containers attached to the rim.

water white [CHEM] A grade of color for liquids that has the appearance of clear water; for petroleum products, a plus 21 in the scale of the Saybolt chromometer.

water-white kerosine [MATER] Kerosine or refined oil from the crude still before it is treated or rerun; has the whitest (nearest to colorless) of the three standard kerosine colors, namely, water white, prime white, and standard white.

waterworks [CIV ENG] The whole system of supply and treatment utilized in acquisition and distribution of water to consumers.

water year [HYD] Any 12-month period, usually selected to begin and end during a relatively dry season, used as a basis for processing streamflow and other hydrologic data; the period from October 1 to September 30 is most widely used in the United States.

WATS *See* Wide Area Telephone Service.

Watson equation [PHYS CHEM] Calculation method to extend heat of vaporization data for organic compounds to within 10 or 15°C of the critical temperature; uses known latent heats of vaporization and reduced temperature data.

Watson factor *See* characterization factor.

Watson-Sommerfeld transformation [MATH] A procedure for transforming a series whose lth term is the product of the lth Legendre polynomial and a coefficient, a_l, having certain properties, into the sum of a contour integral of $a(l)$ and terms involving poles of $a(l)$, where $a(l)$ is a meromorphic function such that $a(l)$ equals a_l at integral values of l; used in studying rainbows, propagation of radio waves around the earth, scattering from various potentials, and scattering of elementary particles. Also known as Sommerfeld-Watson transformation.

watt [PHYS] The unit of power in the meter-kilogram-second system of units, equal to 1 joule per second. Symbolized W.

wattage rating [ELEC] A rating expressing the maximum power that a device can safely handle continuously.

watt current *See* active current.

wattevilleite [MINERAL] $Na_2Ca(SO_4)_2 \cdot 4H_2O$ A snow white mineral consisting of a hydrated sulfate of sodium and calcium; occurs as aggregates of acicular or hairlike crystals.

watt-hour [ELEC] A unit of energy used in electrical measurements, equal to the energy converted or consumed at a rate of 1 watt during a period of 1 hour, or to 3600 joules. Abbreviated whr.

watt-hour capacity [ELEC] Number of watt-hours which can be delivered from a storage battery under specified conditions as to temperature, rate of discharge, and final voltage.

watt-hour meter [ENG] A meter that measures and registers the integral, with respect to time, of the active power of the circuit in which it is connected; the unit of measurement is usually the kilowatt-hour.

wattle gum [MATER] A gum arabic extracted from the Australian and East African trees of the genus *Acacia*, as *A. dealbata*, and other species (called mimosa in Kenya); contains 65% tannin.

wattless component *See* reactive component.

wattless current *See* reactive current.

wattless power *See* reactive power.

wattmeter [ENG] An instrument that measures electric power in watts ordinarily.

watt-second [PHYS] Amount of energy corresponding to 1 watt acting for 1 second; 1 watt-second is equal to 1 joule.

WATER-TUBE BOILER

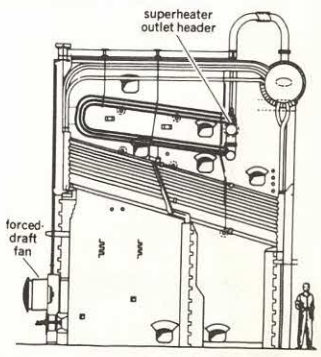


Diagram of straight-tube type of water-tube boiler.

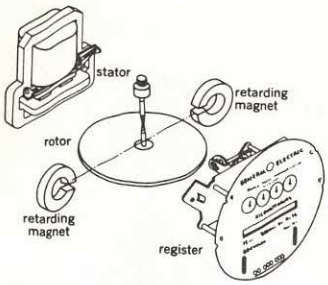
WATT-HOUR METER



Schematic sketch showing basic elements of induction-type watt-hour meter. *(General Electric Co.)*

Watt's law [THERMO] A law which states that the sum of the latent heat of steam at any temperature of generation and the heat required to raise water from 0°C to that temperature is constant; it has been shown to be substantially in error.

wave [FL MECH] A disturbance which moves through or over the surface of a liquid, as of a sea. [PHYS] A disturbance which propagates from one point in a medium to other points without giving the medium as a whole any permanent displacement.

wave acoustics [ACOUS] The study of the propagation of sound based on its wave properties.

wave amplitude [PHYS] The magnitude of the greatest departure from equilibrium of the wave disturbance.

wave analyzer *See* harmonic analyzer.

wave angle [ELECTROMAG] The angle, either in bearing or elevation, at which a radio wave leaves a transmitting antenna or arrives at a receiving antenna.

wave antenna [ELECTROMAG] Directional antenna composed of a system of parallel, horizontal conductors, varying from a half to several wavelengths long, terminated to ground at the far end in its characteristic impedance.

wave base [HYD] The depth at which sediments are not stirred by wave action, usually about 10 meters. Also known as wave depth.

wave basin [GEOGR] A basin close to the inner entrance of a harbor in which the waves from the outer entrance are absorbed, thus reducing the size of the waves entering the inner harbor.

wave-built platform *See* alluvial terrace.

wave-built terrace *See* alluvial terrace.

wave celerity *See* phase velocity.

wave clutter *See* sea clutter.

wave converter [ELECTROMAG] Device for changing a wave of a given pattern into a wave of another pattern, for example, baffle-plate converters, grating converters, and sheath-reshaping converters for waveguides.

wave-corpuscle duality *See* wave-particle duality.

wave crest [PHYS] The position at which the disturbance of a progressive wave attains its maximum positive value.

wave-cut bench [GEOL] A level or nearly level narrow platform produced by wave erosion and extending outward from the base of a wave-cut cliff. Also known as beach platform; high-water platform.

wave-cut cliff [GEOL] A cliff formed by the erosive action of waves on rock.

wave-cut plain *See* wave-cut platform.

wave-cut platform [GEOL] A gently sloping surface which is produced by wave erosion and which extends into the sea for a considerable distance from the base of the wave-cut cliff. Also known as cut platform; erosion platform; strand flat; wave-cut plain; wave-cut terrace; wave platform.

wave-cut terrace *See* wave-cut platform.

wave cyclone [METEOROL] A cyclone which forms and moves along a front; the circulation about the cyclone center tends to produce a wavelike deformation of the front. Also known as wave depression.

wave delta *See* washover.

wave depression *See* wave cyclone.

wave depth *See* wave base.

wave disturbance [METEOROL] In synoptic meteorology, the same as wave cyclone, but usually denoting an early state in the development of a wave cyclone, or a poorly developed one.

wave duct [ELECTROMAG] **1.** Waveguide, with tubular boundaries, capable of concentrating the propagation of waves within its boundaries. **2.** Natural duct, formed in air by atmospheric conditions, through which waves of certain frequencies travel with more than average efficiency.

wave equation [PHYS] **1.** In classical physics, a special equation governing waves that suffer no dissipative attenuation; it states that the second partial derivative with respect to time of the function characterizing the wave is equal to the square of the wave velocity times the Laplacian of this function. Also known as classical wave equation; d'Alembert's wave equation. **2.** Any of several equations which relate the spatial and time dependence of a function characterizing some physical entity which can propagate as a wave, including quantum-wave equations for particles.

wave erosion *See* marine abrasion.

wave filter [ELEC] A transducer for separating waves on the basis of their frequency; it introduces relatively small insertion loss to waves in one or more frequency bands and relatively large insertion loss to waves of other frequencies.

wave forecasting [OCEANOGR] The theoretical determination of future wave characteristics based on observed or forecasted meteorological phenomena.

waveform [PHYS] The pictorial representation of the form or shape of a wave, obtained by plotting the displacement of the wave as a function of time, at a fixed point in space.

waveform-amplitude distortion *See* frequency distortion.

waveform analysis [PHYS] The determination of the amplitude and phase of the components of a complex waveform, either mathematically or by means of electronic instruments.

wavefront [PHYS] **1.** A surface of constant phase. **2.** The portion of a wave envelope that is between the beginning zero point and the point at which the wave reaches its crest value, as measured either in time or distance.

wavefront reversal *See* optical phase conjugation.

wavefront splitting [OPTICS] Any method of producing interference in which light from a single source is split into two parts which can then be recombined; examples include Young's two-slit experiment, the Fresnel double mirror, and the Fresnel biprism.

wave function *See* Schrödinger wave function.

wave gage [ENG] A device for measuring the height and period of waves.

wave group [PHYS] A series of waves in which the wave direction, length, and height vary only slightly.

waveguide [ELECTROMAG] **1.** Broadly, a device which constrains or guides the propagation of electromagnetic waves along a path defined by the physical construction of the waveguide; includes ducts, a pair of parallel wires, and a coaxial cable. Also known as microwave waveguide. **2.** More specifically, a metallic tube which can confine and guide the propagation of electromagnetic waves in the lengthwise direction of the tube.

waveguide assembly [ELECTROMAG] An item consisting of one or more definite lengths of straight or formed, flexible or rigid, prefabricated hollow tubing of conductive material; the tubing has a predetermined cross-section, and is designed to guide or conduct high-frequency electromagnetic energy through its interior; one or more ends are terminated.

waveguide attenuation [ELECTROMAG] The decrease from one point of a waveguide to another, in the power carried by an electromagnetic wave in the waveguide.

waveguide bend [ELECTROMAG] A section of waveguide in which the direction of the longitudinal axis is changed; an **E**-plane bend in a rectangular waveguide is bent along the narrow dimension, while an **H**-plane bend is bent along the wide dimension. Also known as waveguide elbow.

waveguide cavity [ELECTROMAG] A cavity resonator formed by enclosing a section of waveguide between a pair of waveguide windows which form shunt susceptances.

waveguide connector [ELECTROMAG] A mechanical device for electrically joining and locking together separable mating parts of a waveguide system. Also known as waveguide coupler.

waveguide coupler *See* waveguide connector.

waveguide critical dimension [ELECTROMAG] Dimension of waveguide cross section which determines the cutoff frequency.

waveguide cutoff frequency [ELECTROMAG] Frequency limit of propagation along a waveguide for waves of a given field configuration.

waveguide discontinuity *See* discontinuity.

waveguide elbow *See* waveguide bend.

waveguide filter [ELECTROMAG] A filter made up of waveguide components, used to change the amplitude-frequency response characteristic of a waveguide system.

waveguide hybrid [ELECTROMAG] A waveguide circuit that has four arms so arranged that a signal entering through one arm will divide and emerge from the two adjacent arms, but will be unable to reach the opposite arm.

waveguide junction *See* junction.

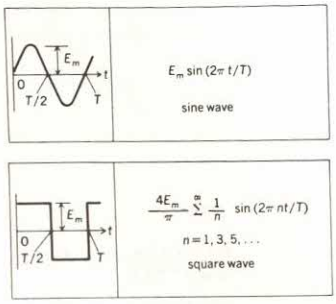
waveguide plunger *See* piston.

waveguide probe *See* probe.

waveguide propagation [COMMUN] Long-range communications in the 10-kilohertz frequency range by the waveguide characteristics of the atmospheric duct formed by the ionospheric D layer and the surface of the earth.

waveguide resonator *See* cavity resonator.

WAVEFORM



Waveforms of sine wave and square wave. Fourier series for waveforms are given at right as functions of time t. E_m is maximum value of wave. T is period of wave.

waveguide shim [ELECTROMAG] Thin resilient metal sheet inserted between waveguide components to ensure electrical contact.

waveguide slot [ELECTROMAG] A slot in a waveguide wall, either for coupling with a coaxial cable or another waveguide, or to permit the insertion of a traveling probe for examination of standing waves.

waveguide switch [ELECTROMAG] A switch designed for mechanically positioning a waveguide section so as to couple it to one of several other sections in a waveguide system.

waveguide window *See* iris.

wave height [OCEANOGR] The height of a water-surface wave is generally taken as the height difference between the wave crest and the preceding trough. [PHYS] Twice the wave amplitude.

wave-height correction [NAV] A correction to a sextant altitude required because of the elevation of parts of the sea surface by wave action.

wave impedance [ELECTROMAG] The ratio, at every point in a specified plane of a waveguide, of the transverse component of the electric field to the transverse component of the magnetic field.

wave intensity [PHYS] The average amount of energy transported by a wave in the direction of wave propagation, per unit area per unit time.

wave interference *See* interference.

wavelength [PHYS] The distance between two points having the same phase in two consecutive cycles of a periodic wave, along a line in the direction of propagation.

wavelength constant *See* phase constant.

wavelength shifter [ELECTR] A photofluorescent compound used with a scintillator material to increase the wavelengths of the optical photons emitted by the scintillator, thereby permitting more efficient use of the photons by the phototube or photocell.

wavelength standards [SPECT] Accurately measured lengths of waves emitted by specified light sources for the purpose of obtaining the wavelengths in other spectra by interpolating between the standards.

wave line *See* swash mark.

wavellite [MINERAL] $Al_3(PO_4)_2(OH)_3 \cdot 5H_2O$ A white to yellow, green, or black mineral crystallizing in the orthorhombic system and occurring in small hemispherical aggregates.

wavemark *See* swash mark.

wave mechanics *See* Schrödinger's wave mechanics.

wavemeter [ENG] A device for measuring the geometrical spacing between successive surfaces of equal phase in an electromagnetic wave.

wave microphone [ENG ACOUS] Any microphone whose directivity depends upon some type of wave interference, such as a line microphone or a reflector microphone.

wave motion [PHYS] The process by which a disturbance at one point is propagated to another point more remote from the source with no net transport of the material of the medium itself; examples include the motion of electromagnetic waves, sound waves, hydrodynamic waves in liquids, and vibration waves in solids. Also known as propagation; wave propagation.

wave motor [MECH ENG] A motor that depends on the lifting power of sea waves to develop its usable energy.

wave normal [PHYS] **1.** A unit vector which is perpendicular to an equiphase surface of a wave, and has its positive direction on the same side of the surface as the direction of propagation. **2.** One of a family of curves which are everywhere perpendicular to the equiphase surfaces of a wave.

wave number [PHYS] The reciprocal of the wavelength of a wave, or sometimes 2π divided by the wavelength. Also known as reciprocal wavelength.

wave optics [OPTICS] The branch of optics which treats of light (or electromagnetic radiation in general) with explicit recognition of its wave nature.

wave packet [PHYS] In wave phenomena, a superposition of waves of differing lengths, so phased that the resultant amplitude is negligibly small except in a limited portion of space whose dimensions are the dimensions of the packet.

wave-particle duality [QUANT MECH] The principle that both matter and electromagnetic radiation exhibit phenomena in which they behave as waves and other phenomena in which they behave as particles, the two aspects being associated by the de Broglie relations. Also known as duality principle; wave-corpuscle duality.

wave period [PHYS] The time between the attainment of successive maxima, at a fixed point, of a quantity characterizing a wave.

wave plate [OPTICS] A plate of material which is linearly birefringent. Also known as retardation sheet.

wave platform *See* wave-cut platform.

wave polarization *See* polarization.

wave propagation *See* wave motion.

wave refraction [PHYS] The process by which the direction of a wave train moving in shallow water at an angle to the contours is changed.

wave ripple mark *See* oscillation ripple mark.

wave setdown [OCEANOGR] A decrease in the mean water level in the region in which breakers form near the seashore, caused by the presence of a pressure field.

wave setup [OCEANOGR] An increase in the mean water level shoreward of the region in which breakers form at the seashore, caused by the onshore flux of momentum against the beach.

wave shaper [ENG] Of explosives, an insert or core of inert material or of explosives having different detonation rates, used for changing the shape of the detonation wave.

wave-shaping circuit [ELECTR] An electronic circuit used to create or modify a specified time-varying electrical quantity, usually voltage or current, using combinations of electronic devices, such as vacuum tubes or transistors, and circuit elements, including resistors, capacitors, and inductors.

wave soldering *See* flow soldering.

wave speed *See* phase velocity.

wave system [OCEANOGR] In ocean wave studies, a group of waves which have the same height, length, and direction of movement.

wave tail [ELECTR] Part of a signal-wave envelope (in time or distance) between the steady-state value (or crest) and the end of the envelope.

wave theory of cyclones [METEOROL] A theory of cyclone development based upon the principle of wave formation on an interface between two fluids; in the atmosphere, a front is taken as such an interface.

wave theory of light [OPTICS] A theory which assumes that light is a wave motion, rather than a stream of particles.

wave tilt [ELECTROMAG] Forward inclination of a radio wave due to its proximity to ground.

wave train [PHYS] A series of waves produced by the same disturbance.

wave trap [CIV ENG] A device used to reduce the size of waves from sea or swell entering a harbor before they penetrate as far as the quayage; usually in the form of diverging breakwaters, or small projecting breakwaters situated close within the entrance. [ELECTR] A resonant circuit connected to the antenna system of a receiver to suppress signals at a particular frequency, such as that of a powerful local station that is interfering with reception of other stations. Also known as trap.

wave trough [PHYS] The lowest part of a wave form between successive wave crests.

wave vector [PHYS] A vector whose direction is the direction of phase propagation of a wave at each point in space, and whose magnitude is sometimes set at $2\pi/\lambda$ and sometimes at $1/\lambda$, where λ is the wavelength.

wave-vector space [SOLID STATE] The space of the wave vectors of the state functions of some system; this would be used, for example, for electron wave functions in a crystal and thermal vibrations of a lattice. Also known as **k**-space; reciprocal space.

wave velocity *See* phase velocity.

wavy extinction *See* undulatory extinction.

wax [MATER] Any of a group of substances resembling beeswax in appearance and character, and in general distinguished by their composition of esters and higher alcohols, and by their freedom from fatty acids.

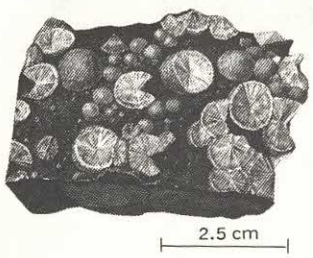
wax-coating machine [GRAPHICS] A machine that applies a pressure-sensitive coating of wax to the backs of proofs, stats, photos, overlays, and other materials.

wax distillate [MATER] A neutral distillate from distillation of crude oil that contains a high percentage of crystallizable paraffin wax; used as a primary base for paraffin wax and neutral lubricating oils.

waxed paper [MATER] Paper that is treated or coated with wax to make it waterproof and greaseproof; used for wrapping.

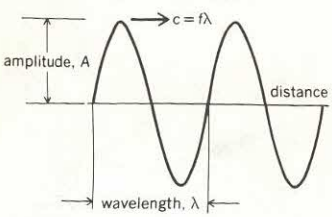
wax engraving [GRAPHICS] A type of letterpress platemak-

WAVELLITE



Wavellite in globular aggregates, found in Devonshire, England. *(Specimen from Department of Geology, Bryn Mawr College)*

WAVE MOTION



Relation between frequency f, wavelength λ, and velocity c in wave motion.

ing, used especially for ruled forms, in which lines of type are impressed in wax, resulting in a mold suitable for electrotyping.

wax fractionation [CHEM ENG] A continuous solvent-recovery/crystallization petroleum-refinery process for the production of waxes with low oil content from wax concentrates; for example, MEK (methyl ethyl ketone) deoiling.

wax gland *See* ceruminous gland.

waxing moon [ASTRON] The moon between new and full, when its visible part is increasing.

wax manufacturing [CHEM ENG] A petroleum refinery process similar to wax fractionation for the manufacture of oil-free waxes by chilling and crystallization from a solvent.

wax master *See* wax original.

wax original [ENG ACOUS] An original recording made on a wax surface and used to make a master. Also known as wax master.

wax stain [MATER] A semitransparent pigment mixed with beeswax, and thinned with turpentine.

wax tailings [MATER] A sticky, pitchlike substance with dark-brown color, the last volatile product distilling off an oil charge before it is coked; used as wood preservative and in manufacture of roofing paper. Also known as petroleum tailings; still wax.

waxy [MINERAL] A type of mineral luster that is soft like that of wax.

waxy-electrolyte battery [ELEC] A primary battery in which the electrolyte is a waxy material, such as polyethylene glycol, in which is dissolved a small amount of a salt, such as zinc chloride; the electrodes are frequently made of zinc and manganese dioxide, and the electrolyte is melted and painted on a paper sheet to form the separator.

way point [NAV] A reference point between the point of departure and the destination, particularly a point on a course line the coordinates of which are defined in relation to an electronic aid to navigation.

ways [CIV ENG] **1.** The tracks and sliding timbers used in launching a vessel. **2.** The building slip or space upon which the sliding timbers or ways, supporting a vessel to be launched, travel. [MECH ENG] Bearing surfaces used to guide and support moving parts of machine tools; may be flat, V-shaped, or dovetailed.

Wb *See* weber.

W boson [PARTIC PHYS] Collective name for two of the hypothetical intermediate vector bosons which carry electric charge; it is believed that charged current interactions are produced by the exhange of these bosons.

W coefficient *See* Racah coefficient.

weak acid [CHEM] An acid that does not ionize greatly; for example, acetic acid or carbonic acid.

weak convergence [MATH] A sequence of elements x_1, x_2,... from a topological vector space X converges weakly if the sequence $f(x_1)$, $f(x_2)$,...converges for every continuous linear functional f on X.

weak coupling [PARTIC PHYS] The coupling of four fermion fields in the weak interaction, having a strength many orders of magntiude weaker than that of the strong or electromagnetic interactions.

weak fix [NAV] A fix determined from horizontal sextant angles between objects poorly located.

weak ground [MIN ENG] Roof and walls of underground excavations which would be in danger of collapse unless suitably supported.

weak interaction [PARTIC PHYS] One of the fundamental interactions among elementary particles, responsible for beta decay of nuclei, and for the decay of elementary particles with lifetimes greater than about 10^{-10} second, such as muons, K mesons, and lambda hyperons; it is several orders of magnitude weaker than the strong and electromagnetic interactions, and fails to conserve strangeness or parity. Also known as beta interaction.

weak topology [MATH] A topology on a topological vector space X whose open neighborhoods around a point x are obtained from those points y of X for which every $f_i(x)$ is close to $f_i(y)$, f_i appearing in a finite list of linear functionals.

weapon [ORD] An instrument of combat, either offensive or defensive, used to destroy, injure, defeat, or threaten an enemy; for example, a gun, bayonet, bomb, or missile.

weapon delivery [ORD] The total action required to locate the target, establish the necessary release conditions, and maintain guidance to the target if required; it includes the detection recognition and the acquisition of the target, and the weapon release and weapon guidance.

weapon of mass destruction [ORD] Nuclear, bacteriological, or other weapon capable of causing widespread death or destruction.

weapon record book [ORD] Record book used to keep data on the performance, maintenance, and inspection of a gun or other weapon.

weapons system [ORD] Two or more instruments of combat operating as a single unit of striking power in military combat; specifically, a system in which two instruments of combat are required to perform a single mission.

weapon target line [ORD] An imaginary straight line from a weapon to a target.

wear [ENG] Deterioration of a surface due to material removal caused by relative motion between it and another part.

wearing course [CIV ENG] The top layer of surfacing on a road.

wear tables [ORD] Tables indicating the decrease of muzzle velocity expected as the result of firing a certain number of equivalent rounds; although tubes may vary considerably from the wear rate indicated in such tables, the tables may be used to correct calibration data between periods of calibration.

weasel [VERT ZOO] The common name for at least 12 species of small, slim carnivores which belong to the family Mustelidae and which have a reddish-brown coat with whitish underparts; species in the northern regions have white fur during the winter and are called ermine.

weather [METEOROL] **1.** The state of the atmosphere, mainly with respect to its effects upon life and human activities; as distinguished from climate, weather consists of the short-term (minutes to months) variations of the atmosphere. **2.** As used in the making of surface weather observations, a category of individual and combined atmospheric phenomena which must be drawn upon to describe the local atmospheric activity at the time of observation.

weather central [METEOROL] An organization which collects, collates, evaluates, and disseminates meteorological information in such a manner that it becomes a principal source of such information for a given area.

weathercocking [AERO ENG] The aerodynamic action causing alignment of the longitudinal axis of a rocket with the relative wind after launch. Also known as weather vaning.

weathercock stability *See* directional stability.

weather deck [NAV ARCH] **1.** The uppermost deck of a ship. **2.** Any deck that does not have overhead protection from the weather.

weathered crude [MATER] Crude petroleum that, owing to evaporation and other natural causes during storage and handling, has lost an appreciable quantity of its more volatile components.

weathered iceberg [OCEANOGR] An iceberg which is irregular in shape, due to an advanced stage of ablation; it may have overturned.

weathered layer [GEOPHYS] The zone of the earth which lies immediately below the surface and is characterized by low wave velocities.

weather forecast [METEOROL] A forecast of the future state of the atmosphere with specific reference to one or more associated weather elements.

weathering [GEOL] Physical disintegration and chemical decomposition of earthy and rocky materials on exposure to atmospheric agents, producing an in-place mantle of waste. Also known as clastation; demorphism.

weathering correction [GEOPHYS] A velocity correction which is applied to seismic data, necessitated by the diminished velocity of seismic wave propagation in weathered rock.

weathering-potential index [GEOL] A measure of the susceptibility of a rock or mineral to weathering.

weathering velocity [GEOPHYS] The velocity of propagation of seismic waves through weathered rock.

weather map [METEOROL] A chart portraying the state of the atmospheric circulation and weather at a particular time over a wide area; it is derived from a careful analysis of simultaneous weather observations made at many observing points in the area.

weather-map type *See* weather type.

weather minimum [METEOROL] The worst weather conditions under which aviation operations may be conducted under either visual or instrument flight rules; usually prescribed by

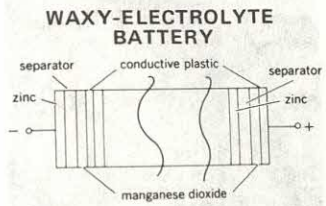


Diagram of battery stack of cells using a waxy electrolyte.

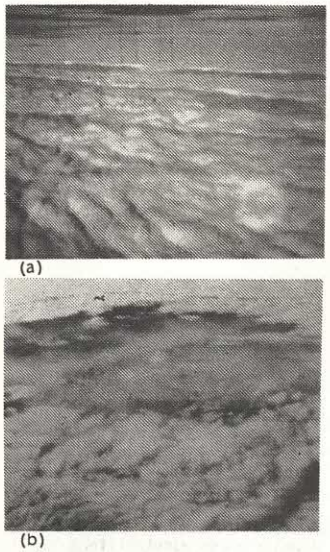
WEASEL

The common or European weasel (*Mustela nivalis*).

WEATHER MODIFICATION



(a) (b)

Example of cloud dissipation, a type of weather modification. *(a)* Three lines in a stratocumulus cloud layer 15 minutes after seeding. *(b)* Opening in stratocumulus layer 70 minutes after seeding. *(U.S. Army ECOM, Fort Monmouth, N.J.)*

directives and standing operating procedures in terms of minimum ceiling, visibility, or specific hazards to flight.

weather modification [METEOROL] The changing of natural weather phenomena by technical means; so far, only on the microscale of condensation and freezing nuclei has it been possible to exert modifying influences.

weather observation [METEOROL] An evaluation of one or more meteorological elements that describe the state of the atmosphere either at the earth's surface or aloft.

weather observation radar *See* weather radar.

weatherometer [ENG] A device used to subject articles and finishes to accelerated weathering conditions; for example, a rich ultraviolet source, water spray, or salt water.

weather pit [GEOL] A shallow depression (depth up to 15 centimeters) on the flat or gently sloping summit of large exposures of granite or granitic rocks, attributed to strongly localized solvent action of impounded water.

weatherproof [ENG] Able to withstand exposure to weather without damage.

weather radar [ENG] Generally, any radar which is suitable or can be used for the detection of precipitation or clouds. Also known as weather observation radar.

weather resistance [ENG] The ability of a material, paint, film, or the like to withstand the effects of wind, rain, or sun and to retain its appearance and integrity.

weather shore [METEOROL] As observed from a vessel, the shore lying in the direction from which the wind is blowing.

weather side [METEOROL] The side of a ship exposed to the wind or weather.

weather signal [METEOROL] A visual signal displayed to indicate a weather forecast.

weather station [METEOROL] A place and facility for the observation, measurement, and recording and transmission of data of the variable elements of weather; one of the most effective network facilities is that of the U.S. Weather Bureau.

weather strip [BUILD] A piece of material, such as wood or rubber, applied to the joints of a window or door to stop drafts.

weather type [METEOROL] A series of generalized synoptic situations, usually presented in chart form; weather types are selected to represent typical pressure patterns, and were originally devised as a method for lengthening the effective time-range of forecasts. Also known as weather-map type.

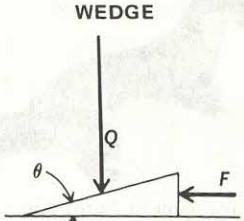
weather vaning *See* weathercocking.

weather window [PETRO ENG] That part of the year when the weather is suitable for operations, such as pipelaying or platform installation, which cannot be undertaken in adverse sea conditions.

weave [TEXT] **1.** To make cloth by interlacing strands of warp and filling threads. **2.** A cloth made by weaving. **3.** The pattern of a woven fabric.

web [ARCH] The portion of a ribbed vault between ribs. [CIV ENG] The vertical strip connecting the upper and lower flanges of a rail or girder. [GRAPHICS] The continuous length of paper formed when paper pulp moves through a papermaking machine; the web is then cut into sheets or wrapped onto rolls. [MATER] In a grain of propellant, the minimum thickness of the grain between any two adjacent surfaces. [MECH ENG] For twist drills and reamers, the central portion of the tool body that joins the lands. [MET] In forging, the thin section of metal remaining at the bottom of a depression or at the location of the punches. [OPTICS] *See* wire. [TEXT] A fabric as it is being woven on a loom. [VERT ZOO] The membrane between digits in many birds and amphibians.

WEDGE



The shape of a wedge and a diagram of forces acting on it. F is smaller applied force, Q is larger force to be exerted, θ is angle between surfaces of wedge.

weber [ELECTROMAG] The unit of magnetic flux in the meter-kilogram-second system, equal to the magnetic flux which, linking a circuit of one turn, produces in it an electromotive force of 1 volt as it is reduced to zero at a uniform rate in 1 second. Symbolized Wb.

Weber-Christian disease [MED] Febrile, relapsing, nodular nonsuppurative panniculitis.

Weber differential equation [MATH] A special case of the confluent hypergeometric equation that has as solution a confluent hypergeometric series. Also known as Weber-Hermite equation.

Weber-Hermite equation *See* Weber differential equation.

Weberian apparatus [VERT ZOO] A series of bony ossicles which form a chain connecting the swim bladder with the inner ear in fishes of the superorder Ostariophysi.

Weberian ossicle [VERT ZOO] One of a chain of three or four small bones that make up the Weberian apparatus.

weberite [MINERAL] Na_2MgAlF_7 A light gray, orthorhombic mineral consisting of an aluminofluoride of sodium and magnesium; occurs as grains and masses.

Weber number 1 [FL MECH] A dimensionless number used in the study of surface tension waves and bubble formation, equal to the product of the square of the velocity of the wave or the fluid velocity, the density of the fluid, and a characteristic length, divided by the surface tension. Symbolized N_{We1}, We.

Weber number 2 [FL MECH] A dimensionless number, equal to the square root of Weber number 1. Symbolized N_{We2}.

Weber number 3 [CHEM ENG] A dimensionless number used in interfacial area determination in distillation equipment, equal to the surface tension divided by the product of the liquid density, the acceleration of gravity, and the depth of liquid on the tray under consideration. Symbolized N_{We3}.

Weber's law [PHYSIO] The law that the stimulus increment which can barely be detected (the just noticeable difference) is a constant fraction of the initial magnitude of the stimulus; this is only an approximate rule of thumb.

web-fed press [GRAPHICS] Printing press designed to accept paper from rolls instead of sheets; large web presses offer great speed and economy for long press runs, but high makeready and plate costs make them too costly for short runs.

web frame [NAV ARCH] A built-up member consisting of a web plate with single or double bars riveted or welded to its edges; web frames are placed several frame spaces apart with smaller frames in between.

websterite *See* aluminite.

Weddell Current [OCEANOGR] A surface current which flows in an easterly direction from the Weddell Sea outside the limit of the West Wind Drift.

weddellite [MINERAL] $CaC_2O_4 \cdot 2H_2O$ A colorless to white or yellowish-brown to brown, tetragonal mineral consisting of calcium oxalate dihydrate.

Wedener-Bergeron process *See* Bergeron-Findeisen theory.

wedge [COMMUN] A convergent pattern of equally spaced black and white lines, used in a television test pattern to indicate resolution. [DES ENG] A piece of resistant material whose two major surfaces make an acute angle. [ELECTROMAG] A waveguide termination consisting of a tapered length of dissipative material introduced into the guide, such as carbon. [ENG] In ultrasonic testing, a device which directs waves of ultrasonic energy into the test piece at an angle. [METEOROL] *See* ridge. [OPTICS] **1.** An optical filter in which the transmission decreases continuously or in steps from one end to the other. **2.** A refracting prism of very small angle, inserted in an optical train to introduce a bend in the ray path.

wedge-base lamp [ELEC] A small indicator lamp that has wire leads folded back on opposite sides of a flat glass base.

wedge bit [DES ENG] A tapered-nose noncoring bit, used to ream out the borehole alongside the steel deflecting wedge in hole-deflection operations. Also known as bull-nose bit; wedge reaming bit; wedging bit.

wedge bonding [ENG] A type of thermocompression bonding in which a wedge-shaped tool is used to press a small section of the lead wire onto the bonding pad of an integrated circuit.

wedge core lifter [MECH ENG] A core-gripping device consisting of a series of three or more serrated-face, tapered wedges contained in slotted and tapered recesses cut into the inner surface of a lifter case or sleeve; the case is threaded to the inner tube of a core barrel, and as the core enters the inner tube, it lifts the wedges up along the case taper; when the barrel is raised, the wedges are pulled tight, gripping the core.

wedge filter [NUCLEO] A radiation filter so constructed that its thickness or transmission characteristics vary continuously or in steps from one edge to the other; used to increase the uniformity of radiation in certain types of treatment.

wedge photometer [ENG] A photometer in which the luminous flux density of light from two sources is made equal by pushing into the beam from the brighter source a wedge of absorbing material; the wedge has a scale indicating how much it reduces the flux density, so that the luminous intensities of the sources may be compared.

wedge reaming bit *See* wedge bit.

wedge spectrograph [SPECT] A spectrograph in which the intensity of the radiation passing through the entrance slit is varied by moving an optical wedge.

wedging [ENG] **1.** A method used in quarrying to obtain

large, regular blocks of building stones; a row of holes is drilled, either by hand or by pneumatic drills, close to each other so that a longitudinal crevice is formed into which a gently sloping steel wedge is driven, and the block of stone can be detached without shattering. **2.** The act of changing the course of a borehole by using a deflecting wedge. **3.** The lodging of two or more wedge-shaped pieces of core inside a core barrel, and therefore blocking it. **4.** The material, moss, or wood used to render the shaft lining tight.

wedging bit *See* wedge bit.

weed [BOT] A plant that is useless or of low economic value, especially one growing on cultivated land to the detriment of the crop.

week [ASTRON] A time period of 7 days which has been accepted from ancient Babylon; the 7 days of the week were first given names of the seven celestial bodies: the sun, moon, and five visible planets.

weep hole [CIV ENG] A hole in a wood sill, retaining wall, or other structure to allow accumulated water to escape.

weeping core [PETRO ENG] A core cut that is covered with tearlike drops of fluid when it is brought to the surface; usually indicative of a deposit that will produce little oil.

weeping spring *See* spring seepage.

weevil [INV ZOO] Any of various snout beetles whose larvae destroy crops by eating the interior of the fruit or grain, or bore through the bark into the pith of many trees.

weft *See* filling.

weft knitting [TEXT] A knitting process in which a continuous yarn is carried in crosswise rows.

Wegener's granulomatosis [MED] A rare disease of unknown causation characterized by necrotizing granulomas in the air passages, necrotizing vasculitis, and glomerulitis.

Wehnelt cathode *See* oxide-coated cathode.

wehrlite [MINERAL] BiTe A mineral that is a native alloy of bismuth and tellurium. Also known as mirror glance. [PETR] A peridotite composed principally of olivine and clinopyroxene with accessory opaque oxides.

weibullite [MINERAL] $Pb_4Bi_6S_9Se_4$ A steel gray mineral consisting of lead bismuth sulfide with selenium replacing the sulfide; occurs in indistinct prismatic crystals in massive form.

Weierstrass' approximation theorem [MATH] A continuous real valued function on a closed interval can be uniformly approximated by polynomials.

Weierstrass functions [MATH] Used in the calculus of variations, these determine functions satisfying the Euler-Lagrange equation and Jacobi's condition while maximizing a given definite integral.

Weierstrassian elliptic function [MATH] A function that plays a central role in the theory of elliptic functions; for z, g_2 and g_3 real or complex numbers, let y be that number such that

$$z = \int_y^\infty \frac{dt}{\sqrt{4t^3 - g_2 t - g_3}};$$

the Weierstrassian elliptic function of z with parameters g_2 and g_3 is $p(z; g_2, g_3) = y$.

Weierstrass M test [MATH] An infinite series of numbers will converge or functions will converge uniformly if each term is dominated in absolute value by a nonnegative constant M_n, where these M_n form a convergent series. Also known as Weierstrass' test for convergence.

Weierstrass' test for convergence *See* Weierstrass M test.

Weierstrass transform [MATH] This transform of a real function $f(y)$ is the function given by the integral from $-\infty$ to ∞ of $(4\pi t)^{-1/2}\exp[-(x-y)^2/4]f(y)dy$; this is used in studying the heat equation.

weighing rain gage [ENG] A type of recording rain gage, consisting of a receiver in the shape of a funnel which empties into a bucket mounted upon a weighing mechanism; the weight of the catch is recorded, on a clock-driven chart, as inches of precipitation; used at climatological stations.

weight [MECH] **1.** The gravitational force with which the earth attracts a body. **2.** By extension, the gravitational force with which a star, planet, or satellite attracts a nearby body.

weight and balance sheet [AERO ENG] A sheet which records the distribution of weight in an aircraft and shows the center of gravity of an aircraft at takeoff and landing.

weight barometer [ENG] A mercury barometer which measures atmospheric pressure by weighing the mercury in the column or the cistern.

weight density [PHYS] The weight of a body or portion of a body divided by its volume.

weighted code [COMPUT SCI] A method of representing a decimal digit by a combination of bits, in which each bit is assigned a weight, and the value of the decimal digit is found by multiplying each bit by its weight and then summing the results.

weighted area masks [COMPUT SCI] In character recognition, a set of characters (each character residing in the character reader in the form of weighted points) which theoretically render all input specimens unique, regardless of the size or style.

weighted average [STAT] The number obtained by adding the product of α_i times the ith number in a set of N numbers for $i = 1,2,\ldots,N$, where α_i are numbers (weights) such that $\alpha_1 + \alpha_2 + \ldots + \alpha_N = 1$.

weight factor [STAT MECH] The number of microstates that correspond to a given macrostate.

weight function [MATH] Two real valued functions f and g are orthogonal relative to a weight function σ on an interval if the integral over the interval of $f \cdot g \cdot \sigma$ vanishes.

weighting [ENG] The artificial adjustment of measurements to account for factors that, in the normal use of the device, would otherwise be different from conditions during the measurements. [TEXT] The chemical or mechanical process of adding weight or body to a fabric or yarn, especially silk, by the addition of various materials.

weighting network [ENG ACOUS] One of three or more circuits in a sound-level meter designed to adjust its response; the A and B weighting networks provide responses approximating the 40- and 70-phon equal loudness contours, respectively, and the C weighting network provides a flat response up to 8000 hertz.

weightlessness [MECH] A condition in which no acceleration, whether of gravity or other force, can be detected by an observer within the system in question. Also known as zero gravity.

weightlessness switch *See* zero gravity switch.

weight-loaded regulator [ENG] A pressure-regulator valve for pressure vessels or flow systems; the regulator is preloaded by counterbalancing weights to open (or close) at the upper (or lower) limit of a preset pressure range.

weight zone [ORD] A weight range having specified minimum and maximum weights; artillery projectiles of 75-millimeter caliber and larger are sometimes grouped into weight zones and marked with appropriate symbols; the selection of projectiles of a single weight zone for a specific firing problem results in improved ballistic uniformity.

Weil-Felix test [IMMUNOL] An agglutination test for various rickettsial infections based on production of nonspecific agglutinins in the blood of infected patients, and using various strains of *Proteus vulgaris* as antigen.

Weil's disease [MED] A severe form of leptospirosis characterized by jaundice, oliguria, circulatory collapse, and tendency to hemorrhage. Also known as icterohemorrhagic fever; leptospirosis icterohemorrhagia; spirochetal jaundice.

Weinberg-Salam theory [PARTIC PHYS] A gage theory in which the electromagnetic and weak nuclear interactions are described by a single unifying framework in which both have a characteristic coupling paramenter equal to the fine-structure constant; it predicts the existence of intermediate vector bosons and neutral current interactions. Also known as Salam-Weinberg theory.

Weingarten formulas [MATH] Equations concerning the normals to a surface at a point.

weinschenkite [MINERAL] **1.** $YPO_4 \cdot 2H_2O$ A white mineral consisting of a hydrous yttrium phosphate. Also known as churchite. **2.** A dark-brown variety of hornblende high in ferric iron, aluminum, and water.

weir [CIV ENG] A dam in a waterway over which water flows, serving to regulate water level or measure flow.

weir tank [PETRO ENG] A type of oil-field storage tank with high- and low-level weir boxes and liquid-level controls for metering the liquid content of the tank.

Weissenberg method [SOLID STATE] A method of studying crystal structure by x-ray diffraction in which the crystal is rotated in a beam of x-rays, and a photographic film is moved parallel to the axis of rotation; the crystal is surrounded by a sleeve which has a slot that passes only diffraction spots from a

WEIGHTLESSNESS

Film magazine (arrow) floats in weightless environment of space cabin. *(NASA)*

single layer of the reciprocal lattice, permitting positive identification of each spot in the pattern.

weissite [MINERAL] Cu_2Te_3 A dark bluish-black mineral consisting of copper telluride; occurs in massive form.

Weiss magneton [ATOM PHYS] A unit of magnetic moment, equal to 1.853×10^{-21} erg/oersted, about one-fifth of the Bohr magneton; it is experimentally derived, the magnetic moments of certain molecules being close to integral multiples of this quantity.

Weiss molecular field [SOLID STATE] The effective magnetic field postulated in the Weiss theory of ferromagnetism, which acts on atomic magnetic moments within a domain, tending to align them, and is in turn generated by these magnetic moments.

Weiss theory [SOLID STATE] A theory of ferromagnetism based on the hypotheses that below the Curie point a ferromagnetic substance is composed of small, spontaneously magnetized regions called domains, and that each domain is spontaneously magnetized because a strong molecular magnetic field tends to align the individual atomic magnetic moments within the domain. Also known as molecular field theory.

Weisz ring oven [ANALY CHEM] A device for vaporization of solvent from filter paper, leaving the solute in a ring (circular) shape; used for qualitative analysis of very small samples.

Weizäcker-Williams method [QUANT MECH] A method of calculating the bremsstrahlung emitted when two particles, whose relative kinetic energies are much larger than their rest energies, collide; in the rest frame of one of the particles, the field of the other is equivalent to a set of virtual photons, and Compton scattering of these photons by the particle at rest is computed.

Weizsaecker's theory [ASTRON] A theory of the origin of the solar system; it hypothesizes primeval turbulent eddies which become permanent and self-gravitating; Weizsaecker does not discuss the origin of the gas clouds.

weld [MET] A union made between two metals by welding.

weldability [MET] Suitability of a metal to be welded under specified conditions.

weld bead [MET] A deposit of filler metal from a single welding pass. Also known as bead.

weldbonding [MET] A process for joining metals in which adhesive, typically an epoxy paste, is applied to the parts, which are then clamped together, spot-welded, and put into an oven (250°F, or 121°C, for 1 hour) to cure the adhesive.

weld decay [MET] Intercrystalline corrosion of austenitic stainless steels near welded areas; caused by chromium carbide precipitation along grain boundaries of alloy subject to prolonged heating in the temperature range 400–850°C.

weld delay time [MET] Delay of the time current in spot, seam, or projection welding with respect to starting the forge delay timer used to synchronize pressure and heat.

welded tuff [PETR] A pyroclastic deposit hardened by the action of heat, pressure from overlying material, and hot gases. Also known as tuff lava.

welder [MET] **1.** A machine used in welding. Also known as welding machine. **2.** A person who performs a welding operation.

weld gage [ENG] A device used to check the shape and size of welds.

welding [GEOL] Consolidation of sediments by pressure; water is squeezed out and cohering particles are brought within the limits of mutual molecular attraction. [MET] Joining two metals by applying heat to melt and fuse them, with or without filler metal.

welding current [ELEC] The current that flows through a circuit while a weld is being made.

welding cycle [MET] The complete sequence of events involved in making a resistance weld.

welding electrode [MET] **1.** In arc welding, the current-carrying rod or rods used to strike an arc between rod and work. **2.** In resistance welding, the component of a machine through which current and pressure are applied to the work.

welding force *See* electrode force.

welding generator [ELEC] A generator used for supplying the welding current.

welding ground *See* work lead.

welding machine *See* welder.

welding rod [MET] Filler metal in the form of a rod or heavy wire.

welding schedule [MET] A record of all welding machine settings plus identification of the machine needed to produce a weld for a given material of a given size and finish.

welding sequence [MET] The order for welding component parts of a weldment or structure.

welding stress [MET] Residual stress resulting from localized heating and cooling during welding.

welding tip [ENG] A replaceable nozzle for a gas torch used in welding. [MET] An electrode used in spot or projection welding.

welding torch [ENG] A gas-mixing and burning tool for the welding of metal.

welding transformer [ELEC] A high-current, low-voltage power transformer used to supply current for welding.

weld interval [MET] The total heat and cool times for making one multiple-impulse weld.

weld-interval timer [ENG] A device used to control weld interval.

weld line [MET] The junction of the weld metal and base metal, or the junction of base-metal parts when filler metal is not used.

weld mark *See* flow line.

weldment [ENG] An assembly or structure whose component parts are joined by welding.

weld metal [MET] The metal constituting the fused zone in spot, seam, or projection welding.

weld time [MET] The time that the welding current is applied to the work in single-impulse and flash welding.

Welge method [PETRO ENG] A method of calculation of the anticipated oil-recovery performance of a gas-cap-drive oil reservoir.

well [BUILD] An open shaft in a building, extending vertically through floors to accommodate stairs or an elevator. [ENG] A hole dug into the earth to reach a supply of water, oil, brine, or gas.

wellbore hydraulics [PETRO ENG] A branch of oil production engineering that deals with the motion of fluids (oil, gas, or water) in wellbore tubing or casing, or the annulus between tubing and casing.

well completion [PETRO ENG] The final sealing off of a drilled well (after drilling apparatus is removed from the borehole) with valving, safety, and flow-control devices.

well conditioning [PETRO ENG] **1.** Preparation of a well for sampling procedures by control of production rate and associated pressure drawdown. **2.** Removal of accumulated scale, wax, mud, and sand from the inner surfaces of a wellbore, or breakage of water blocks to increase production of oil or gas.

well core [ENG] A sample of rock penetrated in a well or other borehole obtained by use of a hollow bit that cuts a circular channel around a central column or core.

well-deck vessel [NAV ARCH] A merchant vessel having a sunken deck fitted between the forecastle and a long poop or continuous bridge house or raised quarterdeck.

well drill [MECH ENG] A drill, usually a churn drill, used to drill water wells.

well-formed formula [MATH] A finite sequence or string of symbols that is grammatically or syntactically correct for a given set of grammatical or syntactical rules.

wellhead [CIV ENG] The top of a well. [HYD] The place where a stream emerges from the ground.

wellhole [MIN ENG] **1.** A large-diameter vertical hole used in quarries and opencast pits for taking heavy explosive charges in blasting. **2.** The sump, or portion of a shaft below the place where skips are caged at the bottom of the shaft, in which water collects.

well injectivity [PETRO ENG] The ability of an injection well (water or gas) to receive injected fluid; can be negatively influenced by formation plugging, borehole scale, or liquid blocking around the lower end of the borehole.

well logging [ENG] The technique of analyzing and recording the character of a formation penetrated by a drill hole in mineral exploration and exploitation work.

well-ordered set [MATH] A linearly ordered set where every subset has a least element.

well-ordering principle [MATH] The proposition that every set can be endowed with an order so that it becomes a well-ordered set; this is equivalent to the axiom of choice.

well performance [PETRO ENG] The measurement of a well's production of oil or gas as related to the well's anticipated productive capacity, pressure drop, or flow rate.

wellpoint [CIV ENG] A component of a wellpoint system

consisting of a perforated pipe about 4 feet (1.2 meters) long and about 2 inches (5 centimeters) in diameter, equipped with a ball valve, a screen, and a jetting tip.

wellpoint system [CIV ENG] A method of keeping an excavated area dry by intercepting the flow of groundwater with pipe wells located around the excavation area.

well-regulated system [CONT SYS] A system with a regulator whose action, together with that of the environment, prevents any disturbance from permanently driving the system from a state in which it is stable, that is, a state in which it retains its structure and survives.

well shooting [ENG] The firing of a charge of nitroglycerin, or other high explosive, in the bottom of a well for the purpose of increasing the flow of water, oil, or gas.

well-sorted [GEOL] Referring to a sorted sediment that consists of particles of approximately the same size and has a sorting coefficient of less than 2.5.

well spacing [PETRO ENG] Areal location and interrelationship between producing oil or gas wells in an oil field; calculated for the maximum ultimate production from a given reservoir.

well stimulation *See* stimulation treatment.

well-type manometer [ENG] A type of double-leg, glass-tube manometer; one leg has a relatively small diameter, and the second leg is a reservoir; the level of the liquid in the reservoir does not change appreciably with change of pressure; a mercury barometer is a common example.

Welwitschiales [BOT] An order of gymnosperms in the subdivision Geneticae represented by the single species *Welwitschia mirabilis* of southwestern Africa; distinguished by only two leaves and short, unbranched, cushion- or saucer-shaped woody main stem which tapers to a very long taproot.

Wenlockian [GEOL] A European stage of geologic time: Middle Silurian (above Tarannon, below Ludlovian).

Wentworth classification [GEOL] A logarithmic grade for size classification of sediment particles starting at 1 millimeter and using the ratio of ½ in one direction (and 2 in the other), providing diameter limits to the size classes of 1, ½, ¼, etc. and 1, 2, 4, etc.

Wentworth quick-return motion *See* turning-block linkage.

Wentworth scale [GEOL] A geometric grade scale for sedimentary particles ranging from clay particles (diameter less than $\frac{1}{250}$ millimeter) to boulders (diameters greater than 256 millimeters), in which the size classes are related to one another by a constant ratio of ½ (4, 2, 1, ½, etc.).

Wentzel-Kramers-Brillouin method [QUANT MECH] Method of approximating quantum-mechanical wave functions and energy levels, in which the logarithm of the wave function is expanded in powers of Planck's constant, and all except the first two terms are neglected. Also known as phase integral method; WKB method.

Werdnig-Hoffman disease [MED] Infantile spinal muscular atrophy.

Werfenian stage *See* Scythian stage.

Werner band [SPECT] A band in the ultraviolet spectrum of molecular hydrogen extending from 116 to 125 nanometers.

Werner complex *See* coordination compound.

wernerite *See* scapolite.

Werner's syndrome [MED] A complex of symptoms, thought to be inherited as an autosomal recessive, including premature senescence, dwarfism, cataracts, sclerodermalike changes of the skin, osteoporosis, and multiglandular dysfunction.

Wernicke's encephalopathy [MED] A disease due to thiamine deficiency, characterized by vomiting, ophthalmoplegia, ptosis, nystagmus, ataxia, weakness, dementia, and hemorrhaging of neurons around the third ventricle, cerebral aqueduct, and mammillary bodies.

Wertheim effect *See* Wiedemann effect.

west [GEOGR] The direction 90° to the left or 270° to the right of north.

West African cedar *See* Sapele mahogany.

West Australia Current [OCEANOGR] The complex current flowing northward along the west coast of Australia; it is strongest from November to January, and weakest and variable from May to July; it curves toward the west to join the South Equatorial Current.

westerlies [METEOROL] The dominant west-to-east motion of the atmosphere, centered over the middle latitudes of both hemispheres; at the earth's surface, the westerly belt (or westwind belt) extends, on the average, from about 35 to 65° latitude. Also known as circumpolar westerlies; middle-latitude westerlies; mid-latitude westerlies; polar westerlies; subpolar westerlies; subtropical westerlies; temperate westerlies; zonal westerlies; zonal winds.

westerly wave [METEOROL] An atmospheric wave disturbance embedded in the mid-latitude westerlies.

Western Equatorial Countercurrent [OCEANOGR] Weak, narrow bands of eastward-flowing water observed in some winter months in the western Atlantic near the equator.

Western equine encephalitis [MED] A type of equine encephalitis which occurs chiefly west of the Mississippi River; the chief vector is the culicine mosquito *Culex tarsalis*.

West Greenland Current [OCEANOGR] The current flowing northward along the west coast of Greenland into the Davis Strait; part of this current joins the Labrador Current, while the other part continues into Baffin Bay.

westing [NAV] The distance a craft makes good to the west.

West Nile fever [MED] An acute, usually mild, mosquito-borne virus disease occurring in summer, chiefly in Egypt, Israel, Africa, India, and Korea; signs are fever and lymphadenopathy, sometimes with a rash.

Weston standard cell [ELEC] A standard cell used as a highly accurate voltage source for calibrating purposes; the positive electrode is mercury, the negative electrode is cadmium, and the electrolyte is a saturated cadmium sulfate solution; the Weston standard cell has a voltage of 1.018636 volts at 20°C.

Westphal balance [ENG] A direct-reading instrument for determining the densities of solids and liquids; a plummet of known mass and volume is immersed in the liquid whose density is to be measured or, alternatively, a sample of the solid whose density is to be measured is immersed in a liquid of known density, and the loss in weight is measured, using a balance with movable weights.

Westphalian [GEOL] A European stage of Upper Carboniferous geologic time, forming the Middle Pennsylvanian, above upper Namurian and below Stephanian.

Westphal-Pilcz reflex *See* pupillary reflex.

Westphal's pupillary reflex *See* pupillary reflex.

west point [ASTRON] That point on the celestial sphere that is due west of observer; at this point the celestial equator crosses the horizon.

westward intensification [OCEANOGR] The intensification of ocean currents to the west, derived from a mathematical model that includes the effects of zonal wind stress at the sea surface and internal friction.

West Wind Drift *See* Antarctic Circumpolar Current.

wet [PHYS] A liquid is said to wet a solid if the contact angle between the solid and the liquid, measured through the liquid, lies between 0 and 90°, and not to wet the solid if the contact angle lies between 90 and 180°.

wet adiabat *See* saturation adiabat.

wet and dry bulb thermometer *See* psychrometer.

wet ashing [ORG CHEM] The conversion of an organic compound into ash (decomposition) by treating the compound with nitric or sulfuric acid.

wet assay [MIN ENG] The determination of the quantity of a desired constituent in ores, metallurgical residues, and alloys by the use of the processes of solution, flotation, or other liquid means.

wet blasting [ENG] Shot firing in wet holes. [MET] Liquid honing in which an impeller wheel drives the liquid suspension.

wet-bulb depression [METEOROL] The difference in degrees between the dry-bulb temperature and the wet-bulb temperature.

wet-bulb temperature [METEOROL] **1.** Isobaric wet-bulb temperature, that is, the temperature an air parcel would have if cooled adiabatically to saturation at constant pressure by evaporation of water into it, all latent heat being supplied by the parcel. **2.** The temperature read from the wet-bulb thermometer; for practical purposes, the temperature so obtained is identified with the isobaric wet-bulb temperature.

wet-bulb thermometer [ENG] A thermometer having the bulb covered with a cloth, usually muslin or cambric, saturated with water.

wet cell [ELEC] A primary cell in which there is a substantial amount of free electrolyte in liquid form.

wet-cell caplight [MIN ENG] A rechargeable head lamp; the batteries are worn on the belt.

WELLPOINT SYSTEM

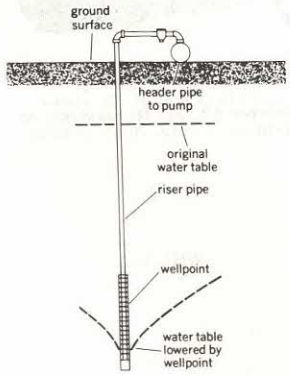


Diagram showing setup of components of wellpoint system.

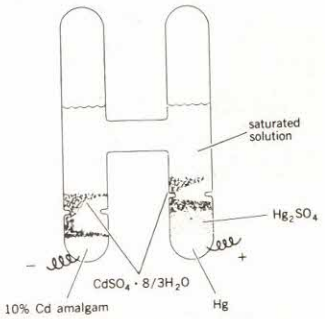
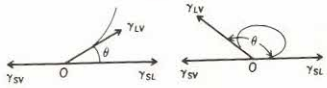
WESTON STANDARD CELL



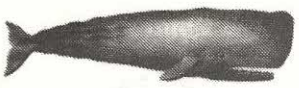
Cross-sectional diagram of Weston standard cell.

WET



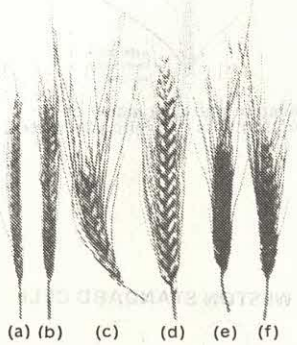
Contact angle between the solid and the liquid is indicated by θ. *(a)* Liquid wets solid, *(b)* liquid does not wet solid. Arrows represent interfacial tensions γ_{SL}, γ_{SV}, and γ_{LV}, where S, L, and V refer to solid, liquid and vapor.

WHALE



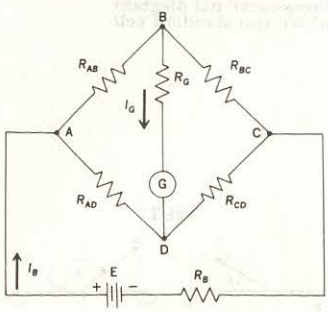
Sperm whale *(Physeter catodon)*, a species of whale having worldwide distribution. Head measures 20 feet (6 meters), or one-third of total body length.

WHEAT



Spikes of some representative varieties of wheat. *(a)* Wild and *(b)* cultivated forms of einkorn *(Triticum monococcum)*; *(c)* wild emmer *(T. dicocciodes)*; *(d)* emmer *(T. dicoccum)*; *(e)* durum *(T. durum)*; *(f)* poulard *(T. turgidum)*. *(Courtesy of H. Kihara)*

WHEATSTONE BRIDGE



Circuit diagram of Wheatstone bridge, used to measure resistance R_{CD} in terms of known resistances R_{AB}, R_{BC}, and R_{AD}; the latter are adjusted until current I_G through detector G equals zero. R_G = internal resistance of detector. Current I_B flows through battery with open-circuit voltage E and internal resistance R_B.

wet classifier [ENG] A device for the separation of solid particles in a mixture of solids and liquid into fractions, according to particle size or density by methods other than screening; operates by the difference in the settling rate between coarse and fine or heavy and light particles in a tank-confined liquid.
wet climate [CLIMATOL] A climate whose vegetation is of the rainforest type. Also known as rainforest climate.
wet collector *See* scrubber.
wet contact [ELEC] Contact through which direct current flows.
wet cooling tower [MECH ENG] A structure in which water is cooled by atomization into a stream of air; heat is lost through evaporation. Also known as evaporative cooling tower.
wet corrosion [MET] Corrosion caused by exposure to aqueous solutions.
wet criticality [NUCLEO] Reactor criticality achieved with the coolant present.
wet drawing [MET] Drawing in which the dies and blocks are completely immersed in the lubricant.
wet drill [MECH ENG] A percussive drill with a water feed either through the machine or by means of a water swivel, to suppress the dust produced when drilling.
wet electrolytic capacitor [ELEC] An electrolytic capacitor employing a liquid electrolyte.
wet emplacement [AERO ENG] A launch emplacement that provides a deluge of water for cooling the flame bucket, the rocket engines, and other equipment during the launch of a missile.
wet engine [MECH ENG] An engine with its oil, liquid coolant (if any), and trapped fuel inside.
wet flashover voltage [ELECTR] The voltage at which an electric discharge occurs between two electrodes that are separated by an insulator whose surface has been sprayed with water to simulate rain.
wet gas [MATER] Natural gas produced along with crude petroleum in oil fields or from gas-condensate fields; in addition to methane, it contains ethane, propane, butanes, and some higher hydrocarbons, such as pentane and hexane.
wet grinding [MECH ENG] **1.** The milling of materials in water or other liquid. **2.** The practice of applying a coolant to the work and the wheel to facilitate the grinding process.
wet hole [ENG] A borehole that traverses a water-bearing formation from which the flow of water is great enough to keep the hole almost full of water.
wet mill [MECH ENG] **1.** A grinder in which the solid material to be ground is mixed with liquid. **2.** A mill in which the grinding energy is developed by a fast-flowing liquid stream; for example, a jet pulverizer.
wet-reed relay [ELEC] Reed-type relay containing mercury at the relay contacts to reduce arcing and contact bounce.
wet season *See* rainy season.
wet sleeve [MECH ENG] A cylinder liner which is exposed to the coolant over 70% or more of its surface.
wet slip [CIV ENG] An opening between two wharves or piers where dock trials are usually conducted, and the final fitting out is done.
wet snow [METEOROL] Deposited snow that contains a great deal of liquid water.
wet spinning [TEXT] Producing synthetic and man-made filaments by extruding the chemical solution through spinnerets into a chemical bath where they coagulate.
wet stowage [ORD] Method of stowing major caliber ammunition in combat vehicles by placing it in racks surrounded by nonflammable liquid, to reduce ammunition fire hazards.
wet strength [MATER] **1.** The strength of a material saturated with water. **2.** The ability to withstand water (as for paper products) with a wet-strength additive or resin finish.
wet-strength paper [MATER] Paper with increased water resistance due to processing and interlocking of fibers, as well as impregnation with small amounts of resins (for example, melamine or urea formaldehyde). Also known as wet-strong paper.
wet-strong paper *See* wet-strength paper.
wettability [CHEM] The ability of any solid surface to be wetted when in contact with a liquid; that is, the surface tension of the liquid is reduced so that the liquid spreads over the surface.
wet tabling [MIN ENG] A tabling process in which a pulp of two or more minerals flows across an inclined, riffled plane surface, is shaken longwise, and is water-washed crosswise.
wetted [CHEM] Pertaining to material that has accepted water or other liquid, either on its surface or within its pore structure.
wetted perimeter [GEOL] The portion of the perimeter of a steam channel cross section which is in contact with the water.
wetted surface [NAV ARCH] The surface of a ship's hull in contact with the water under specified conditions.
wetted-wall column [CHEM ENG] A vertical column that operates with the inner walls wetted by the liquid being processed; used in theoretical studies of mass transfer rates and in analytical distillations; an example is a spinning-band column.
wet-test meter [ENG] A device to measure gas flow by counting the revolutions of a shaft upon which water-sealed, gas-carrying cups of fixed capacity are mounted.
wetting [ELECTR] The coating of a contact surface with an adherent film of mercury. [MET] Spreading liquid filler metal or flux on a solid base metal.
wetting agent [GRAPHICS] A substance that renders a surface nonrepellent to a wetting liquid.
wetting angle [FL MECH] A contact angle which lies between 0 and 90°.
wetting phase [PETRO ENG] In a two-phase oil reservoir system (oil and water), one phase (water) will wet the pore surfaces of the reservoir formation, the other (oil) will not.
wet well [MECH ENG] A chamber which is used for collecting liquid, and to which the suction pipe of a pump is attached.
wetwood [PL PATH] Wood having a water-soaked appearance because of a high water content; may be caused by bacteria or by physiological factors.
whale [VERT ZOO] A large marine mammal of the order Cetacea; the body is streamlined, the broad flat tail is used for propulsion, and the limbs are balancing structures.
Whale *See* Cetus.
whaleback dune [GEOL] A smooth, elongated mound or hill of desert sand shaped generally like a whale's back; formed by passage of a succession of longitudinal dunes along the same path. Also known as sand levee.
whaleboat [NAV ARCH] **1.** A long, narrow rowboat that has a large sheer and both ends sharp and inclined to the perpendicular; formerly used to hunt whales. **2.** A long, narrow rowboat or motorboat that has both ends sharp and rounded in the manner of the original whaleboats, and that is equipped with buoyancy tanks; it is often carried on merchant ships and warships.
whalebone *See* baleen.
whale oil [MATER] A combustible, nontoxic, yellow-brown fixed oil obtained from whale blubber; soluble in alcohol, ether, chloroform, carbon disulfide, and benzene; used as a lubricant, illuminant, and leather dressing, and in soapmaking and fat manufacture. Also known as blubber oil.
whaler *See* waler.
wharf [CIV ENG] A structure of open construction built parallel to the shoreline; used by vessels to receive and discharge passengers and cargo.
Wharton's duct *See* submandibular duct.
wheat [BOT] A food grain crop of the genus *Triticum*; plants are self-pollinating; the inflorescence is a spike bearing sessile spikelets arranged alternately on a zigzag rachis.
wheat germ [BOT] The embryo of a wheat grain.
wheat germ oil [MATER] A light-yellow oil extracted from wheat germ; used as a source for vitamin E, as a dietary supplement, and in medicine.
wheat middlings *See* sharps.
Wheatstone bridge [ELEC] A four-arm bridge circuit, all arms of which are predominately resistive; used to measure the electrical resistance of an unknown resistor by comparing it with a known standard resistance. Also known as resistance bridge; Wheatstone network.
Wheatstone network *See* Wheatstone bridge.
wheel [DES ENG] A circular frame with a hub at the center for attachment to an axle, about which it may revolve and bear a load.
wheelbarrow [ENG] A small, hand-pushed vehicle with a single wheel and axle between the front ends of two shafts that support a boxlike body and serve as handles at the rear. Also known as barrow.
wheel base [DES ENG] The distance in the direction of travel from front to rear wheels of a vehicle, measured between centers of ground contact under each wheel.
wheel-bearing lubricant [MATER] A lubricating grease with the character, structure, and consistency needed to make it suitable for use in antifriction wheel bearings.

wheel dresser [ENG] A tool for cleaning, resharpening, and restoring the mechanical accuracy of the cutting faces of grinding wheels.

wheeled crane [MECH ENG] A self-propelled crane that rides on a rubber-tired chassis with power for transportation provided by the same engine that is used for hoisting.

Wheeler-Feynman theory [RELAT] A relativistic action-at-a-distance theory in which it is assumed that there are enough absorbers in the universe to serve as sinks for all actions that emanate from any charged particle; radiation damping is a consequence of the theory.

Wheelerian [GEOL] A North American stage of upper Pliocene geologic time, above the Venturian and below the Hallian.

wheelhouse *See* pilothouse.

wheel load capacity [CIVIL ENG] The capacity of airfield runways, taxiways, parking areas, or roadways to bear the pressures exerted by aircraft or vehicles in a gross weight static configuration.

wheel printer [COMPUT SCI] A line printer that prints its characters from the rim of a wheel around which is the type for the alphabet, numerals, and other characters.

wheel sleeve [DES ENG] A flange used as an adapter on precision grinding machines where the hole in the wheel is larger than the machine arbor.

wheel static [ELECTR] Interference encountered in automobile-radio installations due to static electricity developed by friction between the tires and the street.

whelk [INV ZOO] A gastropod mollusk belonging to the order Neogastropoda; species are carnivorous but also scavenge.

wherryite [MINERAL] A light green mineral consisting of a basic carbonate-sulfate of lead and copper; occurs in massive form.

whetstone [MATER] Any hard, fine-grained, naturally occurring, usually siliceous rock suitable for sharpening cutting instruments.

whewellite [MINERAL] $Ca(C_2O_4)\cdot H_2O$ A colorless or yellowish or brownish, monoclinic mineral consisting of calcium oxalate monohydrate; occurs as crystals.

whey [FOOD ENG] The watery part of milk separated from the curd in the process of making cheese.

whiffletree switch [ELECTR] In computers, a multiposition electronic switch composed of gate tubes and flip-flops, so named because its circuit diagram resembles a whiffletree.

whip antenna [ELECTROMAG] A flexible vertical rod antenna, used chiefly on vehicles. Also known as fishpole antenna.

whipcord [TEXT] A twill fabric with fine diagonal cords that is woven of hard-twisted cotton or worsted woolen yarns.

whipstock [PETRO ENG] A long wedge dropped or placed in a petroleum well in order to deflect the drill from some obstruction.

whip grafting [BOT] A method of grafting by fitting a small tongue and notch cut in the base of the scion into corresponding cuts in the stock.

Whipple's disease [MED] A disease characterized by infiltration of the intestinal wall and lymphatics by macrophages filled with glycoprotein. Also known as intestinal lipodystrophy.

whippoorwill storm *See* frog storm.

whipworm disease [MED] A chronic, wasting diarrhea produced by heavy parasitization of the large intestine by the nematode *Trichuris trichiura*, particularly in undernourished children in the tropics.

whirlpool [OCEANOGR] Water in rapid rotary motion.

whirly [METEOROL] A small violent storm, a few yards (or meters) to 100 yards (91 meters) or more in diameter, frequent in Antarctica near the time of the equinoxes.

whiskers *See* vibrissae.

whiskey [FOOD ENG] A potable alcoholic beverage made by distilling fermented grain mashes and aging the distillate in wood, usually oak; principal sources of grain are barley, wheat, rye, oats, and corn.

whistle buoy [NAV] A buoy equipped with a whistle; in the United States it is usually a conical buoy with a whistle located on its top.

whistler [GEOPHYS] An effect that occurs when a plasma disturbance, caused by a lightning discharge, travels out along lines of magnetic force of the earth's field and is reflected back to its origin from a magnetically conjugate point on the earth's surface; the disturbance may be picked up electromagnetically and converted directly to sound; the characteristic drawn-out descending pitch of the whistler is a dispersion effect due to the greater velocity of the higher-frequency components of the disturbance.

whistler wave *See* electron cyclotron wave.

whistling meteor [ELECTROMAG] Name applied to a radio meteor when a special system for detection is used in which the presence of the meteor is indicated by a rapidly changing audio-frequency radio signal.

White Alice *See* Alaska Integrated Communications Exchange.

white ant *See* termite.

white blood cell *See* leukocyte.

white body [PHYS] A hypothetical substance whose surface absorbs no electromagnetic radiation of any wavelength, that is, one which exhibits zero absorptivity for all wavelengths.

whitecap [OCEANOGR] A cloud of bubbles at the sea surface caused by a breaking wave.

white carbon black [MATER] A white silica powder made from silicon tetrachloride; used as a replacement for carbon black in rubber compounding.

white cast iron [MET] An extremely hard cast iron, rapidly cooled from the melt; contains about 3% carbon in the form of cementite and fine pearlite.

white cement [MATER] Pure white portland cement, made from raw materials with a low iron content, or by using a reducing flame to fire the clinker.

white clay *See* kaolin.

white coal *See* tasmanite.

white coat [BUILD] The finishing coat in plastering.

white cobalt *See* cobaltite.

white compression [COMMUN] In facsimile or television the reduction in picture-signal gain at levels corresponding to light areas, with respect to the gain at the level for midrange light values; the overall effect of white compression is to reduce contrast in the highlights of the picture.

white copperas *See* zinc sulfate.

white corpuscle *See* leukocyte.

white cutch *See* gambir.

white damp [MIN ENG] In mining, carbon monoxide (CO); a gas that may be present in the afterdamp of a gas or coal-dust explosion, or in the gases given off by a mine fire; it is an important constituent of illuminating gas, supports combustion, and is very poisonous.

white diarrhea *See* pullorum disease.

white dwarf star [ASTRON] An intrinsically faint star of very small radius and high density; the mass is about 0.6 that of the sun and the average radius is about 8000 kilometers; it is one final stage of stellar evolution with thermonuclear energy sources extinct.

white feldspar *See* albite.

whitefish [VERT ZOO] Any of various food fishes in the family Salmonidae, especially of the genus *Coregonus*, characterized by an adipose dorsal fin and nearly toothless mouth.

white frost *See* hoarfrost.

white garnet *See* leucite.

whiteheart malleable iron [MET] White cast iron malleableized and decarburized by heat treatment in an oxidizing material at 900°C for 100–150 hours; decarburization produces a light-colored fracture, in contrast to blackheart malleable iron, which is not decarburized. Also known as blackheart malleable iron.

white infarct [MED] An infarct in which hemorrhage is slight, or that has been decolorized by removal of blood or its pigments.

white iron [MET] A brittle cast iron whose total carbon content is in the combined forms, and containing little or no graphite; a fresh fracture is white.

white iron ore *See* siderite.

white lead [INORG CHEM] Basic lead carbonate of variable composition, the oldest and most important lead paint pigment; also used in putty and ceramics.

white level [COMMUN] The carrier signal level corresponding to maximum picture brightness in television and facsimile.

white light [OPTICS] Any radiation producing the same color sensation as average noon sunlight.

white light hologram [OPTICS] A reflection hologram which can be viewed with an ordinary light source.

white metal [MET] **1.** Any of several white-colored metals and their alloys of relatively low melting points, such as lead,

WHOOPING CRANE

Whooping cranes *(Grus americana)*, a rare North American species in danger of extinction. *(Bureau of Sport Fisheries and Wildlife)*

WHORL

Plain whorl fingerprint pattern. *(Federal Bureau of Investigation)*

tin, antimony, and zinc. **2.** A copper matte of about 77% copper, obtained from the smelting of sulfide copper ores.

white-metal bearing alloy *See* lead-base babbitt.

white mica *See* muscovite.

white mineral oil [MATER] A highly refined, colorless hydrocarbon oil with low volatility; used as a laxative and in medicine. Also known as liquid petrolatum; paraffinum liquidum.

white nickel *See* rammelsbergite.

whitening filter [ELECTR] An electrical filter which converts a given signal to white noise. Also known as prewhitening filter.

white noise [PHYS] Random noise that has a constant energy per unit bandwidth at every frequency in the range of interest.

white object [OPTICS] An object that reflects all wavelengths of light with substantially equal high efficiencies and with considerable diffusion.

white oil [MATER] Any of various highly refined, colorless hydrocarbon oils of low volatility and a wide range of viscosities; used for lubrication of food and textile machinery and as medicinal and mineral oils. Also known as technical white oil.

white olivine *See* forsterite.

whiteout [METEOROL] An atmospheric optical phenomenon of the polar regions in which the observer appears to be engulfed in a uniformly white glow: shadows, horizon, and clouds are not discernible; sense of depth and orientation are lost; dark objects in the field of view appear to float at an indeterminable distance. Also known as milky weather.

white phosphorus [CHEM] The element phosphorus in its allotropic form, a soft, waxy, poisonous solid melting at 44.5°C; soluble in carbon disulfide, insoluble in water and alcohol; self-igniting in air. Also known as yellow phosphorus.

white phosphorus grenade [ORD] Hand grenade or rifle grenade containing a main charge of white phosphorus and a small explosive burster charge for scattering the main charge; used for smoke and some incendiary effect.

white portland cement [MATER] Finely ground portland cement made from pure calcite limestone and white clay.

white potato *See* potato.

whiteprint [GRAPHICS] A print made by a plan copying process, produced on diazo paper or film, the emulsion containing a diazonium compound and a coupling or activating component; the process is based on sensitivity to ultraviolet light; development is by ammonia vapors, anhydrous ammonia gas, an alkaline solution which includes the coupler, or heat.

white rainbow *See* fogbow.

Whiterock [GEOL] A North American stage of lowermost Middle Ordovician geologic time, above lower Ordovician and below Marmor.

white schorl *See* albite.

white signal [COMMUN] Signal at any point in a facsimile system produced by the scanning of a minimum density area of the subject copy.

white squall [METEOROL] A sudden squall in tropical or subtropical waters, which lacks the usual squall cloud and whose approach is signaled only by the whiteness of a line of broken water or whitecaps.

white tellurium *See* krannerite; sylvanite.

white-to-black amplitude range [COMMUN] **1.** In a facsimile system employing positive amplitude modulation, the ratio of signal voltage (or current) for picture white to the signal voltage (or current) for picture black at any point in the system. **2.** In a facsimile system employing negative amplitude modulation, the ratio of the signal voltage (or current) for picture black to the signal voltage (or current) for picture white; this ratio is often expressed in decibels.

white-to-black frequency swing [COMMUN] In a facsimile system employing frequency modulation, the numerical difference between the signal frequencies corresponding to picture white and picture black at any point in the system.

white transmission [COMMUN] **1.** In an amplitude-modulated system, that form of transmission in which the maximum transmitted power corresponds to the minimum density of the subject copy. **2.** In a frequency-modulation system, that form of transmission in which the lowest transmitted frequency corresponds to the minimum density of the subject copy.

white vitriol *See* zinc sulfate.

whitewash [MATER] A simple mixture of hydrated lime and water, used mostly for painting fences and outbuildings; common whitewash is not water-resistant and rubs off easily.

white water [OCEANOGR] Frothy water, as in whitecaps or breakers.

whiting *See* chalk.

whitleyite [GEOL] An achondritic stony meteorite consisting essentially of enstatite with fragments of black chondrite.

whitlockite [MINERAL] $Ca_9(Mg,Fe)H(PO_4)_7$ A rare mineral that forms hexagonal crystals.

Whittaker differential equation [MATH] A special form of Gauss' hypergeometric equation with solutions as special cases of the confluent hypergeometric series.

Whitworth screw thread [DES ENG] A British screw thread standardized to form and dimension.

whizzer mill *See* Jeffrey crusher.

whole-body counter [NUCLEO] A radiation counter that directly measures radioactivity in the entire human body.

whole gale [METEOROL] **1.** In storm-warning terminology, a wind of 48 to 63 knots (55 to 72 miles, or 89 to 133 kilometers, per hour). **2.** In the Beaufort wind scale, a wind whose speed is from 48 to 55 knots (55 to 63 miles, or 89 to 102 kilometers, per hour).

whole range point [AERO ENG] The point vertically below an aircraft at the moment of impact of a bomb released from that aircraft, assuming that the aircraft's velocity has remained unchanged.

whole step *See* whole tone.

whole tone [ACOUS] The interval between two sounds whose basic frequency ratio is approximately equal to the sixth root of 2. Also known as whole step.

whooping cough *See* pertussis.

whooping crane [VERT ZOO] *Grus americana*. A member of a rare North American migratory species of wading birds; the entire species forms a single population.

whorl [ANAT] A fingerprint pattern in which at least two deltas are present with a recurve in front of each. [BOT] An arrangement of several identical anatomical parts, such as petals, in a circle around the same point.

whr *See* watt-hour.

Whytt's reflex *See* pupillary reflex.

wiborgite *See* rapakivi.

wichtisite *See* tachylite.

wicket dam [CIV ENG] A movable dam consisting of a number of rectangular panels of wood or iron hinged to a sill and propped vertically; the prop is hinged and can be tripped to drop the wickets flat on the sill.

wicking [ENG] The flow of solder under the insulation of covered wire.

Widal test [IMMUNOL] A macroscopic or microscopic agglutination test for the diagnosis of typhoid fever and other *Salmonella* infections by using killed or preserved bacteria as the antigen.

wide-angle lens [OPTICS] An optical lens having a large angular field, generally greater than 80°.

wide-aperature digital VOR [NAV] A very-high-frequency omnidirectional radio range in which azimuth angle is determined from a system of crossed wide-baseline interferometers that measure the angles between the line of sight and each of the two baselines.

wide area data service [COMMUN] Automatic wide area teletypewriter data exchange service, using leased commercial lines.

Wide Area Telephone Service [COMMUN] A special telephone service that allows a customer to call anyone in one or more of six regions into which the continental United States has been divided, on a direct dialing basis, for a flat monthly charge related to the number of regions to be called. Abbreviated WATS.

wide band [ELECTR] Property of a tuner, amplifier, or other device that can pass a broad range of frequencies.

wide-band amplifier [ELECTR] An amplifier that will pass a wide range of frequencies with substantially uniform amplification.

wide-band communications system [COMMUN] Communications system which provides numerous channels of communications on a highly reliable and secure basis which are relatively invulnerable to interruption by natural phenomena or countermeasures; included are multichannel telephone cable, tropospheric scatter, and multichannel line-of-sight radio system such as microwave.

wide-band ratio [COMMUN] Ratio of a system of the occupied frequency bandwidth to the intelligence bandwidth.

wide-band repeater [ELECTR] Airborne system that receives a radio-frequency signal for transmission; used in reconnaissance missions when low-altitude reconnaissance aircraft require an airborne relay platform for beyond line-of-sight data transmission to a readout station.

wide-band switching [ELECTR] Basically, four-wire circuits using correed matrices with electronic controls capable of switching wide-band facilities up to 50 kilohertz in bandwidth.

wide-band transformer [ELEC] A transformer that can transfer electric energy from one circuit to another at any of a broad range of frequencies.

wide berth [NAV] A vessel which keeps well away from another ship or navigational hazard is said to give the other ship or hazard a wide berth.

wide-open [ELECTR] Refers to the untuned characteristic or lack of frequency selectivity.

Widmanstatten patterns [GEOL] Characteristic figures that appear on the surface of an iron meteorite when the meteorite is cut, polished, and etched with acid.

width [COMMUN] **1.** The horizontal dimension of a television or facsimile picture. **2.** The time duration of a pulse.

width coding [COMMUN] Modifying the duration of the pulses emitted from the transponder according to a prearranged code for recognition in the display.

width control [ELECTR] Control that adjusts the width of the pattern on the screen of a cathode-ray tube in a television receiver or oscilloscope.

Wiedemann effect [ELECTROMAG] The twist produced in a current-carrying wire when placed in a longitudinal magnetic field. Also known as Wertheim effect.

Wiedemann-Franz law [SOLID STATE] The law that the ratio of the thermal conductivity of a metal to its electrical conductivity is a constant, independent of the metal, times the absolute temperature. Also known as Lorentz relation.

Wiedemann's additivity law [PHYS CHEM] The law that the mass (or specific) magnetic susceptibility of a mixture or solution of components is the sum of the proportionate (by weight fraction) susceptibilities of each component in the mixture.

Wiegand effect [ELEC] The generation of an electrical pulse in a coil wrapped around or located near a Wiegand wire subjected to a changing magnetic field.

Wiegand module [ELEC] The apparatus for generating an electrical pulse by means of the Wiegand effect, consisting of a Wiegand wire, two small magnets, and a pickup coil.

Wiegand wire [ELEC] A work-hardened wire whose magnetic permeability is much greater near its surface than at its center.

Wien bridge oscillator [ELECTR] A phase-shift feedback oscillator that uses a Wien bridge as the frequency-determining element.

Wien capacitance bridge [ELEC] A four-arm alternating-current bridge used to measure capacitance in terms of resistance and frequency; two adjacent arms contain capacitors respectively in parallel and in series with resistors, while the other two arms are nonreactive resistors; bridge balance depends on frequency.

Wien constant [STAT MECH] The product of the temperature and the wavelength at which the intensity of radiation from a blackbody reaches its maximum; it is equal to approximately 2898 micrometer-kelvins.

Wien-DeSauty bridge *See* DeSauty's bridge.

Wien effect [PHYS CHEM] An increase in the conductance of an electrolyte at very high potential gradients.

Wiener experiment [OPTICS] An experiment in which a front-faced mirror is covered with a thick photographic emulsion which is then exposed to light incident perpendicular to the surface; upon development, it is found that standing waves are set up in the emulsion whose nodes coincide with those of the electric vector, rather than those of the magnetic vector.

Wiener-Hopf equations [MATH] Integral equations arising in the study of random walks and harmonic analysis; they are

$$g(x) = \int_0^\infty K(|x - t|)\, f(t)\, dt$$
$$f(x) = \int_0^\infty K(|x + t|)\, f(t)\, dt + g(x),$$

where g and K are known functions on the positive real numbers and f is the unknown function.

Wiener-Khintchine theorem [MATH] The theorem that determines the form of the correlation function of a given stationary stochastic process.

Wiener process [MATH] A stochastic process with normal density at each stage, arising from the study of Brownian motion, which represents the limit of a sequence of experiments. Also known as Gaussian noise.

Wien frequency bridge [ELEC] A modification of the Wien capacitance bridge, used to measure frequencies.

Wien inductance bridge [ELEC] A four-arm alternating-current bridge used to measure inductance in terms of resistance and frequency; two adjacent arms contain inductors respectively in parallel and in series with resistors, while the other two arms are nonreactive resistors; bridge balance depends on frequency.

Wien-Maxwell bridge *See* Maxwell bridge.

Wien's displacement law [STAT MECH] A law for blackbody radiation which states that the wavelength at which the maximum amount of radiation occurs is a constant equal to approximately 2898 times the product of 1 micrometer and 1 kelvin. Also known as displacement law; Wien's radiation law.

Wien's distribution law [STAT MECH] A formula for the spectral distribution of radiation from a blackbody, which is a good approximation to the Planck radiation formula at sufficiently low temperatures or wavelengths, for example, in the visible region of the spectrum below 3000K. Also known as Wien's radiation law.

Wien's radiation law [STAT MECH] **1.** The law that the intensity of radiation emitted by a blackbody per unit wavelength, at that wavelength at which this intensity reaches a maximum, is proportional to the fifth power of the temperature. **2.** *See* Wien's displacement law. **3.** *See* Wien's distribution law.

Wierl equation [ELECTR] A formula for the intensity of an electron beam scattered through a specified angle by diffraction from the molecules in a gas.

Wiese formula [ENG] An empirical relationship for motor fuel antiknock values above 100 in relation to performance numbers; basis for the ASTM scale, in which octane numbers above 100 are related to increments of tetraethyllead added to isooctane.

Wiesen *See* meadow.

wiggler [NUCLEO] A system of transverse, periodic electromagnetic fields, generally used in a storage ring or synchrotron to increase the intensity of synchrotron radiation, increase reaction rates in high-energy physics experiments, produce quasimonochromatic photon beams, and amplify photon beams from other sources, as in the free-electron laser.

wiggle stick *See* divining rod.

Wigner coefficient *See* vector coupling coefficient.

Wigner-Eckart theorem [QUANT MECH] A theorem in the quantum theory of angular momentum which states that the matrix elements of a tensor operator can be factored into two quantities, the first of which is a vector-coupling coefficient, and the second of which contains the information about the physical properties of the particular states and operator, and is completely independent of the magnetic quantum numbers.

Wigner effect *See* discomposition effect.

Wigner force [NUCLEO] A short-range nonexchange force between nucleons, postulated to explain various phenomena.

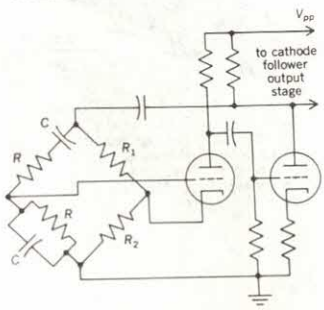
Wigner nuclides [NUC PHYS] The most important class of mirror nuclides, comprising pairs of odd-mass-number isobars for which the atomic number and the neutron number differ by 1.

Wigner-Seitz cell [CRYSTAL] A polyhedron about an atom in a face-centered cubic structure, made by drawing planes which perpendicularly bisect the lines to the nearest neighbors; in a body-centered cubic structure, bisecting planes of lines to nearest neighbors and next-nearest neighbors are used; such polyhedra fill space.

Wigner-Seitz method [SOLID STATE] A method of approximating the band structure of a solid: Wigner-Seitz cells surrounding atoms in the solid are approximated by spheres, and band solutions of the Schrödinger equation for one electron are estimated by using the assumption that an electronic wave function is the product of a plane wave function and a function whose gradient has a vanishing radial component at the sphere's surface.

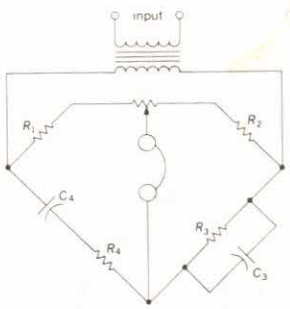
Wigner's theorem [QUANT MECH] **1.** The theorem that, if ψ is an eigenfunction of the Hamiltonian operator and R is a symmetry element of the Hamiltonian, then $R\psi$ is an eigenfunction of the Hamiltonian having the same eigenvalue as ψ. **2.**

WIEN BRIDGE OSCILLATOR



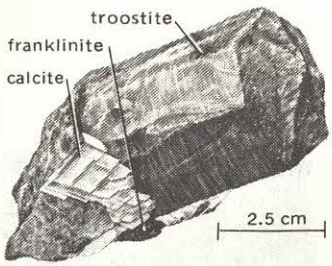
Circuit diagram of Wien bridge oscillator. V_{pp} = plate supply voltage. Frequency of oscillation is $f_O = 1/2\pi RC$.

WIEN FREQUENCY BRIDGE



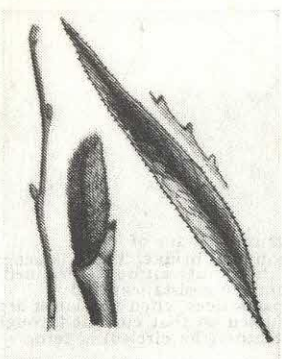
Circuit diagram of Wien frequency bridge. The frequency of the input can be determined from the resistances and capacitances when the latter are adjusted so that current through detector (the circles) is zero.

WILLEMITE



Willemite from Sussex County, New Jersey. This crystal is the variety troostite, in which manganese replaces a considerable part of the zinc. *(Specimen from Department of Geology, Bryn Mawr College)*

WILLOW



Twig, terminal bud, and leaf of the Babylon weeping willow *(Salix babylonia)*.

Angular momentum of the electron spin is conserved in a collision of the second kind.

Wigner supermultiplet [NUC PHYS] A set of quantum-mechanical states of a collection of nucleons which form the basis of a representation of SU(4), especially appropriate when spin and isospin dependence of the nuclear interaction may be disregarded; several combinations of spin and isospin multiplets may occur in a supermultiplet.

Wigner three-*j* symbol *See* three-*j* number.

Wijs' iodine monochloride solution [ANALY CHEM] A solution in glacial acetic acid of iodine monochloride; used to determine iodine numbers. Also known as Wijs' special solution.

Wijs' special solution *See* Wijs' iodine monochloride solution.

Wilcoxon one-sample test [STAT] A rank test for testing the hypothesis $\mu = \mu_H$ against the alternative $\mu > \mu_H$ under the assumption that observations are symmetrically distributed about μ_H; here μ_H is a given number and μ is the (unknown) mean of a random variable.

Wilcoxon paired comparison distribution [STAT] The distribution of the rank sum V_- (or V_+) of the negative differences (or positive differences) of observations in paired comparisons.

Wilcoxon paired comparison test [STAT] The test based upon the rank sum V_- (or V_+) of the negative differences (or positive differences) of observations in paired comparisons.

Wilcoxon two-sample distribution [STAT] The distribution of the Wilcoxon two-sample test statistic; it consists of the rank sums of treated subjects.

Wilcoxon two-sample test [STAT] The test based upon the rank sum of treated (or untreated) subjects.

wild boar [VERT ZOO] *Sus scrofa*. A wild hog with coarse, grizzled hair and enlarged tusks or canines on both jaws. Also known as boar.

wildcat [NAV ARCH] The drum of an anchor windlass, with projections on its rim that engage the anchor chain.

wildcat drilling [MIN ENG] The drilling of boreholes in unproved territory. Also known as cold nosing; wildcatting.

wildcatting *See* wildcat drilling.

wild cinnamon *See* bayberry.

Wilderness [GEOL] A North American stage of Middle Ordovician geologic time, above Porterfield and below Trentonian.

Wild fence [ENG] A wooden enclosure about 16 feet square and 8 feet high with a precipitation gage in its center; the function of the fence is to minimize eddies around the gage, and thus ensure a catch which will be representative of the actual rainfall or snowfall.

wildfire [PL PATH] A bacterial disease of tobacco caused by *Pseudomonas tabaci* and characterized by the appearance of brown spots surrounded by yellow rings, which turn dark, rot, and fall out.

wildflysch [GEOL] A type of flysch facies that represents a stratigraphic unit with irregularly sorted boulders resulting from fragmentation, and twisted, confused beds resulting from slumping or sliding due to the influence of gravity.

wild gasoline [MATER] Unstabilized casinghead gasoline.

wildness [MET] A condition that exists when molten metal, during cooling, evolves so much gas that it becomes violently agitated, forcibly ejecting metal from its container.

wild shot [ORD] Artillery shot which is completely out of the normal pattern of dispersion; that is, shot whose impact is more than four probable errors, and more than six firing table probable errors from the center of impact.

wild snow [METEOROL] Newly deposited snow which is very fluffy and unstable; in general, it falls only during a dead calm at very low air temperatures.

Wilfley table [MIN ENG] A flat, rectangular surface that can be tilted and shaken about the long axis and has horizontal riffles for imposing restraint in removing minerals from classified sand. Also known as shaking table.

wilkeite [MINERAL] $Ca_5(SiO_4,PO_4,SO_4)_3(O,OH,F)$ A rose red or yellow, hexagonal mineral consisting of a basic sulfate-silicate-phosphate of calcium.

Willans line [MECH ENG] The line (nearly straight) on a graph showing steam consumption (pounds per hour) versus power output (kilowatt or horsepower) for a steam engine or turbine; frequently extended to show total fuel consumed (pounds per hour) for gas turbines, internal combustion engines, and complete power plants.

willemite [MINERAL] Zn_2SiO_4 A white, greenish-yellow, green, reddish, or brown mineral that forms rhombohedral crystals and exhibits intense bright-yellow fluorescence in ultraviolet light; a minor ore of zinc.

Williams-Hazen formula [FL MECH] In a liquid-flow system, a method for calculation of head loss due to the friction in a pipeline.

Williamsoniaceae [PALEOBOT] A family of extinct plants in the order Cycadeoidales distinguished by profuse branching.

Williamson synthesis [ORG CHEM] The synthesis of ethers utilizing an alkyl iodide and sodium alcoholate.

Williams refractometer [OPTICS] A refractometer in which light from a single slit is divided into two beams by a pentagonal prism.

Williams tube [ELECTR] A cathode-ray storage tube in which information is stored as a pattern of electric charges produced, maintained, read, and erased by suitably controlled scanning of the screen by the electron beam.

williwaw [METEOROL] A very violent squall in the Straits of Magellan; it may occur in any month but occurs most frequently in winter.

willow [BOT] A deciduous tree and shrub of the genus *Salix*, order Salicales; twigs are often yellow-green and bear alternate leaves which are characteristically long, narrow, and pointed, usually with fine teeth along the margins.

willy-willy [METEOROL] In Australia, a severe tropical cyclone.

Wilms' tumor [MED] A malignant renal tumor composed principally of mesodermal tissues. Also known as nephroblastoma.

Wilson cloud chamber [NUCLEO] A cloud chamber containing air supersaturated with water vapor by sudden expansion, in which rapidly moving nuclear particles such as alpha or beta rays produced ionization tracks by condensation of vapor on the ions produced by the rays.

Wilson effect [ASTRON] An effect in which the penumbra of a sunspot appears narrower in the direction toward the sun's center than in the direction toward the sun's limb.

Wilson electroscope [ELEC] An electroscope that has a single gold leaf which, when charged, is attracted to a grounded metal plate inclined at an angle that maximizes the instrument's sensitivity.

Wilson experiment [ELECTROMAG] An experiment that tests the validity of electromagnetic theory; a hollow cylinder of dielectric material, having layers of metal on its outer and inner cylindrical surfaces, is rotated about its axis in a magnetic field parallel to the axis; a sensitive electrometer, connected to the metal layers, indicates a charge that has the magnitude and sign predicted by theory.

Wilson's disease [MED] A hereditary disease of ceruloplasmin formation transmitted as an autosomal recessive and characterized by decreased serum ceruloplasmin and copper values, and increased excretion of copper in the urine. Also known as hepatolenticular degeneration.

Wilson's theorem [MATH] The number $(n-1)!+1$ is divisible by n if and only if n is a prime.

wilt [PL PATH] Any of various plant diseases characterized by drooping and shriveling, following loss of turgidity.

Wimshurst machine [ELEC] An electrostatic generator consisting of two glass disks rotating in opposite directions, having sectors of tinfoil and collecting combs so arranged that static electricity is produced for charging Leyden jars or discharging across a gap.

winch [MECH ENG] A machine having a drum on which to coil a rope, cable, or chain for hauling, pulling, or hoisting.

Winchester disk [COMPUT SCI] A type of disk storage device characterized by nonremovable or sealed disk packs; extremely narrow tracks; a lubricated surface that allows the head to rest on the surface during start and stop operations; and servomechanisms which utilize a magnetic pattern, recorded on the medium itself, to position the head.

Winchester technology [COMPUT SCI] Innovations designed to achieve disks with up to 6×10^8 bytes per disk drive; the technology includes nonremovable or sealed disk packs, a read/write head that weighs only 0.25 gram and floats above the surface, magnetic orientation of iron oxide particles on the disk surface, and lubrication of the disk surface.

winch operator *See* hoistman.

wind [ELECTR] The manner in which magnetic tape is wound onto a reel; in an A wind, the coated surface faces the hub; in

a B wind, the coated surface faces away from the hub. [METEOROL] The motion of air relative to the earth's surface; usually means horizontal air motion, as distinguished from vertical motion, and air motion averaged over the response period of the particular anemometer.

windage [MECH] **1.** The deflection of a bullet or other projectile due to wind. **2.** The correction made for such deflection.

windage scale [ORD] Scale for adjusting a sight to allow for the effect of the wind on a bullet in flight. Also known as wind gage.

windage yaw [ORD] In aerial gunnery, the yaw produced by the relative motion of the gun and the air; the tangent of the windage yaw is the crosswind, or the component of the airspeed perpendicular to the axis of the bore, divided by the muzzle velocity (the initial velocity relative to the gun).

windbreak [ENG] Any device designed to obstruct wind flow and intended for protection against any ill effects of wind.

windburn [BOT] Injury to plant foliage, caused by strong, hot, dry winds. [MED] A superficial inflammation of the skin, analogous to sunburn, caused by exposure to wind, especially a hot dry wind, inducing a dilation of the surface blood vessels.

wind charger [ELEC] A wind-driven direct-current generator used for charging storage batteries.

wind chill [METEOROL] That part of the total cooling of a body caused by air motion.

wind-chill index [METEOROL] The cooling effect of any combination of temperature and wind, expressed as the loss of body heat in kilogram calories per hour per square meter of skin surface; it is only an approximation because of individual body variations in shape, size, and metabolic rate.

wind cone [ENG] A tapered fabric sleeve, shaped like a truncated cone and pivoted at its larger end on a standard, for the purpose of indicating wind direction; since the air enters the fixed end, the small end of the cone points away from the wind. Also known as wind sleeve; wind sock.

wind correction [ENG] Any adjustment which must be made to allow for the effect of wind; especially, the adjustments to correct for the effect on a projectile in flight, on sound received by sound ranging instruments, and on an aircraft flown by dead reckoning navigation.

wind crust [HYD] A type of snow crust, formed by the packing action of wind on previously deposited snow; wind crust may break locally but, unlike wind slab, does not constitute an avalanche hazard.

wind current [METEOROL] Generally, any of the quasi-permanent, large-scale wind systems of the atmosphere, for example, the westerlies, trade winds, equatorial easterlies, or polar easterlies.

wind-cut stone *See* ventifact.

wind deflection [MECH] Deflection caused by the influence of wind on the course of a projectile in flight.

wind direction [METEOROL] The direction from which wind blows.

wind direction indicator [ENG] A device to indicate the direction from which the wind blows; an example is a weather vane.

wind-direction shaft [METEOROL] A representational mark for wind direction on a synoptic chart, it is a straight line drawn directly upwind from the station circle; the wind arrow is completed by adding the wind-speed barbs and pennants to the outer end of the shaft.

wind divide [METEOROL] A semipermanent feature of the atmospheric circulation (usually a high-pressure ridge) on opposite sides of which the prevailing wind directions differ greatly.

wind drift [ACOUS] Shift in the apparent position of a sound source or target observed by sound apparatus; it is caused by the effect of wind on sound waves, which changes their direction and increases or decreases sound lag. [OCEANOGR] *See* drift current.

wind-driven current *See* drift current.

winder [BUILD] A step, generally wedge-shaped, with a tread that is wider at one end than the other; often used in spiral staircases.

wind erosion [GEOL] Detachment, transportation, and deposition of loose topsoil or sand by the action of wind.

wind factor [NAV] In air navigation, a measure of the net effect of wind on the ground speed of an aircraft; it is the magnitude of the wind vector component parallel to the heading of an aircraft, averaged over the entire flight positive if a tailwind, negative if a headwind.

wind-fire angle [ORD] The horizontal angle measured clockwise from the plane of fire to the direction from which the ballistic wind is blowing.

wind gage *See* windage scale.

wind gap [GEOL] A shallow, relatively high-level notch in the upper part of a mountain ridge, usually an abandoned water gap. Also known as air gap; wind valley.

wind-grooved stone *See* ventifact.

winding [ELEC] **1.** One or more turns of wire forming a continuous coil for a transformer, relay, rotating machine, or other electric device. **2.** A conductive path, usually of wire, that is inductively coupled to a magnetic storage core or cell.

winding number [MATH] The number of times a given closed curve winds in the counterclockwise direction about a designated point in the plane.

windlass *See* anchor windlass.

wind measurement [METEOROL] The determination of three parameters: the size of an air sample, its speed, and its direction of motion.

windmill [MECH ENG] Any of various mechanisms, such as a mill, pump, or electric generator, operated by the force of wind against vanes or sails radiating about a horizontal shaft.

windmill anemometer [ENG] A rotation anemometer in which the axis of rotation is horizontal; the instrument has either flat vanes (as in the air meter) or helicoidal vanes (as in the propeller anemometer); the relation between wind speed and angular rotation is almost linear.

wind noise [ACOUS] Noise caused by turbulent airflow over and around an object.

window [AERO ENG] An interval of time during which conditions are favorable for launching a spacecraft on a specific mission. [BUILD] An opening in the wall of a building or the body of a vehicle to admit light and usually to permit vision through a transparent or translucent material, usually glass. [ELECTR] A material having minimum absorption and minimum reflection of radiant energy, sealed into the vacuum envelope of a microwave or other electron tube to permit passage of the desired radiation through the envelope to the output device. [ELECTROMAG] A hole in a partition between two cavities or waveguides, used for coupling. [GEOL] A break caused by erosion of a thrust sheet or a large recumbent anticline that exposes the rocks beneath the thrust sheet. Also known as fenster. [GEOPHYS] Any range of wavelengths in the electromagnetic spectrum to which the atmosphere is transparent. [HYD] The unfrozen part of a river surrounded by river ice during the winter. [MATER] A globular defect in a thermoplastic sheet or film caused by incomplete plasticization; similar to a fisheye. [NUCLEO] **1.** An aperture for the passage of particles or radiation in a nuclear reactor. **2.** An energy range of relatively high transparency in the total neutron cross section of a material; such windows arise from interference between potential and resonance scattering in elements of intermediate atomic weight, and can be of importance in neutron shielding. [ORD] A confusion reflector consisting of strips of chaff, wire, or bars cut to give resonance at expected enemy radar frequencies, and dropped in clusters from aircraft or expelled from shells or rockets as a radar countermeasure.

window frost [HYD] A thin deposit of hoarfrost often found on interior surfaces of windows in winter, and frequently exhibiting beautiful fernlike patterns.

window ice [HYD] A thin deposit of ice which forms by the freezing of many tiny drops of water that have condensed on the indoors side of a cold window surface.

windowing [COMPUT SCI] The procedure of selecting a portion of a large drawing to be displayed on the screen of a computer graphics system, usually by placing a rectangular window over a compressed version of the entire drawing displayed on the screen.

window rocket [ORD] A rocket filled with window that is to be expelled at a desired height.

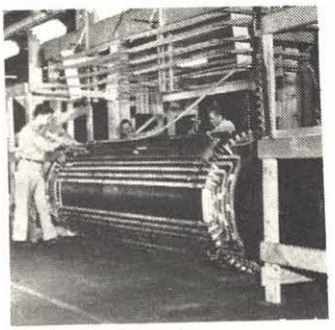
wind-polished stone *See* ventifact.

wind pressure [MECH] The total force exerted upon a structure by wind. Also known as velocity pressure.

wind ripple [METEOROL] One of a series of wavelike formations on a snow surface, an inch or so in height, at right angles to the direction of wind. Also known as snow ripple.

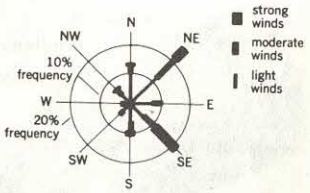
wind-rode [NAV ARCH] A ship riding at anchor is said to be wind-rode when it is heading into the wind.

WINDING



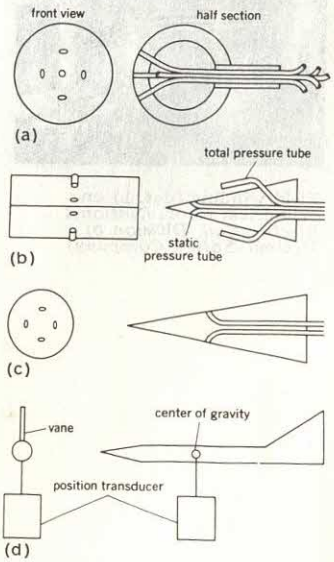
Field winding (def. 1) on cylindrical rotor. *(National Electric Coil, Division of McGraw-Edison Company)*

WIND ROSE



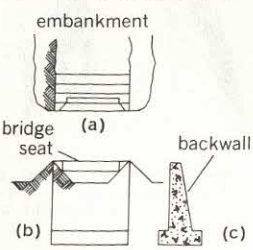
Example of standard wind rose.

WIND-TUNNEL INSTRUMENTATION



Instruments used to measure direction of flow in a wind tunnel. First three instruments measure pressure distribution over surface of body. *(a)* Yaw sphere. *(b)* Wedge. *(c)* Cone. *(d)* Vane.

WINGLESS ABUTMENT



A wingless abutment of a bridge. *(a)* Plan. *(b)* Front elevation. *(c)* Section.

WING NUT

A wing nut. *(Reynolds Metals Co.)*

wind rose [METEOROL] A diagram in which statistical information concerning direction and speed of the wind at a location may be summarized; a line segment is drawn in each of perhaps eight compass directions from a common origin; the length of a particular segment is proportional to the frequency with which winds blow from that direction; thicknesses of a segment indicate frequencies of occurrence of various classes of wind speed.

windrow [GEOL] Any accumulation of material formed by wind or tide action.

winds aloft [METEOROL] Generally, the wind speeds and directions at various levels in the atmosphere above the domain of surface weather observations, as determined by any method of winds-aloft observation. Also known as upper-level winds; upper winds.

winds-aloft observation [METEOROL] The measurement and computation of wind speeds and directions at various levels above the surface of the earth.

wind scoop [METEOROL] A saucerlike depression in the snow near obstructions such as trees, houses, and rocks, caused by the eddying action of the deflected wind.

wind-scoured stone *See* ventifact.

wind-shaped stone *See* ventifact.

wind shear [METEOROL] The local variation of the wind vector or any of its components in a given direction.

wind shield *See* rain gage shield.

windshield [ENG] A transparent glass screen that protects the passengers and compartment of a vehicle from wind and rain.

wind-shift line [METEOROL] A line or narrow zone along which there is an abrupt change of wind direction.

wind slab [HYD] A type of snow crust; a patch of hard-packed snow, which is packed as it is deposited in favored spots by the wind, in contrast to wind crust.

wind sleeve *See* wind cone.

wind sock *See* wind cone.

wind speed [METEOROL] The rate of motion of air.

wind star [NAV] A method of solution for the speed and direction of the wind by observing drift on three different headings which form an approximate equilateral triangle.

windstorm [METEOROL] A storm in which strong wind is the most prominent characteristic.

wind stress [METEOROL] The drag or tangential force per unit area exerted on the surface of the earth by the adjacent layer of moving air.

wind tee [ENG] A weather vane shaped like the letter T or like an airplane, situated on an airport or landing field to indicate the wind direction. Also known as landing tee.

wind tide [OCEANOGR] **1.** The vertical rise in the still-water level on the leeward side of a body of water, particularly the ocean or other large body, caused by wind stresses on the surface of the water. **2.** The difference in still-water level between the windward and leeward sides of such a body caused by wind stresses.

wind triangle [AERO ENG] A vector diagram showing the effect of the wind on the flight of an aircraft; it is composed of the wind direction and wind speed vector, the true heading and true airspeed vector, and the resultant track and ground speed vector.

wind tunnel [ENG] A duct in which the effects of airflow past objects can be determined.

wind-tunnel balance [AERO ENG] A device or apparatus that measures the aerodynamic forces and moments acting upon a body tested in a wind tunnel.

wind-tunnel instrumentation [ENG] Measuring devices used in wind-tunnel tests; in addition to conventional laboratory instruments for fluid flow, thermometry, and mechanical measurements, there are sensing devices capable of precision measurement in the small-scale environment of the test setup.

wind valley *See* wind gap.

wind vane [ENG] An instrument used to indicate wind direction, consisting basically of an asymmetrically shaped object mounted at its center of gravity about a vertical axis; the end which offers the greater resistance to the motion of air moves to the downwind position; the direction of the wind is determined by reference to an attached oriented compass rose.

wind velocity [METEOROL] The speed and direction of wind.

windward [METEOROL] In the general direction from which the wind blows.

wind wave [OCEANOGR] A wave resulting from the action of wind on a water surface.

wine [FOOD ENG] An alcoholic beverage made by fermentation of the juice of fruits or berries, especially grapes; classified on the basis of color, sweetness, alcoholic content, variety of grape, presence of carbon dioxide, and region where the grapes are grown.

wine lees [FOOD ENG] Sediment or deposit that forms in the bottom of wine casks during the fermentation process; used as a source of tartaric acid and tartrates.

wing [AERO ENG] **1.** A major airfoil. **2.** An airfoil on the side of an airplane's fuselage or cockpit, paired off by one on the other side, the two providing the principal lift for the airplane. [GEOL] *See* vesicle. [ZOO] Any of the paired appendages serving as organs of flight on many animals.

wing assembly [AERO ENG] An aeronautical structure designed to maintain a guided missile in stable flight; it consists of all panels, sections, fastening devices, chords, spars, plumbing accessories, and electrical components necessary for a complete wing assembly.

wing axis [AERO ENG] The locus of the aerodynamic centers of all the wing sections of an airplane.

wing dam *See* groin.

winged headland [GEOGR] A seacliff with two bays or spits, one on either side.

Winged Horse *See* Pegasus.

winged missile [ORD] A missile that has wings, distinguished from wingless missiles such as bullets, projectiles, and certain rockets.

wing gun [ORD] A fixed gun mounted on the wing of an airplane.

wingless abutment [CIV ENG] A straight-sided bridge abutment designed to resist pressure in back and provide a bridge seat.

wing loading [AERO ENG] A measure of the load carried by an airplane wing per unit of wing area; commonly used units are pounds per square foot and kilograms per square meter.

wing nut [DES ENG] An internally threaded fastener with wings to permit it to be tightened or loosened by finger pressure only. Also known as butterfly nut.

wing panel [AERO ENG] That portion of a multipiece wing section that usually lies between the front and rear spars; it may be designed to include either the leading edge or the trailing edge as an integral part, but never both, and excludes control surfaces.

wing profile [AERO ENG] The outline of a wing section.

wing rib [AERO ENG] A chordwise member of the wing structure of an airplane, used to give the wing section its form and to transmit the load from the fabric to the spars.

wing section *See* airfoil profile.

wing spot generator [ELECTR] Electronic circuit that grows wings on the video target signal of a type G indicator; these wings are inversely proportional in size to the range.

wing structure [AERO ENG] In an aircraft, the combination of outside fairing panels that provide the aerodynamic lifting surfaces and the inside supporting members that transmit the lifting force to the fuselage; the primary load-carrying portion of a wing is a box beam (the prime box) made up usually of two or more vertical webs, plus a major portion of the upper and lower skins of the wing, which serve as chords of the beam.

wing-tip rake [AERO ENG] The shape of the wing when the tip edge is straight in plan but not parallel to the plane of symmetry; the amount of rake is measured by the acute angle between the straight portion of the wing tip and the plane of symmetry; the rake is positive when the trailing edge is longer than the leading edge.

Winkler titration [ANALY CHEM] A chemical method for estimating the dissolved oxygen in seawater: manganous hydroxide is added to the sample and reacts with oxygen to produce a manganese compound which in the presence of acid potassium iodide liberates an equivalent quantity of iodine that can be titrated with standard sodium thiosulfate.

winning [MIN ENG] **1.** A new mine opening. **2.** The portion of a coal field laid out for working. **3.** Mining.

winnowing gold [MIN ENG] Tossing up dry powdered auriferous material in air, and catching the heavier particles not blown away.

winter [ASTRON] The period from the winter solstice, about December 22, to the vernal equinox, about March 21; popularly and for most meteorological purposes, winter is taken to include

December, January, and February in the Northern Hemisphere, and June, July, and August in the Southern Hemisphere.

Winteraceae [BOT] A family of dicotyledonous plants in the order Magnoliales distinguished by hypogynous flowers, exstipulate leaves, air vessels absent, and stamens usually laminar.

winter buoy [NAV] An unlighted buoy without sound signal which is maintained in certain areas during winter months when other aids are temporarily removed or extinguished.

wintergreen oil *See* methyl salicylate.

winter ice [OCEANOGR] Level sea ice more than 8 inches (20 centimeters) thick, and less than 1 year old; the stage which follows young ice.

winterization [ENG] The preparation of equipment for operation in conditions of winter weather; this applies to preparation not only for cold temperatures, but also for snow, ice, and strong winds.

winter load line [NAV ARCH] The waterline to which a vessel is allowed to load when going to sea in the wintertime.

winter marker [NAV] An unlighted marker without sound signal which is maintained in certain areas during the winter months when other aids are temporarily removed or extinguished.

winter solstice [ASTRON] **1.** The sun's position on the ecliptic (about December 22). Also known as first point of Capricorn. **2.** The date (December 22) when the greatest southern declination of the sun occurs.

winter-talus ridge [GEOL] A wall-like arcuate ridge on the floor of a cirque formed by freezing activity that dislodged boulders from a cirque wall covered with a snowbank. Also known as nivation ridge.

winze [MIN ENG] A vertical or inclined opening or excavation connecting two levels in a mine, differing from a raise only in construction; a winze is sunk underhand, and a raise is put up overhand.

wiped joint [MET] A joint wherein filler metal is applied in liquid form, and the joint is wiped mechanically to distribute the metal.

wipe-on plate [GRAPHICS] In offset lithography, a plate with a light-sensitive coating.

wiper [ELEC] That portion of the moving member of a selector, or other similar device, in communications practice, which makes contact with the terminals of a bank.

wiping [NAV] The process of reducing the amount of permanent magnetism in a naval vessel by placing a single coil horizontally around the vessel and moving it, while energized, up and down along the sides of the vessel.

wiping contact [ELEC] A switch or relay contact designed to move laterally with a wiping motion after it touches a mating contact. Also known as self-cleaning contact; sliding contact.

wiping effect [MET] Activation of a metal surface by mechanically rubbing or wiping to enhance the formation of a conversion coating.

wire [ELEC] A single bare or insulated metallic conductor having solid, stranded, or tinsel construction, designed to carry current in an electric circuit. Also known as electric wire. [MET] A thin, flexible, continuous length of metal, usually of circular cross section. [OPTICS] A filament, usually consisting of a stretched strand of spider's web or a fine metal wire, mounted in the field of view of a telescope eyepiece to serve as a reference or for measurements. Also known as web.

wire bonding [ELEC] Lead-covered tie used to connect two cable sheaths until a splice is permanently closed and covered.

wire cloth [DES ENG] Screen composed of wire crimped or woven into a pattern of squares or rectangles.

wire-cut brick [MATER] A brick cut from clay shaped by extrusion before burning; the long bar of extruded clay is cut into bricks by a set of wires 9 inches (23 centimeters) apart.

wired-program computer [COMPUT SCI] A computer in which the sequence of instructions that form the operating program is created by interconnection of wires on a removable control panel.

wire drag [ENG] An apparatus for surveying rocky underwater areas where normal sounding methods are insufficient to ensure the discovery of all existing submerged obstructions, small shoals, or rocks above a given depth or for determining the least depth of an area; it consists essentially of a buoyed wire towed at the desired depth by two launches.

wiredrawing [MET] Pulling a metal rod or wire through a die to reduce its cross section.

wire-fabric reinforcing [CIV ENG] Reinforcing concrete or mortar with a welded wire fabric.

wire facsimile system [COMMUN] A facsimile system in which messages are sent over wires or cables, rather than by radio.

wire flame spray gun [ENG] A device which utilizes the heat from a gas flame and material in the form of wire or rod to perform a flame-spraying operation.

wire fusing current [ELEC] The electric current which will cause a wire to melt.

wire gage [DES ENG] **1.** A gage for measuring the diameter of wire or thickness of sheet metal. **2.** A standard series of sizes arbitrarily indicated by numbers, to which the diameter of wire or the thickness of sheet metal is usually made, and which is used in describing the size or thickness.

wire glass [MATER] Sheet glass with woven wire mesh embedded in the center of the sheet; used in building construction for windows, doors, floors, and skylights.

wiregrating [ELECTROMAG] A series of wires placed in a waveguide that allow one or more types of waves to pass and block all others.

wire insulation [MATER] A flexible insulation used to cover an electric wire.

wire line [DES ENG] **1.** Any cable or rope made of steel wires twisted together to form the strands. **2.** A steel wire rope 5/16 inch or less in diameter. [PETRO ENG] A line or cable used to lower and raise devices and gages in oil well boreholes; used for logging instruments and bottom-hole pressure gages.

wire-line coring [PETRO ENG] A method for obtaining samples of reservoir rocks during the drilling phase of oil wells.

wire-link telemetry [COMMUN] Telemetry in which electric signals are sent over transmission lines, rather than by radio. Also known as hard-wire telemetry.

wire mile [ELEC] Unit of measure of the length of two-conductor wire between two points; the length of the route multiplied by the number of circuits gives the number of wire miles.

wire nail [DES ENG] A nail made of wire and having a circular cross section.

wirephoto [COMMUN] **1.** A photograph transmitted over wires to a facsimile receiver. **2.** *See* facsimile.

wire printing *See* matrix printing.

wire recorder [ENG ACOUS] A magnetic recorder that utilizes a round stainless steel wire about 0.004 inch (0.01 centimeter) in diameter instead of magnetic tape.

wire recording [ENG ACOUS] Magnetic recording by use of a magnetized wire.

wire rod [MET] A metal rod used in wiredrawing.

wire rope [ENG] A rope formed of twisted strands of wire.

wire saw [MECH ENG] A machine employing one- or three-strand wire cable, up to 16,000 feet (4900 meters) long, running over a pulley as a belt; used in quarries to cut rock by abrasion.

wiresonde [ENG] An atmospheric sounding instrument which is supported by a captive balloon and used to obtain temperature and humidity data from the ground level to a height of a few kilometers; height is determined by means of a sensitive altimeter, or from the amount of cable released and the angle which the cable makes with the ground, and the information is telemetered to the ground through a wire cable.

wire stripper [ENG] A hand-operated tool or special machine designed to cut and remove the insulation for a predetermined distance from the end of an insulated wire, without damaging the solid or stranded wire inside.

wire tack [DES ENG] A tack made from wire stock.

wiretap [COMMUN] A secretly made and concealed connection to a telephone line, office intercommunication line, or other wiring system, for the purpose of monitoring conversations and activities in a room from a remote location without knowledge of the participants, legally or illegally.

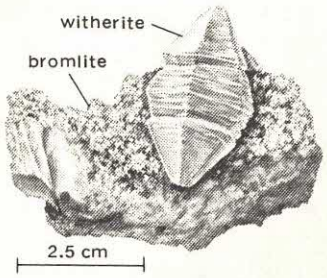
wire telegraphy [COMMUN] Telegraphy in which messages are sent over wires or cables, rather than by radio.

wire train [ENG] An assembly that normally consists of an extruder, a crosshead and die, a means of cooling, and feed and take-up spools for the wire; used to coat wire with resin.

wireway [ENG] A trough which is lined with sheet metal and has hinged covers, designed to house electrical conductors or cables.

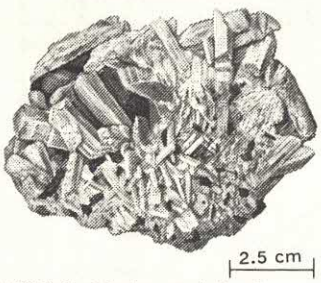
wire weight gage [ENG] A river gage in which a weight suspended on a wire is lowered to the water surface from a bridge or other overhead structure to measure the distance from a point of known elevation on the bridge to the water surface; the

WITHERITE



Large crystal form of witherite with bromlite, from Fallowfield, Northumberland, England. *(Specimen from Department of Geology, Bryn Mawr College)*

WOLLASTONITE



Triclinic tabular crystals of wollastonite, embedded in limestone in this specimen, from Santa Fe, Chiapas, Mexico. *(Specimen from Department of Geology, Bryn Mawr College)*

WOLLASTON POLARIZING PRISM

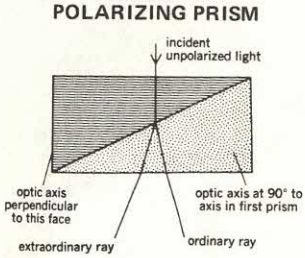


Diagram of Wollaston polarizing prism.

distance is usually measured by counting the number of revolutions of a drum required to lower the weight, and a counter is provided which reads the water stage directly.

wire-wound cryotron [CRYO] A cryotron that consists of a central insulated wire surrounded by a control coil; it is designed so that a relatively small current passed through the control coil produces a magnetic field which makes the gate resistive.

wire-wound potentiometer [ELEC] A potentiometer which is similar to a slide-wire potentiometer, except that the resistance wire is wound on a form and contact is made by a slider which moves along an edge from turn to turn.

wire-wound resistor [ELEC] A resistor employing as the resistance element a length of high-resistance wire or ribbon, usually Nichrome, wound on an insulating form.

wire-wound rheostat [ELEC] A rheostat in which a sliding or rolling contact moves over resistance wire that has been wound on an insulating core.

wire-wrap connection [ELEC] A solderless connection made by wrapping several turns of bare wire around a sharp-corner rectangular terminal under tension, using either a power tool or hand tool. Also known as solderless wrapped connection; wrapped connection.

wiring [ELEC] The installation and utilization of a system of wire for conduction of electricity. Also known as electric wiring. [SCI TECH] A system of wires.

wiring board *See* control panel.

wiring diagram *See* circuit diagram.

wiring harness [ELEC] An array of insulated conductors bound together by lacing cord, metal bands, or other binding, in an arrangement suitable for use only in specific equipment for which the harness was designed; it may include terminations.

Wirsung's duct [ANAT] The adult pancreatic duct in man, sheep, ganoid fish, teleost fish, and frog.

Wisconsin [GEOL] Pertaining to the fourth, and last, glacial stage of the Pleistocene epoch in North America; followed the Sangamon interglacial, beginning about 85,000 ± 15,000 years ago and ending 7000 years ago.

Wisconsin false blossom *See* false blossom.

wisper wind [METEOROL] A cold night wind, blowing out of the valley of the Wisper River in Germany during clear weather.

witches'-broom disease [PL PATH] An abnormal cluster of small branches or twigs that grow on a tree or shrub as a result of attack by fungi, viruses, dwarf mistletoes, or insect injury. Also known as hexenbesen; staghead.

witch hazel [MATER] A water extract from the dried leaves of the witch hazel shrub (*Hamamelis virginiana*); a solution of 14% alcohol with 1% witch hazel extract is commonly known as witch hazel; used as a tonic and sedative.

witch of Agnesi [MATH] The curve, symmetric about the y axis and asymptotic in both directions to the x axis, given by $x^2y = 4a^2(2a - y)$.

witherite [MINERAL] $BaCO_3$ A yellowish- or grayish-white mineral of the aragonite group that has orthorhombic symmetry, hardness of 3¼ on Mohs scale, and specific gravity 4.3.

withertip [PL PATH] A blighting of the terminal shoots or the tips of leaves associated with certain plant diseases, such as anthracnose of citrus plants.

Witte-Margules equation [OCEANOGR] A formula expressing the slope of the boundary layer between two water masses of different densities and velocities, taking into account the rotation of the earth. Also known as Margules equation.

wittichenite [MINERAL] Cu_3BiS_3 A steel gray to tin white, orthorhombic mineral consisting of copper bismuth sulfide; occurs in tabular and massive form.

Wittig ether rearrangement [ORG CHEM] The rearrangement of benzyl and alkyl ethers when reacted with a methylating agent, producing secondary and tertiary alcohols.

wittite [MINERAL] $Pb_3Bi_6(S,Se)_{14}$ A light lead gray, orthorhombic or monoclinic mineral consisting of a sulfide of lead and bismuth.

Witt theory [CHEM] A theory of the mechanism of dyeing stating that all colored organic compounds (called chromogens) contain certain unsaturated chromophoric groups which are responsible for the color, and if these compounds also contain certain auxochromic groups, they possess dyeing properties.

WKB method *See* Wentzel-Kramers-Brillouin method.

Wobbe index [THERMO] A measure of the amount of heat released by a gas burner with a constant orifice, equal to the gross calorific value of the gas in British thermal units per cubic foot at standard temperature and pressure divided by the square root of the specific gravity of the gas.

wobble wheel roller [MECH ENG] A roller with freely suspended pneumatic tires used in soil stabilization.

wobbulator [ELECTR] A signal generator in which a motor-driven variable capacitor is used to vary the output frequency periodically between two known limits, as required for displaying a frequency-response curve on the screen of a cathode-ray oscilloscope.

Wolbachia [MICROBIO] A genus of the tribe Wolbachieae; coccoid, rod-shaped, and spherical cells; associated with, but not pathogenic for, arthropods.

Wolbachieae [MICROBIO] A tribe of the family Rickettsiaceae; rickettsialike organisms found principally in arthropods.

wolf [VERT ZOO] Any of several wild species of the genus *Canis* in the family Canidae which are fierce and rapacious, sometimes attacking humans; includes the red wolf, gray wolf, and coyote.

Wolf 359 [ASTRON] A star of absolute magnitude 16.6; it is 7.7 light-years from the sun and is a variable flare star, which may emit bursts of light and even radio noise.

wolfachite [MINERAL] Ni(As,Sb)S A silver white to tin white mineral consisting of nickel, arsenic, and antimony sulfide; occurs in small crystals and in aggregates.

Wolfcampian [GEOL] A North American provincial series of geologic time; lowermost Permian (below Leonardian, above Virgilian of Pennsylvania).

wolfeite [MINERAL] $(Fe,Mn)_2(PO_4)(OH)$ A pinkish, wine yellow to yellowish-brown or reddish-brown, monoclinic mineral consisting of a basic phosphate of iron and manganese.

Wolffian duct *See* mesonephric duct.

Wolf-Kishner reduction [ORG CHEM] Conversion of aldehydes and ketones to corresponding hydrocarbons by heating their semicarbazones, phenylhydrazones, and hydrazones with sodium ethoxide or by heating the carbonyl compound with excess sodium ethoxide and hydrazine sulfate.

Wolf number *See* relative sunspot number.

wolfram *See* tungsten; wolframite.

wolframic acid *See* tungstic acid.

wolframine *See* wolframite.

wolframite [MINERAL] $(Fe,Mn)WO_4$ A brownish- or grayish-black mineral occurring in short monoclinic, prismatic, bladed crystals; the most important ore of tungsten. Also known as tobacco jack; wolfram; wolframine.

wolfram white *See* barium tungstate.

Wolf-Rayet star [ASTRON] A member of a class of very hot stars (100,000–35,000 K) which characteristically show broad bright emission lines in their spectra; luminosities are high, probably in the range 10^4–10^5 times that of the sun; these stars are probably very young and represent an early short-lived stage in stellar evolution.

wolfsbane *See* aconite.

Wolf-Wolfer number *See* relative sunspot number.

wollastonite [MINERAL] $CaSiO_3$ A white to gray inosilicate mineral (a pyroxenoid) that crystallizes in the triclinic system in tabular crystals and has a pearly or silky luster on the cleavages; hardness is 5–5.5 on Mohs scale, and specific gravity is 2.85. Also known as tabular spar.

Wollaston polarizing prism [OPTICS] A device for producing linearly polarized beams of light, consisting of two adjacent quartz wedges with their optic axes perpendicular to each other and to the direction of incident light.

Wollaston wire [ENG] An extremely fine platinum wire, produced by enclosing a platinum wire in a silver sheath, drawing them together, and using acid to dissolve away the silver; used in electroscopes, microfuses, and hot-wire instruments.

wolverine [VERT ZOO] *Gulo gulo*. A carnivorous mammal which is the largest and most vicious member of the family Mustelidae.

wood [BOT] The hard fibrous substance that makes up the trunks and large branches of trees beneath the bark. [ECOL] A dense growth of trees, more extensive than a grove and smaller than a forest. [MATER] Lumber or timber obtained from trees.

wood alcohol *See* methyl alcohol.

wood block [GRAPHICS] A picture, design, or lettering carved on a block of wood with hand tools; the nonprinting areas of the block are carefully carved away, and only the raised areas of the design carry the ink; it differs from a wood engraving

because the design is carved along the side of the block parallel with the grain, rather than perpendicular to it; it is therefore characterized by broad areas and strokes running with the grain. Also known as woodcut.

wood-block printing [GRAPHICS] Making prints from wood blocks by use of a press.

wood-carving tools [GRAPHICS] The tools normally used in wood carving; they consist of adzes, chisels, gouges, files, and rasps, all of which vary in size and shape.

wood coal *See* bituminous wood.

wood copper *See* olivenite.

woodcut *See* wood block.

Wood effect [OPTICS] Transparence of alkali metals to ultraviolet light.

wooden bomb [ORD] A concept which pictures a weapon as being completely reliable and having an infinite shelf life while at the same time requiring no special handling, storage, or surveillance.

wood engraving [GRAPHICS] An engraving carved on the edge grain of a piece of wood.

wood ether *See* dimethyl ether.

wood filler [MATER] A paste designed to fill the pores of open-grained woods such as ash, chestnut, mahogany, and oak.

wood flour [MET] Pulverized wood used in casting molds to furnish a reducing atmosphere, help overcome expansion of sand, increase flowability of the metal, and improve casting finish.

woodhouseite [MINERAL] $CaAl_3(PO_4)(SO_4)(OH)_6$ A colorless to flesh-colored or white, hexagonal mineral consisting of a basic sulfate-phosphate of calcium and aluminum; occurs in small crystals and tabular form.

woodland *See* forest; temperate woodland.

woodpecker [VERT ZOO] A bird of the family Picidae characterized by stiff tail feathers and zygodactyl feet which enable them to cling to a tree trunk while drilling into the bark for insects.

wood physics [MATER] The area of wood science concerned with the physical and mechanical properties of wood and the factors which affect them.

wood preservative [MATER] A material used to coat wood to kill insects and fungi, but not usually classed as an insecticide; coal tar creosote and its derivatives are the most widely used wood preservatives.

wood pulp *See* pulp.

Woodruff key [DES ENG] A self-aligning machine key made by a side-milling cutter in the form of a segment of a disk.

wood screw [DES ENG] A threaded fastener with a pointed shank, a slotted or recessed head, and a sharp tapered thread of relatively coarse pitch for use only in wood.

Wood's glass [MATER] A type of glass that has a high transmission factor for ultraviolet radiation but is relatively opaque to visible radiation.

Wood's metal [MET] A fusible alloy of the Cerro Corporation that contains 50% bismuth, 25% lead, 12.5% tin, and 12.5% cadmium, and melts at 158°F (70–72°C); used for automatic sprinkler plugs.

woodstave pipe [DES ENG] A pipe made of narrow strips of wood placed side by side and banded with wire, metal collars, and inserted joints, used largely for municipal water supply, outfall sewers, and mining irrigation.

woodstone *See* silicified wood.

wood sugar *See* xylose.

wood tin [MINERAL] A riniform, brownish variety of cassiterite with fibers radiating concentrically and resembling dry wood. Also known as dneprovskite.

wood vinegar *See* pyroligneous acid.

Woodward-Hoffmann rule [ORG CHEM] A concept which can predict or explain the stereochemistry of certain types of reactions in organic chemistry; it is also described as the conservation of orbital symmetry.

woodwardite [MINERAL] $Cu_4Al_2(SO_4)(OH)_{12}\cdot 2\text{–}4H_2O$ A greenish-blue to turquoise blue mineral consisting of a hydrated basic sulfate of copper and aluminum; occurs as botryoidal concretions and in spherulitic form.

Woodward's Reagent K *See N*-ethyl-5-phenylisoxazolium-3′-sulfonate.

woody lignite *See* bituminous wood.

woody structure [MET] A fibrous appearance in a fracture, particularly found in wrought iron and extruded aluminum alloys, usually associated with elongated inclusions or grains.

woof *See* filling.

woofer [ENG ACOUS] A large loudspeaker designed to reproduce low audio frequencies at relatively high power levels; usually used in combination with a crossover network and a high-frequency loudspeaker called a tweeter.

wool [TEXT] A textile fiber made from raw wool characterized by absorbency, resiliency, and insulation. [VERT ZOO] The soft undercoat of various animals such as sheep, angora, goat, camel, alpaca, llama, and vicuna.

wool fat *See* wool grease.

wool grease [MATER] A highly complex mixture of wax ester, alcohols, and fatty acids coating the surface of sheep wool fibers and obtained by scouring the wool with soap or synthetic detergent; used in the manufacture of lanolin and its derivatives, for dressing leather, and in lubricating and slushing oils, soaps, and ointments. Formerly known as degras. Also known as wool fat; wool oil; wool wax.

wool-sorter's disease *See* anthrax.

wool wax *See* wool grease.

word [COMPUT SCI] The fundamental unit of storage capacity for a digital computer, almost always considered to be more than eight bits in length. Also known as computer word.

word concatenation system [ENG ACOUS] The simplest form of voice response system, which retrieves previously spoken versions of words or phrases and carefully forms them into a sequence without pauses, to approximate normally spoken word sequences.

word format [COMPUT SCI] Arrangement of characters in a word, with each position or group of positions in the word containing certain specified data.

word length [COMPUT SCI] The number of bits, digits, characters, or bytes in one word.

word mark [COMPUT SCI] A nondata punctuation bit used to delimit a word in a variable-word-length computer.

word-oriented computer [COMPUT SCI] A computer in which the locations of words are addressed, and the bits and characters within the words can be addressed only through use of special instructions.

word processing [COMPUT SCI] The creation, dissemination, storage, and retrieval of the written word by typewriter terminals that use magnetic tape for storage, automatic control, editing, and retyping.

word rate [COMPUT SCI] In computer operations, the frequency derived from the elapsed period between the beginning of the transmission of one word and the beginning of the transmission of the next word.

words per minute [COMMUN] A measure of the speed with which messages can be transmitted by a telegraph system. Abbreviated WPM.

word time *See* minor cycle.

work [ELEC] *See* load. [MECH] The transference of energy that occurs when a force is applied to a body that is moving in such a way that the force has a component in the direction of the body's motion; it is equal to the line integral of the force over the path taken by the body.

workability [MATER] The ease with which concrete can be placed.

work angle [MET] In arc welding, the angle in a plane normal to the weld axis between the electrode and one member of the joint.

work assembly [COMPUT SCI] The clerical activities related to organizing collections of data records and computer programs or series of related programs.

work cycle [IND ENG] A sequence of tasks, operations, and processes, or a pattern of manual motions, elements, and activities that is repeated for each unit of work.

worked-out [MIN ENG] Exhausted, referring to a coal seam or ore deposit.

worked penetration [ENG] Penetration of a sample of lubricating grease immediately after it has been brought to a specified temperature and subjected to strokes in a standard grease worker.

worker [INV ZOO] One of the neuter, usually sterile individuals making up a caste of social insects, such as ants, termites, or bees, which labor for the colony.

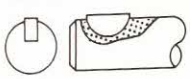
work function [SOLID STATE] The minimum energy needed to remove an electron from the Fermi level of a metal to infinity; usually expressed in electron volts. [THERMO] *See* free energy.

work hardening [MET] Increased hardness accompanying

WOODPECKER

Red-headed woodpecker *(Melanerpes erythrocephalus)*, a typical woodpecker with clawed feet and stiff tail feathers.

WOODRUFF KEY



Diagrams of Woodruff key, end and side views. The half disk shape of the key is shown in the side view. *(From P. H. Black and O. E. Adams, Jr., Machine Design, 3d ed., 1968)*

plastic deformation of a metal below the recrystallization temperature range.

working [COMMUN] Carrying on radio communication with a station by means of telegraphy, telephony, or facsimile for a purpose other than calling. [MIN ENG] **1.** The whole strata excavated in working a seam. **2.** Ground or rocks shifting under pressure and producing noise. [NAV] In sea ice navigation, making headway through an ice pack by boring, breaking, and slewing.

working electrode [PHYS CHEM] The electrode used in corrosion testing by an electrochemical cell.

working load [ENG] The maximum load that any structural member is designed to support.

working place [MIN ENG] The place in a mine at which coal or ore is being actually mined.

working pressure [ENG] The allowable operating pressure in a pressurized vessel or conduit, usually calculated by ASME (American Society of Mechanical Engineers) or API (American Petroleum Institute) codes.

working program [COMPUT SCI] A valid program which, when translated into machine language, can be executed on a computer.

working Q *See* loaded Q.

working set [COMPUT SCI] The smallest collection of instruction and data words of a given computer program which should be loaded into the main storage of a computer system so that efficient processing is possible.

working-set window [COMPUT SCI] A fixed time interval during which the working set is referenced.

working solution [GRAPHICS] A solution ready for use.

working space *See* working storage.

working storage [COMPUT SCI] **1.** An area of main memory that is reserved by the programmer for storing temporary or intermediate values. Also known as working space. **2.** In COBOL (computer language), a section in the data division used for describing the name, structure, usage, and initial value of program variables that are neither constants nor records of input/output files.

working voltage *See* voltage rating.

work-kinetic energy theorem [MECH] The theorem that the change in the kinetic energy of a particle during a displacement is equal to the work done by the resultant force on the particle during this displacement.

work lead [MET] The electrical conductor connecting the source of current to the work in arc welding. Also known as ground lead; welding ground.

work life [CHEM ENG] The period of time a resin or an adhesive will remain usable after it is mixed with a catalyst and other ingredients.

Workman-Reynolds effect [GEOPHYS] A mechanism for electric charge separation during freezing of slightly impure water; when a very dilute solution of certain salts freezes rapidly, a strong potential difference is established between the solid and liquid phases; for some salts, the ice attains negative charge, for others, positive; this mechanism has been suggested as one possible mode of thunderstorm charge separation in those portions of a thunderstorm downdraft where snow-pellet or hail particles sweep out supercooled waterdrops.

work of adhesion *See* adhesional work.

work print [GRAPHICS] The first print of a motion picture; used for preliminary screening and editing.

work sampling [IND ENG] A technique to measure work activity as related to delays consisting of intermittent observations of actual work and delays. Also known as activity sampling; frequency study; ratio delay study.

Workshop *See* Sculptor.

workspace [COMPUT SCI] In a string processing language, the portion of computer memory that contains the string currently being processed.

work standardization [IND ENG] The establishment of uniformity of working conditions, tools, equipment, technical procedures, administrative procedures, workplace arrangements, motion sequences, materials, quality requirements, and similar factors which affect the performance of work.

work tape [COMPUT SCI] A magnetic tape that is available for general use during data processing.

work task [IND ENG] A specified amount of work, set of responsibilities, or occupation assigned to an individual or to a group.

world [RELAT] Pertaining to Lorentz transformations and four-dimensional space-time, rather than rotations and three-dimensional space, as in world scalar, world vector, world line.

world calendar [ASTRON] A proposed calendar in which the present 12 months are retained but the days are divided into four equal quarters; January, April, July, and October begin on Sunday and have 31 days, the other months have 30 days, so that there are 364 days with the 365th day following December 30 in no month; leap-year days would follow June 30.

world geographic reference system [NAV] A geographic reference system used by the U.S. Air Force for aircraft position reports, target designations, and other tactical air operations. Abbreviated georef.

world rift system [GEOL] The system of interconnected midocean ridges which is the locus of tensional splitting and magma upwelling believed responsible for sea-floor spreading.

worm [DES ENG] A shank having at least one complete tooth (thread) around the pitch surface; the driver of a worm gear. [INV ZOO] **1.** The common name for members of the Annelida. **2.** Any of various elongated, naked, soft-bodied animals resembling an earthworm. [MET] Sweat of molten metal which exudes through the crust of solidifying metal in a casting, and is caused by gas evolution.

worm conveyor *See* screw conveyor.

worm gear [DES ENG] A gear with teeth cut on an angle to be driven by a worm; used to connect nonparallel, nonintersecting shafts.

wormseed oil [MATER] An essential oil distilled from the seeds and leaf stems of the plant *Chenopodium anthelminticum*, which is grown in Maryland, and which contains the alkaloid ascoridole; used in worm treatment of animals. Also known as Baltimore oil.

worm wheel [DES ENG] A gear wheel with curved teeth that meshes with a worm.

wormwood oil *See* absinthe oil.

worobieffite *See* vorobyevite.

worsted [TEXT] **1.** Yarn spun from combed long-staple wool fibers. **2.** Fabric made from this yarn. **3.** Yarns, with any fiber content, manufactured by using the worsted spinning system.

worsted system [TEXT] A manufacturing technique for yarns in which the short fibers are removed by combing, producing a compact yarn with parallel fibers.

wort [FOOD ENG] A clear infusion of malt grain extract, used by brewers for fermentation.

wound shock *See* hypovolemic shock.

wove paper [MATER] Paper characterized by a uniform, unlined surface and a soft, smooth finish.

woven-screen storage [COMPUT SCI] Digital storage plane made by weaving wires coated with thin magnetic films; when currents are sent through a selected pair of wires that are at right angles in the screen, storage and readout occur at the intersection of the two wires.

wow [ENG ACOUS] A low-frequency flutter; when caused by an off-center hole in a disk record, occurs once per revolution of the turntable.

WPM *See* words per minute.

wrap [GRAPHICS] In a book or magazine, an insert, usually on a different stock, which is not tipped in but wrapped around one of the signatures, and which usually consists of at least two leaves (four pages) securely stitched into the binding.

wrap-around hanger [PETRO ENG] An oil-well tubing hanger made up of two hinged halves with a resilient sealing element between two steel mandrels.

wrap-around plate [GRAPHICS] In rotary letterpress, a thin, one-piece relief printing plate which is wrapped around the press cylinder.

wrap forming *See* stretch forming.

wrapped connection *See* wire-wrap connection.

wrapper sheet [MECH ENG] **1.** The outer plate enclosing the firebox in a fire-tube boiler. **2.** The thinner sheet of a boiler drum having two sheets.

wrecking ball *See* skull cracker.

wren [VERT ZOO] Any of the various small brown singing birds in the family Troglodytidae; they are insectivorous and tend to inhabit dense, low vegetation.

wrench [ENG] A manual or power tool with adapted or adjustable jaws or sockets either at the end or between the ends of a lever for holding or turning a bolt, pipe, or other object. [MECH] The combination of a couple and a force which is parallel to the torque exerted by the couple.

wrench fault [GEOL] A lateral fault with a more or less

vertical fault surface. Also known as basculating fault; torsion fault.

wrench-head bolt [DES ENG] A bolt with a square or hexagonal head designed to be gripped between the jaws of a wrench.

Wright's phenomenon [ASTRON] The phenomenon that the diameter of Mars appears greater when viewed from earth in ultraviolet light than when viewed in infrared light.

Wright system [PETRO ENG] A method for mining oil from partially drained sands that involves drilling a shaft through the productive strata, followed by long, slanting holes drilled radially in all directions from the shaft bottom into the oil sands.

Wright telescope [OPTICS] A modification of the Schmidt system in which the spherical primary mirror is replaced by an ellipsoidal mirror, and the corrector plate is modified accordingly.

wringing fit [DES ENG] A fit of zero-to-negative allowance.

wrinkle ridge [ASTRON] A prominent, well-defined, often sinuous ridge on a lunar mare, with gently sloping sides and a height of generally less than 150 meters.

wrinkling [MET] Waviness around the edges of a drawn metal product.

wrist [ANAT] The part joining forearm and hand.

wrist breadth [ANTHRO] A measurement from the outside projection of the distal part of the ulna to the radius at the wrist joint.

wrist pin *See* piston pin.

wrist thickness [ANTHRO] The measurement transverse to the wrist breadth.

writable control storage [COMPUT SCI] A section of the control storage holding microprograms which can be loaded from a console file or under microprogramming control.

write [COMPUT SCI] **1.** To transmit data from any source onto an internal storage medium. **2.** A command directing that an output operation be performed.

write enable ring [COMPUT SCI] A file protection ring that must be attached to the hub of a reel of magnetic tape in order to physically allow data to be transcribed onto the reel. Also known as write ring.

write error [COMPUT SCI] **1.** A condition in which information cannot be written onto or into a storage device, due to dust, dirt, damage to the recording surface, or damaged electronic components. **2.** A condition in which there is an inconsistency between the pattern of bits transmitted to the write head of a magnetic tape drive and the pattern sensed immediately afterward by the read head.

write head [ELECTR] Device that stores digital information as coded electrical pulses on a magnetic drum, disk, or tape.

write inhibit ring [COMPUT SCI] A file protection ring that physically prevents data from being written on a reel of magnetic tape when it is attached to the hub of the reel.

write protection [COMPUT SCI] A form of memory protection in which a computer program can read from any area in memory but cannot write outside its own area.

write ring *See* write enable ring.

write time [COMPUT SCI] The time required to transcribe a data item into a computer storage device.

writing speed [ELECTR] Lineal scanning rate of the electron beam across the storage surface in writing information on a cathode-ray storage tube.

Wronskian [MATH] An $n \times n$ matrix whose ith row is a list of the $(i - 1)$st derivatives of a set of functions $f_1, \ldots, f_n$; ordinarily used to determine linear independence of solutions of linear homogeneous differential equations.

wrought alloy [MET] An alloy that has been mechanically worked after casting.

wrought iron [MET] A commercial iron consisting of slag fibers, primarily iron silicate, embedded in a ferrite matrix.

wryneck *See* torticollis.

W stars [ASTRON] Stars of the W spectral class; their spectra contain an abundance of highly ionized elements such as He, C, N, and O, and they are intensely hot with surface temperatures of about 50,000 to 100,000 K.

Wuchereria [INV ZOO] A genus of filarial worms parasitic in man in all worm regions of the world.

wuchereriasis [MED] Infection with worms of the genus *Wuchereria*. Also known as Bancroft's filariasis.

wulfenite [MINERAL] $PbMoO_4$ A yellow, orange, orange-yellow, or orange-red tetragonal mineral occurring in tabular crystals or granular masses; an ore of molybdenum. Also known as yellow lead ore.

Wulff process [CHEM ENG] A chemical process to make acetylene and ethylene by cracking a hydrocarbon gas (for example, butane) with high-temperature steam in a regenerative furnace.

Wullenweber antenna [ELECTROMAG] An antenna array consisting of two concentric circles of masts, connected to be electronically steerable; used for ground-to-air communication at Strategic Air Command bases.

Würm [GEOL] **1.** A European stage of geologic time: uppermost Pleistocene (above Riss, below Holocene). **2.** Pertaining to the fourth glaciation of the Pleistocene epoch in the Alps, equivalent to the Wisconsin glaciation in North America, following the Riss-Würm interglacial.

W Ursae Majoris stars [ASTRON] Eclipsing variable stars whose brightness is continuously varying in periods of a few hours; they are composed of two close stars that have a common gaseous envelope.

Wurster process *See* air-suspension encapsulation.

Wurtz-Fittig reaction [ORG CHEM] A modified Wurtz reaction in which an aromatic halide reacts with an aklyl halide in the presence of sodium and an anhydrous solvent to form alkylated aromatic hydrocarbons.

wurtzilite [GEOL] A black, massive, sectile, infusible, asphaltic pyrobitumen derived from the metamorphosis of petroleum.

wurtzite [MINERAL] (Zn,Fe)S A brownish-black hexagonal mineral consisting of zinc sulfide and occurring in hemimorphic pyramidal crystals, or in radiating needles and bundles.

Wurtz reaction [ORG CHEM] Synthesis of hydrocarbons by treating alkyl iodides in ethereal solution with sodium according to the reaction $2CH_3I + 2Na \rightarrow CH_3CH_3 + 2NaI$.

wustite [MINERAL] FeO An artificial mineral that consists of ferric oxide.

W Virginis stars [ASTRON] Periodic variable stars with periods of about 10 to 30 days; they exhibit two surges of activity from the same star so that there is a doubling of their spectral lines. Also known as Type II Cepheids.

WWV [COMMUN] The call letters of a radio station maintained by the National Bureau of Standards to provide standard radio and audio frequencies and other technical services, such as precision time signals and radio propagation disturbance warnings; the station broadcasts on 2.5, 5, 10, 15, 20, 25, 30, and 35 megahertz at various times.

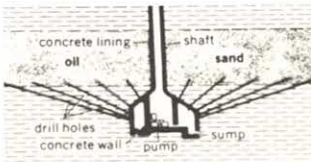
WWVH [COMMUN] The National Bureau of Standards radio station at Maui, Hawaii, broadcasting services similar to those of WWV on 5, 10, and 15 megahertz.

wye [ELEC] Polyphase circuit whose phase differences are 120° and which when drawn resembles the letter Y. [ENG] A pipe branching off a straight main run at an angle of 45°. Also known as Y; yoke.

wye level *See* Y level.

Wynyardiidae [PALEON] An extinct family of herbivorous marsupial mammals in the order Diprotodonta.

WRIGHT SYSTEM



Sketch of Wright system for draining oil sands by a series of boreholes drilled from mine shaf *(After L. C. Uren, Petroleum Production Engineering: Oil Field Exploitation, 3d ed., McGraw-Hill, 1953)*

X

X *See* siegbahn.

XANES *See* x-ray absorption near-edge structure.

xanthan gum [ORG CHEM] A high-molecular-weight (5–10 million) water-soluble natural gum; a heteropolysaccharide made up of building blocks of D-glucose, D-mannose, and D-glucuronic acid residues; produced by pure culture fermentation of glucose with *Xanthomonas campestris*.

xanthate [ORG CHEM] A water-soluble salt of xanthic acid, usually potassium or sodium; used as an ore-flotation collector.

xanthelasma [MED] Raised yellow plaques occurring around the eyelids, resulting from lipid-filled cells in the dermis.

xanthene [ORG CHEM] $CH_2(C_6H_4)_2O$ Yellowish crystals that are soluble in ether, slightly soluble in water and alcohol; melts at 100°C; used as a fungicide and chemical intermediate. Also known as tricyclic dibenzopyran.

xanthene dye [ORG CHEM] Any of a family of dyes related to the xanthenes; the chromophore groups are (C_6H_4).

xanthene ketone *See* xanthone.

9-xanthenone *See* genicide.

Xanthidae [INV ZOO] The mud crabs, a family of decapod crustaceans in the section Brachyura.

xanthine [ORG CHEM] $C_5H_4N_4O_2$ A toxic yellow-white purine base that is found in blood and urine, and occasionally in plants; it is a powder, insoluble in water and acids, soluble in caustic soda; sublimes when heated; used in medicine and as a chemical intermediate. Also known as dioxopurine.

xanthine oxidase [BIOCHEM] A flavoprotein enzyme catalyzing the oxidation of certain purines.

xanthism [BIOL] A color variation in which an animal's normal coloring is largely replaced by yellow pigments. Also known as xanthochroism.

xanthochroism *See* xanthism.

xanthochroite *See* greenockite.

xanthoconite [MINERAL] Ag_3AsS_3 A dark red to dull orange to clove brown mineral consisting of silver arsenic sulfide.

xanthoma [MED] A yellowish mass of lipid-filled histocytes occurring in subcutaneous tissue, often around tendons.

xanthomatosis [MED] A condition marked by the deposit of a yellowish or orange lipoid material in the reticuloendothelial cells, the skin, and the internal organs.

Xanthomonas [MICROBIO] A genus of bacteria in the family Pseudomonadaceae; straight rods that produce a yellow growth on agar media.

xanthomycin [MICROBIO] An antibiotic produced by a strain of *Streptomyces* and composed of two varieties, A and B; active in low concentrations against a number of gram-positive microorganisms.

xanthone [ORG CHEM] $CO(C_6H_4)_2O$ White needle crystals that are found in some plant pigments; insoluble in water, soluble in alcohol, chloroform, and benzene; melts at 173°C, sublimes at 350°C; used as a larvicide, as a dye intermediate, and in perfumes and pharmaceuticals. Also known as benzophenone oxide; dibenzopyrone; xanthene ketone.

xanthophore [CYTOL] A yellow chromatophore.

Xanthophyceae [BOT] A class of yellow-green to green flagellate organisms of the division Chrysophyta; zoologists classify these organisms in the order Heterochlorida.

xanthophyll [BIOCHEM] $C_{40}H_{56}O_2$ Any of a group of yellow, alcohol-soluble carotenoid pigments that are oxygen derivatives of the carotenes, and are found in certain flowers, fruits, and leaves. Also known as lutein.

xanthophyllite *See* clintonite.

xanthosiderite *See* goethite.

xanthoxenite [MINERAL] $Ca_2Fe(PO_4)_2(OH)\cdot 1\frac{1}{2}H_2O$ A pale yellow to brownish-yellow, monoclinic or triclinic mineral consisting of a hydrated basic phosphate of calcium and iron; occurs as masses and crusts.

xanthurenic acid [BIOCHEM] $C_{10}H_7NO_4$ Sulfur yellow crystals with a melting point of 286°C; soluble in aqueous alkali hydroxides and carbonates; excreted by pyridoxine-deficient animals after ingestion of tryptophan.

Xantusiidae [VERT ZOO] The night lizards, a family of reptiles in the suborder Sauria.

x axis [CRYSTAL] A reference axis within a quartz crystal. [MATH] **1.** A horizontal axis in a system of rectangular coordinates. **2.** That line on which distances to the right or left (east or west) of the reference line are marked, especially on a map, chart, or graph.

X band [COMMUN] A radio-frequency band extending from 5200 to 10,900 megahertz, corresponding to wavelengths of 5.77 to 2.75 centimeters.

X boson *See* superheavy boson.

X chromosome [GEN] The sex chromosome occurring in double dose in the homogametic sex and in single dose in the heterogametic sex.

X coefficient *See* nine-*j* symbol.

x coordinate [MATH] One of the coordinates of a point in a two- or three-dimensional cartesian coordinate system, equal to the directed distance of a point from the y axis in a two-dimensional system, or from the plane of the y and z axes in a three-dimensional system, measured along a line parallel to the x axis.

x-cut [CRYSTAL] A quartz-crystal cut made in such a manner that the x axis is perpendicular to the faces of the resulting slab.

Xe *See* xenon.

Xenarthra [VERT ZOO] A suborder of mammals in the order Edentata including sloths, anteaters, and related forms; posterior vertebrae have extra articular facets and vertebrae in the hip, and shoulder regions tend to be fused.

X engine [MECH ENG] An in-line engine with the cylinder banks so arranged around the crankshaft that they resemble the letter X when the engine is viewed from the end.

xenoblast [MINERAL] A mineral which has grown during metamorphism without development of its characteristic crystal faces. Also known as allotrioblast.

xenocryst [CRYSTAL] A crystal in igneous rock that resembles a phenocryst and is foreign to the enclosing body of rock. Also known as chadacryst.

xenogamy [BOT] Cross-fertilization between flowers on different plants.

xenogeneic [IMMUNOL] Referring to cells, tissues, or organs used in transplantation that originate in a different species.

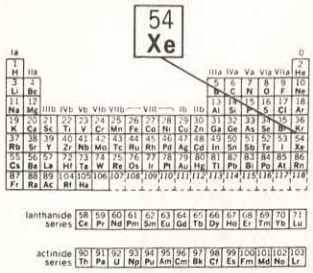
xenograft [IMMUNOL] A graft performed between members of different species.

***ortho*-xenol** *See* phenylphenol.

***para*-xenol** *See* phenylphenol.

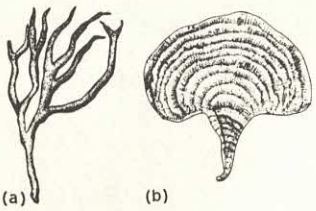
xenolith [PETR] An inclusion in an igneous rock which is not genetically related, such as an unmelted fragment of country

XENON



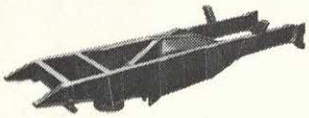
Periodic table of the chemical elements showing the position of xenon.

XENOPHYOPHORIDA



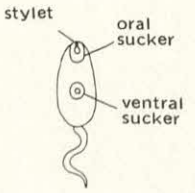
Representative fan-shaped branching forms of xenophyophorids. *(a) Stanomma dendroides (after Schulze). (b) Stannophyllum zonarium (after Schulze). (Doflein and Reichenon, Lehrbuch der Protozoenkunde, 1929)*

X FRAME



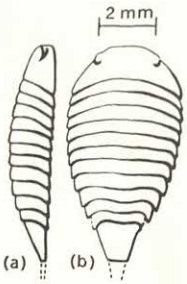
X frame with X-shaped member joining side rails. *(GMC Truck and Coach Division, General Motors Corp.)*

XIPHIDIO CERCARIA



Xiphidio cercaria showing stylet in oral sucker. *(From R. M. Cable, An Illustrated Laboratory Manual of Parasitology, Burgess, 1958)*

XIPHOSURIDA



Drawing of *Paleomerus* species of the subclass Xiphosurida. *(a)* Side view. *(b)* Dorsal view.

rock. Also known as accidental inclusion; exogenous inclusion.

xenomorphic *See* allotriomorphic.

xenon [CHEM] An element, symbol Xe, member of the noble gas family, group O, atomic number 54, atomic weight 131.30; colorless, boiling point −108°C (1 atmosphere, or 101,325 newtons per square meter), noncombustible, nontoxic, and nonreactive; used in photographic flash lamps, luminescent tubes, and lasers, and as an anesthetic.

xenon-135 [NUC PHYS] A radioactive isotope of xenon produced in nuclear reactors; readily absorbs neutrons; half-life is 9.2 hours.

xenon arc lamp [ELEC] An arc lamp filled with xenon giving a light intensity approaching that of the carbon arc; particularly valuable in projecting motion pictures.

xenon flash lamp [ELEC] A flash tube containing xenon gas, which produces an intense peak of radiant energy at a wavelength of 566 nanometers when a high direct-current pulsed voltage is applied between electrodes at opposite ends of the tube.

xenon override [NUCLEO] In a nuclear reactor, the excess reactivity provided to compensate for the poisoning effect of xenon buildup.

xenon poisoning [NUCLEO] The accumulation in a nuclear reactor of xenon-135, formed by beta decay of iodine-135; xenon-135 has the highest cross section for thermal neutron capture of any known reactor poison.

Xenophyophorida [INV ZOO] An order of Protozoa in the subclass Granuloreticulosia; includes deep-sea forms that develop as discoid to fan-shaped branching forms which are multinucleate at maturity.

Xenopneusta [INV ZOO] A small order of wormlike animals belonging to the Echiurida.

Xenopterygii [VERT ZOO] The equivalent name for Gobiesociformes.

Xenosauridae [VERT ZOO] A family of four rare species of lizards in the suborder Sauria; composed of the Chinese lizard (*Shinisaurus crocodilurus*) and three Central American species of the genus *Xenosaurus*.

xenothermal [MINERAL] Pertaining to a mineral deposit formed at high temperature but at shallow to moderate depth.

xenotime [MINERAL] $Y(PO_4)$ A tetragonal mineral of varying color, consisting of yttrium phosphate.

Xenungulata [PALEON] An order of large, digitigrade, extinct, tapirlike mammals with relatively short, slender limbs and five-toed feet with broad, flat phalanges; restricted to the Paleocene deposits of Brazil and Argentina.

xenyl [ORG CHEM] The chemical radical $C_6H_5C_6H_4$—.

xenylamine *See para*-biphenylamine.

Xeralf [GEOL] A suborder of the soil order Alfisol, having good drainage, and found in regions with rainy winters and dry summers in mediterranean climates; the surface horizons tend to become massive and hard during the dry seasons, with some soils having duripans that interfere with root growth.

Xerert [GEOL] A suborder of the soil order Vertisol, formed in a Mediterranean climate; wide surface cracks open and close once a year.

xeric [ECOL] **1.** Of or pertaining to a habitat having a low or inadequate supply of moisture. **2.** Of or pertaining to an organism living in such an environment.

xeroderma pigmentosum [MED] A genodermatosis characterized by premature degenerative changes in the form of keratoses, malignant epitheliomatosis, and hyper- and hypopigmentation.

xerodermosteosis *See* Sjögren's syndrome.

xerography [GRAPHICS] A printing method developed by the Xerox Corporation; a negative image is formed by a resinous powder on an electrically charged plate, and this image is transferred and thermally fixed onto a paper as a positive.

Xeroll [GEOL] A suborder of the soil order Mollisol, formed in a xeric moisture regime; may have a calcic, petrocalcic, or gypsic horizon, or a duripan.

xerophthalmia [MED] Dryness and thickening of the conjunctiva, sometimes following chronic conjunctivitis, disease of the lacrimal apparatus, or vitamin A deficiency.

xerophyte [ECOL] A plant adapted to life in areas where the water supply is limited.

xeroradiography [GRAPHICS] An electrostatic image-forming process in which x-rays or gamma rays form an electrostatic image on a photoconductive insulating medium; the charged image areas attract and hold a fine powder called a toner, and then the powder image is transferred to paper and fused there by heat.

xerosere [ECOL] A temporary community in an ecological succession on dry, sterile ground such as rock, sand, or clay.

xerosis conjunctivae [MED] A condition marked by silver-gray, shiny, triangular spots on both sides of the cornea, within the region of the palpebral aperture, consisting of dried epithelium, flaky masses, and microorganisms.

xerothermal period *See* xerothermic period.

xerothermic [CLIMATOL] Characterized by dryness and heat.

xerothermic period [GEOL] A postglacial interval of a warmer, drier climate. Also known as xerothermal period.

Xerult [GEOL] A suborder of the soil order Ultisol, formed in a xeric moisture regime; brownish or reddish soil with a low to moderate organic-carbon content.

X frame [DES ENG] An automotive frame which either has side rails bent in at the center of the vehicle, making the overall form that of an X, or has an X-shaped member which joins the side rails with diagonals for added strength and resistance to torsional stresses.

xi hyperon [PARTIC PHYS] Also known as xi particle. **1.** Collective name for the xi-minus and xi-zero particles, which form an isotopic-spin multiplet of quasi-stable baryons, designated Ξ, having a hypercharge of −1, a total isotopic spin of ½, a spin of ½, positive parity, and an average mass of approximately 1318 MeV (million electron volts). Also known as cascade hyperon; cascade particle. **2.** A baryon belonging to any isotopic-spin multiplet having a hypercharge of −1 and a total isotopic spin of ½; designated by $\Xi_{JP}(m)$, where m is the mass of the baryon in MeV, and J and P are its spin and parity (if known); the $\Xi_{3/2}+$ (1530) is sometimes designated Ξ^*.

xi-minus particle [PARTIC PHYS] A negatively charged xi hyperon, designated Ξ^-. Also known as cascade particle.

xi particle *See* xi hyperon.

xiphidio cercaria [INV ZOO] A digenetic trematode larva having a stylet in the oral sucker.

Xiphiidae [VERT ZOO] The swordfishes, a family of perciform fishes in the suborder Scombroidei characterized by a tremendously produced bill.

xiphisternum [ANAT] The elongated posterior portion of the sternum.

Xiphodontidae [PALEON] A family of primitive tylopod ruminants in the superfamily Anaplotherioidea from the late Eocene to the middle Oligocene of Europe.

Xiphosura [INV ZOO] The equivalent name for Xiphosurida.

Xiphosurida [INV ZOO] A subclass of primitive arthropods in the class Merostomata characterized by cephalothoracic appendages, ocelli, book lungs, a somewhat trilobed body, and freely articulating styliform telson.

Xiphydriidae [INV ZOO] A family of the Hymenoptera in the superfamily Siricoidea.

xi-zero particle [PARTIC PHYS] An uncharged xi hyperon, designated Ξ^0.

X organ [INV ZOO] A cluster of neurosecretory cells of the medulla terminales, a portion of the brain lying in the eyestalk in stalk-eyed crustaceans.

x-parallax *See* absolute stereoscopic parallax.

XPS *See* x-ray photoelectron spectroscopy.

X punch [COMPUT SCI] In an 80-column punched card, any hole in the second row from the top. Also known as eleven punch.

x-radiation *See* x-rays.

x-ray absorption [ELECTROMAG] The taking up of energy from an x-ray beam by a medium through which the beam is passing.

x-ray absorption near-edge structure [PHYS] A ripplelike structure in the x-ray absorption spectrum of a substance, at energies just above the absorption edge associated with liberation of core electrons into the continuum, and much closer to the absorption edge than the energies associated with extended x-ray absorption fine structure. Abbreviated XANES.

x-ray analysis [PHYS] The use of x-ray radiations to detect heavy elements in the presence of lighter ones, to give critical-edge absorption to identify elemental composition, and to identify crystal structures by diffraction patterns.

x-ray astronomy [ASTRON] The study of x-rays mainly from sources outside the solar system; it includes the study of

novae and supernovae in the Milky Way Galaxy, together with extragalactic radio sources.

x-ray burster [ASTRON] One of a class of celestial x-ray sources which produce bursts of x-rays in the 1–20-kiloelectron-volt range and which are characterized by rise times of less than a few seconds and decay times of a few seconds to a few minutes; the peak luminosity is of the order of 10^{38} ergs/per second (10^{31} watts) and the sources have an average equivalent temperature of 10^8 K.

x-ray crystallography [CRYSTAL] The study of crystal structure by x-ray diffraction techniques. Also known as roentgen diffractometry.

x-ray crystal spectrometer [SPECT] An instrument designed to produce an x-ray spectrum and measure the wavelengths of its components, by diffracting x-rays from a crystal with known lattice spacing.

x-ray diffraction [PHYS] The scattering of x-rays by matter, especially crystals, with accompanying variation in intensity due to interference effects. Also known as x-ray microdiffraction.

x-ray diffraction analysis [CRYSTAL] Analysis of the crystal structure of materials by passing x-rays through them and registering the diffraction (scattering) image of the rays.

x-ray diffractometer [ENG] An instrument used in x-ray analysis to measure the intensities of the diffracted beams at different angles.

x-ray emission *See* x-ray fluorescence.

x-ray film [GRAPHICS] A film base coated, usually on both sides, with an emulsion designed for use with x-rays.

x-ray fluorescence [ATOM PHYS] Emission by a substance of its characteristic x-ray line spectrum upon exposure to x-rays. Also known as x-ray emission.

x-ray fluorescence analysis [ANALY CHEM] A nondestructive physical method used for chemical analyses of solids and liquids; the specimen is irradiated by an intense x-ray beam and the lines in the spectrum of the resulting x-ray fluorescence are diffracted at various angles by a crystal with known lattice spacing; the elements in the specimen are identified by the wavelengths of their spectral lines, and their concentrations are determined by the intensities of these lines. Also known as x-ray fluorimetry.

x-ray fluorescent emission spectrometer [SPECT] An x-ray crystal spectrometer used to measure wavelengths of x-ray fluorescence; in order to concentrate beams of low intensity, it has bent reflecting or transmitting crystals arranged so that the theoretical curvature required can be varied with the diffraction angle of a spectrum line.

x-ray fluorimetry *See* x-ray fluorescence analysis.

x-ray generator [ELECTR] A metal from whose surface large amounts of x-rays are emitted when it is bombarded with high-velocity electrons; metals with high atomic weight are the most efficient generators.

x-ray goniometer [ENG] A scale designed to measure the angle between the incident and refracted beams in x-ray diffraction analysis.

x-ray hardness [ELECTROMAG] The penetrating ability of x-rays; it is an inverse function of the wavelength.

x-ray image spectrography [SPECT] A modification of x-ray fluorescence analysis in which x-rays irradiate a cylindrically bent crystal, and Bragg diffraction of the resulting emissions produces a slightly enlarged image with a resolution of about 50 micrometers.

x-ray irradiation [PHYS] Subjection of a material, object, or patient to x-rays.

x-ray machine [ENG] The x-ray tube, power supply, and associated equipment required for producing x-ray photographs.

x-ray microdiffraction *See* x-ray diffraction.

x-ray microprobe *See* microprobe.

x-ray microscope [ENG] **1.** A device in which an ultra-fine-focus x-ray tube or electron gun produces an electron beam focused to an extremely small image on a transmission-type x-ray target that serves as a vacuum seal; the magnification is by projection; specimens being examined can thus be in air, as also can the photographic film that records the magnified image. **2.** Any of several instruments which utilize x-radiation for chemical analysis and for magnification of 100–1000 diameters; it is based on contact or projection microradiography, reflection x-ray microscopy, or x-ray image spectrography.

x-ray monochromator [ENG] An instrument in which x-rays are diffracted from a crystal to produce a beam having a narrow range of wavelengths.

x-ray nebulae [ASTRON] The remnant of an ancient supernova that has been identified as a source of x-rays; an example is the Crab Nebula.

x-ray nova [ASTRON] An x-ray source which appears suddenly in the sky, dramatically increases in intensity over a few days, and then decays away with a lifetime of several months. Also known as transient x-ray source.

x-ray optics [ELECTROMAG] A title-by-analogy of those phases of x-ray physics in which x-rays demonstrate properties similar to those of light waves. Also known as roentgen optics.

x-ray photoelectron spectroscopy [SPECT] A form of electron spectroscopy in which a sample is irradiated with a beam of monochromatic x-rays and the energies of the resulting photoelectrons are measured. Abbreviated XPS. Also known as electron spectroscopy for chemical analysis (ESCA).

x-ray powder diffractometer *See* powder diffraction camera.

x-ray powder method *See* powder method.

x-ray projection microscopy *See* projection microradiography.

x-rays [PHYS] A penetrating electromagnetic radiation, usually generated by accelerating electrons to high velocity and suddenly stopping them by collision with a solid body, or by inner-shell transitions of atoms with atomic number greater than 10; their wavelengths range from about 10^5ms5 angstrom to 10^3 angstroms, the average wavelength used in research being about 1 angstrom. Also known as roentgen rays; x-radiation.

x-ray spectrograph [SPECT] An x-ray spectrometer equipped with photographic or other recording apparatus; one application is fluorescence analysis.

x-ray spectrometer [SPECT] An instrument for producing the x-ray spectrum of a material and measuring the wavelengths of the various components.

x-ray spectrometry [SPECT] The measure of wavelengths of x-rays by observing their diffraction by crystals of known lattice spacing. Also known as roentgen spectrometry; x-ray spectroscopy.

x-ray spectroscopy *See* x-ray spectrometry.

x-ray spectrum [SPECT] A display or graph of the intensity of x-rays, produced when electrons strike a solid object, as a function of wavelengths or some related parameter; it consists of a continuous bremsstrahlung spectrum on which are superimposed groups of sharp lines characteristic of the elements in the target.

x-ray star [ASTROPHYS] A source of x-rays from outside the solar system; examples are the point x-ray sources Scorpius X-1, Cygnus X-2, and the Crab x-ray source.

x-ray target [ELECTR] The metal body with which high-velocity electrons collide, in a vacuum tube designed to produce x-rays.

x-ray telescope [ENG] An instrument designed to detect x-rays emanating from a source outside the earth's atmosphere and to resolve the x-rays into an image; they are carried to high altitudes by balloons, rockets, or space vehicles; although several types of x-ray detector, involving gas counters, scintillation counters, and collimators, have been used, only one, making use of the phenomenon of total external reflection of x-rays from a surface at grazing incidence, is strictly an x-ray telescope.

x-ray therapy [MED] Medical treatment by controlled application of x-rays; a type of radiotherapy.

x-ray thickness gage [ENG] A thickness gage used for measuring and indicating the thickness of moving cold-rolled sheet steel during the rolling process without making contact with the sheet; an x-ray beam directed through the sheet is absorbed in proportion to the thickness of the material and its atomic number.

x-ray tube [ELECTR] A vacuum tube designed to produce x-rays by accelerating electrons to a high velocity by means of an electrostatic field, then suddenly stopping them by collision with a target.

x-ray unit *See* siegbahn.

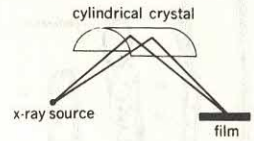
XS-3 code *See* excess-3 code.

X test [STAT] A one-sample test which rejects the hypothesis $\mu = \mu_H$ in favor of the alternative $\mu > \mu_H$ if $X - \mu_H \geq c$ where c is an appropriate critical value, X is the arithmetic mean of observations, μ_H is a given number, and μ is the (unknown) expected value of the random variable X.

XU *See* siegbahn.

X unit *See* siegbahn.

X-RAY IMAGE SPECTROGRAPHY



Arrangement of x-ray source, cylindrical crystal, and photographic film in x-ray image spectrography.

X-RAY TELESCOPE

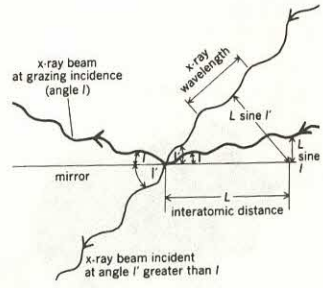


Diagram illustrating phenomenon of total external reflection of x-rays at grazing incidence, on which x-ray telescope is based. Beam incident at angle I is totally reflected, because $L \sin I$ is much smaller than x-ray wavelength, while beam incident at angle I' greater than I is not reflected.

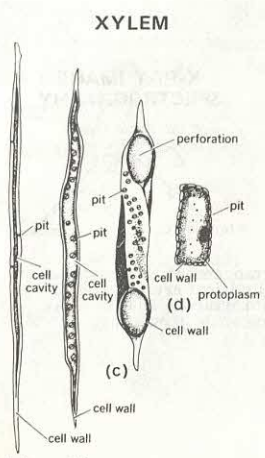


Xylem cell types. *(a)* Wood (xylem) fiber. *(b)* Tracheid. *(c)* Vessel member. *(d)* Xylem parenchyma cell. All can vary widely in structure. *(From H. J. Fuller and O. Tippo, College Botany, rev. ed., Holt, 1954)*

X wave *See* extraordinary wave.

x,y chromaticity diagram *See* Maxwell triangle.

XY coordinate plotter *See* coordinate plotter.

Xyelidae [INV ZOO] A family of hymenopteran insects in the superfamily Megalodontoidea.

xylem [BOT] The principal water-conducting tissue and the chief supporting tissue of higher plants; composed of tracheids, vessel members, fibers, and parenchyma.

xylene [ORG CHEM] $C_6H_4(CH_3)_2$ Any one of the family of isomeric, colorless aromatic hydrocarbon liquids, produced by the destructive distillation of coal or by the catalytic reforming of petroleum naphthenic fractions; used for high-octane and aviation gasolines, solvents, chemical intermediates, and the manufacture of polyester resins. Also known as dimethylbenzene; xylol.

***meta*-xylene** [ORG CHEM] $1,3\text{-}C_6H_4(CH_3)_2$ A flammable, toxic liquid; insoluble in water, soluble in alcohol and ether; boils at 139°C; used as an intermediate for dyes, a chemical intermediate, and a solvent, and in insecticides and aviation fuel. Also known as 1,3-dimethylbenzene.

***ortho*-xylene** [ORG CHEM] $1,2\text{-}C_6H_4(CH_3)_2$ A flammable, moderately toxic liquid; insoluble in water, soluble in alcohol and ether; boils at 144°C; used to make phthalic anhydride, vitamins, pharmaceuticals, and dyes, and in insecticides and motor fuels. Also known as 1,2-dimethylbenzene.

***para*-xylene** [ORG CHEM] $1,4\text{-}C_6H_4(CH_3)_2$ A toxic, combustible liquid; insoluble in water, soluble in alcohol and ether; boils at 139°C; used as a chemical intermediate, and to synthesize terephthalic acid, vitamins, and pharmaceuticals, and in insecticides. Also known as 1,4-dimethylbenzene.

xylenol [ORG CHEM] $(CH_3)_2C_6H_3OH$ Highly toxic, combustible crystals; slightly soluble in water, soluble in most organic solvents; melts at 20–76°C; used as a chemical intermediate, disinfectant, solvent, and fungicide, and for pharmaceuticals and dyestuffs. Also known as dimethylhydroxybenzene; dimethylphenol; hydroxydimethylbenzene.

xylidine [ORG CHEM] $(CH_3)_2C_6H_3NH_2$ A toxic, combustible liquid; soluble in alcohol and ether, slightly soluble in water; boils about 220°C; used as a chemical intermediate and to make dyes and pharmaceuticals. Also known as aminodimethylbenzene; aminoxylene.

xylinite [GEOL] A variety of provitrinite consisting of xylem or lignified tissue.

xylite *See* xylitol.

xylitol [ORG CHEM] $CH_2OH(CHOH)_3CH_2OH$ Pentahydric alcohols derived from xylose. Also known as xylite.

Xylocopidae [INV ZOO] A family of hairy tropical bees in the superfamily Apoidea.

xyloid coal *See* bituminous wood.

xyloid lignite *See* bituminous wood.

xylol *See* xylene.

Xylomyiidae [INV ZOO] A family of orthorrhaphous dipteran insects in the series Brachycera.

xylophagous [BIOL] Referring to an organism which feeds on wood.

xylose [BIOCHEM] $C_5H_{10}O_5$ A pentose sugar found in many woody materials; combustible, white crystals with a sweet taste; soluble in water and alcohol; melts about 148°C; used as a nonnutritive sweetener and in dyeing and tanning. Also known as wood sugar.

***meta*-xylyl bromide** *See* α-bromo-*meta*-xylene.

XY plotter *See* coordinate plotter.

XY recorder [ENG] A recorder that traces on a chart the relation of two variables, neither of which is time.

Xyridaceae [BOT] A family of terrestrial monocotyledonous plants in the order Commelinales characterized by an open leaf sheath, three stamens, and a simple racemose head for the inflorescence.

XY switching system [ELECTR] A telephone switching system consisting of a series of flat bank and wiper switches in which the wipers move in a horizontal plane, first in one direction and then in another under the control of pulses from a subscriber's dial; the switches are stacked on frames, and are operated one after another.

Y

Y *See* wye; yttrium.

yacca gum *See* acaroid resin.

yacht [NAV ARCH] A sailing or power boat used for pleasure cruises or racing.

Yagi antenna *See* Yagi-Uda antenna.

Yagi-Uda antenna [ELECTROMAG] An end-fire antenna array having maximum radiation in the direction of the array line; it has one dipole connected to the transmission line and a number of equally spaced unconnected dipoles mounted parallel to the first in the same horizontal plane to serve as directors and reflectors. Also known as Uda antenna; Yagi antenna.

yag laser *See* yttrium-aluminum-garnet laser.

yak [VERT ZOO] *Poephagus grunniens*. A heavily built, long-haired mammal of the order Artiodactyla, with a shoulder hump; related to the bison, and resembles it in having 14 pairs of ribs.

yalca [METEOROL] A local name for a severe snowstorm with a strong squally wind which occurs in the Andes Mountain passes of northern Peru.

yam [BOT] **1.** A plant of the genus *Dioscorea* grown for its edible fleshy root. **2.** An erroneous name for the Puerto Rico variety of sweet potato; the edible, starchy tuberous root of the plant.

yamase [METEOROL] A cool, onshore, easterly wind in the Senriku district of Japan in summer.

Yang-Mills theory [PARTIC PHYS] A theory of nuclear forces between nucleons based on the hypothesis that they can be derived by imposing local isospin invariance; this implies that the interaction must occur through the exchange of three massless vector bosons.

yard [CIV ENG] A facility for building and repairing ships. [MECH] A unit of length in common use in the United States and United Kingdom, equal to 0.9144 meter, or 3 feet. Abbreviated yd. [NAV ARCH] A long spar, tapered at the ends, attached at its middle to a mast and running athwartships, and used to support a sail.

yardage [MECH] An amount expressed in yards. [MIN ENG] The extra compensation a miner receives in addition to the mining price for working in a narrow place or in deficient coal, usually at a certain price per yard advanced.

yardarm [NAV ARCH] One of the ends of a yard.

yard crane *See* crane truck.

yard maintenance [ENG] A category of maintenance that includes the complete rebuilding of parts, subassemblies, or components.

yardstick compass [GRAPHICS] A simple arrangement consisting of two fully adjustable clips that slide on an ordinary yardstick; one clip has a sharp point, the other a pencil holder; the compass is used to make large, accurate circles.

Yarmouth interglacial [GEOL] The second interglacial stage of the Pleistocene epoch in North America, following the Kansan glacial stage and before the Illinoian.

yarn [TEXT] A continuous strand of two or more plies of carded or combed fibers twisted together, or a single filament of natural or synthetic fibers used for weaving or knitting.

yarn-dyed [TEXT] Pertaining to a fabric made of yarns dyed before weaving or knitting.

yaw [MECH] **1.** The rotational or oscillatory movement of a ship, aircraft, rocket, or the like about a vertical axis. Also known as yawing. **2.** The amount of this movement, that is, the angle of yaw. **3.** To rotate or oscillate about a vertical axis.

yaw acceleration [MECH] The angular acceleration of an aircraft or missile about its normal or Z axis.

yaw angle *See* angle of yaw.

yaw axis [MECH] A vertical axis through an aircraft, rocket, or similar body, about which the body yaws; it may be a body, wind, or stability axis. Also known as yawing axis.

yaw damper [AERO ENG] A control system or device that reduces the yaw of an aircraft, guided missile, or the like.

yaw in bore [ORD] The maximum angle between the axis of the bore of a gun and the axis of the projectile which can occur due to the clearance between the bore diameter and the bourrelets.

yaw indicator [AERO ENG] A device that measures the angular direction of the airflow relative to the longitudinal vertical plane of the aircraft; this may be accomplished by a balanced vane or by a differential pressure sensor that aligns the detector to the airflow, and in so doing transmits the measured angle between the normal axis and the detector as the yaw angle.

yawing *See* yaw.

yawing axis *See* yaw axis.

yaws [MED] An infectious tropical disease of humans caused by the spirochete *Treponema pertenue;* manifested by a primary cutaneous lesion followed by a granulomatous skin eruption.

yaw simulator [CONT SYS] A test instrument used to derive and thereby permit study of probable aerodynamic behavior in controlled flight under specific initial conditions; certain components of the missile guidance system, such as the receiver or servo loop, are connected into the simulator circuitry; also, certain aerodynamic parameters of the specific missile must be known and set into the simulator; applicable to the yaw plane.

y axis [CRYSTAL] A line perpendicular to two opposite parallel faces of a quartz crystal. [MATH] **1.** A vertical axis in a system of rectangular coordinates. **2.** That line on which distances above or below (north or south) the reference line are marked, especially on a map, chart, or graph.

Yb *See* ytterbium.

Y block [MET] A Y-shaped test casting used to appraise low-shrinkage alloys.

Y chromosome [GEN] The sex chromosome found only in the heterogametic sex.

Y circulator [ELECTROMAG] Circulator in which three identical rectangular waveguides are joined to form a symmetrical Y-shaped configuration, with a ferrite post or wedge at its center; power entering any waveguide will emerge from only one adjacent waveguide.

Y connection *See* Y network.

y coordinate [MATH] One of the coordinates of a point in a two- or three-dimensional coordinate system, equal to the directed distance of a point from the x axis in a two dimensional system, or from the plane of the x and z axes in a three-dimensional coordinate system, measured along a line parallel to the y axis.

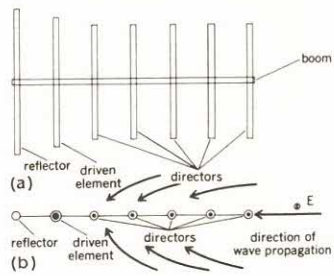
Y cut [CRYSTAL] A quartz-crystal cut such that the y axis is perpendicular to the faces of the resulting slab.

yd *See* yard.

Y-delta transformation [ELEC] One of two electrically equivalent networks with three terminals, one being connected internally by a Y configuration and the other being connected internally by a delta transformation. Also known as delta-Y transformation; pi-T transformation.

year [ASTRON] Any of several units of time based on the

YAGI-UDA ANTENNA

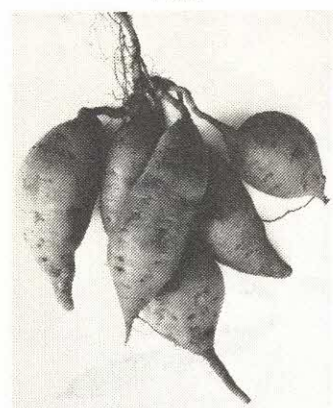


Yagi-Uda antenna. *(a)* View from above. *(b)* Side view; arrows show energy flow close to parasitic elements.

YAK

Yak *(Poephagus grunniens)* showing characteristic features.

YAM



Puerto Rico sweet potato known as the yam. *(USDA)*

revolution of the earth about the sun; the tropical year to which the calendar is adjusted is the period required for the sun's longitude to increase 360°; it is about 365.24220 mean solar days. Abbreviated yr.

yeast [MYCOL] A collective name for those fungi which possess, under normal conditions of growth, a vegetative body (thallus) consisting, at least in part, of simple, individual cells.

yellow [OPTICS] The hue evoked in an average observer by monochromatic radiation having a wavelength in the approximate range from 577 to 597 nanometers; however, the same sensation can be produced in a variety of other ways.

yellow arsenic *See* orpiment.

yellow cake [MIN ENG] The final precipitate formed in the milling of uranium ores.

yellow cedar *See* Alaska cedar.

yellow coal *See* tasmanite.

yellow copperas *See* copiapite.

yellow cypress *See* Alaska cedar.

yellow dwarf [PL PATH] Any of several plant viral diseases characterized by yellowing of the foliage and stunting of the plant.

yellow fat cell [HISTOL] A large, generally spherical fat cell with a thin shell of protoplasm and a single enlarged fat droplet which appears yellowish.

yellow fever [MED] An acute, febrile, mosquito-borne viral disease characterized in severe cases by jaundice, albuminuria, and hemorrhage.

yellow-green algae [BOT] The common name for members of the class Xanthophyceae.

yellow lead ore *See* wulfenite.

yellow leaf blotch [PL PATH] A fungus disease of alfalfa caused by *Pyrenopeziza medicaginis* characterized by the appearance of yellow or orange blotches with small black dots on the foliage.

yellow mud [GEOL] Mud containing sediment having a characteristic yellow color, resulting from certain iron compounds.

yellow phosphorus *See* white phosphorus.

yellow precipitate *See* mercuric oxide.

yellow prussiate of potash *See* potassium ferrocyanide.

yellow prussiate of soda *See* sodium ferrocyanide.

yellow pyoktanin *See* auramine hydrochloride.

yellow pyrite *See* chalcopyrite.

yellow quartz *See* citrine.

yellows [PL PATH] Any of various fungus diseases of plants characterized by yellowing of the leaves which later turn brown, become brittle, and die; affects cabbage, lettuce, cauliflower, peach, sugarbeet, and other plants.

yellow salt *See* uranyl nitrate.

yellow scale [MATER] The commercial name for low-grade paraffin wax.

Yellow Sea [GEOGR] An inlet of the Pacific Ocean between northeastern China and Korea.

yellow snow [HYD] Snow with a golden or yellow appearance because of the presence of pine or cypress pollen.

yellow tellurium *See* sylvanite.

Yerkes system *See* MK system.

Yersinia [MICROBIO] A genus of bacteria in the family Enterobacteriaceae; ovoid or rod-shaped cells that are nonmotile at 37°C (two species are motile at temperatures below 37°C); one species causes plague in humans and animals.

yew [BOT] A genus of evergreen trees and shrubs, *Taxus*, with the fruit, an aril, containing a single seed surrounded by a scarlet, fleshy, cuplike envelope; the leaves are flat and acicular.

Female branchlet and single leaf of Japanese yew *(Taxus cuspidata)*.

Y factor [PETRO ENG] An empirical relationship of bubble-point data (pressure and formation volume) used to smooth oil reservoir solution-gas/oil-ratio data for graphical presentation.

Y gun [ORD] Two-barreled, antisubmarine gun shaped like the letter Y, used to throw depth charges to either side of the stern of the vessel on which the gun is mounted.

yield [ENG] Product of a reaction or process as in chemical reactions or food processing. [MECH] That stress in a material at which plastic deformation occurs. [ORD] The total effective energy released in a nuclear explosion; usually expressed in terms of the equivalent tonnage of trinitrotoluene (TNT) required to produce the same energy release.

yielding arches [MIN ENG] Steel arches installed in underground openings as the ground is removed to support loads caused by changing ground movement or by faulted and fractured rock; when the ground load exceeds the design load of the arch as installed, yielding takes places in the joint of the arch, permitting the overburden to settle into a natural arch of its own and thus tending to bring all forces into equilibrium.

yielding floor [MIN ENG] A soft floor which heaves and flows into open spaces when subjected to heavy pressure from packs or pillars.

yielding prop [MIN ENG] A steel prop which is adjustable in length and incorporates a sliding or flexible joint which comes into operation when the roof pressure exceeds a set load or value.

yield-pillar system [MIN ENG] A method of roof control whereby the natural strength of the roof strata is maintained by the relief of pressure in working areas and the controlled transference of load to abutments which are clear of the workings and roadways.

yield point [MECH] The lowest stress at which strain increases without increase in stress.

yield strength [MECH] The stress at which a material exhibits a specified deviation from proportionality of stress and strain.

yield stress [MECH] The lowest stress at which extension of the tensile test piece increases without increase in load.

yield temperature [ENG] The temperature at which a fusible plug device melts and is dislodged by its holder and thus relieves pressure in a pressure vessel; it is caused by the melting of the fusible material, which is then forced from its holder.

yig device [ELECTR] A filter, oscillator, parametric amplifier, or other device that uses an yttrium-iron-garnet crystal in combination with a variable magnetic field to achieve wide-band tuning in microwave circuits. Derived from yttrium-iron-garnet device.

yig filter [ELECTR] A filter consisting of an yttrium-iron-garnet crystal positioned in a magnetic field provided by a permanent magnet and a solenoid; tuning is achieved by varying the amount of direct current through the solenoid; the bias magnet serves to tune the filter to the center of the band, thus minimizing the solenoid power required to tune over wide bandwidths.

yig-tuned parametric amplifier [ELECTR] A parametric amplifier in which tuning is achieved by varying the amount of direct current flowing through the solenoid of a yig filter.

yig-tuned tunnel-diode oscillator [ELECTR] Microwave oscillator in which precisely controlled wide-band tuning is achieved by varying the current through a tuning solenoid that acts on a yig filter in the tunnel-diode oscillator circuit.

Y junction [ELECTROMAG] A waveguide in which the longitudinal axes of the waveguide form a Y.

ylem [ASTROPHYS] The primordial matter which according to the big bang theory existed just prior to the formation of the chemical elements.

Y level [ENG] A surveyor's level with Y-shaped rests to support the telescope. Also known as wye level.

Y ligament *See* iliofemoral ligament.

ylium ion *See* enium ion.

Y network [ELEC] A star network having three branches. Also known as Y connection.

yogurt [FOOD ENG] A fermented milk food made by adding cultures of *Lactobacillus acidophilus* and *Streptococcus thermophilus* to skimmed cow's milk and milk solids.

yoke [ARCH] A horizontal member forming the head of a window frame. [DES ENG] A clamp or similar device to embrace and hold two other parts. [ELECTR] *See* deflection yoke. [ELECTROMAG] Piece of ferromagnetic material without windings, which permanently connects two or more magnet cores. [ENG] **1.** A bar of wood used to join the necks of draft animals for working together. **2.** *See* wye. [MECH ENG] A slotted crosshead used instead of a connecting rod in some steam engines.

yoked basin *See* zeugogeosyncline.

yolk [BIOCHEM] **1.** Nutritive material stored in an ovum. **2.** The yellow spherical mass of food material that makes up the central portion of the egg of a bird or reptile.

yolk larva *See* vitellarium.

yolk sac [EMBRYO] A distended extraembryonic extension, heavy-laden with yolk, through the umbilicus of the midgut of the vertebrate embryo.

Y organ [INV ZOO] Either of a pair of nonneural structures found in the anterior portion of the crustacean body; source of the molting hormone, ecdysone.

Yorkian [GEOL] A European stage of geologic time forming

part of the lower Upper Carboniferous, above Lanarkian and below Staffordian, equivalent to part of the lower Westphalian.

York-Scheibel column *See* Scheibel extractor.

youg [METEOROL] A hot wind during unsettled summer weather in the Mediterranean.

Young construction [OPTICS] A graphical procedure for tracing a light ray through a boundary between two media having different refractive indices.

Young-Helmholtz theory [PHYSIO] A theory of color vision according to which there are three types of color receptors that respond to short, medium, and long waves respectively; primary colors are those that stimulate most successfully the three types of receptors. Also known as Helmholtz theory.

young ice [HYD] Newly formed ice in the transitional stage of development from ice crust to winter ice.

Younginiformes [PALEON] A suborder of extinct small lizardlike reptiles in the order Eosuchia, ranging from the Middle Permian to the Lower Triassic in South Africa.

Young's modulus [MECH] The ratio of a simple tension stress applied to a material to the resulting strain parallel to the tension.

Young's two-slit interference [OPTICS] Interference of light from two parallel slits which are illuminated by light from a single slit, which in turn is illuminated by a source; the interference can be seen by letting the light fall on a screen, which then shows a series of parallel fringes.

youth [GEOL] The first stage of the cycle of erosion in which the original surface or structure is the dominant topographic feature; characterized by broad, flat-topped interstream divides, numerous swamps and shallow lakes, and progressive increase of local relief. Also known as topographic youth.

y parameter [ELECTR] One of a set of four transistor equivalent-circuit parameters, used especially with field-effect transistors, that conveniently specify performance for small voltage and current in an equivalent circuit; the equivalent circuit is a current source with shunt impedance at both input and output.

Yponomeutidae [INV ZOO] A heterogeneous family of small, often brightly colored moths in the superfamily Tineoidea; the head is usually smooth with reduced or absent ocelli.

Ypsilothuriidae [INV ZOO] A family of echinoderms in the order Dactylochirotida having 8–10 tentacles, a permanent spire on the plates of the test, and the body fusiform or U-shaped.

Y punch [COMPUT SCI] In a standard punched card, a hole in the topmost row.

yr *See* year.

yrast state [NUC PHYS] An energy state of a nucleus whose energy is less than that of any other state with the same spin.

Y search [NAV] A sector search with one of the legs modified to provide for coverage of the interior of the sector.

Y signal *See* luminance signal.

ytterbia *See* ytterbium oxide.

ytterbium [CHEM] A rare-earth metal of the yttrium subgroup, symbol Yb, atomic number 70, atomic weight 173.04; lustrous, malleable, soluble in dilute acids and liquid ammonia, reacts slowly with water; melts at 824°C, boils at 1427°C; used in chemical research, lasers, garnet doping, and x-ray tubes.

ytterbium oxide [INORG CHEM] Yb_2O_3 A colorless compound, melts at 2346°C, dissolves in hot dilute acids; used to prepare alloys, ceramics, and special glasses. Also known as ytterbia.

yttria *See* yttrium oxide.

yttrium [CHEM] A rare-earth metal, symbol Y, atomic number 39, atomic weight 88.905; dark-gray, flammable (as powder), soluble in dilute acids and potassium hydroxide solution, and decomposes in water; melts at 1500°C, boils at 2927°C; used in alloys and nuclear technology and as a metal deoxidizer.

yttrium acetate [ORG CHEM] $Y(C_2H_3O_2)_3 \cdot 8H_2O$ Colorless, water-soluble crystals used as an analytical reagent.

yttrium-aluminum-garnet laser [OPTICS] A four-level infrared laser in which the active material is neodymium ions in an yttrium-aluminum-garnet crystal; it can provide a continuous output power of several watts. Abbreviated yag laser.

yttrium chloride [INORG CHEM] $YCl_3 \cdot 6H_2O$ Reddish, transparent, water- and alcohol-soluble prisms; decomposes at 100°C; used as an analytical reagent.

yttrium-iron-garnet device *See* yig device.

yttrium oxide [INORG CHEM] Y_2O_3 A yellowish powder, insoluble in water, soluble in dilute acids; used as television tube phosphor and microwave filters. Also known as yttria.

yttrium sulfate [INORG CHEM] $Y_2(SO_4)_3 \cdot 8H_2O$ Reddish crystals that are soluble in concentrated sulfuric acid, slightly soluble in water; decomposes at 700°C; used as an analytical reagent.

yttrocrasite [MINERAL] $(Y,Th,U,Ca)_2Ti_4O_{11}$ A black, orthorhombic mineral consisting of an oxide of rare earths and titanium.

yttrotantalite [MINERAL] $(Y,U,Fe)(Ta,Nb)O_4$ A black or brown, orthorhombic mineral consisting of an oxide of iron, yttrium, uranium, columbium, and tantalum; occurs in prismatic and tabular form.

Yucatán Current [OCEANOGR] A rapid northward flowing current along the western side of the Yucatán Strait; generally loops to the north and exits as the Florida Current.

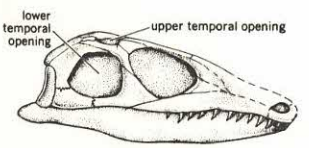
yugawaralite [MINERAL] $CaAl_2Si_6O_{16} \cdot 4H_2O$ A zeolite mineral consisting of hydrous calcium aluminum silicate.

Yukawa force [NUC PHYS] The strong, short-range force between nucleons, as calculated on the assumption that this force is due to the exchange of a particle of finite mass (Yukawa meson), just as electrostatic forces are interpreted in quantum electrodynamics as being due to the exchange of photons.

Yukawa meson [PARTIC PHYS] A particle, having a finite rest mass, whose exchange between nucleons is postulated to account for the strong, short-range forces between them; such a contributor is the pi meson.

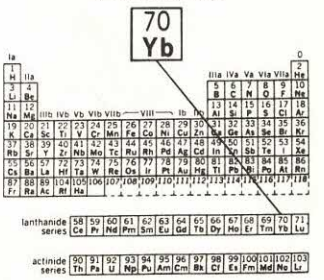
Yukawa potential [NUC PHYS] The potential function that is associated with the Yukawa force, with the form $V(r) = -V_0\,(b/r)\,\exp\,(-r/b)$, where r is the distance between the nucleons and V_0 and b are constants, giving measures of the strength and range of the force respectively.

YOUNGINIFORMES



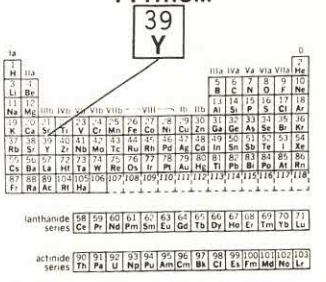
Lateral view of skull of *Youngina*, a representative of Younginiformes, Upper Permian to Lower Triassic. *(From A. S. Romer, Vertebrate Paleontology, 3d ed., University of Chicago Press, 1966)*

YTTERBIUM



Periodic table of the chemical elements showing the position of ytterbium.

YTTRIUM



Periodic table of the chemical elements showing the position of yttrium.

Z

Zalambdalestidae [PALEON] A family of extinct insectivorous mammals belonging to the group Proteutherea; they occur in the Late Cretaceous of Mongolia.

Zanclidae [VERT ZOO] The Moorish idols, a family of Indo-Pacific perciform fishes in the suborder Acanthuroidei.

Zanzibar gum [MATER] A combustible, hard, fossil-type copal, which is insoluble in most solvents and melts at about 245°C; used in varnishes.

Zapoididae [VERT ZOO] The Northern Hemisphere jumping mice, a family of the order Rodentia with long legs and large feet adapted for jumping.

zaratite [MINERAL] $Ni_3(CO_3)(OH)_4 \cdot 4H_2O$ An emerald-green mineral consisting of a hydrous basic nickel carbonate and occurring in incrustations or compact masses.

zastruga *See* sastruga.

z axis [CRYSTAL] The optical axis of a quartz crystal, perpendicular to both the x and y axes. [MATH] One of the three axes in a three-dimensional cartesian coordinate system; in a rectangular coordinate system it is perpendicular to the x and y axes.

Z^0 boson [PARTIC PHYS] A hypothetical intermediate vector boson which carries no electric charge; it is believed that neutral current interactions are produced by exchange of these bosons.

Z cam [ASTRON] A representative type of variable star; it is eruptive with a cycle of about 10–600 days; magnitude ranges from 2 to 6.

Z Camelopardalis stars [ASTRON] A class of dwarf novae which exhibit unpredictable, and sometimes very protracted, pauses in the decline from maximum to minimum brightness.

Z coefficient [QUANT MECH] A coefficient used in the transformation between modes of coupling eigenfunctions of three angular momenta, and especially in calculating matrix elements in beta decay and similar problems.

z coordinate [MATH] One of the coordinates of a point in a three-dimensional coordinate system, equal to the directed distance of a point from the plane of the x and y axes, measured along a line parallel to the z axis.

zebra [VERT ZOO] Any of three species of African mammals belonging to the family Equidae distinguished by a coat of black and white stripes.

zebu [VERT ZOO] A domestic breed of cattle, indigenous to India, belonging to the family Bovidae, distinguished by long drooping ears, a dorsal hump between the shoulders, and a dewlap under the neck; known as the Brahman in the United States.

Zechstein [GEOL] A European series of geologic time, especially in Germany: Upper Permian (above Rothliegende).

Zeeman displacement [SPECT] The separation, in wave numbers, of adjacent spectral lines in the normal Zeeman effect in a unit magnetic field, equal (in centimeter-gram-second Gaussian units) to $e/4\pi mc^2$, where e and m are the charge and mass of the electron, or to approximately 4.67×10^{-5} (centimeter)$^{-1}$(gauss)$^{-1}$.

Zeeman effect [SPECT] A splitting of spectral lines in the radiation emitted by atoms or molecules in a static magnetic field.

Zeeman energy [ATOM PHYS] The energy of interaction between an atomic or molecular magnetic moment and an applied magnetic field.

Zeiformes [VERT ZOO] The dories, a small order of teleost fishes, distinguished by the absence of an orbitosphenoid bone, a spinous dorsal fin, and a pelvic fin with a spine and five to nine soft rays.

zein [MATER] A combustible, white to yellowish protein powder derived from corn; insoluble in water, soluble in dilute alcohol; used in inks, fibers, microencapsulation, and coatings for paper and food.

Zemorrian [GEOL] A North American stage of Oligocene and Miocene geologic time, above Refugian and below Saucesian.

Zener breakdown [ELECTR] Nondestructive breakdown in a semiconductor, occurring when the electric field across the barrier region becomes high enough to produce a form of field emission that suddenly increases the number of carriers in this region. Also known as Zener effect.

zener diode [ELECTR] A semiconductor breakdown diode, usually constructed of silicon, in which reverse-voltage breakdown is based on the Zener effect.

Zener diode voltage regulator *See* diode voltage regulator.

Zener effect *See* Zener breakdown.

Zener voltage *See* breakdown voltage.

zenith [ASTRON] That point of the celestial sphere vertically overhead.

zenithal chart *See* azimuthal chart.

zenithal hourly rate [ASTRON] The number of meteors in a meteor shower which would be observed per hour if the radiant of the meteor shower were overhead and there were no moonlight.

zenithal rain [METEOROL] In the tropics or subtropics, the rainy season which recurs annually or semiannually at about the time that the sun is most nearly overhead (at zenith).

zenith distance [ASTRON] Angular distance from the zenith; the arc of a vertical circle between the zenith and a point on the celestial sphere, measured from the zenith through 90°, for bodies above the horizon. Also known as co-altitude.

zenith telescope [OPTICS] A type of telescope that is fixed in the vertical or moves only a small amount from the vertical; it is used to get positional measurement of stars moving near the zenith.

zenocentric coordinates [ASTRON] Coordinates that indicate the position of a point on the surface of Jupiter, determined by the direction of a line joining the center of Jupiter to the point.

zenodiagnosis [MED] A procedure of using a suitable arthropod to transfer an infectious agent from a patient to a susceptible laboratory animal.

zenographic coordinates [ASTRON] Coordinates that indicate the position of a point on the surface of Jupiter, determined by the direction of a line perpendicular to the mean surface at the point.

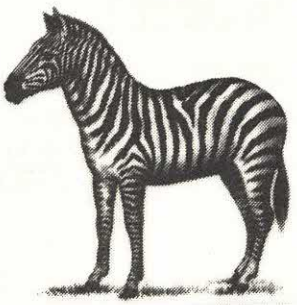
Zeno's paradox [MATH] An erroneous group of paradoxes dealing with motion; the most famous one concerns two objects, one chasing the other which has a given head start, where the chasing one moves faster yet seemingly never catches the other.

Zeoidea [VERT ZOO] An equivalent name for Zeiformes.

zeolite [MINERAL] **1.** A group of white or colorless, sometimes red or yellow, hydrous tectosilicate minerals characterized by an aluminosilicate tetrahedral framework, ion-exchangeable large cations, and loosely held water molecules permitting reversible dehydration. **2.** Any mineral of the zeolite group, such as analcime, chabazite, natrolite, and stilbite.

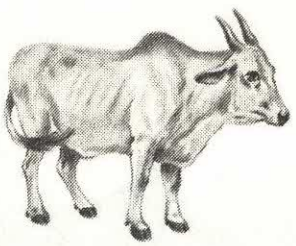
zeolite catalyst [INORG CHEM] Hydrated aluminum and calcium (or sodium) silicates (for example, $CaO \cdot 2Al_2O_3 \cdot 5SiO_2$ or

ZEBRA



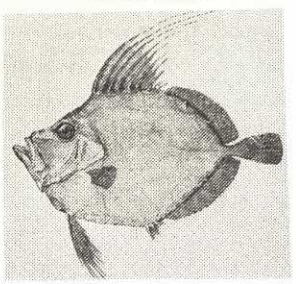
Grevy's zebra *(Equus grevyi)*, the largest species of zebra.

ZEBU



Zebu, or Brahman, a domestic breed of cattle.

ZEIFORMES



John dory *(Zenopsis ocellata)*, a representative of Zeiformes, showing characteristic features. *(After G. B. Goode, Fishery Industries of the United States, sect. 1, 1884)*

$Na_2O \cdot 2Al_2O_3 \cdot 5SiO_2$) made with controlled porosity; used as a catalytic cracking catalyst in petroleum refineries, or loaded with catalyst for other chemical reactions.

zeolite facies [PETR] Metamorphic rocks formed in the transitional period from diagenesis to metamorphism, at pressures of about 2000–3000 bars and temperatures of 200–300°C.

zeolitization [GEOL] Introduction of or replacement by a zeolite mineral.

Zeomorphi [VERT ZOO] An equivalent name for Zeiformes.

zeotrope [PHYS CHEM] A nonazeotropic liquid mixture which may be separated by distillation, and in which the components are miscible in all proportions (homogeneous zeotrope or homozeotrope) or not miscible in all proportions (heterogeneous zeotrope or heterozeotrope).

zephyr [METEOROL] Any soft, gentle breeze.

Zepp antenna [ELECTROMAG] Horizontal antenna which is a multiple of a half-wavelength long and is fed at one end by one lead of a two-wire transmission line that is some multiple of a quarter-wavelength long.

Zerewitinoff reagent [ANALY CHEM] A light-colored methylmagnesium iodide–*n*-butyl ether solution that reacts rapidly with moisture and oxygen; used to determine water, alcohols, and amines in inert solvents.

zero [MATH] The additive identity element of an algebraic system.

zero-access instruction [COMPUT SCI] An instruction consisting of an operation which does not require the designation of an address in the usual sense; for example, the instruction, "shift left 0003," has in its normal address position the amount of the shift desired.

zero-access storage [COMPUT SCI] Computer storage for which waiting time is negligible.

zero-address instruction format [COMPUT SCI] An instruction format in which the instruction contains no address, used when an address is not needed to specify the location of the operand, as in repetitive addressing. Also known as addressless instruction format.

zero adjuster [ENG] A device for adjusting the pointer position of an instrument or meter to read zero when the measured quantity is zero.

zero beat [ELEC] The condition in which a circuit is oscillating at the exact frequency of an input signal, so no beat tone is produced or heard.

zero-beat reception *See* homodyne reception.

zero bevel gears [DES ENG] A special form of bevel gear having curved teeth with a zero-degree spiral angle.

zero bias [ELECTR] The condition in which the control grid and cathode of an electron tube are at the same direct-current voltage.

zero-bias tube [ELECTR] Vacuum tube which is designed so that it may be operated as a class B amplifier without applying a negative bias to its control grid.

zero branch [SPECT] A spectral band whose Fortrat parabola lies between two other Fortrat parabolas, with its vertex almost on the wave number axis.

zero compression [COMPUT SCI] Any of a number of techniques used to eliminate the storage of nonsignificant leading zeros during data processing in a computer.

zero condition [COMPUT SCI] The state of a magnetic core or other computer memory element in which it represents the value 0. Also known as nought state; zero state.

zero curtain [GEOL] The layer of ground between the active layer and permafrost where the temperature remains nearly constant at 0°C.

zero defects [IND ENG] A program for improving product quality to the point of perfection, so there will be no failures due to defects in construction.

zero deflection [ORD] Adjustment of a sight exactly parallel to the axis of the bore of the gun to which it is attached.

zero error [ELECTR] Delay time occurring within the transmitter and receiver circuits of a radar system; for accurate range data, this delay time must be compensated for in the calibration of the range unit.

zero-field emission *See* field-free emission current.

zerogel [CHEM] A gel which has dried until apparently solid; sometimes it will swell or redisperse to form a sol when treated with a suitable solvent.

zero geodesic *See* null geodesic.

zero gravity *See* weightlessness.

zero-gravity switch [ELEC] A switch that closes as weightlessness or zero gravity is approached; in one version, conductive sphere of mercury encompasses two contacts at zero gravity but flattens away from the upper contact under the influence of gravity. Also known as weightlessness switch.

zero height of burst [ORD] Condition obtained when rounds fired with the same fuse setting and the same quadrant elevation result in an equal number of airbursts and bursting of the projectile at the instant of ground impact.

zero in [ORD] **1.** To adjust the sight settings of a weapon by calibrated results of firings. **2.** To adjust any device to another so that automatic synchronization results.

zero layer [OCEANOGR] A reference level in the ocean, at which horizontal motion is at a minimum.

zero length [AERO ENG] In rocket launchers, zero length indicates that the launcher is designed to hold the rocket in position for launching but not to give it guidance.

zero-length launcher [ORD] A launcher that holds a vehicle in position and releases the rocket simultaneously at two points so that the buildup of thrust, normally rocket thrust, is sufficient to take the missile or vehicle directly into the air without need of a takeoff run and without imposing a pitch rate release.

zero-length rocket [ORD] A rocket with a sufficient thrust to launch a vehicle directly into the air.

zero level [ENG ACOUS] Reference level used for comparing sound or signal intensities; in audio-frequency work, a power of 0.006 watt is generally used as zero level; in sound, the threshold of hearing is generally assumed as the zero level.

zero-level address [COMPUT SCI] The operand contained in an instruction so structured as to make immediate use of the operand.

zero-lift angle [AERO ENG] The angle of attack of an airfoil when its lift is zero.

zero-lift chord [AERO ENG] A chord taken through the trailing edge of an airfoil in the direction of the relative wind when the airfoil is at zero-lift angle of attack.

zero method *See* null method.

zero of a function [MATH] Any point where a function assumes the value zero.

zero-order hold [CONT SYS] A device which converts a sampled output into an output which is held constant between samples at the last sampled value.

zero-order reaction [PHYS CHEM] A reaction for which reaction rate is independent of the concentrations of the reactants; for example, a photochemical reaction in which the rate is determined by the intensity of light.

zero output [ELECTR] **1.** Voltage response obtained from a magnetic cell in a zero state by a reading or resetting process. **2.** Integrated voltage response obtained from a magnetic cell in a zero state by a reading or resetting process; a ratio of a one output to a zero output is a one-to-zero ratio.

zero phase-sequence relay [ELEC] Relay which functions in conformance with the zero phase-sequence component of the current, voltage, or power of the circuit.

zero point [ORD] The location of the center of a burst of an atomic missile at the instant of detonation; the zero point may be in the air, or on or beneath the surface of land or water, dependent upon the type of burst, and it is thus to be distinguished from ground zero.

zero-point energy [STAT MECH] The kinetic energy retained by the molecules of a substance at a temperature of absolute zero.

zero-point entropy [STAT MECH] The entropy that a substance such as glass, which is not in thermodynamic equilibrium, retains at a temperature of absolute zero.

zero-point vibration [STAT MECH] The vibrational motion which molecules in a crystal lattice, or particles in any oscillator potential, retain at a temperature of absolute zero; it is quantum-mechanical in origin. Also known as residual vibration.

zero population growth [ECOL] A theory which advocates that there be no increase in population, that each person replace only oneself, and that birth control be practiced in all nations.

zero potential [ELEC] Expression usually applied to the potential of the earth, as a convenient reference for comparison.

zero-power reactor [NUCLEO] An experimental nuclear reactor operated at low neutron flux and at a power level so low that no forced cooling is required; fission product activity in the fuel is then sufficiently low to permit handling the fuel after use.

zero state *See* zero condition.

zero subcarrier chromaticity [COMMUN] Chromaticity, in

color television, which is intended to be displayed when the subcarrier amplitude is zero.

zero-sum game [MATH] A two-person game where the sum of the payoffs to the two players is zero for each move.

zero suppression [COMPUT SCI] A process of replacing leading (nonsignificant) zeros in a numeral by blanks; it is an editing operation designed to make computable numerals easily readable to the human eye.

zero time reference [ELECTR] Reference point in time from which the operations of various radar circuits are measured.

zero twist [ORD] Rifling with no twist; some designs have this condition at the origin of rifling for guns with increasing twist rifling.

zeta function *See* Riemann zeta function.

Zeta Geminorum stars [ASTRON] A subgroup of classical Cepheid variable stars whose variation of magnitude with time for one complete cycle produces a quasi-bell-shaped curve.

zeta potential [PHYS] The electrical potential that exists across the interface of all solids and liquids. Also known as electrokinetic potential.

zeugmatography [MED] A technique that combines nuclear magnetic resonance spectroscopy with methods of focusing and scanning radio waves to produce cross-sectional images of the human body that indicate proton density and relaxation times, and distinguish normal tissue from tumors. Also known as nuclear magnetic resonance tomography.

zeugogeosyncline [GEOL] A geosyncline in a craton or stable area, within which is also an uplifted area, receiving clastic sediments. Also known as yoked basin.

zeunerite [MINERAL] $Cu(UO_2)_2(AsO_4)_2 \cdot 10\text{–}16H_2O$ A green secondary mineral of the autunite group consisting of a hydrous copper uranium arsenate; it is isomorphous with uranospinite.

zeylanite *See* ceylonite.

zibeline [TEXT] A soft, lustrous woolen fabric with a long nap running in one direction, often containing mohair, alpaca, or camel's hair.

Ziegler catalyst [MATER] A special catalyst developed to produce stereospecific polymers, and derived from a transition-metal halide and a metal hydride or metal alkyl.

Ziegler process [CHEM ENG] A process for the low-pressure linear polymerization of ethylene and stereospecific polymerization of propylene; the product is a high-density polymer or elastomer.

Ziehl-Neelsen stain [MICROBIO] A procedure for acid-fast staining of tubercle bacilli with carbol fuchsin.

zigzag lightning [GEOPHYS] Ordinary lightning of a cloud-to-ground discharge that appears to have a single, but very irregular, lightning channel; viewed from the right angle, this may be observed as beaded lightning.

zigzag reflections [ELECTROMAG] From a layer of the ionosphere, high-order multiple reflections which may be of abnormal intensity; they occur in waves which travel by multihop ionosphere reflections and finally turn back toward their starting point by repeated reflections from a slightly curved or sloping portion of an ionized layer.

Zimm plot [ANALY CHEM] A graphical determination of the root-square-mean end-to-end distances of coillike polymer molecules during scattered-light photometric analyses.

zinc [CHEM] A metal of group IIb, symbol Zn, atomic number 30, atomic weight 65.37; explosive as powder; soluble in acids and alkalies, insoluble in water; strongly electropositive; melts at 419°C, boils at 907°C. [MET] A shiny, bluish-white, lustrous metal that is ductile when pure; used in alloys, metal coatings, electrical fuses, anodes, and dry cells.

zinc-65 [NUC PHYS] A radioactive isotope of zinc, which has a 250-day half-life with beta and gamma radiation; used in alloy-wear tracer studies and body metabolism studies.

zinc acetate [ORG CHEM] $Zn(C_2H_3O_2)_2 \cdot 2H_2O$ Pearly-white crystals with an astringent taste; soluble in water and alcohol; decomposes at 200°C; used to preserve wood in textile dyeing, and as an analytical reagent, a feed additive, and a polymer cross-linking agent.

zincaluminite [MINERAL] $Zn_6Al_6(SO_4)_2(OH)_{26} \cdot 5H_2O$ A white to bluish-white and pale blue mineral consisting of a basic hydrated sulfate of zinc and aluminum; occurs in tufts and crusts.

zinc arsenate [INORG CHEM] $ZnHAsO_4$ A toxic white powder that is insoluble in water, soluble in alkalies; used as an insecticide. Also known as zinc orthoarsenate.

zinc arsenite [INORG CHEM] $Zn(AsO_2)_2$ A toxic white powder that is insoluble in water, soluble in alkalies; used as an insecticide and timber preservative. Also known as zinc metaarsenite.

zincate [INORG CHEM] A reaction product of zinc with an alkali metal or with ammonia; for example, sodium zincate, Na_2ZnO_2.

zinc baryta white *See* lithopone.

zinc borate [INORG CHEM] $3ZnO \cdot 2B_2O_3$ A white, amorphous powder that is soluble in dilute acids, slightly soluble in water; melts at 980°C; used in medicine, as a ceramics flux, as an inhibitor for mildew, and to fireproof textiles.

zinc bromide [INORG CHEM] $ZnBr_2$ Water- and alcohol-soluble, white crystals that melt at 294°C; used in medicine, manufacture of rayon, and photography, and as a radiation viewing screen.

zinc carbonate [INORG CHEM] $ZnCO_3$ White crystals that are insoluble in water, soluble in alkalies and acids; used in ceramics and ointments, and as a fireproofing agent and feed additive.

zinc chills *See* metal fume fever.

zinc chloride [INORG CHEM] $ZnCl_2$ Water- and alcohol-soluble, white, fire-hazardous crystals that melt at 290°C, and are irritating to the skin; used as a catalyst and in electroplating, wood preservation, textile processing, petroleum refining, medicine, and feed additives.

zinc chromate [INORG CHEM] $ZnCrO_4$ A toxic, yellow powder that is insoluble in water, soluble in acids; used as a pigment in paints (artists', automotive, primer), varnishes, linoleum, and epoxy laminates.

zinc cyanide [INORG CHEM] $Zn(CN)_2$ A toxic, white powder that is insoluble in water and alcohol, soluble in alkalies and dilute acids; melts at 800°C; used as an analytical reagent and insecticide, and in medicine and metal plating.

zinc dimethyldithiocarbamate *See* ziram.

zinc ethylenebisdithiocarbamate *See* zineb.

zinc fluoride [INORG CHEM] ZnF_2 A toxic white powder that is slightly soluble in water and melts at 872°C; used in enamels, ceramic glazes, and galvanizing.

zinc formate [ORG CHEM] $Zn(CHO_2)_2 \cdot 2H_2O$ Toxic, white crystals that are soluble in water, insoluble in alcohol; used as a catalyst, weatherproofing agent, and wood preservative.

zinc halide [INORG CHEM] A binary compound of zinc and a halogen; for example, $ZnBr_2$, $ZnCl_2$, ZnF_2, and ZnI_2.

zinc hydroxide [INORG CHEM] $Zn(OH)_2$ Colorless, water-soluble crystals that decompose at 125°C; used as a chemical intermediate and in rubber compounding and surgical dressings.

zincite [MINERAL] (Zn,Mn)O A deep-red to orange-yellow brittle mineral; an ore of zinc. Also known as red oxide of zinc; red zinc ore; ruby zinc; spartalite.

zinckenite *See* zinkenite.

zinc metaarsenite *See* zinc arsenite.

zinc naphthenate [ORG CHEM] $Zn(C_6H_5COO)_2$ A combustible, viscous, acetone-soluble solid; used in paints, varnishes, and resins, and as a drier and wetting agent, insecticide, fungicide, and mildewstat.

zinc orthoarsenate *See* zinc arsenate.

zinc orthophosphate *See* zinc phosphate.

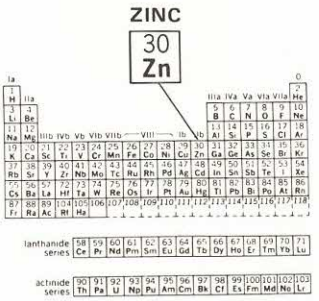
zinc oxide [INORG CHEM] ZnO A bitter-tasting, white to gray powder that is insoluble in water, soluble in alkalies and acids; melts at 1978°C; used as a pigment, mold-growth inhibitor, and dietary supplement, and in cosmetics, electronics, and color photography.

zinc phosphate [INORG CHEM] $Zn_3(PO_4)_2$ A white powder that is insoluble in water, soluble in acids and ammonium hydroxide; melts at 900°C; used in coatings for steel, aluminum, and other metals, and in dental cements and phosphors. Also known as tribasic zinc phosphate; zinc orthophosphate.

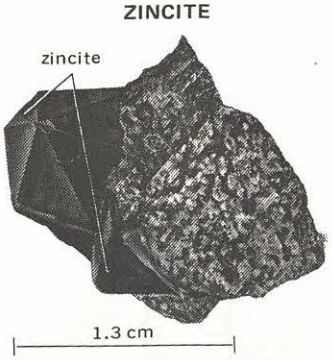
zinc phosphide [INORG CHEM] Zn_3P_2 A toxic, alcohol-insoluble, gray gritty powder that reacts violently with oxidizing agents; melts at over 420°C, decomposes in water; used as a rat poison and in medicine.

zinc-[*N,N'*-propylene-1,2-bis(dithiocarbamate)]$_x$ [ORG CHEM] A yellow powder which decomposes at 160°C; insoluble in water; used as a fungicide for potatoes, tobacco, grapevines, and bananas. Also known as propineb.

zinc selenide [INORG CHEM] ZnSe A water-insoluble, moderately toxic, yellow to reddish solid that is a fire hazard



Periodic table of the chemical elements showing the position of zinc.



Zincite crystals from Franklin, N.J. *(Specimen from Department of Geology, Bryn Mawr College)*

when in contact with water and acids; melts above 1100°C; used as infrared optical windows.

zinc–silver chloride primary cell [ELEC] A reserve primary cell that is activated by adding water; it can have a high capacity, up to 40 watt-hours per pound, and long life after activation.

zinc spar *See* smithsonite.

zinc spinel *See* gahnite.

zinc sulfate [INORG CHEM] $ZnSO_4 \cdot 7H_2O$ Efflorescent, water-soluble, colorless crystals with an astringent taste; used to preserve skins and wood and as a paper bleach, analytical reagent, feed additive, and fungicide. Also known as white copperas; white vitriol; zinc vitriol.

zinc sulfide [INORG CHEM] ZnS A yellowish powder that is insoluble in water, soluble in acids; exists in two crystalline forms (alpha, or wartzite, and beta, or sphalerite); beta becomes alpha at 1020°C, and sublimes at 1180°C; used as a pigment for paints and linoleum, in opaque glass, rubber, and plastics, for hydrosulfite dyeing process, as x-ray and television screen phosphor, and as a fungicide.

zinc sulfide white *See* lithopone.

zinc telluride [INORG CHEM] ZnTe Moderately toxic, reddish crystals that melt at 1238°C and decompose in water.

zinc vitriol *See* zinc sulfate.

zinc white *See* Chinese white.

zineb [ORG CHEM] $C_4H_6N_2S_4Zn$ An off-white solid compound, used as a fungicide for fruits and vegetables. Also known as zinc ethylenebisdithiocarbamate.

Zingiberaceae [BOT] A family of aromatic monocotyledonous plants in the order Zingiberales characterized by one functional stamen with two pollen sacs, distichously arranged leaves and bracts, and abundant oil cells.

Zingiberales [BOT] An order of monocotyledonous herbs or scarcely branched shrubs in the subclass Commelinidae characterized by pinnately veined leaves and irregular flowers that have well-differentiated sepals and petals, an inferior ovary, and either one or five functional stamens.

zinkenite [MINERAL] $Pb_6Sb_{14}S_{27}$ A steel-gray orthorhombic mineral consisting of a lead antimony sulfide and occurring in crystals and in masses; has metallic luster, hardness of 3–3.5 on Mohs scale, and specific gravity of 5.30–5.35. Also spelled zinckenite.

zinnwaldite [MINERAL] $K_2(Li,Fe,Al)_6(Si,Al)_8O_{20}(OH,F)_4$ A pale-violet, yellowish, brown, or dark-gray mica mineral; an iron-bearing variety of lepidolite; the characteristic mica of greisens.

zip mode [COMPUT SCI] Mode of operation of a plotter in which each input plot command represents a velocity increment and causes an increase or decrease in speed relative to either axis or both axes.

zippeite [MINERAL] $(UO_2)_2(SO_4)(OH)_2 \cdot nH_2O$ An orange-yellow, orthorhombic mineral consisting of a hydrated basic sulfate of uranium.

zipper [ENG] A generic name for slide fasteners in which two sets of interlocking teeth of the same design provide sturdy and continuous closure for adjacent pieces of textile, leather, and other materials.

zipper conveyor [MECH ENG] A type of conveyor belt with zipperlike teeth that mesh to form a closed tube; used to handle fragile materials.

ziram [ORG CHEM] $C_6H_{12}N_2S_4Zn$ A colorless solid; melting point is 246°C; used as a fungicide for vegetables and some fruit crops. Also known as zinc dimethyldithiocarbamate.

zircon [MINERAL] $ZrSiO_4$ A brown, green, pale-blue, red, orange, golden-yellow, grayish, or colorless neosilicate mineral occurring in tetragonal prisms; it is the chief source of zirconium; the colorless varieties provide brilliant gemstones. Also known as hyacinth; jacinth; zirconite.

zirconia *See* zirconium oxide.

zirconia brick [MATER] A type of brick containing zirconium oxide, used to line metallurgical furnaces.

zirconic anhydride *See* zirconium oxide.

zirconite *See* zircon.

zirconium [CHEM] A metallic element of group IVb, symbol Zr, atomic number 40, atomic weight 91.22; occurs as crystals, flammable as powder; insoluble in water, soluble in hot, concentrated acids; melts at 1850°C, boils at 4377°C. [MET] A hard, lustrous, grayish metal that is strong and ductile; used in alloys, pyrotechnics, welding fluxes, and explosives.

zirconium-95 [NUC PHYS] A radioactive isotope of zirconium; half-life of 63 days with beta and gamma radiation; used to trace petroleum-pipeline flows and in the circulation of a catalyst in a cracking plant.

zirconium boride [INORG CHEM] ZrB_2 A hard, toxic, gray powder that melts at 3000°C; used as an aerospace refractory, in cutting tools, and to protect thermocouple tubes. Also known as zirconium diboride.

zirconium carbide [INORG CHEM] ZrC Hard, gray crystals that are soluble in water, soluble in acids; as powder, it ignites spontaneously in air; melts at 3400°C, boils at 5100°C; used as an abrasive, refractory, and metal cladding, and in cermets, incandescent filaments, and cutting tools.

zirconium chloride *See* zirconium tetrachloride.

zirconium diboride *See* zirconium boride.

zirconium dioxide *See* zirconium oxide.

zirconium halide [INORG CHEM] A compound of zirconium with a halogen; for example, $ZrBr_2$, $ZrCl_2$, $ZrCl_3$, $ZrCl_4$, $ZrBr_2$, $ZrBr_3$, ZrF_4, and ZrI_4.

zirconium hydride [INORG CHEM] ZrH_2 A flammable, gray-black powder; used in powder metallurgy and nuclear moderators, and as a reducing agent, vacuum-tube getter, and metal-foaming agent.

zirconium hydroxide [INORG CHEM] $Zr(OH)_4$ A toxic, amorphous white powder; insoluble in water, soluble in dilute mineral acids; decomposes at 550°C; used in pigments, glass, and dyes, and to make zirconium compounds.

zirconium lamp [ELECTR] A high-intensity point-source lamp having a zirconium oxide cathode in an argon-filled bulb, used because of its low emanation of long-wavelength light and its concentrated source.

zirconium nitride [INORG CHEM] ZrN A hard, brassy powder that is soluble in concentrated acids; melts at 2930°C; used in refractories, cermets, and laboratory crucibles.

zirconium orthophosphate *See* zirconium phosphate.

zirconium oxide [INORG CHEM] ZrO_2 A toxic, heavy white powder that is insoluble in water, soluble in mineral acids; melts at 2700°C; used in ceramic glazes, special glasses, and medicine, and to make piezoelectric crystals. Also known as zirconia; zirconic anhydride; zirconium dioxide.

zirconium oxychloride [INORG CHEM] $ZrOCl_2 \cdot 8H_2O$ White crystals that are soluble in water, insoluble in organic solvents, and acidic in aqueous solution; used for textile dyeing and oil-field acidizing, in cosmetics and greases, and for antiperspirants and water repellents. Also known as basic zirconium chloride; zirconyl chloride.

zirconium phosphate [INORG CHEM] $ZrO(H_2PO_4)_2 \cdot 3H_2O$ A toxic, dense white powder that is insoluble in water, soluble in acids and organic solvents; decomposes on heating; used as an analytical reagent, coagulant, and radioactive-phosphor carrier. Also known as basic zirconium phosphate; zirconium orthophosphate.

zirconium tetrachloride [INORG CHEM] $ZrCl_4$ Toxic, alcohol-soluble, white lustrous crystals; sublimes above 300°C and decomposes in water; used to make pure zirconium and for water-repellent textiles and as an analytical reagent. Also known as zirconium chloride.

zirconyl chloride *See* zirconium oxychloride.

zirkelite [MINERAL] A black mineral consisting of an oxide of zirconium, titanium, calcium, ferrous iron, thorium, uranium, and rare earths.

zitterbewegung [QUANT MECH] An oscillatory motion of an electron suggested in some interpretations of the Dirac electron theory, having a frequency greater than $4\pi mc^2/h$, where m is the electron's mass, c is the speed of light, and h is Planck's constant, or approximately 1.5×10^{21} hertz.

Z line [HISTOL] The line formed by attachment of the actin filaments between two sarcomeres.

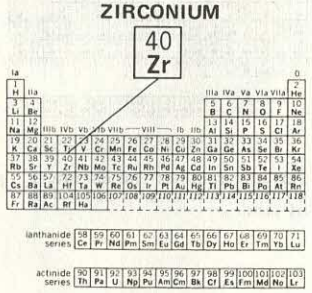
Z-marker beacon [NAV] Transmitter equipment installed as part of a four-course radio range; it radiates vertically to indicate to aircraft when they pass directly over the range station; it is usually not keyed for identification.

Zn *See* zinc.

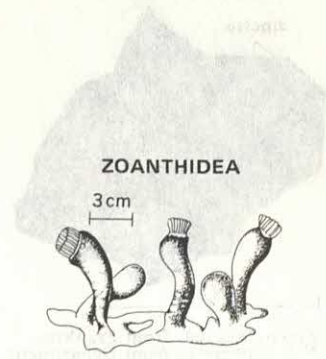
Zoantharia [INV ZOO] A subclass of the class Anthozoa; individuals are monomorphic and most have retractile, simple, tubular tentacles.

Zoanthidea [INV ZOO] An order of anthozoans in the subclass Zoantharia; these are mostly colonial, sedentary, skeletonless, anemonelike animals that live in warm, shallow waters and coral reefs.

Zoarcidae [VERT ZOO] The eelpouts, a family of actinop-



Periodic table of the chemical elements showing the position of zirconium.



Colony of *Zoanthina tentaculata*, a representative species of Zoanthidea. *(After Y. Dalage)*

terygian fishes in the order Gadiformes which inhabit cold northern and far southern seas.

zobaa [METEOROL] In Egypt, a lofty whirlwind of sand resembling a pillar, moving with great velocity.

Zodiac [ASTRON] A band of the sky extending 8° on each side of the ecliptic, within which the moon and principal planets remain.

zodiacal cone *See* zodiacal pyramid.

zodiacal constellations [ASTRON] The constellations Aries, Taurus, Gemini, Cancer, Leo, Virgo, Libra, Scorpio, Sagittarius, Capricorn, Aquarius, and Pisces which are assigned to 12 equal portions of the zodiac.

zodiacal counterglow *See* gegenschein.

zodiacal light [GEOPHYS] A diffuse band of luminosity occasionally visible on the ecliptic; it is sunlight diffracted and reflected by dust particles in the solar system within and beyond the orbit of the earth.

zodiacal pyramid [GEOPHYS] The pattern formed by the zodiacal light. Also known as zodiacal cone.

zoea [INV ZOO] An early larval stage of decapod crustaceans distinguished by a relatively large cephalothorax, conspicuous eyes, and large, fringed antennae.

zoisite [MINERAL] $Ca_2Al_3Si_3O_{12}(OH)$ A white, gray, brown, green, or rose-red orthorhombic mineral of the epidote group consisting of a basic calcium aluminum silicate and occurring massive or in prismatic crystals.

Zollinger-Ellison syndrome [MED] Gastric hypersecretion and hyperacidity, fulminating intractable atypical peptic ulceration, and hyperplasia of the islet cells of the pancreas.

zonal [METEOROL] Latitudinal, easterly or westerly, opposed to meridional.

zonal centrifuge [BIOL] A centrifuge that uses a rotating chamber of large capacity in which to separate cell organelles by density-gradient centrifugation.

zonal circulation *See* zonal flow.

zonal flow [METEOROL] The flow of air along a latitude circle; more specifically, the latitudinal (east or west) component of existing flow. Also known as zonal circulation.

zonal harmonics [MATH] Spherical harmonics which do not depend on the azimuthal angle; they are proportional to Legendre polynomials of cos θ, where θ is the colatitude.

zonal index [METEOROL] A measure of strength of the middle-latitude westerlies, expressed as the horizontal pressure difference between 35° and 55° latitude, or as the corresponding geostrophic wind.

zonal kinetic energy [METEOROL] The kinetic energy of the mean zonal wind, obtained by averaging the zonal component of the wind along a fixed latitude circle.

zonal soil [GEOL] In early classification systems in the United States, a soil order including soils with well-developed characteristics that reflect the influence of agents of soil genesis. Also known as mature soil.

zonal theory [GEOL] A theory of the formation of mineral deposition and sequence patterns, based on the changes in a mineral-bearing fluid as it passes upward from a magmatic source.

zonal westerlies *See* westerlies.

zonal wind [METEOROL] The wind, or wind component, along the local parallel of latitude, as distinguished from the meridional wind.

zonal winds *See* westerlies.

zonal wind-speed profile [METEOROL] A diagram in which the speed of the zonal flow is one coordinate and latitude the other.

zona pellucida [HISTOL] The thick, solid, elastic envelope of the ovum. Also known as oolemma.

zonation [ECOL] Arrangement of organisms in biogeographic zones. [GEOL] The condition of being arranged in zones.

zonda [METEOROL] A hot wind in Argentina.

Zond spacecraft [AERO ENG] One of a series of Soviet space probes which have photographed the moon and made observations in interplanetary space.

zone [ANALY CHEM] *See* band. [COMPUT SCI] **1.** One of the top three rows of a punched card, namely, the 11, 12, and zero rows. **2.** *See* storage area. [CRYSTAL] A set of crystal faces which intersect (or would intersect, if extended) along edges which are all parallel. [GEOGR] An area or region of latitudinal character. [GEOL] A belt, layer, band, or strip of earth material such as rock or soil. [MATH] The portion of a sphere lying between two parallel planes that intersect the sphere. [ORD] **1.** Any tactical area of importance, generally parallel to the front, such as a fortified area, a defensive position, a combat zone, or a traffic-control zone. **2.** An area in which projectiles will fall when a given propelling charge is used and the elevation is varied between the minimum and the maximum; in practice, generally limited to howitzer and mortar firings.

zone axis [CRYSTAL] A line through the center of a crystal which is parallel to all the faces of a zone.

zone bit [COMPUT SCI] A set of bits; for example, it may indicate whether the set of bits represents a numeric or alphabetic character.

zone blanking [ELECTR] Method of turning off the cathode-ray tube during part of the sweep of an antenna.

zone charge [ORD] The number of increments of propellant in a propellant charge of semifixed rounds, corresponding to the intended zone of fire; for example, zone charge five consists of five increments of propellant.

zone control [ENG] The zoning of a process or building, and the independent heating or temperature controls for each zone.

zoned decimal [COMPUT SCI] A format for use with EBCDIC input and output permitting a sign overpunch in the low order position of the field; thus, + 1234 would be represented as: 1111/0001/1111/0010/1111/0011/1100/0100.

zone description [NAV] The number, with its sign, that must be added to or subtracted from the zone time to obtain the Greenwich mean time; the zone description is usually a whole number of hours.

zone fire [ORD] Artillery or mortar fire that is designed to cover an area in which a target is situated.

zone heat [CIV ENG] A central heating system arranged to allow different temperatures to be maintained at the same time in two or more areas of a building.

zone indices [CRYSTAL] Three integers identifying a zone of a crystal; they are the crystallographic coordinates of a point joined to the origin by a line parallel to the zone axis.

zone law [CRYSTAL] A law which states that the Miller indices (h, k, l) of any crystal plane lying in a zone with zone indices (u, v, w) satisfy the equation $hu + lv + kw = 0$.

zone marker [NAV] Very-high-frequency radio station designed to radiate signals vertically in a cone-shaped pattern to define a zone above a radio range station.

zone melting crystallization [CHEM ENG] A method for purification of crystalline solids; the sample, packed in a narrow column, is heated so that a molten zone passes down through the sample, carrying impurities with it.

zone meridian [ASTRON] The meridian used for reckoning zone time; this is generally the nearest meridian whose longitude is exactly divisible by 15°.

zone noon [ASTRON] Twelve o'clock zone time, or the instant the mean sun is over the upper branch of the zone meridian.

zone of aeration [GEOL] A subsurface zone containing water below atmospheric pressure and air or gases at atmospheric pressure. Also known as unsaturated zone; vadose zone; zone of suspended water.

zone of accumulation *See* B horizon.

zone of avoidance [ASTRON] An irregularly shaped area in the Milky Way Galaxy in which no extragalactic nebulae are observed because of the presence of interstellar matter.

zone of cementation [GEOL] The layer of the earth's crust in which unconsolidated deposits are cemented by percolating water containing dissolved minerals from the overlying zone of weathering. Also known as belt of cementation.

zone of illuviation *See* B horizon.

zone of intersection [NAV] That part of a civil airway which overlaps and lies within any part of another civil airway.

zone of maximum precipitation [METEOROL] In a mountain region, the belt of elevation at which the annual precipitation is greatest.

zone of optimal proportion [IMMUNOL] One of three zones considered to appear when antigen and antibody are mixed; it is that zone in which there is no uncombined antigen or antibody. Also known as equivalence zone.

zone of saturation [HYD] A subsurface zone in which water fills the interstices and is under pressure greater than atmospheric pressure. Also known as phreatic zone; saturated zone.

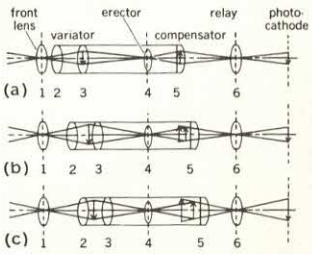
zone of silence *See* skip zone.

zone of soil water *See* belt of soil water.

ZOEA

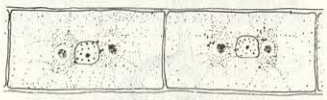
Zoea larva of crab, showing characteristic features. *(Smithsonian Institution)*

ZOOM LENS



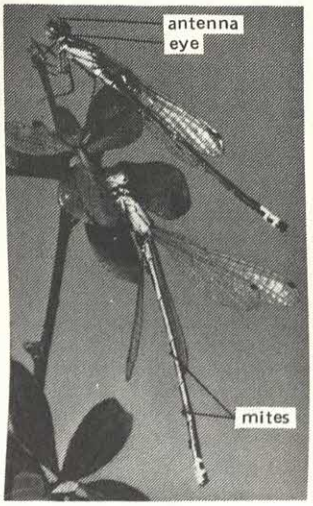
Zoom lens in three operating positions. *(a)* Wide-angle. *(b)* Medium-angle. *(c)* Telephoto. Lens elements 2, 3, and 5 are mounted in movable barrel connected to zoom handle. Lens elements 1, 4, and 6 are stationary, mounted in lens housing. *(From D. G. Fink, ed., Television Engineering Handbook, McGraw-Hill, 1957)*

ZYGNEMATACEAE



Vegetative cells of *Zygnema* species, type genus of the family Zygnemataceae, showing characteristic pair of stellate chloroplasts in each cell. *(From G. M. Smith, Cryptogamic Botany, 2d ed., McGraw-Hill, 1955)*

ZYGOPTERA



Two adult damsel flies of the suborder Zygoptera. Note mites attached.

zone of suspended water *See* zone of aeration.

zone plate [OPTICS] A plate with alternate transparent and opaque rings, designed to block off every other Fresnel half-period zone; light from a point source passing through the plate produces an intense point image much like that produced by a lens.

zone-position indicator [ENG] Auxiliary radar set for indicating the general position of an object to another radar set with a narrower field.

zone punch [COMPUT SCI] In a punched card, the 11 or 12 punch according to any code, the zero punch if another numeric punch is present in the same column, and sometimes the 8 and 9 punches in EBCDIC-coded cards.

zone purification *See* zone refining.

zone refining [MET] A technique to purify materials in which a narrow molten zone is moved slowly along the complete length of the specimen to bring about impurity segregation, and which depends on differences in composition of the liquid and solid in equilibrium. Also known as zone purification.

zone theory *See* stage theory.

zone time [ASTRON] The local mean time of a reference or zone meridian whose time is kept throughout a designated zone; the zone meridian is usually the nearest meridian whose longitude is exactly divisible by 15°.

zoning [CIV ENG] Designation and reservation under a master plan of land use for light and heavy industry, dwellings, offices, and other buildings; use is enforced by restrictions on types of buildings in each zone. [CRYSTAL] A variation in the composition of a crystal from core to margin due to a separation of the crystal phases during its growth by loss of equilibrium in a continuous reaction series. [ELECTROMAG] The displacement of various portions of the lens or surface of a microwave reflector so the resulting phase front in the near field remains unchanged. Also known as stepping.

zonite [INV ZOO] A body segment in Diplopoda.

zonochlorite *See* pumpellyite.

zoocecidium [PL PATH] A plant gall usually caused by an insect.

zoochlorellae [BIOL] Unicellular green algae which live as symbionts in the cytoplasm of certain protozoans, sponges, and other invertebrates.

zoochory [BOT] Dispersal of plant disseminules by animals.

zooecium [INV ZOO] The exoskeleton of a feeding zooid in bryozoans.

zoogeographic region [ECOL] A major unit of the earth's surface characterized by faunal homogeneity.

zoogeography [BIOL] The science that attempts to describe and explain the distribution of animals in space and time.

zoogloea [MICROBIO] A gelatinous or mucilaginous mass characteristic of certain bacteria grown in organic-rich fluid media.

Zoogloea [MICROBIO] A genus of bacteria in the family Pseudomonadaceae; rod-shaped cells which are motile when young and later aggregate in flocs having dendritic outgrowths.

zooid [INV ZOO] A more or less independent individual of colonial animals such as bryozoans and coral.

zoology [BIOL] The science that deals with knowledge of animal life.

Zoomastigina [INV ZOO] The equivalent name for Zoomastigophorea.

Zoomastigophorea [INV ZOO] A class of flagellate protozoans in the subphylum Sarcomastigophora; some are simple, some are specialized, and all are colorless.

zoom lens [OPTICS] A system of lenses in which two or more parts are moved with respect to each other to obtain a continuously variable focal length and hence magnification, while the image is kept in the same image plane. Also known as variable-focal-length lens; varifocal lens.

zoonoses [BIOL] Diseases which are biologically adapted to and normally found in lower animals but which under some conditions also infect man.

zoophobia [PSYCH] An abnormal fear of animals.

zooplankton [ECOL] Microscopic animals which move passively in aquatic ecosystems.

zoosphere [ECOL] The world community of animals.

zoosporangium [BOT] A spore case bearing zoospores.

zoospore [BIOL] An independently motile spore.

zooxanthellae [BIOL] Microscopic yellow-green algae which live symbiotically in certain radiolarians and marine invertebrates.

Zoraptera [INV ZOO] An order of insects, related to termites and psocids, which live in decaying wood, sheltered from light; most individuals are wingless, pale in color, and blind.

Zorn's lemma [MATH] If every linearly ordered subset of a partially ordered set has a maximal element in the set, then the set has a maximal element.

Zoroasteridae [INV ZOO] A family of deep-water asteroid echinoderms in the order Forcipulatida.

Zorotypidae [INV ZOO] The single family, containing one genus, *Zorotypus*, in the order Zoraptera.

zorsite [MINERAL] $Ca_2Al_3Si_3O_{12}(OH)$ White, gray, brown, green, or rose-red orthorhombic mineral of the epidote group; an essential constituent of saussurite.

zoster *See* herpes zoster.

Zosteraceae [BOT] A family of monocotyledonous plants in the order Najadales; the group is unique among flowering plants in that they grow submerged in shallow ocean waters near the shore.

Zosterophyllatae [PALEOBOT] *See* Zosterophyllopsida.

Zosterophyllopsida [PALEOBOT] A group of early land vascular plants ranging from the Lower to the Upper Devonian; individuals were leafless and rootless.

Z parameter [ELECTR] One of a set of four transistor equivalent-circuit parameters; they are the inverse of the *Y* parameters.

Zr *See* zirconium.

Z score [STAT] A measure of how many standard deviations a raw score is from the mean.

Zsigmondy gold number [CHEM] The number of milligrams of protective colloid necessary to prevent 10 milliliters of gold sol from coagulating when 0.5 milliliter of 10% sodium chloride solution is added.

Z time *See* Greenwich mean time.

z-transfer function *See* pulsed transfer function.

z-transform [MATH] The *z*-transform of a sequence whose general term is f_n is the sum of a series whose general term is $f_n z^{-n}$, where z is a complex variable; n runs over the positive integers for a one-sided transform, over all the integers for a two-sided transform.

Z twist [TEXT] A right-handed yarn twist in which the spiral slants like the middle part of the letter Z.

Zulu time *See* Greenwich mean time.

Zuni [ORD] A United States air-to-surface unguided rocket with solid propellant; can be armed with various types of heads, including flares, fragmentation, and armor-piercing.

Zurich number *See* relative sunspot number.

Z variometer *See* vertical intensity variometer.

Zwischengebirge *See* median mass.

zwitterion *See* dipolar ion.

Zygaenidae [INV ZOO] A diverse family of small, often brightly colored African moths in the superfamily Zygaenoidea.

Zygaenoidea [INV ZOO] A superfamily of moths in the suborder Heteroneura characterized by complete venation, rudimentary palpi, and usually a rudimentary proboscis.

Zyglo method [ENG] A procedure for visualizing incipient cracks caused by fatigue failure, in which the part is immersed in a special activated penetrating oil and viewed under black light.

Zygnemataceae [BOT] A family of filamentous plants in the order Conjugales; they are differentiated into genera by chloroplast morphology, which may be spiral, bandlike, or cushionlike.

zygodactyl [VERT ZOO] Of birds, having a toe arrangement of two in front and two behind.

zygomatic bone [ANAT] A bone of the side of the face below the eye; forms part of the zygomatic arch and part of the orbit in mammals. Also known as malar bone.

zygomorphic [BIOL] Bilaterally symmetrical.

Zygomycetes [MYCOL] A class of fungi in the division Eumycetes.

zygopophysis [ANAT] One of the articular processes of the neural arch of a vertebra.

Zygoptera [INV ZOO] The damsel flies, a suborder of insects in the order Odonata; individuals are slender, dainty creatures, often with bright-blue or orange coloring and usually with clear or transparent wings.

zygote [EMBRYO] **1.** An organism produced by the union of two gametes. **2.** The fertilized ovum before cleavage.

zygotene [CYTOL] The stage of meiotic prophase during which homologous chromosomes synapse; visible bodies in the nucleus are now bivalents. Also known as amphitene.

zygotic induction [VIROL] Phage induction following conjugation of a lysogenic bacterium with a nonlysogenic one.

zymase [BIOCHEM] A complex of enzymes that catalyze glycosis.

zymogen [BIOCHEM] The inactive precursor of an enzyme; liberates an active enzyme on reaction with an appropriate kinose. Also known as proenzyme.

zymogen granules [BIOCHEM] Granules of zymogen in gland cells, particularly those of the pancreatic acini and of the gastric chief cells.

zymogenic [MICROBIO] Obtaining energy by amylolitic processes.

Zymomonas [MICROBIO] A genus of gram-negative, anaerobic (but able to tolerate small amounts of oxygen), rod-shaped bacteria of uncertain affiliation; ferment glucose and fructose, with accumulation of ethanol and acetaldehyde in the medium.

zymophore [BIOCHEM] The active portion of an enzyme.

zymosis *See* fermentation.

zymosterol [BIOCHEM] $C_{27}H_{43}OH$ An unsaturated sterol obtained from yeast fat; yields cholesterol on hydrogenation.

Zythiaceae [MYCOL] A family of fungi of the order Sphaeropsidales which contains many plant and insect pathogens.

U.S. Customary System and the metric system

To date, scientists and engineers have used two major systems of units in measurement. These are commonly called the U.S. Customary System (inherited from the British Imperial System) and the metric system.

In the U.S. Customary System the units yard and pound with their divisions, such as the inch, and multiples, such as the ton, are basic. The metric system was evolved during the 18th century and has been adopted for general use by most countries. Nearly everywhere it is used for precise measurements in science. The meter and kilogram with their multiples, such as the kilometer, and fractions, such as the gram, are basic to the metric system.

In the U.S. Customary System, units of the same kind are related almost at random. For example, there are the units of length, the inch, yard, and mile. In the metric system the relationships between units of the same kind are strictly decimal (millimeter, meter, and kilometer).

However, to complicate matters in scientific writing, there is no uniformity within each of these two systems as to the choice of units for the same quantities. For example, the hour or the second, the foot or the inch, and the centimeter or the millimeter could be chosen by a scientist as the unit of measurement for the quantities time and length.

The International System, or SI

To simplify matters and to make communication more understandable, an internationally accepted system of units is coming into use. This is termed the International System of Units, which is abbreviated SI in all languages.

Fundamentally the system is metric with the base units derived from scientific formulas or natural constants. For example, the meter in the SI is defined as the length equal to 1 650 763.73 wavelengths in vacuum of the radiation corresponding to the transition between the electronic energy levels $2p_{10}$ and $5d_5$ of the krypton-86 atom. Previously, in the metric system, the meter was defined as the distance between two marks on a specific metal bar.

In a similar way the second in the SI is defined as the duration of 9 192 631 770 periods of the radiation corresponding to the transition between two hyperfine levels of the ground state of the cesium-133 atom.

Interestingly, the kilogram, the SI unit of mass, is still the mass of the kilogram kept at Sèvres, France. However, it is possible that eventually the unit will be redefined in terms of atomic mass, and the kilogram unit will be renamed the giorgi, with symbol G.

Although the SI is increasing in usage by scientists and engineers, there are some units in everyday use which will probably remain, for example, minute, hour, day, degree (angle), and liter. The point should be made, however, that these terms will not be employed in a scientific context if the SI is fully adopted.

Because of their extremely common use among scientists, several units are still permitted in conjunction with SI units, for example, the electron volt, gauss, barn, and curie. In time their usage might be phased out.

One further point is that in October, 1967, the Thirteenth General Conference of Weights and Measures recommended that in the SI the degree sign be omitted when the Kelvin temperature scale is used. For example, the notation is 273K and not 273°K.

The basic units and derived units of the SI are shown in **Table 1** and **Table 2.**

In the SI the prefixes differ from a unit in ste... 10^3. A list of prefix terms, symbols, and their fact... given in **Table 3.** Some examples of the use of t... prefixes follow:

APP.

$$1000\ \text{m} = 1\ \text{kilometer} = 1\ \text{km}$$
$$1000\ \text{V} = 1\ \text{kilovolt} = 1\ \text{kV}$$
$$1\,000\,000\ \Omega = 1\ \text{megohm} = 1\ \text{M}\Omega$$
$$0.000\,000\,001\ \text{s} = 1\ \text{nanosecond} = 1\ \text{ns}$$

Only one prefix is to be employed for a unit. For example:

$$1000\ \text{kg} = 1\ \text{Mg} \quad \text{not } 1\ \text{kkg}$$
$$10^{-9}\ \text{s} = 1\ \text{ns} \quad \text{not } 1\ \text{m}\mu\text{s}$$
$$1\,000\,000\ \text{m} = 1\ \text{Mm} \quad \text{not } 1\ \text{kkm}$$

Also, when a unit is raised to a power, the power applies to the whole unit including the prefix. For example:

$$\text{km}^2 = (\text{km})^2 = (1000\ \text{m})^2 = 10^6\ \text{m}^2 \quad \text{not } 1000\ \text{m}^2$$

Table 1. Base units of the International System

Quantity	*Name of unit*	*Unit symbol*
length	meter	m
mass	kilogram	kg
time	second	s
electric current	ampere	A
temperature	kelvin	K
luminous intensity	candela	cd
amount of substance	mole	mol

Table 2. Derived units of the International System

Quantity	*Name of unit*	*Unit symbol, where differing from basic form*	*Unit expressed in terms of base or supplementary units**
area	square meter		m^2
volume	cubic meter		m^3
frequency	hertz	Hz	s^{-1}
density	kilogram per cubic meter		kg/m^3
velocity	meter per second		m/s
angular velocity	radian per second		rad/s
acceleration	meter per second squared		m/s^2
angular acceleration	radian per second squared		rad/s^2
volumetric flow rate	cubic meter per second		$\text{m}^3\text{/s}$
force	newton	N	$\text{kg} \cdot \text{m/s}^2$
surface tension	newton per meter, joule per square meter	N/m, J/m^2	kg/s^2
pressure	newton per square meter, pascal	N/m^2, Pa	$\text{kg/m} \cdot \text{s}^2$
viscosity, dynamic	newton-second per square meter, pascal-second	$\text{N} \cdot \text{s/m}^2$, $\text{Pa} \cdot \text{s}$	$\text{kg/m} \cdot \text{s}$
viscosity, kinematic	meter squared per second		$\text{m}^2\text{/s}$
work, torque, energy, quantity of heat	joule, newton-meter, watt-second	J, $\text{N} \cdot \text{m}$, $\text{W} \cdot \text{s}$	$\text{kg} \cdot \text{m}^2/\text{s}^2$
power, heat flux	watt, joule per second	W, J/s	$\text{kg} \cdot \text{m}^2/\text{s}^3$
heat flux density	watt per square meter	W/m^2	kg/s^3
volumetric heat release rate	watt per cubic meter	W/m^3	$\text{kg/m} \cdot \text{s}^3$
heat transfer coefficient	watt per square meter kelvin	$\text{W/m}^2 \cdot \text{K}$	$\text{kg/s}^3 \cdot \text{K}$
heat capacity (specific)	joule per kilogram kelvin	$\text{J/kg} \cdot \text{K}$	$\text{m}^2/\text{s}^2 \cdot \text{K}$
capacity rate	watt per kelvin	W/K	$\text{kg} \cdot \text{m}^2/\text{s}^3 \cdot \text{K}$
thermal conductivity	watt per meter kelvin	$\text{W/m} \cdot \text{K}, \frac{\text{J} \cdot \text{m}}{\text{s} \cdot \text{m}^2 \cdot \text{K}}$	$\text{kg} \cdot \text{m/s}^3 \cdot \text{K}$
quantity of electricity	coulomb	C	$\text{A} \cdot \text{s}$
electromotive force	volt	V, W/A	$\text{kg} \cdot \text{m}^2/\text{A} \cdot \text{s}^3$
electric field strength	volt per meter	V/m	$\text{kg} \cdot \text{m/A} \cdot \text{s}^3$
electric resistance	ohm	Ω, V/A	$\text{kg} \cdot \text{m}^2/\text{A}^2 \cdot \text{s}^3$
electric conductivity	ampere per volt meter	$\text{A/V} \cdot \text{m}$	$\text{A}^2 \cdot \text{s}^3/\text{kg} \cdot \text{m}^3$
electric capacitance	farad	$\text{F}, \text{A} \cdot \text{s/V}$	$\text{A}^3 \cdot \text{s}^4/\text{kg} \cdot \text{m}^2$
magnetic flux	weber	$\text{Wb}, \text{V} \cdot \text{s}$	$\text{kg} \cdot \text{m}^2/\text{A} \cdot \text{s}^2$
inductance	henry	$\text{H}, \text{V} \cdot \text{s/A}$	$\text{kg} \cdot \text{m}^2/\text{A}^2 \cdot \text{s}^2$
magnetic permeability	henry per meter	H/m	$\text{kg} \cdot \text{m/A}^2 \cdot \text{s}^2$
magnetic flux density	tesla, weber per square meter	T, Wb/m^2	$\text{kg/A} \cdot \text{s}^2$
magnetic field strength	ampere per meter		A/m
magnetomotive force	ampere		A
luminous flux	lumen	lm	$\text{cd} \cdot \text{sr}$
luminance	candela per square meter		cd/m^2
illumination	lux, lumen per square meter	lx, lm/m^2	$\text{cd} \cdot \text{sr/m}^2$
activity (of radionuclides)	becquerel	Bq	s^{-1}
absorbed dose	gray	Gy, J/kg	$\text{m}^2 \cdot \text{s}^{-2}$
dose equivalent	sievert	Sv	$\text{m}^2 \cdot \text{s}^{-2}$

*Supplementary units are: plane angle, radian (rad); solid angle, steradian (sr).

Table 3. Prefixes for units in the International System

Prefix	*Symbol*	*Power*	*Example*
exa	E	10^{18}	
peta	P	10^{15}	
tera	T	10^{12}	
giga	G	10^{9}	
mega	M	10^{6}	megahertz (MHz)
kilo	k	10^{3}	kilometer (km)
hecto	h	10^{2}	
deka	da	10^{1}	
deci	d	10^{-1}	
centi	c	10^{-2}	
milli	m	10^{-3}	milligram (mg)
micro	μ	10^{-6}	microgram (μg)
nano	n	10^{-9}	nanosecond (ns)
pico	p	10^{-12}	picofarad (pf)
femto	f	10^{-15}	
atto	a	10^{-18}	

Some common units defined in terms of SI units are given in **Table 4** (the definitions in the fourth column are exact).

Table 4. Some common units defined in terms of SI units

Quantity	*Name of unit*	*Unit symbol*	*Definition of unit*
length	inch	in.	2.54×10^{-2} m
mass	pound (avoirdupois)	lb	0.45359237 kg
force	kilogram-force	kgf	9.80665 N
pressure	atmosphere	atm	101325 Pa
pressure	torr	torr	(101325/760) Pa
pressure	conventional millimeter of mercury*	mmHg	$13.5951 \times 980.665 \times 10^{-2}$ Pa
energy	kilowatt-hour	kWh	3.6×10^{6} J
energy	thermochemical calorie	cal	4.184 J
energy	international steam table calorie	cal_{IT}	4.1868 J
thermodynamic temperature (T)	degree Rankine	°R	(5/9) K
customary temperature (t)	degree Celsius	°C	$t(°C) = T(K) - 273.15$
customary temperature (t)	degree Fahrenheit	°F	$t(°F) = T(°R) - 459.67$
radioactivity	curie	Ci	3.7×10^{10} Bq
energy†	electron volt	eV	$eV \approx 1.60219 \times 10^{-19}$ J
mass†	unified atomic mass unit	u	$u \approx 1.66057 \times 10^{-27}$ kg

*The conventional millimeter of mercury, symbol mmHg (not mm Hg), is the pressure exerted by a column exactly 1 mm high of a fluid of density exactly 13.5951 g cm^{-3} in a place where the gravitational acceleration is exactly 980.665 cm · s^{-2}. The mmHg differs from the torr by less than 2×10^{-7} torr.

†These units defined in terms of the best available experimental values of certain physical constants may be converted to SI units. The factors for conversion of these units are subject to change in the light of new experimental measurements of the constants involved.

Conversion factors for the measurement systems

Because it will take some years for all scientists and engineers to convert to the SI, this dictionary has retained the U.S. Customary and metric systems. Conversion factors between the two systems and SI are given in **Table 5** for some prevalent units; in each of the subtables the user proceeds as follows:

To convert a quantity expressed in a unit in the left-hand column to the equivalent in a unit in the top row of a subtable, multiply the quantity by the factor common to both units.

The factors have been carried out to seven significant figures, as derived from the fundamental constants and the definitions of the units. However, this does not mean that the factors are always known to that accuracy. Numbers followed by ellipses are to be continued indefinitely with repetition of the same pattern of digits. Factors written with fewer than seven significant digits are exact values. Numbers followed by an asterisk are definitions of the relation between the two units.

Table 5. Conversion factors for the U.S. Customary System, metric system, and International System

A. UNITS OF LENGTH

Units	cm	m	in.	ft	yd	mile
1 cm	= 1	0.01*	0.3937008	0.03280840	0.01093613	6.213712×10^{-6}

Electron Configuration → -32-18-1

Transition Elements

Lanthanides	+3 57 **La** Lanthanum 138.9055 -18-9-2	+3 +4 58 **Ce** Cerium 140.12 -19-9-2	+3 59 **Pr** Praseodymium 140.9077 -21-8-2	+3 60 **Nd** Neodymium 144.24 -22-8-2	+3 61 **Pm** Promethium (145) -23-8-2	+2 +3 62 **Sm** Samarium 150.4 -24-8-2	+2 +3 63 **Eu** Europium 151.96 -25-8-2	+3 64 **Gd** Gadolinium 157.25 -25-9-2	+3 65 **Tb** Terbium 158.9254 -26-9-2	+3 66 **Dy** Dysprosium 162.50 -28-8-2	+3 67 **Ho** Holmium 164.9304 -29-8-2	+3 68 **Er** Erbium 167.26 -30-8-2	+3 69 **Tm** Thulium 168.9342 -31-8-2	+2 +3 70 **Yb** Ytterbium 173.04 -32-8-2	+3 71 **Lu** Lutetium 174.97 -32-9-2
Actinides	+3 89 **Ac** Actinium (227) -18-9-2	+4 90 **Th** Thorium 232.0381 -18-10-2	+4 +5 91 **Pa** Protactinium 231.0359 -20-9-2	+3 +4 +5 +6 92 **U** Uranium 238.029 -21-9-2	+3 +4 +5 +6 93 **Np** Neptunium 237.0482 -22-9-2	+3 +4 +5 +6 94 **Pu** Plutonium (244) -24-8-2	+3 +4 +5 +6 95 **Am** Americium (243) -25-8-2	+3 96 **Cm** Curium (247) -25-9-2	+3 +4 97 **Bk** Berkelium (247) -27-8-2	+3 98 **Cf** Californium (251) -28-8-2	+3 99 **Es** Einsteinium (254) -29-8-2	+3 100 **Fm** Fermium (257) -30-8-2	+2 +3 101 **Md** Mendelevium (258) -31-8-2	+2 +3 102 **No** Nobelium (255) -32-8-2	+3 103 **Lr** Lawrencium (260) -32-9-2

Note:

Atomic weights are those of the most commonly available long-lived isotopes on the 1973 IUPAC Atomic Weights of the Elements. A value given in parentheses denotes the mass number of the longest-lived isotope. Adapted from *Merck Index: An Encyclopedia of Chemicals and Drugs*, Merck and Co., Inc., 9th ed.; 1976.

Mathematical signs and symbols

Symbol	*Definition*	Symbol	*Definition*	*Symbol*	*Definition*
+	plus (sign of addition)	$\propto$	varies as	$\oint$	line integral around a closed path
+	positive	∞	infinity	Σ	(sigma) summation of
−	minus (sign of subtraction)	$\sqrt{\ }$	square root of	$f(x), F(x)$	functions of x
−	negative	$\sqrt[3]{\ }$	cube root of	$\exp x = e^x$	(e = naperian log base) (abbreviation for e^x)
$\pm$ ($\mp$)	plus or minus (minus or plus)	$\therefore$	therefore	∇	del or nabla, vector differential operator
×	times, by (multiplication sign)	$\parallel$	parallel to	∇^2	Laplacian operator
·	multiplied by	()[]{}	parentheses, brackets and braces; quantities enclosed by them to be taken together in multiplying, dividing, etc.	£	Laplace operational symbol
÷	sign of division			4!	factorial $4 = 1 \times 2 \times 3 \times 4$
/	divided by	$\overline{AB}$	length of line from A to B	$\lvert x \rvert$	absolute value of x
:	ratio sign, divided by, is to	π	(pi), = 3.14159+	$\dot{x}$	first derivative of x with respect to time
::	equals, as (proportion)	°	degrees	$\ddot{x}$	second derivative of x with respect to time
<	less than	′	minutes	**A** × **B**	vector product; magnitude of **A** times magnitude of **B** times sine of the angle from **A** to **B**; $AB \sin \overline{AB}$
>	greater than	″	seconds	**A** · **B**	scalar product of **A** and **B**; magnitude of **A** times magnitude of **B** times cosine of the angle from **A** to **B**; $AB \cos \overline{AB}$
≪	much less than	∠	angle		
≫	much greater than	dx	differential of x		
=	equals	Δ	(delta) difference		
≡	identical with	Δx	increment of x		
~	similar to	$\partial u/\partial x$	partial derivative of u with respect to x		
≈	approximately equals	$\int$	integral of		
≅	approximately equals, congruent	$\int_b^a$	integral of, between limits a and b		
≤	equal to or less than				
≥	equal to or greater than				
≠ ≠	not equal to				
→ ≐	approaches				

Mathematical notation

Mathematical logic.

$p, q, P(x)$	Sentences, propositional functions, propositions
$\neg p, \sim p$, non p, Np	Negation, read "not p" ($\neq$: read "not equal")
$p \vee q, p + q, Apq$	Disjunction, read "p or q," "p, q," or both
$p \wedge q, p \cdot q, p\&q, Kpq$	Conjunction, read "p and q"
$p \rightarrow q, p \supset q, p \Rightarrow q$, Cpq	Implication, read "p implies q" or "if p then q"
$p \leftrightarrow q, p \equiv q, p \Longleftrightarrow q$, Epq, p iff q	Equivalence, read "p is equivalent to q" or "p if and only if q"
n.a.s.c.	Read "necessary and sufficient condition"
$(), [], \{\}, . ., \cdot\ \cdot$	Parentheses
$\forall, \mathbf{\forall}, \Sigma$	Universal quantifier, read "for all" or "for every"
$\exists, \mathbf{\exists}, \Pi$	Existential quantifier, read "there is a" or "there exists"
$\vdash$	Assertion sign ($p \vdash q$: read "q follows from p"; $\vdash p$: read "p is or follows from an axiom," or "p is a tautology"
0, 1	Truth, falsity (values)
$=$	Identity
$\overset{\text{Df}}{=}, \overset{\text{df}}{=}, \underset{\text{df}}{=}, \equiv$	Definitional identity
∎	"End of proof"; "QED"

Set theory, relations, functions.

X, Y	Sets
$x \in X$	x is a member of the set X
$x \notin X$	x is not a member of X
$A \subset X, A \subseteq X$	Set A is contained in set X
$A \not\subset X, A \nsubseteq X$	A is not contained in X
$X \cup Y, X + Y$	Union of sets X and Y
$X \cap Y, X \cdot Y$	Intersection of sets X and Y
$+, \dot{+}, \bigcirc$	Symmetric difference of sets
$\bigcup X_i, \Sigma X_i$	Union of all the sets X_i
$\bigcap X_i, \Pi X_i$	Intersection of all the sets X_i
$\varnothing, 0, \Lambda$	Null set, empty set
$X', \mathbf{C}X, CX$	Complement of the set X
$X - Y, X \backslash Y$	Difference of sets X and Y
$\hat{x}(P(x)), \{x \mid P(x)\}$, $\{x : P(x)\}$	The set of all x with the property P

(x,y,z), $\langle x,y,z\rangle$	Ordered set of elements x, y, and z; to be distinguished from (x,z,y), for example
$\{x,y,z\}$	Unordered set, the set whose elements are x, y, z, and no others
$\{a_1, a_2, \ldots, a_n\}$, $\{a_i\}_{i=1,2,\ldots,n}$, $\{a_i\}_{i=1}^{n}$	The set whose members are a_i, where i is any whole number from 1 to n
$\{a_1, a_2, \ldots\}$, $\{a_i\}_{i=1,2,\ldots}$, $\{a_i\}_{i=1}^{\infty}$	The set whose members are a_i, where i is any positive whole number
$X\times Y$	Cartesian product, set of all (x,y) such that $x\in X$, $y\in Y$
$\{a_i\}_{i\in I}$	The set whose elements are a_i, where $i\in I$
xRy, $R\{x,y\}$	Relation
$\equiv$, $\cong$, $\sim$, $\simeq$	Equivalence relations, for example, congruence
$\geqq$, $\geq$, $>$, $\gtrless$, $\gg$, $\leqq$, $\leq$, $<$	Transitive relations, for example, numerical order
$f:X\to Y$, $X\xrightarrow{f} Y$, $X\to Y$, $f\in Y^X$	Function, mapping, transformation
f^{-1}, f, $X\xleftarrow{f^{-1}} Y$	Inverse mapping
$g\circ f$	Composite functions: $(g\circ f)(x)=g(f(x))$
$f(X)$	Image of X by f
$f^{-1}(X)$	Inverse-image set, counter image
1-1, one-one	Read "one-to-one correspondence"
$\begin{array}{ccc} X & \xrightarrow{f} & Y \\ \phi\downarrow & & \downarrow\psi \\ W & \xrightarrow{g} & Z \end{array}$	Diagram: the diagram is commutative in case $\psi\circ f=g\ \phi$
$f\|A$	Partial mapping, restriction of function f to set A
X, card X, $\|X\|$	Cardinal of the set A
$\aleph_0$, d	Denumerable infinity
$\mathfrak{c}$, c, $2^{\aleph_0}$	Power of continuum
ω	Order type of the set of positive integers
σ-	Read "countably"

Number, numerical functions.

1.4; 1,4; 1·4	Read "one and four-tenths"
1(1)20(10)100	Read "from 1 to 20 in intervals of 1, and from 20 to 100 in intervals of 10"
const	Constant
$A\geqq 0$	The number A is nonnegative, or, the matrix A is positive definite, or, the matrix A has nonnegative entries
$x\|y$	Read "x divides y"
$x\equiv y \bmod p$	Read "x congruent to y modulo p"
$a_0+\dfrac{1}{a_1}+\dfrac{1}{a_2}+\cdots$, $a_0+\dfrac{1\|}{\|a_1}+\cdots$	Continued fractions
$[a,b]$	Closed interval
$[a,b)$, $[a,b[$	Half-open interval (open at the right)
(a,b), $]a,b[$	Open interval
$[a,\infty)$, $[a,\to[$	Interval closed at the left, infinite to the right
$(-\infty,\infty)$, $]\leftarrow,\to[$	Set of all real numbers
$\max_{x\in X} f(x)$, $\max\{f(x)\|x\in X\}$	Maximum of $f(x)$ when x is in the set X
min	Minimum
sup, l.u.b.	Supremum, least upper bound
inf, g.l.b.	Infimum, greatest lower bound
$\lim_{x\to a} f(x)=b$, $\lim_{x=a} f(x)=b$, $f(x)\to b$ as $x\to a$	b is the limit of $f(x)$ as x approaches a
$\lim_{x\to a-} f(x)$, $\lim_{x=a-0} f(x), f(a-)$	Limit of $f(x)$ as x approaches a from the left
lim sup, $\overline{\lim}$	Limit superior
lim inf, $\underline{\lim}$	Limit inferior
l.i.m.	Limit in the mean
$z=x+iy=re^{i\theta}$, $\zeta=\xi+i\eta$, $w=u+iv=\rho e^{i\phi}$	Complex variables
z^*	Complex conjugate
Re, $\Re$	Real part
Im, $\Im$	Imaginary part
arg	Argument
$\dfrac{\partial(u,v)}{\partial(x,y)}$, $\dfrac{D(u,v)}{D(x,y)}$	Jacobian, functional determinant
$\int_E f(x)\,d\mu(x)$	Integral (for example, Lebesgue integral) of function f over set E with respect to measure μ
$f(n)\sim\log n$ as $n\to\infty$	$f(n)/\log n$ approaches 1 as $n\to\infty$
$f(n)=O(\log n)$ as $n\to\infty$	$f(n)/\log n$ is bounded as $n\to\infty$
$f(n)=o(\log n)$	$f(n)/\log n$ approaches zero
$f(x)\nearrow b, f(x)\uparrow b$	$f(x)$ increases, approaching the limit b
$f(x)\downarrow b, f(x)\searrow b$	$f(x)$ decreases, approaching the limit b
a.e., p.p.	Almost everywhere
ess sup	Essential supremum
C^0, $C^0(X)$, $C(X)$	Space of continuous functions
C^k, $C^k[a,b]$	The class of functions having continuous kth derivative (on $[a,b]$)

C'	Same as C^1
Lip_α, $\mathrm{Lip}\,\alpha$	Lipschitz class of functions
L^p, L_p, $L^p[a,b]$	Space of functions having integrable absolute pth power (on $[a,b]$)
L'	Same as L^1
(C,α), (C,p)	Cesàro summability

Special functions.

$[x]$	The integral part of x
$\binom{n}{k}$, ${}^nC_k$, ${}_nC_k$	Binomial coefficient $n!/k!(n-k)!$
$\left(\frac{n}{p}\right)$	Legendre symbol
e^x, $\exp x$	Exponential function
$\sinh x$, $\cosh x$, $\tanh x$	Hyperbolic functions
$\mathrm{sn}\,x$, $\mathrm{cn}\,x$, $\mathrm{dn}\,x$	Jacobi elliptic functions
$\wp(x)$	Weierstrass elliptic function
$\Gamma(x)$	Gamma function
$J_\nu(x)$	Bessel function
$\chi_X(x)$	Characteristic function of the set X: $\chi_X(x)=1$ in case $x\in X$, otherwise $\chi_X(x)=0$
$\mathrm{sgn}\,x$	Signum: $\mathrm{sgn}\,0=0$, while $\mathrm{sgn}\,x=x/\lvert x\rvert$ for $x\neq 0$
$\delta(x)$	Dirac delta function

Algebra, tensors, operators.

$+,\cdot,\times,\circ,\mathsf{T},\tau$	Laws of composition in algebraic systems
$e,0$	Identity, unit, neutral element (of an additive system)
$e,1,I$	Identity, unit, neutral element (of a general algebraic system)
e, $\mathfrak{e}$, E, P	Idempotent
a^{-1}	Inverse of a
$\mathrm{Hom}(M,N)$	Group of all homomorphisms of M into N
G/H	Factor group, group of cosets
$[K:k]$	Dimension of K over k
$\oplus$, $\dot{+}$	Direct sum
$\otimes$	Tensor product, Kronecker product
$\wedge$	Exterior product, Grassmann product
$\vec{x}$, $\mathbf{x}$, $\underline{x}$, x	Vector
$\vec{x}\cdot\vec{y}$, $\mathbf{x}\cdot\mathbf{y}$, $(\underline{x},\underline{b})$	Inner product, scalar product, dot product
$\mathbf{x}\times\mathbf{y}$, $[\underline{x},\underline{b}]$, $\mathbf{x}\wedge\mathbf{y}$	Outer product, vector product, cross product
$\lvert x\rvert$, $\lvert x\rvert$, $\lVert x\rVert$, $\lVert x\rVert_p$	Norm of the vector x
Ax, xA	The image of x under the transformation A
δ_{ij}	Kronecker delta: $\delta_{ii}=1$, while $\delta_{ij}=0$ for $i\neq j$
A', ${}^tA$, A^t, ${}^tA$	Transpose of the matrix A
A^*, $\tilde{A}$	Adjoint, Hermitian conjugate of A
$\mathrm{tr}\,A$, $\mathrm{Sp}\,A$	Trace of the matrix A
$\det A$, $\lvert A\rvert$	Determinant of the matrix A
$\Delta^n f(x)$, $\Delta_h{}^n f$, $\underset{h}{\Delta}{}^n f(x)$	Finite differences
$[x_0,x_1]$, $[x_0,x_1,x_2]$, $\underset{x_1}{\Delta} u_{x_0}$, $[x_0,x_1]_f$	Divided differences
∇f, $\mathrm{grad}\,f$	Read "gradient of f"
$\nabla\cdot\mathbf{v}$, $\mathrm{div}\,\mathbf{v}$	Read "divergence of $\mathbf{v}$"
$\nabla\times\mathbf{v}$, $\mathrm{curl}\,\mathbf{v}$, $\mathrm{rot}\,\mathbf{v}$	Read "curl of $\mathbf{v}$"
∇^2, Δ, div grad	Laplacian
$[X,Y]$	Poisson bracket, or commutator, or Lie product
$\mathrm{GL}(n,R)$	Full linear group of degree n over field R
$\mathrm{O}(n,R)$	Full orthogonal group
$\mathrm{SO}(n,R)$, $\mathrm{O}^+(n,R)$	Special orthogonal group

Topology.

E^n	Euclidean n space
S^n	n sphere
$\rho(p,q)$, $d(p,q)$	Metric, distance (between points p and q)
$\overline{X}$, X^-, $\mathrm{cl}\,X$, X^c	Closure of the set X
$\mathrm{Fr}X$, $\mathrm{fr}X$, ∂X, $\mathrm{bdry}\,X$	Frontier, boundary of X
$\mathrm{int}\,X$, $\mathring{X}$	Interior of X
T_2 space	Hausdorff space
F_σ	Union of countably many closed sets
G_δ	Intersection of countably many open sets
$\dim X$	Dimensionality, dimension of X
$\pi_1(X)$	Fundamental group of the space X
$\pi_n(X)$, $\pi_n(X,A)$	Homotopy groups
$H_n(X)$, $H_n(X,A;G)$, $H_*(X)$	Homology groups
$H^n(X)$, $H^n(X,A;G)$, $H^*(X)$	Cohomology groups

Probability and statistics.

X,Y	Random variables
$P(X\leqq 2)$, $\Pr\{X\leqq 2\}$	Probability that $X\leqq 2$
$P(X\leqq 2\lvert Y\geqq 1)$	Conditional probability
$E(X)$, $\mathrm{E}(X)$	Expectation of X
$E(X\lvert Y\geqq 1)$	Conditional expectation
c.d.f.	Cumulative distribution function
p.d.f.	Probability density function
c.f.	Characteristic function
$\bar{x}$	Mean (especially, sample mean)
σ, s.d.	Standard deviation
σ^2, Var, var	Variance
μ_1, μ_2, μ_3, μ_i, μ_{ij}	Moments of a distribution
ρ	Coefficient of correlation
$\rho_{12\cdot 34}$	Partial correlation coefficient

Fundamental constants

Compiled by E. R. Cohen and B. N. Taylor under the auspices of the CODATA Task Group on Fundamental Constants. This set has been officially adopted by CODATA and is taken from J. Phys. Chem. Ref. Data, Vol. 2, No. 4, p. 663 (1973) and CODATA Bulletin No. 11 (December 1973).

Quantity	Symbol	Numerical Value *	Uncert. (ppm)	SI † ← Units →	cgs ‡
Speed of light in vacuum	c	299792458(1.2)	0.004	$m \cdot s^{-1}$	10^{2} $cm \cdot s^{-1}$

* Note that the numbers in parentheses are the one standard-deviation uncertainties in the last digits of the quoted value computed on the basis of internal consistency, that the unified atomic mass scale $^{12}C \triangleq 12$ has been used throughout, that u=atomic mass unit, C=coulomb, F=farad, G=gauss, H=henry, Hz=hertz=cycle/s, J=joule, K=kelvin (degree Kelvin), Pa=pascal=N•m^{-2}, T=tesla (10^4 G), V=volt, Wb=weber=T•m^2, and W=watt. In cases where formulas for constants are given (e.g., R_∞), the relations are written as the product of two factors. The second factor, in parentheses, is the expression to be used when all quantities are expressed in cgs units, with the electron charge in electrostatic units. The first factor, in brackets, is to be included only if all quantities are expressed in SI units. We remind the reader that with the exception of the auxiliary constants which have been taken to be exact, the uncertainties of these constants are correlated, and therefore the general law of error propagation must be used in calculating additional quantities requiring two or more of these constants.

† Quantities given in u and atm are for the convenience of the reader; these units are not part of the International System of Units (SI).

‡ In order to avoid separate columns for "electromagnetic" and "electrostatic" units, both are given under the single heading "cgs Units." When using these units, the elementary charge e in the second column should be understood to be replaced by e_m or e_e, respectively.

Abbreviations for scientific and technical organizations

Abbrev.	*Organization*
AAA	American Automobile Association
AAAS	American Association for the Advancement of Science
AACC	American Association of Cereal Chemists; American Automatic Control Council
AACE	American Association of Coast Engineers
AAM	American Academy of Microbiology
AAPG	American Association of Petroleum Geologists
AAPM	American Association of Physicists in Medicine
AAPT	Association of Asphalt Paving Technologists
AAR	Association of American Railroads
AAS	American Astronautical Society; American Astronomical Society
ABAI	American Boiler & Affiliated Industries
ABRC	Advisory Board for the Research Councils (U.K.)
ACA	American Crystallographic Association
ACARD	Advisory Council for Applied Research and Development (U.K.)
ACI	American Concrete Institute
ACIP	Advisory Committee on Immunization Practice
ACM	Association for Computing Machinery
ACORD	Advisory Council on Research and Development (U.K.)
ACRMA	Air Conditioning and Refrigerating Manufacturers Association
ACS	American Chemical Society
ACSM	American Congress on Surveying and Mapping
AcSoc	Acoustical Society of America
AEC	Atomic Energy Commission (U.S.; see ERDA, NRC)
AEEC	Airlines Electronic Engineering Committee
AES	Aerospace Electrical Society; Airways Engineering Society; Audio Engineering Society, Inc.
AFBMA	Anti-friction Bearings Manufacturers' Association
AFCCE	Association of Federal Communications Consulting Engineers
AFIPS	American Federation of Information Processing Societies
AFS	American Foundrymen's Society
AGA	American Gas Association
AGI	American Geological Institute
AGMA	American Gear Manufacturers' Association
AGU	American Geophysical Union
AIA	American Institute of Architects
AIAA	American Institute of Aeronautics and Astronautics
AICE	American Institute of Consulting Engineers
AIChE	American Institute of Chemical Engineers
AIEE	American Institute of Electrical Engineers (see IEEE)
AIF	Atomic Industries Forum
AIHA	American Industrial Hygiene Association
AIIE	American Institute of Industrial Engineers, Inc.
AIME	American Institute of Mining, Metallurgical, and Petroleum Engineers
AIP	American Institute of Physics
AIPE	American Institute of Plant Engineers
AISE	American Iron & Steel Engineers
AISI	American Iron and Steel Institute
AMA	Automobile Manufacturers' Association; Acoustical Materials Association
AMCA	Air Moving & Conditioning Association, Inc.
AMS	American Mathematical Society
ANC	Army-Navy Civil Aeronautics Committee
ANS	American Nuclear Society
ANSI	American National Standards Institute
AOA	American Ordnance Association
APCA	Air Pollution Control Association
APHA	American Public Health Association
APHIS	Animal and Plant Health Inspection Service
API	American Petroleum Institute
APS	American Physical Society
APTIC	Air Pollution Technical Information Center
APWA	American Public Works Association
ARC	Agricultural Research Council (U.K.)
AREA	American Railroad Engineering Association
ARGC	Australian Research Grants Committee
ARI	Air Conditioning and Refrigeration Institute
ARPA	Advanced Research Project Agency
ARS	Agricultural Research Service; American Rocket Society
ASA	American Society of Agronomy; American Standards Association (see USASI); American Statistical Association
ASAE	American Society of Agricultural Engineers
ASCE	American Society of Civil Engineers
ASCET	American Society of Certified Engineering Technicians
ASHA	American Speech Language and Hearing Association
ASHAE	see ASHRAE
ASHRAE	American Society of Heating, Refrigerating, and Air Conditioning Engineers (formerly ASHAE and ASH&VE)
ASH&VE	see ASHRAE
ASLB	Atomic Safety and Licensing Board
ASLE	American Society of Lubricating Engineers
ASM	American Society for Metals; American Society for Microbiology
ASME	American Society of Mechanical Engineers
ASNE	American Society of Naval Engineers, Inc.
ASNT	American Society for Nondestructive Testing
ASP	American Society of Photogrammetry
ASPEP	Association of Scientists and Professional Engineering Personnel
ASQC	American Society for Quality Control
ASRE	American Society of Refrigerating Engineers (see ASHRAE)
ASSE	American Society of Safety Engineers; American Society of Sanitary Engineers
ASST	American Society for Steel Treating
ASTEC	Australian Science and Technology Council
ASTM	American Society for Testing and Materials
ASTME	American Society of Tool & Manufacturing Engineers
AVS	American Vacuum Society
AWPA	American Wood Preservation Association
AWS	American Welding Society
AWWA	American Water Works Association
BAA	British Astronomical Association
BCS	British Computer Society
BEMA	Business Equipment Manufacturers Association
BHRA	British Hydromechanics Research Association
BIH	Bureau International de l'Heure
BNIST	National Bureau for Scientific and Technical Information (France)
BOHS	British Occupational Hygiene Society
BSSRS	British Society for Social Responsibility in Science
CAB	Civil Aeronautics Board
CAGI	Compressed Air & Gas Institute

Abbrev.	*Organization*
CASI	Canadian Aeronautics and Space Institute
CAST	Council for Agricultural Science and Technology
CCA	Canadian Construction Association
CCITT	Consultative Committee in International Telegraphy and Telephony
CCPE	Canadian Council of Professional Engineers
CEA	Commissariat à l'Energie Atomique (France)
CEC	Consulting Engineers Council (U.S.)
CECT	State Committee for Science and Technology (Cuba)
CEI	Council of Engineering Institutions (U.K.)
CERN	Commission Européenne pour la Recherche Nucléaire
CFA	Canadian Forestry Association
CGIAR	Consultative Group on International Agricultural Research
CHASM	Coventry Health and Safety Movement (U.K.)
CIAT	Centro Internacional de Agricultura Tropical (Columbia)
CIC	Chemical Institute of Canada
CIE	Chinese Institute of Engineers
CIMM	Canadian Institute of Mining and Metallurgy
CIMMYT	International Maize and Wheat Improvement Center (Mexico)
CIOS	Conseil International pour l'Organisation Scientifique
CIPC	Canadian Institute on Pollution Control
CIPM	Comité International des Poids et Mésures
CIS	Canadian Institute of Surveying
CISHEC	Chemical Industries Association's Safety and Health Council (U.K.)
CME	Chartered Mechanical Engineers (IME)
CMRA	Chemical Marketing Research Association
CNCT	National Council of Science and Technology (Cuba)
CNES	Centre National d'Études Spatiales
CNIC	National Center for Scientific Research (Cuba)
COESA	U.S. Committee on Extension to the Standard Atmosphere
COPR	Center for Overseas Pest Research (U.K.)
COSMAT	Committee on the Survey of Materials Science and Engineering
COSTED	Committee on Science and Technology in Developing Countries
CPSC	Consumer Product Safety Commission
CRGR	Coalition for Responsible Genetic Research
CSA	Canadian Standards Association; Computer Services Association (U.K.)
CSC	Commonwealth Science Council
CSChE	Canadian Society for Chemical Engineering
CSI	Construction Specifications Institute
CSIRO	Commonwealth Scientific and Industrial Research Organization
CSRS	Cooperative State Research Service
CSSA	Crop Science Society of America
CSSE	Conference of State Sanitary Engineers
CUEP	Central Unit on Environmental Pollution (U.K.)
DBER	Division of Biomedical and Environmental Research (ERDA)
DEN	Department of Energy (U.K.)
DEO	Department of Environment (U.K.)
DFG	Deutsches Forschungsgemeinschaft
DFVLR	Deutsche Forschung- und Versuchsanstalt für Luft und Raumfahrt (Air and Space Travel Research Establishment)
DGRST	Délégation Générale á la Recherche Scientifique et Technique (France)
DMAAC	Defence Mapping Agency Aerospace Center
DMAHC	Defence Mapping Agency Hydrographic Center
DPMA	Data Processing Management Association (U.K.)
DSARC	Defense Systems Acquisition Review Council
DSIR	Department of Scientific and Industrial Research
EAI	Engineers and Architects Institute
ECFA	European Committee for Future Accelerators
ECRC	Engineering College Research Council
ECS	Electrochemical Society, Inc.
EEB	European Environmental Bureau
EEI	Edison Electric Institute
EEIB	Environmental Engineering Intersociety Board, Inc.
EF	Engineering Foundation
EIA	Electronic Industries Association
EIAJ	Electronic Industries Association of Japan
EIC	Engineering Institute of Canada
EIRMA	European Industrial Research Management Association
EITB	Engineering Industry Training Board (U.K.)
EJC	Engineers Joint Council
EMBC	European Molecular Biology Conference
EMBO	European Molecular Biology Organization
EPA	Environmental Protection Agency
EPRI	Electric Power Research Institute
ERDA	Energy Research and Development Administration (successor to AEC)
ESA	European Space Agency
ESF	European Science Foundation
ESOC	European Space Operations Center
ESRO	European Space Research Organization
FAA	Federal Aviation Administration
FAO	Food and Agriculture Organization
FAS	Federation of American Scientists
FCC	Federal Communications Commission; Federal Construction Council
FEA	Federal Energy Administration
FEMA	Flavor and Extract Manufacturers' Association
FEO	Federal Energy Office
FID	Federation of International Documentation
FIEP	Forest Industry Energy Program
FIGO	Federation of Gynecology and Obstetrics
FPC	Federal Power Commission
FPRS	Forest Products Research Society
FPS	Fluid Power Society
FSB	Federal Specifications Board
GMAG	Genetic Manipulation Advisory Group (U.K.)
GSA	Geological Society of America
HMO	Health Maintenance Organization
HRB	Highway Research Board
HSMHA	Health Services and Mental Health Administration
HTFMI	Heat Transfer and Fluid Mechanics Institute
IACC	International Association of Cereal Chemistry
IAEA	International Atomic Energy Agency
IAF	International Astronautical Federation
IAMS	International Association of Microbiological Societies
IAS	Institute of Aerospace Sciences
IASS	International Association for Shell Structures
IATA	International Air Transport Association
ICAO	International Civil Aviation Organization
ICC	Interstate Commerce Commission
ICE	Institution of Civil Engineers
ICI	International Commission on Illumination
ICLARM	International Center for Living Aquatic Resources Management
ICMSF	International Commission of Microbiological Specifications for Foods
ICRF	Imperial Cancer Research Fund (U.K.)
ICRISAT	International Crops Research Institute for the Semi-Arid Tropics (India)

Abbrev.	*Organization*
ICSU	International Council of Scientific Unions
IDP	Institute of Data Processing (U.K.)
IDRC	International Development Research Center (Canada)
IEA	International Energy Agency
IEE	Institution of Electrical Engineers (U.K.)
IEEE	Institute of Electrical & Electronics Engineers (successor to AIEE)
IES	Illuminating Engineering Society
IFGO	International Federation of Gynecology and Obstetrics
IGT	Institute of Gas Technology
IGU	International Geographical Union
IME	Institution of Mechanical Engineers
IMMS	International Material Management Society
IMS	International Metallographic Society, Inc.
INA	Institution of Naval Architects
INCAP	Institute of Nutrition for Central America and Panama
INPE	Instituto de Pesquisas Espaciais (Brazil)
IOSA	Irish Offshore Services Association
IP	Institute of Petroleum
IPIN	Pan American Institute of Naval Engineering
IRAC	Information Resource and Analysis Center
IRE	Institute of Radio Engineers
IRI	Industrial Research Institute
IRRI	International Rice Research Institute
ISA	Instrument Society of America
ISC	International Society of Chemotherapy
ISI	International Standards Institute
ISO	International Organization for Standardization
ISTM	International Society for Testing Materials
ITU	International Telecommunications Union
IUCNNR	International Union for Conservation of Nature and Natural Resources
IUFRO	International Union of Forest Research Organizations
IUPAC	International Union of Pure and Applied Chemistry

NAFCO	Northwest Atlantic Fishery Consultative Organization
NAS	National Academy of Sciences
NASA	National Aeronautics and Space Administration
NBFU	National Board of Fire Underwriters
NBS	National Bureau of Standards
NCAES	National Center for Analysis of Energy Systems
NCAR	National Center for Atmospheric Research
NCB	National Coal Board
NCC	National Computing Centre (U.K.); Nature Conservancy Council (U.K.)
NCI	National Cancer Institute
NCWQ	National Commission on Water Quality
NDHA	National District Heating Association
NEC	National Electrical Code
NEMA	National Electrical Manufacturers Association
NFPA	National Fire Protection Association
NIAMDD	National Institute of Arthritis, Metabolism, and Digestive Diseases
NIBSC	National Institute for Biological Standards and Control (U.K.)
NICHHD	National Institute of Child Health and Human Development
NIDA	National Institute on Drug Abuse
NIGMS	National Institute of General Medical Sciences
NIH	National Institutes of Health
NIOSH	National Institute of Occupational Safety and Health
NLGI	National Lubricating Grease Institute
NMA	National Microfilm Association
NMAB	National Materials Advisory Board
NMFS	National Marine Fisheries Service
NOAA	National Oceanographic and Atmospheric Administration
NPC	National Petroleum Council
NRC	National Research Council; Nuclear Regulatory Commission (successor to AEC)
NRPB	National Radiological Protection Board (U.K.)
NSF	National Science Foundation
NSPE	National Society of Professional Engineers
NTDPMA	National Tool, Die and Precision Machining Association
NTIS	National Technical Information Service
NTSB	National Transportation Safety Board
NTSC	National Television System Committee
NWS	National Weather Service
OCR	Office of Coal Research
OCZM	Office of Coastal Zone Management
OES	Office of Endangered Species
ONR	Office of Naval Research
OSA	Optical Society of America
OSF	Office of Space Flight
OSHA	Occupational Safety and Health Administration
OSTP	Office of Science and Technology Policy
OSW	Office of Saline Water
OTA	Office of Technology Assessment
OTS	Office of Technical Services, U.S. Department of Commerce
PAHO	Pan American Health Organization
PFI	Pipe Fabrication Institute
PMA	Pharmaceutical Manufacturers Association
RCEP	Royal Commission on Environmental Pollution (U.K.)
RCRC	Reinforced Concrete Research Council
RESA	Research Society of America
RMA	Rubber Manufacturers Association
RSC	Reactor Safety Commission (German Federal Republic)
RTCA	Radio Technical Commission for Aeronautics
SAE	Society of Automotive Engineers
SAMPE	Society of Aerospace Material & Process Engineers
SAS	Society for Applied Spectroscopy
SBI	Steel Boiler Institute
SDCE	Society of Die Casting Engineers, Inc.
SERI	Solar Energy Research Institute
SEG	Society of Economic Geologists
SES	Standards Engineers Society
SESA	Society for Experimental Stress Analysis
SFPE	Society of Fire Protection Engineers
SIAM	Society for Industrial and Applied Mathematics
SINR	Swiss Institute for Nuclear Research

Abbrev.	*Organization*
SIPI	Scientists' Institute for Public Information
SMACNA	Sheet Metal and Air Conditioning Contractors' National Association
SMBA	Scottish Marine Biological Association
SME	Society of Mining Engineers (AIME)
SMPTE	Society of Motion Picture and Television Engineers
SNA&ME	Society of Naval Architects and Marine Engineers
SNSO	Space Nuclear Systems Office
SOPA	Society for Professional Archeologists
SOR	Society of Rheology
SPE	Society of Petroleum Engineers (AIME); Society of Plastics Engineers
SPHE	Society of Packaging and Handling Engineers
SPIE	Society of Photo-optical Instrumentation Engineers
SPSE	Society of Photographic Scientists and Engineers
SRC	Science Research Council (U.K.)
SRF	Smithsonian Research Foundation
SSA	Seismological Society of America
SSIE	Smithsonian Science Information Exchange
SSSA	Soil Sciences Society of America
SWE	Society of Women Engineers
TAAC	Technology Assessment Advisory Council
TAB	Technology Assessment Board
TAC	Technical Advisory Committee on Weather Design Conditions (ASHRAE)
TFI	The Fertilizer Institute
TIC	Technical Institute Council
TMS	The Metallurgical Society (AIME)
UICC	Union Internationale Contre le Cancer
UKAEA	United Kingdom Atomic Energy Authority
UL	Underwriters' Laboratory
UNEP	United Nations Environment Program
UPADI	Union Pan Americana des Asociaciones de Ingenieros
USAF	U.S. Air Force
USASI	U.S.A. Standards Institute (successor to ASA)
USCG	U.S. Coast Guard
USDA	U.S. Department of Agriculture
USDHEW	U.S. Department of Health, Education and Welfare
USFPL	U.S. Forest Products Laboratory
USGS	U.S. Geological Survey
USN	U.S. Navy
USP	U.S. Pharmacopoeia
USPHS	U.S. Public Health Service
VDI	Verein Deutscher Ingenieure
WHO	World Health Organization
WMO	World Meteorological Organization
WPA	Western Pine Association
WSMO	Weather Service Meteorological Offices
ZSL	Zoological Society of London

Specialized abbreviations and acronyms

Abbrev.	*Term*
AA	arachidonic acid
AAAD	aromatic amino acid decarboxylase
AAF	acetylaminofluorene
AAH	advanced attack helicopter
AALC	amphibious assault landing craft
AAMX	acetoacet-*m*-xylidide
AAS	atomic absorption spectroscopy
AAT	α-antitrypsin
AAW	antiair warfare
ABA	abscisic acid
ABS	acrylonitrile-butadiene-styrene; alkyl benzene sulfonate
AC	allyl chloride
ACAS	airborne collision-avoidance system
ACF	advanced communications function
AChR	acetylcholine receptor
ACN	acrylonitrile
ACU	automatic calling unit
ACV	air-cushion vehicle
A/D	analog/digital
ADA	adenosine deaminase
ADC	air data computer
ADCCP	advanced data communications control procedure
ADI	altitude direction indicator
ADM	adaptive delta modulation
ADPE	automatic data-processing equipment
AEH	anhydroenneaheptitol
AEPD	2-amino-2-ethyl-1,3-propanediol
AER	average evoked response
AES	atomic emission spectroscopy; Auger electron spectroscopy
AEW	airborne early warning
AF	aminofluorene
AFB	atmospheric fluidized bed
AFF	automatic frequency follower
AGR	advanced gas-cooled reactor
AGT	advanced ground transport
AHCTL	acetylhomocysteinethiolactone
AIDJEX	Arctic Ice Dynamics Joint Experiment
AILS	advanced integrated landing systems
AIM	adaptive injection molding
AIRS	advanced inertial reference sphere
ALCM	air-launched cruise missile
ALG	antilymphocytic globulin
ALL	acute lymphoblastic leukemia
ALS	antilymphocytic serum
ALSS	advanced location strike system
ALU	arithmetic logic unit
AME	angle-measuring equipment
AML	acute myelocytic leukemia
AMP	2-amino-2-methyl-1-propanol
AMPTE	Active Magnetospheric Particle Tracer Experiment
AMR	automatic meter reading
AMRAAM	advanced medium-range air-to-air missile
AMSA	advanced manned strategic aircraft
AMST	advanced medium short-takeoff-and-landing transport
AMTEX	Air Mass Transformation Experiment
Angus	a navigable general-purpose underwater surveyor
ANPO	α-naphthylphenyloxazole
ANS	astronomical Netherlands satellite; autonomic nervous system
ANTU	α-naphthylthiourea
AOD	argon-oxygen decarburization
AP	ammonium perchlorate
APAP	acetyl-*p*-aminophenol
APB	arterial premature beat
APC	ammonium perchlorate
API	air-position indicator
APRT	adenine phosphoribosyltransferase
APT	automatic picture transmission
APW	apparent polar wander
AQAM	air quality assessment model
ARCS	advanced reconfigurable computer system
ARIA	Apollo range instrumented aircraft
ARM	automatic reel mounting
ARSR	air route surveillance radar
ARTCC	Air Route Traffic Control Center
ARTS	automated radar terminal system
ASALM	advanced strategic air-launched missile
ASCII	American Standard Code for Information Interchange
ASDE	airport surface detection equipment
ASL	American sign language; Atmospheric Sciences Laboratory
ASM	all-sky monitor
ASMI	airfield service movement indication
ASMR	advanced short-takeoff-and-landing medium range
ASR	airport surveillance radar; automatic send/receive
ASV	avian sarcoma virus
ASW	antisubmarine warfare
ATC	adiabatic toroidal compressor
ATCA	advanced tanker/cargo aircraft
ATCRBS	air-traffic control radar beacon system
ATDC	after top dead center
ATE	aluminum triethyl; automated test equipment
ATL	automated tape library
ATM	aluminum trimethyl; automated teller machine
ATN	augmented transmission network
ATREX	astrophysics transient explorer
ATS	automated telemetry system
AVD	alternate voice/data
AVF	azimuthally varying field
AVHRR	advanced very-high-resolution radiometer
AVOID	airfield vehicle obstacle indication device
AWACS	airborne warning and control system
BAP	benzyl-*p*-aminophenol
BBDC	before bottom dead center
BBP	butyl benzyl phthalate
BCA	benzene carboxylic acid
BCAS	beacon collision-avoidance system
BCC	block check character
BCD	binary-coded decimal
BCS	basic control system
BCV	barge-carrying vessels
BDC	bottom dead center
BEK	butyl ethyl ketene
BER	bit error rate
BERT	bit error rate test
BFE	bromotrifluoroethylene
BFS	beam-foil spectroscopy
BGG	bovine gamma globulin
BHC	benzene hexachloride
BIPS	billion instructions per second
BL	Burkitt's lymphoma
BLU	basic link unit
BMD	ballistic missile defense
BMEP	brake mean effective pressure
BMV	brome mosaic virus
BNL	Brookhaven National Laboratory
BNPA	β-nitropropionic acid
BOMEX	Barbados Oceanographic and Meteorological Experiment
BON	β-oxynaphthoic acid

Abbrev.	*Term*
BORAM	block-oriented random-access memory
BPC	bonded phase chromatography
BRA	β-resorcylic acid
BSA	bovine serum albumin
BSC	binary synchronous communications
BSS	balanced saline solution
BTDA	benzophenone tetracarboxylic dianhydride
BTDC	before top dead center
BTU	basic transmission unit
BVE	butyl vinyl ether
CA	cellulose acetate; cortisone acetate
CAB	cellulose acetate butyrate
CADF	commutated-antenna direction finder
CAES	compressed-air energy storage
CAFB	chemically active fluidized bed
CAI	computer-aided instruction
CAM	computer-assisted makeup; content-addressed memory
CAP	Civil Air Patrol
CAPTOR	encapsulated torpedo
CARETS	Central Atlantic Regional Ecological Test Site
CARS	coherent anti-Stokes Raman spectroscopy
CAS	collision-avoidance system
CAT	choline acetyltransferase
CB	cataclysmic binary; citizen's band; conduction band
CBCT	customer-bank communications terminal
CBD	cannabidiol
CBM	chlorobromomethane
CBT	computer-based terminal
CC	carbonaceous chondrite; coupled channel
CCAS	carrier-controlled approach system
CCAT	conglutinating complement absorption test
CCD	calcite compensation depth; charge-coupled device
CCF	communications control field
CCIS	common channel interoffice signaling
CCL	communications control language
CCT	coupler cut through
CCTV	closed-circuit television
CCU	communications control unit
CDAA	chloro-*N*,*N*-diallylacetamide
CDC	Center for Disease Control
CDEC	chloroallyl diethyldithiocarbamate
CDF	communications data field
cDNA	complementary deoxyribonucleic acid
CDP	cresyl diphenylphosphate; cytidine diphosphate
CDS	charged droplet scrubber
CDTS	centralized digital telecommunications system
CDV	canine distemper virus
CEA	Cambridge Electron Accelerator
CEP	circular error of probability
CES	cyanoethyl sucrose
CEV	citrus exocortis viroid
CF	cystic fibrosis
CFA	complete Freund's adjuvant
CFC	chlorofluorocarbon
CFE	chlorotrifluoroethylene
CFM	chlorofluromethane
CFR	commercial fast breeder reactor
CGDE	contact glow discharge electrolysis
CGI	computer-generated imagery
CGIC	compressed-gas-insulated cable
CGIT	compressed-gas-insulated transmission line
ChAc	choline acetyltransferase
CHAMP	Community Health Air Monitoring Program
ChCMV	chrysanthemum chlorotic mottle viroid
CHESS	Community Health and Environmental Surveillance System
CHF	critical heat flux
CHIL	current-hogging injection logic
CHL	current-hogging logic
CI	cropping index
CIAP	Climatic Impact Assessment Program; Climatic Implications of Atmospheric Pollution
CICS	customer information control system
CID	combined immunological deficiency
CIG	computer image generation
CIM	computer input microfilm
CIR	carrier-to-interference ratio
CL	corpus luteum
CLIMAP	climate long-range investigation mapping and prediction
CIMV	cauliflower mosaic virus
CLS	characteristic loss spectroscopy
CMA	calcium methanearsonate
CMC	carboxymethyl cellulose
CMHEC	carboxymethyl hydroxyethyl cellulose
CMI	cell-mediated immunity; cell multiplication inhibition
CML	cell-mediated lympholysis
CMN	cerium magnesium nitrate
CMOS	complementary metal oxide semiconductor
CMP	cytidine monophosphate
CMPP	2-(4-chloro-2-methylphenoxy)propionic acid
CMR	carbon-13 nuclear magnetic resonance
CMT	cadmium mercury telluride
CMU	chlorophenyldimethylurea
CMV	cytomegalovirus
CNC	condensation nuclei counter
CNI	communications navigation-identification
CNR	carrier-to-noise ratio
CNSC	carrying nuclear-strike cruiser
COD	chemical oxygen demand
COM	computer-output microfilm
CONUS	contiguous United States
COP	coefficient of performance
CORD	chronic obstructive respiratory disease
CP	charge conjugation parity
CPA	closest point of approach; compressed-pulse altimeter
CPBX	computerized private branch exchange
CPC	compound parabolic concentrator; computer program component
CPE	central processing element; circular probable error; computer performance evaluation
CPH	characters per hour
CPI	carbon preference index
CPL	conversational programming language
CPOL	communications procedure-oriented language
CPR	cyclonene-pyrethrin-rotenone
CPS	communications processor system
CPU	central processing unit
CQMS	circuit quality monitoring system
CR	carriage return; conditioned reinforcer; conditioned response
CRBRP	Clinch River Breeder Reactor Plant
CRC	cyclic redundancy check
CRH	corticotropin-releasing hormone
CRM	chemical remanent magnetization
CRNL	Chalk River Nuclear Laboratories
CRO	cosmic ray observatory
CRP	C-reactive protein
CS	citrate synthetase; conditioned stimulus
CSF	cerebrospinal fluid
CSM	command and service module
CSRS	coherent Stokes-Raman spectroscopy
CSV	chrysanthemum stunt viroid
CT	computed tomography

Abbrev.	*Term*
CTAK	cipher text auto key
CTC	chlortetracycline
CTD	conductivity-temperature-depth
CTFE	chlorotrifluoroethylene
CTIAC	Concrete Technology Information Analysis Center
CTMT	combined thermomechanical treatment
CTP	cytidine triphosphate
CTR	controlled thermonuclear reactor
CTS	clear-to-send; communications technology satellite
CV	coefficient of variation
CVC	conserved vector current
CVD	chemical vapor deposition
DA	data available
DAA	data-access arrangement; diacetone acrylamide
DAB	diaminobenzidine
DABA	diaminobenzanilide
DABS	discrete address beacon system
DAF	dissolved air flotation
DAHQ	2,5-di-*tert*-amylhydroquinone
DAL	data-access line
DANS	dimethylaminonaphthalenesulfonyl chloride
DAP	data-access protocol; diallyl phthalate; diammonium phosphate
DARS	digital attitude reference system
DARSS	diode array rapid-scan spectrometer
DAS	4,4′-diamino-2,2′-stilbenedisulfonic acid; differential absorption and scattering
DASD	direct-access storage device
DBC	data base computer
DBCP	dibromochloropropane
DBH	dopamine β-hydroxylase
DBM	dibutyl maleate
DBMS	data base management system
DBP	dibutyl phthalate
DBS	dibutyl sebacate
DCA	deoxycorticosterone acetate
DCB	1,4-dichlorobutane
DCC	dicyclohexylcarbodiimide
DCCI	dicyclohexylcarbiodiimide
DCE	data circuit–terminating equipment
DCHP	dicyclohexyl phthalate
DCIP	dichlorophenol-indilphenol
DCN	deuterated hydrocyanic acid
DCNA	dichloronitroaniline
DCO	dehydrated castor oil
DCP	dicapryl phthalate; dichlorophenol
DCPA	dimethyl 2,3,5,6-tetrachloroterephthalate
DCPC	dichlorophenyl methyl carbinol
DCS	digital computer system; distributed computing system
DCTL	direct-coupled transistor logic
DDA	digital differential analyzer
DDB	dodecylbenzene
DDBSA	dodecylbenzenesulfonic acid
DDCMP	digital data-communications message protocol
DDD	dichlorodiphenyldichloroethane
DDDM	2,2′-dihydroxy-5,5′-dichlorodiphenylmethane
DDDP	discrete differential dynamic programming
DDE	dichlorodiphenyldichloroethylene
DDH	dichlorodimethylhydantoin
DDL	data definition language; data description language
DDM	2,2′-dihydroxy-5,5′-dichlorodiphenylmethane; dodecyl mercaptan
DDNP	diazodinitrophenol
DDP	didecyl phthalate; distributed data processing
DDPS	digital data-processing system
DDQ	2,3-dichloro-5,6-decyanobenzoquinone
DDS	dataphone digital service; diaminodiphenylsulfone
DDVP	dimethyl dichlorovinyl phosphate
DEA	diethanolamine
DEAC	diethylaluminum chloride
DEAE	diethylaminoethyl
DEC	β-diethylaminoethyl chloride hydrochloride
DED/D	*Data Element Dictionary/Directory*
DEET	diethyltoluamide
DEGN	diethylene glycol dinitrate
DEHA	diethylhydroxylamine
DEP	diethyl phthalate
DEPC	γ-diethylaminopropyl chloride hydrochloride
DES	data encryption standard; diethylstilbestrol
DESY	Deutsches Elektronen-Synchrotron Laboratory
DETAB	decision table
DF	desferrioxamine; direction finder
DFB	distributed feedback
DFC	data flow control
DFDT	difluorodiphenyltrichloroethane
DFG	diode function generator
DFP	diisopropylfluorophosphate
DFT	discrete Fourier transform
DH	delayed hypersensitivity
DHA	dihydroxyacetone
DHB	dihydroxybenzoic acid
DHFR	dihydrofolate reductase
DHS	dihydrostreptomycin
DHT	dihydrotestosterone
DIAL	differential-absorption laser-impulsed radar
DIBA	diisobutyl adipate
DIBAC	diisobutylaluminum chloride
DIC	β-diisopropylaminoethyl chloride hydrochloride
DIDA	diisodecyl adipate
DIDP	diisodecyl phthalate
DIE	direct-injection enthalpimetry
DINP	diisononyl phthalate
DIOP	diisooctyl phthalate
DIOS	diisooctyl sebacate
DIPA	diisopropanolamine
DIVOTS	direct-input voice-output telephone system
DKP	dipotassium phosphate
DLC	data link control
DLCF	data link control field
DLGS	Doppler landing guidance system
DM	dry matter
DMA	dimethylamine; direct memory access; disodium methyl arsonate
DMAC	dimethylacetamide
DMB	dimethoxybenzene
DMC	β-dimethylaminoethyl chloride hydrochloride; dichlorophenyl methyl carbinol
DMDT	dimethoxydiphenyltrichloroethane
DME	distance-measuring equipment; dropping mercury electrode
DMEM	Dulbecco's modified Eagle's medium
DMF	digital matched filters; dimethylformamide; dimethylfuran
DMH	dimethylhydantoin
DMHF	dimethylhydantoin formaldehyde
DML	data manipulation language; dimyristoyl lecithin
DMLS	Doppler microwave landing system
DMM	digital multimeter
DMMP	dimethyl methylphosphonate
DMNA	dimethylnitrosamine
DMPA	dimethylol propionic acid
DMSO	dimethyl sulfoxide
DMSP	Defense Meteorological Satellite Program
DMT	dimethyl terephthalate; dimethyltryptamine
DMU	dimethylurea

Abbrev.	Term
DNBP	dinitro-*o*-*sec*-butylphenol
DNDS	dinitrodiphenyl disulfide
DNFB	dinitrofluorobenzene
DNOC	4,6-dinitro-*o*-cresol
DNOCHP	dinitro-*o*-cyclohexylphenol
DNOSBP	dinitro-*o*-*sec*-butylphenol
DNP	dinitrophenol; dinonyl phthalate
DNPC	2,6-dinitro-*p*-cresol
DNPT	dinitrosopentamethylenetetramine
DNT	dinitrotoluene
DO	dissolved oxygen
DOA	dioctyl adipate
DOM	dissolved organic matter
DOP	dioctyl phthalate
DOPAC	dihydroxyphenylacetic acid
DOS	disk operating system
DOTG	di-*o*-tolylguanidine
DOTT	di-*o*-tolylthiourea
DOZ	dioctyl azelate
DPA	diphenylamine
DPB	dodecyl pyridinium bromide
DPCM	differential pulse-code modulation
DPF	dual polarized frequency
DPG	diphenylguanidine
DPH	1,6-diphenylhexatriene
DPIP	diphenyl isophthalate
DPO	2,5-diphenyloxazole
DPPD	*N*,*N*′-diphenyl-*p*-phenylenediamine
DRS	data rate selector
DSC	differential scanning calorimetry; direct satellite communications
DSCG	disodium cromoglycate
DSDP	Deep Sea Drilling Project
DSE	distributed system environment
DSMA	disodium methanearsonate
DSP	disodium phosphate
dsRNA	double-stranded ribonucleic acid
DSU	data service unit
DTA	differential thermal analysis
DTAB	dodecyl trimethyl ammonium bromide
DTBP	di-*tert*-butyl peroxide
DTDP	ditridecyl phthalate
DTE	data terminal equipment
DTPA	diethylenetriaminepentaacetic acid
DTR	data terminal reader
DTS	digital tandem switch
DTT	dithiothreitol
DUMAND	deep underwater muon and neutrino detector
DUV	data under voice
DVB	divinylbenzene
DZ	dizygotic
EA	enthalpimetric analysis
EAA	ethylene acrylic acid
EADC	ethylaluminum dichloride
EAK	ethyl amyl ketone
EAP	evoked action potential
EASC	ethylaluminum sesquichloride
EBAM	electron-beam addressable memory
EBCDIC	extended binary-coded decimal interchange code
EBCE	electron-beam control electronics
EBDC	ethylenebisdithiocarbamate
EBIS	ethylenebisisothiocyanate sulfide
EBR	electron-beam recording
EBV	Epstein-Barr virus
ECC	emergency core coolant
ECCS	emergency core cooling system
ECD	electron capture detector
ECF	extracellular fluid
ECL	electrogenerated chemiluminescence; emitter coupled logic; execution control language
ECS	electroconvulsive shock
ECTA	error-correcting tree automation
ECTFE	ethylene chlorotrifluoroethylene
EDB	ethylene dibromide
EDDHA	ethylenediaminedi-*o*-hydroxyphenylacetic acid
EDPM	electronic data-processing machine
EDS	exchangeable disk storage
EDTA	ethylenediaminetetraacetic acid
EDTAN	ethylenediaminetetraacetonitrile
EEA	ethylene ethyl acrylate
EFT	electronic funds transfer
EGA	evolved gas analysis
EGDN	ethylene glycol dinitrate
EGIG	International Greenland Glaciology Expedition
EHEC	ethyl hydroxyethyl cellulose
EI	electron ionization
EIBA	ethylene isobutyl acrylate
ELF	extremely low frequency
elint	electronic intelligence
ELISA	enzyme-linked immunosorbent assay
ELS	electron energy loss spectroscopy; emitter location system
ELT	emergency locator transmitter
EMBL	European Molecular Biology Laboratory
EMC	electromechanochemical; encephalomyocarditis
EMCV	encephalomyocarditis virus
EMG	electromyogram
EMI	electromagnetic interference
EMP	electromagnetic pulse
EMT	emergency medical technologist
EMTS	ethylmercury-*p*-toluenesulfonamide
ENU	*N*-ethyl-*N*-nitrosourea
EOA	end of address
EOG	electrooculograph; electroolfactogram
EOM	end of message
EOR	enhanced oil recovery
EOT	end of text; end of transmission
EPDM	ethylene-propylene diene monomer
EPIRB	emergency position-indicating radio beacon
EPMA	electron probe microanalysis
EPNL	effective perceived noise level
EPR	ethylene-propylene rubber
EPROM	erasable programmable read-only memory
EPT	ethylene-propylene terpolymer
EPTC	ethyl dipropylthiocarbamate
ERBSS	earth radiation budget satellite system
EREP	Earth resources experiment package
ERG	electroretinogram
EROS	Earth resources observation satellite
ESCA	electron spectroscopy for chemical analysis
ESMR	electrically scanning microwave radiometer
ESO	European Southern Observatory
ESP	electrostatic precipitator; evoked synaptic potential
ESR	early storage reserve; electron spin resonance
ESS	electronic switching system
ETFE	ethylene tetrafluoroethylene
ETU	ethylenethiourea
EUVE	extreme ultraviolet explorer
EVA	ethylene vinyl acetate
EVE	ethyl vinyl ether
FAE	fuel/air explosives
FAX	facsimile
FBB	fluidized-bed boiler
FBC	fluidized-bed combustion
FCC	face-centered cubic; fluid-cracking catalyst
FDM	frequency-division multiplexer
FDMA	frequency-domain multiple access
FDRAKE	First Dynamic Response and Kinematics Experiment
FDX	full-duplex transmission

Abbrev.	*Term*
FEC	forward error correction
FEP	fluorinated ethylene-propylene
FESS	flywheel energy storage system
FFA	free fatty acid
FFT	fast Fourier transform
FGGE	First GARP Global Experiment
FH	fumurate hydratase
FHD	fixed-head disk
FI	field ionization
FIA	Freund's incomplete adjuvant
FID	flame ionization detector
FIGS	figures shift
FIR	far infrared; finite impulse response
FITC	fluorescein isothiocyanate
FLIP	floating laboratory instrument platform
FLIR	forward-looking infrared
FLV	Friend leukemia virus
FMCW	frequency-modulated continuous wave
FMDV	foot-and-mouth disease virus
FMEP	friction mean effective pressure
FOC	fiber optics communications
FRP	fiber-reinforced plastic
FSHRH	follicle-stimulating hormone–releasing hormone
FSK	frequency-shift keying
FSLP	first Spacelab payload
GA	gibberellic acid
GABA	γ-aminobutyric acid
GABOB	γ-amino-β-hydroxybutyric acid
GAD	glutamic acid decarboxylase
GaK	galactokinase
GARP	Global Atmospheric Research Program
GATE	GARP Atlantic Tropical Experiment
GBS	Guillain-Barré syndrome
GCFR	gas-cooled fast reactor
GDCH	glycerol dichlorohydrin
GDME	glycol dimethyl ether
GDP	guanosine diphosphate
GEMS	global environmental monitoring system
GEOSECS	Geochemical Ocean Sections Study
GFD	geophysical fluid dynamics
GHRH	growth hormone–releasing hormone
GHRIH	growth hormone–release inhibiting hormone
GISP	Greenland Ice Sheet Program
GLCM	ground-launched cruise missile
GLV	Gross leukemia virus
GMEM	Glascow modified Eagle's medium
GMF	galactic magnetic field
GMP	guanosine monophosphate
GnRH	gonadotropin-releasing hormone
GOR	gas-oil ratio
GOSP	gas-oil separation plant
GOT	glutamate oxaloacetate transaminase
GPC	gel permeation chromatography
GP/DC	general-purpose digital computer
GPDH	D-glyceraldehyde-3-phosphate dehydrogenase
GPI	glucose phosphate isomerase
GPS	global positioning system
GPT	gas phase titration
GR	glutathione reductase
GRAO	gamma-ray astronomy observatory
GRAS	generally recognized as safe
GRIST	grazing-incidence solar telescope
GSE	ground-support equipment
GSO	geosynchronous orbit
GSR	galvanic skin response
GSSPS	gravitationally stabilized solar power system
GuK	guanylate kinase
HAR	harbor advisory radar
HAS	hydroxylamine acid sulfate
HBSS	Hank's balanced salt solution
HBV	hepatitis B virus
HCCH	hexachlorocyclohexane
HCDA	hypothetical core-disruptive accident
HCH	hexachlorocyclohexane
HCP	hexagonal close-packed
HCS	human chorionic somatomammotropin
HDLC	high-level data link control
HDMSW	high-density Mach shock wave
HDNSW	high-density nuclear shock wave
HDPE	high-density polyethylene
HDX	half-duplex transmission
HEA	hydroxyethyl acrylate
HEAO	high-energy astronomical observatory
HEDTA	hydroxyethylethylenediaminetriacetic acid
HEL	high-energy laser
HEMA	hydroxyethyl methacrylate
HETP	hexaethyl tetraphosphate
HFA	homofolic acid
HFPO	hexafluoropropylene epoxide
HGG	human gamma globulin
HGMS	high-gradient magnetic separation
HGPRT	hypoxanthine-guanine phosphoribosyl transferase
HHDN	hexachlorohexahydrodimethanonaphthalene
HIRS	high-resolution infrared radiation sounder
HK	hexokinase
HLH	heavy-lift helicopter
HLLV	heavy-lift launch vehicle
HMDE	hanging mercury drop electrode
HMDS	hexamethyldisilazane
HMF	hydroxymethyl furaldehyde
HMM	heavy meromyosin; hexamethylmelamine
HMPA	hexamethylphosphoramide
HMTA	hexamethylenetetramine
HN	host-to-network
HNAB	hexanitroazobenzene
HNM	hexanitromannite
hnRNA	heterogeneous nuclear ribonucleic acid
HNS	hexanitrostilbene
HOL	high-order language
HPA	hydroxypropyl acrylate
HPLC	high-pressure liquid chromatography
HPRT	hypoxanthine phosphoribosyl transferase
HRP	horseradish peroxidase
HRS	high-resolution spectrometer
HS	hydroxylamine sulfate
HSGPC	high-speed gel permeation chromatography
HSGT	high-speed ground transportation
HSI	horizontal situation indicator
HSLA	high-strength low-alloy steels
HSLC	high-speed liquid chromatography
HSV	herpes simplex virus
HTFFR	high-temperature fast-flow reactor
HTPB	hydroxyl-terminated polybutadiene
HTSEC	high-temperature size-exclusion chromatography
HTST	high-temperature short-time
HTTMT	high-temperature thermomechanical treatment
HVA	homovanillic acid
HVDC	high-voltage direct-current
HVDCT	high-voltage direct-current transmission
HVEM	high-voltage electron microscope
IBIB	isobutyl isobutyrate
IBP	International Biological Program
ICG	indocyanine green
ICP	inductively coupled plasma
ICR	ion cyclotron resonance
IDA	iminodiacetic acid
IDAPS	image data-processing system

Abbrev.	*Term*
IDCR	International Decade of Cetacean Research
IDCS	instrumentation/data collection system
IDD	insulin-dependent diabetes
IDDD	international direct distance dialing
IDDS	international digital data service
IDH	isocitrate dehydrogenase
IDMS	isotope dilution mass spectrometry
IDOE	International Decade of Ocean Exploration
IDT	interdigital transducer
IDU	5-iodo-2-deoxyuridine
IES	inverted echo sounder
IF	interferon
IFES	image feature extraction system
IFF/ATCRBS	identity friend-or-foe/air-traffic control radar beacon system
IFYGL	International Field Year for the Great Lakes
IgA	immunoglobulin A
IgE	immunoglobulin E
IGFET	insulated-gate field-effect transistor
IgG	immunoglobulin G
IgM	immunoglobulin M
IHD	International Hydrological Decade
IHP	International Hydrological Program
IKE	ion kinetic energy
I^2L	integrated injection logic
IMEP	indicated mean effective pressure
IMM	intelligent memory manager
IMMA	ion microprobe mass analyzer
IMP	inosinic acid; interface message processor
IMS	International Magnetosphere Study
INAH	isonicotinic acid hydrazide
INPC	isopropyl *N*-phenylcarbamate
INS	inertial navigation system
I/O	input/output
IPA	isophthalic acid
IPAE	isopropylaminoethanol
IPC	isopropyl *N*-phenylcarbamate
IPL	initial program load
IPN	instant private network
IPOD	International Phase of Ocean Drilling
IPTG	isopropyl-β,D-thiogalactoside
IR	infrared radiation
IRC	international record carrier
IRLS	interrogation, recording, and location system
IRPTC	*International Register of Potentially Toxic Chemicals*
IRR	integral rocket ramjet
IS	international standard
ISA	inorganic sampling and analysis; ion scattering analysis
ISAM	index sequential-access method
ISEE	international sun-earth explorer
ISIS	international satellite for ionospheric studies
ISOS	International Southern Ocean Studies
ISR	intersecting storage rings
IT	intelligent terminal
ITACS	integrated tactical air-control system
ITCZ	intertropical convergence zone
ITDM	intelligent time-division multiplexer
ITEWS	integrated tactical electronic warfare system
ITNS	integrated tactical navigation subsystem
ITOS	improved television and infrared observation satellite
IUS	interim upper stage
IVE	isobutyl vinyl ether
IXA	ion-excited x-ray analysis
IXAE	international x-ray astrophysics explorer
IXEE	international x-ray and extreme ultraviolet explorer
JCL	job control language
JET	joint European torus
JH	juvenile hormone
JONSWAP	Joint North Sea Wave Project
JOP	Jupiter orbiter probe
JSME	Joint Soil Moisture Experiment
KAK	key-auto-key
KAU	key station adapter unit
KCS	thousand characters per second
KDP	potassium dideuterium phosphate
KDS	keyboard display station
KSR	keyboard send/receive
KTPP	potassium tripolyphosphate
LAD	lithium aluminum deuteride
LAGEOS	laser geodetic earth orbiting satellite
LAH	lithium aluminum hydride
LAM	longitudinal acoustic mode
LAMEF	Los Alamos Medium Energy Facility
LAMPF	Los Alamos Meson Physics Facility
LAS	linear alkyl sulfonate
LASA	large-aperture seismic array
LASL	Los Alamos Scientific Laboratory
LATB	lithium aluminum tri-*tert*-butoxyhydride
LC	liquid crystal
LCD	liquid crystal device
LCSSAP	low-cost silicon solar array project
LDH	lactate dehydrogenase
LDM	limited-distance modem
LED	light-emitting diode
LEO	low earth orbit
LERC	Laramie Energy Research Center
LET	linear energy transfer
LF	lactoferrin; line feed
LHRH	luteinizing hormone–releasing hormone
LIM	line interface module; liquid injection molding
LIMTV	linear induction motor test vehicle
LIRTS	large infrared telescope
LIS	laser isotope separation
LISP	laser isotope separation program
LIU	line interface unit
LLC	liquid-liquid chromatography
LLL	Lawrence Livermore Laboratory
LMFBR	liquid-metal fast breeder reactor
LMNA	long-range multipurpose naval aircraft
LMWHC	low-molecular-weight hydrocarbon
LO	line occupancy
LOAD	laser optoacoustic detection
LOCA	loss-of-coolant accident
LOP	line of position
LOPI	loss of piping integrity
LOSC	Law of the Sea Conference
LOX	liquid oxygen
LP	linear programming
LPC	linear predictive coding
LPE	liquid phase epitaxy
LPM	lines per minute
LRC	longitudinal redundancy check
LREE	light rare-earth element
LRF	lumber recovery factor
LRM	liquid reaction molding
LRPDS	long-range position-determining system
LRU	line replaceable units
LRV	lunar roving vehicle
LSD	line-sharing device; line signal detector
LSIR	limb scanning infrared radiometer
LSU	library storage unit
LTM	long-term memory
LTRS	letters shift
LTTMT	low-temperature thermomechanical treatment
LUT	local user terminal

Abbrev.	*Term*
LVDT	linear variable differential transformer
LWR	light water reactor
LZT	lead zirconate titanate
MA	methyl acetate; monoamine
MAA	methanearsonic acid
MAC	methyl allyl chloride
MAGLEV	magnetic levitation
MAMA	monoammonium methanearsonate
MAP	memory allocation and protection
MAR	minimum angle of resolution
MBE	molecular-beam epitaxy
MBMC	monobutyl-*m*-cresol
MBT	mercaptobenzothiazole
MBTS	mercaptobenzothiazyl disulfide
MC	memory controller
MCA	monochloroacetic acid
MCP	methylcyclopentane
MCPA	methylchlorophenoxyacetic acid
MCPP	2-(2-methyl-4-chlorophenoxy)-propionic acid
MCU	microprogram control unit
MD	multiple dissemination
MDA	malonic dialdehyde; methylenedianiline
MDAC	4-methyl-7-diethylaminocoumarin
MDC	multiple drone control
MDH	malate dehydrogenase
MDI	methylene di-*p*-phenylene isocyanate
MDMV	maize dwarf mosaic virus
MDS	multiple data set system
MDV	mucosal disease virus
MEA	β-mercaptoethylamine; minimum en route altitude; monoethanolamine
MEK	methyl ethyl ketone
MEM	minimal essential medium
MEMC	methoxyethylmercury chloride
MEP	methyl ethyl pyridine
METROMEX	Metropolitan Meteorological Experiment
MEW	microwave early warning
MF	microfiche
MFMR	multifrequency microwave radiometer
MG	myasthenia gravis
MGA	multiple gas analyzer
MH	maleic hydrazide
MHC	major histocompatibility complex
MHD	moving-head disk
MHW	multihundred watt
MIAK	methyl isoamyl ketone
MIBC	methyl isobutyl carbinol
MIBK	methyl isobutyl ketone
MICR	magnetic ink character recognition
MICS	microprocessor inertia and communication system
MICV	mechanized infantry combat vehicle
MIKES	mass-analyzed ion kinetic energy spectrometry
MIPA	monoisopropanolamine
MIPS	million instructions per second
MIT	master instruction tape
MIU	multistation interface unit
MIUS	modular-integrated utility systems
MKP	monopotassium phosphate
MLA	mixed lead alkyl
MLC	mixed leukocyte culture; mixed lymphocyte culture
MLS	multilayered structure
MMH	monomethylhydrazine
MMPI	Minnesota Multiphasic Personality Inventory
MMS	multimission modular spacecraft
MNCS	multipoint network-control system
MNOS	metal-nitride-oxide semiconductor
MNU	*N*-methyl-*N*-nitrosourea
MODE	Mid-Ocean Dynamics Experiment
MOI	multiplicity of infection
MOL	manned orbiting laboratory
MOPA	methoxyphenylacetic acid
MP	methylpentane
MPAI	maximum permissible annual intake
MPC	maximum permissible concentration
MPCC	multiprotocol communications controller
MPI	mannose phosphate isomerase
MPK	methyl propyl ketone
MPL	multischedule private line
MPLB	maximum permissible lung burden
MPS	median period of survival
MPU	microprocessor unit
MR	memory reclaimer
MRAALS	marine remote approach and landing system
MRAC	meter-reading access circuit
MRH	melanocyte-stimulating hormone releasing hormone
MRIH	melanocyte-stimulating hormone release–inhibiting hormone
MS	multiple sclerosis
MSBLS	microwave scan beam landing system
MSCF	thousand standard cubic feet
MSG	monosodium glutamate
MSMA	monosodium acid methanearsonate
MSP	monosodium phosphate
MSR	molten salt reactor
MSS	multispectral scanner
MST	medium-scale technology
MSV	mouse sarcoma virus
MSY	maximum sustained yield
MT	measured time
MTBF	mean time between failures
MTD	*m*-tolylenediamine
MTI	moving target indicator
MTL	merged transistor logic
MTM	methods-time measurement
MTS	message toll service
MTTR	mean time to repair
MTX	methotrexate
MuLV	murine leukemia virus
MUX	multiplexer
MVE	methyl vinyl ether; Murray Valley encephalitis
MVS	multiple virtual storage
MWE	megawatts of electricity
MZ	monozygotic
NA	noradrenaline
NAA	naphthaleneacetic acid; neutron activation analysis
NADB	National Air Data Branch
NADW	North Atlantic Deep Water
NAL	National Accelerator Laboratory
NAM	network access machine
NARL	Naval Arctic Research Laboratory
NASN	national air surveillance network
NavSat	Navy navigation satellite system
NBA	*N*-bromoacetamide
NBC	National Building Code
NBCC	National Building Code of Canada
NBS	*N*-bromosuccinimide
NC	network connect; nitrocellulose
NCEA	*N*-(1-carboxyethyl)-alanine
NCP	network control program
NCS	*N*-chlorosuccinimide
NDB	nondirectional beacon
NDEA	*N*-nitrosodiethylamine
NDGA	nordihydroguaiaretic acid
NDMA	nitrosodimethylamine
NDT	net data throughput
NDV	Newcastle disease virus
NEA	negative electron affinity

Abbrev.	*Term*
NEC	nuclear energy center
NEDS	national emission data system
NEL	National Engineering Laboratory (Great Britain)
NEM	*N*-ethyl-maleimide
NEMS	Nimbus-E microwave spectrometer
NESS	National Environmental Satellite Service
NGF	nerve growth factor
NHRE	National Hail Research Experiment
NMC	network management center
NMOS	*n*-channel metal oxide semiconductor
NMT	*N*-methyltransferase
NODA	*n*-octyl, *n*-decyl adipate
NORPAX	North Pacific Experiment
NORSAR	Norwegian seismic array
NP	nucleoside phosphorylase
NPN	*n*-propyl nitrate
NPO	α-naphthylphenyloxazole
NPR	noise-power ratio
NPYRR	*N*-nitrosopyrrolidine
NQR	nuclear quadrupole moment
NR	nitrile rubber
NRAO	National Radio Astronomy Observatory
NRL	Naval Research Laboratory
NRZ	nonreturn to zero
NSAID	nonsteroidal anti-inflammatory drug
NSF	Nuclear Structure Facility (Great Britain)
NSR	nitrile silicone rubber
NTA	nitrilotriacetic acid
NTAN	nitrilotriacetonitrile
NTPF	number of terminals per failure
OAA	oxaloacetic acid
OAO	orbiting astronomical observatory
OBI	omnibearing indicator
OCR	optical character recognition
OCS	outer continental shelf
ODSS	ocean dumping surveillance system
ODW	organic dry weight
OEDSF	onboard experimental data support facility
OFT	orbital flight tests
OIP	oil in-place
OLOGS	open-loop oxygen-generating system
OLRT	on-line real-time operation
OMPA	octamethyl pyrophosphoramide
OMS	orbital maneuvering system
ONB	*o*-nitrobiphenyl
OPD	outpatient department
OPDN	β,β-oxydipropionitrile
OPG	oxypolygelatin
OPO	optical parametric oscillator
OPP	*o*-phenylphenol
OR	operations research
ORGDP	Oak Ridge Gaseous Diffusion Plant
ORNL	Oak Ridge National Laboratory
ORRMIS	Oak Ridge regional modeling information system
OS	operating system
OSDR	oil slick detection radar
OSO	orbiting solar observatory
OSR	optical solar reflector
OSWS	operating system work station
OTEC	ocean thermal energy conservation; ocean thermal energy conversion
OTPP	ocean thermal power plant
OTS	orbital test satellite; *o*-toluenesulfonamide
OTV	orbital transfer vehicle
PABX	private automatic branch exchange
PAD	packet assembler/disassembler
PAGEOS	passive geodetic satellite
PAHA	*p*-aminohippuric acid
PAHR	postaccident heat removal
PAIR	precision approach interferometer radar
PAL	programmable algorithm machine assembly language
PAM	2-pyridine aldoxine methiodide; programmable algorithm machine
PAN	peroxyacetyl nitrate
PAR	precision approach radar
PARR	postaccident radioactivity removal
PAS	photoacoustic spectroscopy
PAT	polyaminotriazole
PBAA	polybutadieneacrylic acid
PBB	polybrominated biphenyl
PBD	1,3,4-phenylbiphenyloxadiazole
PBI	polybenzimidazole
PBPB	pyridinium bromide perbromide
PBS	phosphate-buffered saline
PBX	plastic bonded explosive
PC	plasma chromatography; polycarbonate; polycarbosilane; propylene carbonate
PCA	perchloric acid
PCB	polychlorinated biphenyl; polychlorobenzene
PCM	punched-card machine
PCMS	*p*-chloromercurphenisulfonic acid
PCNB	pentachloronitrobenzene
PCP	pentachlorophenol
PCTFE	polychlorotrifluoroethylene
PDB	*p*-dichlorobenzene
PDE	partial differential equation; position-determining equipment
PDFD	predemonstration fusion device
PDL	photodissociation dye laser
PDR	processing data rate
PDS	photodischarge spectroscopy
PE	pentaerythritol; polyethylene; processor element
PEA	phenylethylamine
PEARL	process and experiment automation real-time language
PEG	polyethylene glycol
PEP	phosphoenolpyruvate
PES	polyethersulfone
PFA	perfluoroalkoxyl
PFB	pressurized fluidized bed
PFC	pulse-flow coulometry
PFEP	programmable front-end processor
PFR	prototype fast reactor
PG	polypropylene glycol; prostaglandin
PGA	pteroylglutamic acid
PGD	phosphogluconate dehydrogenase
PGK	phosphoglycerate kinase
PGM	phosphoglucomutase
PGS	power generation satellite
PHIL	programmable algorithm machine high-level language
PHM	patrol hydrofoil missile
PI	phosphatidylinositol
PIDA	phenylindane dicarboxylic acid
PIU	path information unit
PIXE	proton-induced x-ray emission
PK	pyruvate kinase
PLBR	prototype large breeder reactor
PLRS	position, location, and reporting system
PLSS	precision location strike system
PLUM	priority low-use minimal
PMA	phenylmercuric acetate; phorbol myristate acetate; phosphomolybdic acid; pyromellitic acid
PMAC	phenylmercuric acetate
PMDA	pyromellitic dianhydride
PMHP	*p*-methane hydroperoxide
PMM	polymethyl methacrylate

Abbrev.	*Term*
PMMA	polymethyl methacrylate
PMN	polymorphonuclear neutrophil
PMOS	*p*-channel metal oxide semiconductor
PMR	pressure modulator radiometer; proton magnetic resonance
PMX	packet multiplexer
PNC	phosphonitrilic chloride
POEMS	polyoxyethylene monostearate
POEOP	polyoxyethyleneoxypropylene
POLEX	Polar Experiment
POPDA	polyoxypropylenediamine
PP	polypropylene
PPH	phosphopyruvate hydratase
PPQ	polyphenylquinoxaline
PPS	plant protection system
PRH	prolactin-releasing hormone
PRIH	prolactin release-inhibiting hormone
PROM	programmable read-only memory
PRS	power relay satellite
PRTM	printing response-time monitor
PS	polystyrene
PSE	packet-switching exchange
PSS	public services satellite
PSTV	potato spindle tuber viroid
PSU	primary sampling unit
PTA	phosphotungstic acid
PTD	posttuning drift
PTFE	polytetrafluoroethylene
PTH	parathyroid hormone
PTMEG	polytetramethylene ether glycol
PTMS	*p*-toluidine-*m*-sulfonic acid
PTQ	poly-*p*-tolyquinoxaline
PTSA	*p*-toluenesulfonamide
PTZ	pentylenetetrazol
PVA	polyvinyl alcohol
PVAc	polyvinyl acetate
PVB	polyvinyl butyral
PVC	polyvinyl chloride
PVdC	polyvinyl dichloride
PVDF	polyvinylidene fluoride
PVE	polyvinyl ether; polyvinyl ethyl ether
PVF	polyvinyl fluoride
PVI	polyvinylisobutyl ether
PVM	polyvinyl methyl ether
PVP	polyvinylpyrrolidine
PVS	photovoltaic system
PVT	pressure, volume, temperature
PWR	pressurized water reactor
QAM	quadrature amplitude modulation
QCPSK	quaternary coherent phase-shift-keyed
QED	quantum electrodynamics
RACG	radiometric area-correlation guidance
RAD	random-access device
RAM	random-access memory
RAMS	regional air monitoring station
RAS	remote-access system
ratan	radar and television aid to navigation
RBE	relative biological effectiveness
RBV	return-beam vidicon
RCAC	remote computer-access communications service
RCC	radio common carrier
RCD	receiver-carrier detector
RDA	recommended dietary allowance
RDC	remote data concentrator
RDF	radio direction finder; refuse-derived fuel
RDGE	resorcinol diglycidyl ether
RDOS	real-time disc operating system
RE	rare earth
REE	rare-earth element
RFNA	red fuming nitric acid
RGO	Royal Greenwich Observatory (Great Britain)
RGP	remote graphics processor
RIA	radioimmunoassay
RIC	Rare-Earth Information Center
RID	radial immunodiffusion
RIHANS	river and harbor aid to navigation system
RIM	reaction injection molding
RITC	rhodamine isothicyanate
RJE	remote job entry
RLSD	received line signal detector
RMC	rotating modulation collimator
RMI	radio magnetic indicator
RMS	remote manipulator system; root mean square
RO	receive only
ROM	read-only memory; run-of-mine
ROTR	receive-only typing reperforation
RPC	registered protective circuit
RPG	report program generator
RPH	remotely piloted helicopter
RPL	Rocket Propulsion Laboratory
RPQ	request for price quotation
RPRV	remotely piloted research vehicle
RPV	remotely piloted vehicle
RSR	reactor safety research
RSV	rat sarcoma virus
RT	real time
RTG	radioisotope thermoelectric generator
RTS	reactor trip system; request to send
RU	request/response unit
RVR	runway visual range
SAGE	solar-assisted gas energy
SAHPS	solar energy–assisted heat pump system
SAIB	sucrose acetate isobutyrate
SAM	scanning acoustic microscope
SAN	styrene-acrylonitrile polymer
SAR	synthetic aperture radar
SARP	small autonomous research package
SAS	small astronomy satellite; sodium alkane sulfonate; sodium aluminum sulfate
SASAR	segmented aperture–synthetic aperture radar
SBA	*sec*-butyl alcohol
SBG	standard battery grade
SBNT	single-breath nitrogen test
SCADA	supervisory control and data acquisition
SCAMS	scanning microwave spectrometer
SCANSAR	scanning synthetic aperture radar
SCC	satellite communications controller; specialized common carrier; stress corrosion cracking
SCPC	single channel per carrier
SDA	specially denatured alcohol
SDDC	sodium dimethyldithiocarbamate
SDLC	synchronous data link communications; synchronous data link control
SDP	sulfonyldiphenol
SDS	sodium dodecyl sulfate
SEC	*sec*-butyl alcohol; size-exclusion chromatography
SEM	scanning electron microscope
SEOCS	sun-earth observatory and climatology satellite
SEPS	solar electric propulsion stage
SES	sodium 2,4-dichlorophenoxyethyl sulfate; surface-effect ship
SESLP	sequential explicit stochastic linear programming
SFS	sodium formaldehyde sulfoxylate
SGHWR	steam-generating heavy-water reactor
SGNMOS	screen-grid *n*-channel metal oxide semiconductor
SGOR	solution gas-oil ratio
SGOT	serum glutamic oxaloacetic transaminase
SGPT	serum glutamic pyruvic transaminase

Abbrev.	*Term*
SGR	self-generation recycle
SIMP	satellite information message protocol
SIMS	secondary-ion mass spectrometry
SIPP	sodium iron pyrophosphate
SIRS	satellite infrared spectrometer
SLAC	Stanford Linear Accelerator Center
SLAR	side-looking airborne radar
SLBM	submarine-launched ballistic missile
SLSF	sodium loop safety facility
SMOW	standard mean ocean water
SMRT	single message rate timing
SNAP	standard network-access protocol
SNR	signal-to-noise ratio
SNTA	sodium nitrilotriacetate
SOD	superoxide dismutase
SOH	start of header
SOM	start of message
SOPP	sodium orthophenylphenate
SOTAS	standoff target acquisition system
SP	space character
SPM	solar power module
SPOOL	simultaneous peripheral operation on-line
SPR	strategic petroleum reserve
SPS	solar power satellite; super proton synchrotron
SQD	signal quality detector
SQUID	semiconducting quantum interference device
SR	sarcoplasmic reticulum; scanning radiometer
SRAM	short-range attack missile
SRS	sonobuoy reference system
SSC	standard saline citrate
SSCV	semisubmersible crane vessel
SSI	sky survey instrument
SSME	Space Shuttle main engine
SSPS	solar-based solar power satellite
SSR	secondary surveillance radar
SSRP	Stanford Synchrotron Radiation Project
SST	sea surface temperature
STC	sound transmission class
STD	salinity-temperature-depth
STDN	space flight tracking and data network
STEM	scanning transmission electron microscope
STL	Schottky transistor logic
STM	short-term memory
STNV	satellite tobacco necrosis virus
STPP	sodium tripolyphosphate
STS	space transportation system
STX	start of text
SU	signaling unit
SVC	switched virtual circuit
SVD	simultaneous voice/data
SWS	slow-wave sleep
SXAPS	soft x-ray appearance potential spectroscopy
TA	terephthalic acid
TACRV	tracked air-cushion research vehicle
TAP	tetrainosylpyrrole
TASES	tactical airborne signal exploitation system
TATr	tyrosine aminotransferase regulator
TBH	technical benzene hexachloride
TBHQ	tertiary butylhydroquinone
TBP	tributyl phosphate
TBT	tetrabutyl titanate
TC	terminal controller
TCA	trichloroacetic acid
TCAM	telecommunications access method
TCB	tetracarboxybutane
TCBC	trichlorobenzylchloride
TCDD	tetrachlorodibenzo-*p*-dioxin
TCDMS	telecommunication/data management system
TCM	tetrachloromercurate
TCNQ	tetracyanoquinodimethane
TCP	tricresyl phosphate
TCPP	tetra-*p*-chlorophenylpyrrole
TCTNB	trichlorotrinitrobenzene
TCTP	tetrachlorothiophene
TCU	transmission control unit
TD	theoretical density
TDC	top dead center
TDE	tetrachlorodiphenylethane
TDI	toluene diisocyanate
TDM	time-division multiplexer
TDMA	time-division multiple access
TDP	thiodiphenol
TDQP	trimethyldihydroquinoline polymer
TDRM	time domain reflectometry microcomputer
TDRSS	tracking and data relay satellite system
TEA	tetraethylammonium; triethanolamine
TEAC	tetraethylammonium chloride
TEDA	triethylenediamine
TEDP	tetraethyl dithionopyrophosphate
TEDS	tactical expendable drone systems
TEG	tetraethylene glycol; triethylene glycol
TEL	tetraethyllead
TEM	transmission electron microscope; triethylene melamine
TEP	triethyl phosphate
TEPP	tetraethyl pyrophosphate
TERCOM	terrain correlation matching
TEREC	tactical electronic reconnaissance
TES	thermal energy storage
TET	thermometric enthalpy titration
TETD	tetraethylthiuram disulfide
TFE	tetrafluoroethylene
TFEO	tetrafluoroethylene epoxide
TFME	thin-film mercury electrode
TFMSA	trifluoromethane sulfonic acid
TFTR	tokamak fusion test reactor
TGA	trace gas analysis; triglycollamic acid
TGS	triglycine sulfate
TH	tyrosine hydroxylase
THAM	tris(hydroxymethyl)aminomethane
THC	tetrahydrocannabinol
THF	tetrahydrofuran
THFA	tetrahydrofurfuryl alcohol
THHF	tetrahydrohomofolate
THIR	temperature-humidity infrared radiometer
THP	tetrahydropapaveroline
TIBA	triiodobenzoic acid
TIP	terminal interface package
TIQ	tetrahydroisoquinone
TIROS	television and infrared observation satellite
TIU	toxicologically insignificant usage
TK	thymidine kinase
TKA	thermokinetic analysis
TKP	tripotassium phosphate
TKPP	tetrapotassium pyrophosphate
TL	thermoluminescence
TLC	thin-layer chromatography
TLCK	tosyl lysine chloromethyl ketone
TLS	tactical landing system
TLV	tracked levitated vehicle
TMA	thermal mechanical analysis; trimetallic anhydride; trimethylamine
TMEDA	tetramethylethylenediamine
TML	tetramethyllead
TMMC	tetramethyl ammonium manganese chloride
TMPTMA	trimethylolpropane trimethylacrylate
TMS	telecommunications message switcher
TMT	thermomechanical treatment

Abbrev.	*Term*
TMU	transmission message unit
TMV	tobacco mosaic virus
TNA	tetranitroaniline
TNB	trinitrobenzene
TNF	trinitrofluorenone
TNS	transaction network service
TOC	total organic carbon
TOH	tyrosine hydroxylase
TPA	terephthalic acid
TPB	tetradecylpyridinium bromide; tetraphenylbutadiene
TPF	tetraphenylfuran
TPG	triphenylguanidine
TPI	triose phosphate isomerase
TPO	thermoplastic olefin
TPP	tetraphenylporphine; tetraphenylpyrrole
TPT	tetraphenylthiophene
TRAPATT	trapped plasma avalanche transit time
TRF	thyrotropin-releasing factor
TRH	thyrotropin-releasing hormone
TRI	time-reversal invariance
TRIP	Thunderstorm Research International Program; transformation-induced plasticity
TRM	thermoremanent magnetization
TROV	tethered remotely operated vehicle
TRSB	time-referenced scanning beam
TSA	toluenesulfonic acid
TSO	technical standard order; time-sharing option
TSP	trisodium phosphate
TSPP	tetrasodium pyrophosphate
TSPS	traffic service position system
TTD	tetraethylthiuram disulfide
TTF	tetrathiofulvalene
TTL	transistor-transistor logic
TTP	tetratolylpyrrole
TTY	teletypewriter
TWT	traveling-wave tube
TWX	teletypewriter exchange
TYMV	turnip yellow mosaic virus
UART	universal asynchronous receiver-transmitter
UBC	Uniform Building Code
UCG	underground coal gasification
UCN	ultra-cold neutron
UCR	unconditioned response
UCS	unconditioned stimulus
UCT	universal coordinated time
UDMH	*unsym*-dimethylhydrazine
UGPP	uridine diphosphoglucose pyrophosphorylase
UHV	ultra-high vacuum
UPC	Universal Product Code
UPPE	ultraviolet photometric and polarimetric explorer
UPS	ultraviolet photoemission spectroscopy
USAS	U.S.A. Standard
USCS	U.S. Commercial Standard
USGW	underwater-to-surface guided weapon
UTM	universal transverse mercator
UTT	utility tactical transport
VAC	value-added carrier
VAN	value-added network
VCO	voltage-controlled oscillator
VCR	variable compression ratio
VDE	variable displacement engine
VDK	vicinal diketone
VDT	video display terminal
VFR	visual flight rules
VGP	virtual geomagnetic pole
VHRR	very-high-resolution radiometer
VIDAC	virtual data acquisition and control
VIP	visual information projection
VIR	visible and infrared radiometer
VISSR	visible infrared spin-scan radiometer
VLA	very large array
VLB	very long baseline
VLBI	very-long-baseline interferometry
VLP	viruslike particle
VM	virtual memory
VS	virtual storage
V/STOL	vertical and short takeoff and landing
VTAM	virtual telecommunications access method
VTE	vertical tube evaporator
VTPR	vertical temperature profile radiometer
WPM	words per minute
WRSIC	Water Resources Scientific Information Center
WT	wild type
XPS	x-ray photoelectron spectroscopy
XTC	external transmit clock
YBP	years before present

Semiconductor symbols and abbreviations*

A, a—Anode
B, b—Base
$\mathbf{b_{fs}}$—Common-source small-signal forward transfer susceptance
$\mathbf{b_{is}}$—Common-source small-signal input susceptance
$\mathbf{b_{os}}$—Common-source small-signal output susceptance
$\mathbf{b_{rs}}$—Common-source small-signal reverse transfer susceptance
C, c—Collector
$\mathbf{C_{cb}}$—Collector-base interterminal capacitance
$\mathbf{C_{ce}}$—Collector-emitter interterminal capacitance
$\mathbf{C_{ds}}$—Drain-source capacitance
$\mathbf{C_{du}}$—Drain-substrate capacitance
$\mathbf{C_{eb}}$—Emitter-base interterminal capacitance
$\mathbf{C_{ibo}}$—Common-base open-circuit input capacitance
$\mathbf{C_{ibs}}$—Common-base short-circuit input capacitance
$\mathbf{C_{ieo}}$—Common-emitter open-circuit input capacitance
$\mathbf{C_{ies}}$—Common-emitter short-circuit input capacitance
$\mathbf{C_{iss}}$—Common-source short-circuit input capacitance
$\mathbf{C_{obo}}$—Common-base open-circuit output capacitance
$\mathbf{C_{obs}}$—Common-base short-circuit output capacitance
$\mathbf{C_{oeo}}$—Common-emitter open-circuit output capacitance
$\mathbf{C_{oes}}$—Common-emitter short-circuit output capacitance
$\mathbf{C_{oss}}$—Common-source short-circuit output capacitance
$\mathbf{C_{rbs}}$—Common-base short-circuit reverse transfer capacitance
$\mathbf{C_{rcs}}$—Common-collector short-circuit reverse transfer capacitance
$\mathbf{C_{res}}$—Common-emitter short-circuit reverse transfer capacitance
$\mathbf{C_{rss}}$—Common-source short-circuit reverse transfer capacitance
$\mathbf{C_{tc}}$—Collector depletion-layer capacitance
$\mathbf{C_{te}}$—Emitter depletion-layer capacitance
D, d—Drain
E, e—Emitter
η—Intrinsic standoff ratio
$\mathbf{f_{hfb}}$—Common-base small-signal short-circuit forward current transfer ratio cutoff frequency
$\mathbf{f_{hfe}}$—Common-collector small-signal short-circuit forward current transfer ratio cutoff frequency
$\mathbf{f_{hfe}}$—Common-emitter small-signal short-circuit forward current transfer ratio cutoff frequency
$\mathbf{f_{max}}$—Maximum frequency of oscillation
$\mathbf{f_t}$—Transition frequency (frequency at which common-emitter small-signal forward current transfer ratio extrapolates to unity)
G, g—Gate
$\mathbf{g_{fs}}$—Common-source small-signal forward transfer conductance
$\mathbf{g_{is}}$—Common-source small-signal input conductance
$\mathbf{g_{MB}}$—Common-base static transconductance
$\mathbf{g_{MC}}$—Common-collector static transconductance
$\mathbf{g_{ME}}$—Common-emitter static transconductance
$\mathbf{g_{os}}$—Common-source small-signal output conductance
$\mathbf{G_{PB}}$—Common-base large-signal insertion power gain
$\mathbf{G_{pb}}$—Common-base small-signal insertion power gain
$\mathbf{G_{PC}}$—Common-collector large-signal insertion power gain
$\mathbf{G_{pc}}$—Common-collector small-signal insertion power gain
$\mathbf{G_{PE}}$—Common-emitter large-signal insertion power gain
$\mathbf{G_{pe}}$—Common-emitter small-signal insertion power gain
$\mathbf{G_{pg}}$—Common-gate small-signal insertion power gain
$\mathbf{G_{ps}}$—Common-source small-signal insertion power gain
$\mathbf{g_{rs}}$—Common-source small-signal reverse transfer conductance
$\mathbf{G_{TB}}$—Common-base large-signal transducer power gain
$\mathbf{G_{tb}}$—Common-base small-signal transducer power gain
$\mathbf{G_{TC}}$—Common-collector large-signal transducer power gain
$\mathbf{G_{tc}}$—Common-collector small-signal transducer power gain
$\mathbf{G_{TE}}$—Common-emitter large-signal transducer power gain
$\mathbf{G_{te}}$—Common-emitter small-signal transducer power gain
$\mathbf{G_{tg}}$—Common-gate small-signal transducer power gain
$\mathbf{G_{ts}}$—Common-source small-signal transducer power gain
$\mathbf{h_{FB}}$—Common-base static forward current transfer ratio
$\mathbf{h_{fb}}$—Common-base small-signal short-circuit forward current transfer ratio
$\mathbf{h_{FC}}$—Common-collector static forward current transfer ratio
$\mathbf{h_{fc}}$—Common-collector small-signal short-circuit forward current transfer ratio
$\mathbf{h_{FE}}$—Common-emitter static forward current transfer ratio
$\mathbf{h_{fe}}$—Common-emitter small-signal short-circuit forward current transfer ratio
$\mathbf{h_{FEL}}$—Inherent large-signal forward current transfer ratio
$\mathbf{h_{IB}}$—Common-base static input resistance
$\mathbf{h_{ib}}$—Common-base small-signal short-circuit input impedance
$\mathbf{h_{IC}}$—Common-collector statis input resistance
$\mathbf{h_{ic}}$—Common-collector small-signal short-circuit input impedance
$\mathbf{h_{IE}}$—Common-emitter static input resistance
$\mathbf{h_{ie}}$—Common-emitter small-signal short-circuit input impedance
$\mathbf{h_{ie(imag)}}$—Imaginary part of common-emitter small-signal short-circuit input impedance
$\mathbf{h_{ie(real)}}$—Real part of common-emitter small-signal short-circuit input impedance
$\mathbf{h_{ob}}$—Common-base small-signal open-circuit output admittance
$\mathbf{h_{oc}}$—Common-collector small-signal open-circuit output admittance
$\mathbf{h_{oe}}$—Common-emitter small-signal open-circuit output admittance
$\mathbf{h_{oe(imag)}}$—Imaginary part of common-emitter small-signal open-circuit output admittance
$\mathbf{h_{oe(real)}}$—Real part of common-emitter small-signal open-circuit output admittance
$\mathbf{h_{rb}}$—Common-base small-signal open-circuit reverse voltage transfer ratio
$\mathbf{h_{rc}}$—Common-collector small-signal open-circuit reverse voltage transfer ratio
$\mathbf{h_{ro}}$—Common-emitter small-signal open-circuit reverse voltage transfer ratio
$\mathbf{I_B}$—Base-terminal dc current
$\mathbf{I_b}$—Alternating component (rms value) of base-terminal current
$\mathbf{i_B}$—Instantaneous total value of base-terminal current
$\mathbf{I_{BEV}}$—Base cutoff current, dc
$\mathbf{I_{B2(mod)}}$—Interbase modulated current
$\mathbf{I_C}$—Collector-terminal dc current
$\mathbf{I_c}$—Alternating component (rms value) of collector-terminal current
$\mathbf{i_C}$—Instantaneous total value of collector-terminal current
$\mathbf{I_{CBO}}$—Collector cutoff current (dc), emitter open
$\mathbf{I_{CEO}}$—Collector cutoff current (dc), base open
$\mathbf{I_{CER}}$—Collector cutoff current (dc), specified resistance between base and emitter
$\mathbf{I_{CES}}$—Collector cutoff current (dc), base shorted to emitter
$\mathbf{I_{CEV}}$—Collector cutoff current (dc), specified voltage between base and emitter
$\mathbf{I_{CEX}}$—Collector cutoff current (dc), specified circuit between base and emitter
$\mathbf{I_D}$—Drain current; dc
$\mathbf{I_{D(off)}}$—Drain cutoff current
$\mathbf{I_{D(on)}}$—On-state drain current
$\mathbf{I_{DSS}}$—Zero-gate-voltage drain current
$\mathbf{I_E}$—Emitter-terminal dc current
$\mathbf{I_e}$—Alternating component (rms value) of emitter-terminal current
$\mathbf{i_E}$—Instantaneous total value of emitter-terminal current
$\mathbf{I_{EBO}}$—Emitter cutoff current (dc), collector open
$\mathbf{I_{EB20}}$—Emitter reverse current

*Recommended by the Joint Electron Device Engineering Council of the Electronic Industries Association and the National Electrical Manufacturers Association for use in semiconductor device data sheets and specifications. From R. F. Graf, *Modern Dictionary of Electronics*, 4th ed., Indianapolis: Howard Sams, 1972.

Semiconductor symbols and abbreviations (cont.)

$I_{EC(ofs)}$—Emitter-collector offset current
I_{ECS}—Emitter cutoff current (dc), base short-circuited to collector
$I_{EIE2(off)}$—Emitter cutoff current
I_F—For voltage-regulator and voltage-reference diodes: dc forward current. For signal diodes and rectifier diodes: dc forward current (no alternating component)
I_f—Alternating component of forward current (rms value)
i_F—Instantaneous total forward current
$I_{F(AV)}$—Forward current, dc (with alternating component)
I_{FM}—Maximum (peak) total forward current
$I_{F(OV)}$—Forward current, overload
I_{FRM}—Maximum (peak) forward current, repetitive
$I_{F(RMS)}$—Total rms forward current
I_{FSM}—Maximum (peak) forward current, surge
I_G—Gate current, dc
I_{GF}—Forward gate current
I_{GR}—Reverse gate current
I_{GSS}—Reverse gate current, drain short-circuited to source
I_{GSSF}—Forward gate current, drain short-circuited to source
I_{GSSR}—Reverse gate current, drain short-circuited to source
I_i—Inflection-point current
$\mathbf{Im}(h_{oe})$—Imaginary part of common-emitter small-signal short-circuit input impedance
$\mathbf{Im}(h_{oe})$—Imaginary part of common-emitter small-signal open-circuit output admittance
I_O—Average forward current, 180° conduction angle, 60-Hz half sine wave
I_P—Peak-point current
I_R—For voltage-regulator and voltage-reference diodes: dc reverse current. For signal diodes and rectifier diodes: dc reverse current (no alternating component)
I_r—Alternating component of reverse current (rms value)
i_R—Instantaneous total reverse current
$I_{R(AV)}$—Reverse current, dc (with alternating component)
I_{RM}—Maximum (peak) total reverse current
I_{RRM}—Maximum (peak) reverse current, repetitive
$I_{R(RMS)}$—Total rms reverse current
I_{RSM}—Maximum (peak) surge reverse current
I_S—Source current, dc
I_{SDS}—Zero-gate-voltage source current
$I_{S(off)}$—Source cutoff current
I_V—Valley-point current
I_Z—Regulator current, reference current (dc)
I_{ZK}—Regulator current, reference current (dc near breakdown knee)
I_{ZM}—Regulator current, reference current (dc maximum rated current)
K, k—Cathode
L_c—Conversion loss
M—Figure of merit
NF_o—Overall noise figure
NR_o—Output noise ratio
P_{BE}—Power input (dc) to base, common emitter
p_{BE}—Instantaneous total power input to base, common emitter
P_{CB}—Power input (dc) to collector, common base
p_{CB}—Instantaneous total power input to collector, common base
P_{CE}—Power input (dc) to collector, common emitter
p_{CE}—Instantaneous total power input to collector, common emitter
P_{EB}—Power input (dc) to emitter, common base
p_{EB}—Instantaneous total power input to emitter, common base
P_F—Forward power dissipation, dc (no alternating component)
p_F—Instantaneous total forward power dissipation
$P_{F(AV)}$—Forward power dissipation, dc (with alternating component)
P_{FM}—Maximum (peak) total forward power dissipation
P_{IB}—Common-base large-signal input power
p_{ib}—Common-base small-signal input power
P_{IC}—Common-collector large-signal input power
p_{ic}—Common collector small-signal input power
P_{IE}—Common-emitter large-signal input power
p_{ie}—Common-emitter small-signal input power
P_{OB}—Common-base large-signal output power
p_{ob}—Common-base small-signal output power
P_{OC}—Common-collector large-signal output power
p_{oc}—Common-collector small-signal output power
P_{OE}—Common-emitter large-signal output power
p_{oe}—Common-emitter small-signal output power
P_R—Reverse power dissipation, dc (no alternating component)
p_R—Instantaneous total reverse power dissipation
$P_{R(AV)}$—Reverse power dissipation, dc (with alternating component)
P_{RM}—Maximum (peak) total reverse power dissipation
P_T—Total nonreactive power input to all terminals
p_T—Nonreactive power input, instantaneous total, to all terminals
Q_S—Stored charge
r_{BB}—Interbase resistance
$r_b'C_c$—Collector-base time constant
$r_{CE(sat)}$—Saturation resistance, collector-to-emitter
$r_{DS(on)}$—Static drain-source on-state resistance
$r_{ds(on)}$—Small-signal drain-source on-state resistance
$\mathbf{Re}(h_{ie})$—Real part of common-emitter small-signal short-circuit input impedance
$\mathbf{Re}(h_{oe})$—Real part of common-emitter small-signal open-circuit output admittance
$r_{ele2(on)}$—Small-signal emitter-emitter on-state resistance
r_i—Dynamic resistance at inflection point
R_θ—Thermal resistance
$R_{\theta CA}$—Thermal resistance, case to ambient
$R_{\theta JA}$—Thermal resistance, junction to ambient
$R_{\theta JC}$—Thermal resistance, junction to case
S, s—Source
T_A—Ambient temperature or free-air temperature
T_C—Case temperature
t_d—Delay time
$t_{d(off)}$—Turn-off delay time
$t_{d(on)}$—Turn-on delay time
t_f—Fall time
t_{fr}—Forward recovery time
T_j—Junction temperature
t_{off}—Turn-off time
t_{on}—Turn-on time
t_p—Pulse time
t_r—Rise time
t_{rr}—Reverse recovery time
t_s—Storage time
TSS—Tangential signal sensitivity
T_{stg}—Storage temperature
t_w—Pulse average time
U, u—Bulk (substrate)
V_{BB}—Base supply voltage (dc)
V_{BC}—Average or dc voltage, base to collector
v_{bc}—Instantaneous value of alternating component of base-collector voltage
V_{BE}—Average or dc voltage, base to emitter
v_{be}—Instantaneous value of alternating component of base-emitter voltage
$V_{(BR)}$—Breakdown voltage (dc)
$v_{(BR)}$—Breakdown voltage (instantaneous total)
$V_{(BR)CBO}$—Collector-base breakdown voltage, emitter open
$V_{(BR)CEO}$—Collector-emitter breakdown voltage, base open
$V_{(BR)CER}$—Collector-emitter breakdown voltage, resistance between base and emitter
$V_{(BR)CES}$—Collector-emitter breakdown voltage, base shorted to emitter
$V_{(BR)CEV}$—Collector-emitter breakdown voltage, specified voltage between base and emitter

Semiconductor symbols and abbreviations (cont.)

$V_{(BR)CEX}$ – Collector-emitter breakdown voltage, specified circuit between base and emitter
$V_{(BR)EBO}$ – Emitter-base breakdown voltage, collector open
$V_{(BR)ECO}$ – Emitter-collector breakdown voltage, base open
$V_{(BR)E1E2}$ – Emitter-emitter breakdown voltage
$V_{(BR)GSS}$ – Gate-source breakdown voltage
$V_{(BR)GSSF}$ – Forward gate-source breakdown voltage
$V_{(BR)GSSR}$ – Reverse gate-source breakdown voltage
V_{B2B1} – Interbase voltage
V_{CB} – Average or dc voltage, collector to base
v_{cb} – Instantaneous value of alternating component of collector-base voltage
$V_{CB(fl)}$ – Collector-base dc open-circuit voltage (floating potential)
V_{CBO} – Collector-base voltage, dc, emitter open
V_{CC} – Collector supply voltage (dc)
V_{CE} – Average or dc voltage, collector to emitter
v_{ce} – Instantaneous value of alternating component of collector-emitter voltage
$V_{CE(fl)}$ – Collector-emitter dc open-circuit voltage (floating potential)
V_{CEO} – Collector-emitter voltage (dc), base open
$V_{CE(ofs)}$ – Collector-emitter offset voltage
V_{CER} – Collector-emitter voltage (dc), resistance between base and emitter
V_{CES} – Collector-emitter voltage (dc), base shorted to emitter
$V_{CE(sat)}$ – Collector-emitter dc saturation voltage
V_{CEV} – Collector-emitter voltage (dc), specified voltage between base and emitter
V_{CEX} – Collector-emitter voltage (dc), specified circuit between base and emitter
V_{DD} – Drain supply voltage (dc)
V_{DG} – Drain-gate voltage
V_{DS} – Drain-source voltage
$V_{DS(on)}$ – Drain-source on-state voltage
V_{DU} – Drain-substrate voltage
V_{EB} – Average or dc voltage, emitter to base
v_{eb} – Instantaneous value of alternating component of emitter-base voltage
$V_{EB(fl)}$ – Emitter-base dc open-circuit voltage (floating potential)
V_{EBO} – Emitter-base voltage (dc), collector open
$V_{EB1(sat)}$ – Emitter saturation voltage
V_{EC} – Average or dc voltage, emitter to collector
v_{ec} – Instantaneous value of alternating component of emitter-collector voltage
$V_{EC(fl)}$ – Emitter-collector dc open-circuit voltage (floating potential)
$V_{EC(ofs)}$ – Emitter-collector offset voltage
V_{EE} – Emitter supply voltage (dc)
V_F – For voltage-regulator and voltage-reference diodes: dc forward voltage. For signal diodes and rectifier diodes: dc forward voltage (no alternating component)
V_f – Alternating component of forward voltage (rms value)
v_F – Instantaneous total forward voltage
$V_{F(AV)}$ – Forward voltage, dc (with alternating component)
V_{FM} – Maximum (peak) total forward voltage
$V_{F(RMS)}$ – Total rms forward voltage
V_{GG} – Gate supply voltage (dc)
V_{GS} – Gate-source voltage
V_{GSF} – Forward gate-source voltage
$V_{GS(off)}$ – Gate-source cutoff voltage
V_{GSR} – Reverse gate-source voltage
$V_{GS(th)}$ – Gate-source threshold voltage
V_{GU} – Gate-substrate voltage
V_I – Inflection-point voltage
V_{OBI} – Base-1 peak voltage
V_P – Peak-point voltage
V_{PP} – Projected peak-point voltage
V_R – For voltage-regulator and voltage-reference diodes: dc reverse voltage. For signal diodes and rectifier diodes: dc reverse voltage (no alternating component)
V_r – Alternating component of reverse voltage (rms value)
v_R – Instantaneous total reverse voltage
$V_{R(AV)}$ – Reverse voltage, dc (with alternating component)
V_{RM} – Maximum (peak) total reverse voltage
V_{RRM} – Repetitive peak reverse voltage
$V_{R(RMS)}$ – Total rms reverse voltage
V_{RSM} – Nonrepetitive peak reverse voltage
V_{RT} – Reach-through voltage
V_{RWM} – Working peak reverse voltage
V_{SS} – Source supply voltage (dc)
V_{SU} – Source-substrate voltage
$V_{(TO)}$ – Threshold voltage
V_V – Valley-point voltage
V_Z – Regulator voltage, reference voltage (dc)
V_{ZM} – Regulator voltage, reference voltage (dc at maximum rated current)
y_{fb} – Common base small-signal short-circuit forward transfer admittance
y_{fc} – Common-collector small-signal short-circuit forward transfer admittance
y_{fe} – Common-emitter small-signal short-circuit forward transfer admittance
y_{fs} – Common-source small-signal short-circuit forward transfer admittance
$y_{fs(imag)}$ – Common-source small-signal forward transfer susceptance
$y_{fs(real)}$ – Common-source small-signal forward transfer conductance
y_{ib} – Common-base small-signal short-circuit input admittance
y_{ic} – Common-collector small-signal short-circuit input admittance
y_{ie} – Common-emitter small-signal short-circuit input admittance
$y_{ie(imag)}$ – Imaginary part of small-signal short-circuit input admittance (common-emitter)
$y_{ie(real)}$ – Real part of small-signal short-circuit input admittance (common-emitter)
y_{is} – Common-source small-signal short-circuit input admittance
$y_{is(imag)}$ – Common-source small-signal input susceptance
$y_{is(real)}$ – Common-source small-signal input conductance
y_{ob} – Common-base small-signal short-circuit output admittance
y_{oc} – Common-collector small-signal short-circuit output admittance
y_{oe} – Common-emitter small-signal short-circuit output admittance
$y_{oe(imag)}$ – Imaginary part of small-signal short-circuit output admittance (common-emitter)
$y_{oe(real)}$ – Real part of small-signal short-circuit output admittance (common-emitter)
y_{os} – Common-source small-signal short-circuit output admittance
$y_{os(imag)}$ – Common-source small-signal output susceptance
$Y_{os(real)}$ – Common-source small-signal output conductance
y_{rb} – Common-base small-signal short-circuit reverse transfer admittance
y_{rc} – Common-collector small-signal short-circuit reverse transfer admittance
y_{re} – Common-emitter small-signal short-circuit reverse transfer admittance
y_{rs} – Common-source small-signal short-circuit reverse transfer admittance
$y_{rs(imag)}$ – Common-source small-signal reverse transfer susceptance
$y_{rs(real)}$ – Common-source small-signal reverse transfer conductance
z_{if} – Intermediate-frequency impedance
z_m – Modulator-frequency load impedance
z_{rf} – Radio-frequency impedance
$Z_{\theta JA(t)}$ – Junction-to-ambient transient thermal impedance
$Z_{\theta JC(t)}$ – Junction-to-case transient thermal impedance
$Z_{\theta(t)}$ – Transient thermal impedance
z_v – Video impedance
z_z – Regulator impedance, reference impedance (small-signal at I_z)
z_{zk} – Regulator impedance, reference impedance (small-signal at I_{ZK})
Z_{zm} – Regulator impedance, reference impedance (small-signal at I_{ZM})

Elementary particles

The elementary particles[a]

Gauge bosons $J_C^P = 1^-$ Self-conjugate except $\overline{W^+} = W^-$.

Name	*Symbol*	*Charge*[b]	*Mass, GeV*	*Couplings*
Photon	γ	0	0	$A \Rightarrow \gamma A$
Gluon[c]	g	0	0	$A \Rightarrow gA'$
Weak bosons[d]				
Charged	$W^{\pm}$	± 1	80	$U \Rightarrow W^+ D$
Neutral	Z^0	0	90	$A \Rightarrow Z^0 A$

Fermions $J = \frac{1}{2}$ All have distinct antiparticles, except perhaps the neutrinos.

Name	*Charge*[b]	*Symbol*	*Mass, GeV*	*Symbol*	*Mass, GeV*	*Symbol*	*Mass, GeV*
Leptons							
Neutrinos	0	ν_e	$<10^{-7}$	ν_μ	<.0006	ν_τ	<.5
Charged leptons[e]	−1	e	.0005	μ	.106[f]	τ	1.78[f]
Quarks[c]							
Up type	$\frac{2}{3}$	u	.005	c	1.4	(t	>18)
Down type	$-\frac{1}{3}$	d	.01	s	.15	b	4.8

[a] The graviton, with $J_C^P = 2_+^+$, has been omitted, since it plays no role in high-energy particle physics.

[b] In units of the proton charge.

[c] The gluon is a color SU_3 octet {8}; each quark is a color triplet {3}. These colored particles are confined constituents of hadrons; they do not appear as free particles.

[d] The observation of weak bosons was reported in 1983.

[e] Any further charged leptons have mass greater than 15 GeV.

[f] The μ and τ leptons are unstable, with the following mean life and principal decay modes (branching ratios in %):

μ	$\tau_\mu = 2.2 \times 10^{-6}$ s	$e\bar{\nu}_e\nu_\mu$ 100
τ	$\tau_\tau = 5 \times 10^{-13}$ s	$\mu\bar{\nu}_\mu\nu_\tau$ 18
		$e\bar{\nu}_e\nu_\tau$ 17
		(hadrons)$^-\nu_\tau$ 65

Classification of living organisms*

Taxa following equals signs are synonyms.

SUPERKINGDOM: PROKARYOTAE
KINGDOM: VIRUS

KINGDOM: MONERA
Division: Bacteria
Phototrophic bacteria
Gliding bacteria
Order: Myxobacterales
Cytophagales
Sheathed bacteria
Budding and/or appendaged bacteria
Spirochetes
Spiral and curved bacteria
Gram-negative aerobic rods and cocci
Gram-negative facultatively anaerobic rods
Gram-negative anaerobic bacteria
Gram-negative cocci and coccobacilli
Gram-negative anaerobic cocci
Gram-negative, chemolithotrophic bacteria
Methane-producing bacteria
Gram-positive cocci
Endospore-forming rods and cocci
Gram-positive, asporogenous rod-shaped bacteria
Actinomycetes and related organisms
Order: Actinomycetales
Rickettsias
Order: Rickettsiales
Chlamydiales
Mycoplasmas
CLASS: MOLLICUTES
Order: Mycoplasmatales

Division: Cyanophycota
CLASS: CYANOPHYCEAE
Order: Chroococcales
Pleurocapsales
Stigonematales
Nostocales

Division: Prochlorophycota

SUPERKINGDOM: EUKARYOTAE
KINGDOM: PLANTAE
Subkingdom: Thallobionta
Division: Rhodophycota
CLASS: RHODOPHYCEAE
Subclass: Bangiophycideae
Order: Porphyridiales
Bangiales
Compsopogonales
Rhodochaetales
Subclass: Florideophycideae
Order: Nemaliales
Cryptonemiales
Gigartinales
Rhodymeniales
Palmariales
Ceramiales

Division: Chromophycota
CLASS: CHRYSOPHYCEAE
Subclass: Chrysophycidae
Order: Ochromonadales
Chrysamoebidales
Chrysocapsales
Chrysosphaerales
Phaeothamniales
Sarcinochrysidales
Pedinellales
Subclass: Dictyochophycidae
Order: Dictyochales
CLASS: PRYMNESIOPHYCEAE
(= Haptophyceae)
Order: Isochrysidales
Coccosphaerales
Prymnesiales
Pavlovales
CLASS: XANTHOPHYCEAE
(= Tribophyceae)
Order: Chloramoebales
(= Heterochloridales)
Rhizochloridales
Heterogloeales
Mischococcales
Tribonematales
Vaucheriales
CLASS: EUSTIGMATOPHYCEAE
CLASS: BACILLARIOPHYCEAE
Order: Centrales
Pennales
CLASS: DINOPHYCEAE
Subclass: Dinophycidae
Order: Blastodiniales
Brachydiniales
Chytriodiniales
Desmocapsales
Dinamoebales
Dinocloniales
Dinophysiales
Gloeodiniales
Gymnodiniales
Noctilucales
Peridiniales
Phytodiniales
Prorocentrales
Pyrocystales
Zooxanthellales
Subclass: Ebriophycidae

Biographical listing*

Abbe, Ernst (1840–1905), German physicist. Developed optical instruments, such as an apochromatic objective and a crystal refractometer.

Abel, Frederick Augustus (1827–1902), English chemist. Expert on the chemistry of explosives; originated the Abel test for determination of the flash point of petroleum.

Abel, John Jacob (1857–1938), American pharmacologist and physiologist. Isolated epinephrine, and insulin in crystal form.

Abel, Niels Henrik (1802–1829), Norwegian mathematician. Contributed to the theory of elliptical functions.

Abney, William de Wiveleslie (1843–1920), English photographic chemist and physicist. Photographed the infrared solar spectrum.

Adams, John Couch (1819–1892), English astronomer. Discovered, independently of U. J. J. Leverrier, Neptune.

Adanson, Michel (1727–1806), French naturalist. Classified plants in his *Les Familles Naturelles des Plantes*.

Addison, Thomas (1793–1860), English physician. Identified pernicious anemia and Addison's disease of the adrenal cortex.

Adler, Alfred (1870–1937), Austrian psychiatrist and psychologist. Founded the school of individual psychology.

Adrian of Cambridge, Edgar Douglas Adrian, Baron (1889–1977), English physiologist. Investigated physiology of nervous system; showed that change in electric potential in electroencephalograph is due to electrical activity of cortex; Nobel Prize, 1932.

Afzelius, Adam (1750–1837), Swedish botanist. Founded the Linnaean Institute.

Agassiz, Jean Louis Rodolphe (1807–1873), Swiss-born American naturalist. Wrote books on ichthyology, especially concerning classification.

Agnesi, Maria Gaetana (1718–1799), Italian mathematician. Author of *Istituzioni Analitiche*, a complete treatment of algebra and analysis; shared in the discovery of a cubic curve ("witch of Agnesi").

Agricola, Georgius, real name Georg Bauer (1494–1555), German physician and mineralogist. Known as the father of systematic mineralogy.

Airy, George Biddell (1801–1892), English astronomer. Discovered inequality in the motions of Venus and the Earth; determined the mass of the Earth.

Aitken, John (1839–1919), Scottish physicist. Studied dust particles in the atmosphere, known as Aitken nuclei.

Aitken, Robert Grant (1864–1951), American astronomer. Discovered more than 3000 binary stars.

Alder, Kurt (1902–1958), German chemist. Codeveloper of the Diels-Alder reaction for diene synthesis; contributed to stereochemistry; Nobel Prize, 1950.

Alembert, Jean le Rond d' (1717–1783), French mathematician. Developed d'Alembert's principle and the calculus of partial differences.

Alfvén, Hannes Olof Gösta (1908–), Swedish physicist. Studies in magnetohydrodynamics, plantetary physics, antiferromagnetism, and ferrimagnetism; Nobel Prize, 1970.

Alhazen (965–1038), Arab mathematician and astronomer. Provided the first accounts of atmospheric refraction and reflection from concave surfaces; constructed spherical and parabolic mirrors.

al-Khwarizmi (780–?850), Arab mathematician. Wrote treatises on arithmetic and algebra, which were important in the mathematical knowledge of medieval Europe.

Allen, Edgar (1892–1943), American biologist. Discovered estrogen; investigated hormonal mechanisms controlling female reproductive cycle.

Allen, Willard Myron (1904–), American physician. With G. W. Corner, discovered progesterone, and proved it necessary for development of embryo in early pregnancy; with O. Wintersteiner, synthesized crystalline progesterone.

Alvarez, Luis Walter (1911–), American physicist. Pioneer in building liquid hydrogen bubble chambers, and in developing measurement devices and computer systems to analyze data from these chambers; discovered large numbers of short-lived elementary particles; Nobel Prize, 1968.

Amagat, Émile (1841–1915), French physicist. Investigated relationship of pressure, density, and temperature in gases and liquids, particularly at high pressure.

Amici, Giovanni Battista (1786–1863), Italian astronomer, optician, and naturalist. Invented the Amici microscope; designed parabolic mirrors for reflecting telescopes.

Ampère, André Marie (1775–1836), French physicist and mathematician. Founder of electrodynamics; formulated Ampère's law; invented the astatic needle.

Anaximander (611–547 B.C.), Greek astronomer and mathematician. Reputed inventor of geographical maps; formulated the concept of the universe as infinite (apeiron).

Anderson, Carl David (1905–), American physicist. Discovered the meson in cosmic rays; discovered the positron; Nobel Prize, 1936.

Anderson, Philip Warren (1923–), American physicist. Demonstrated existence of electronic localization in disordered solids, and of localized magnetism in metals; Nobel Prize, 1977.

Andrade, Edward Neville da Costa (1887–1971), English physicist. Discovered Andrade's creep law and a law governing variation of viscosity of liquids with temperature.

Andrews, Roy Chapman (1884–1960), American naturalist. Discovered many plant and animal fossils.

Anfinsen, Christian Boehmer (1916–), American biochemist. Discovered how three-dimensional structures of ribonuclease and other proteins are formed; Nobel Prize, 1972.

Angström, Anders Jonas (1814–1874), Swedish physicist. Mapped the solar spectrum; discovered hydrogen in the solar atmosphere.

Apollonius of Perga (247–205 B.C.), Greek mathematician. Wrote about conic sections; coined the terms parabola, ellipse, and hyperbola.

Appleton, Edward Victor (1892–1965), English physicist. Demonstrated the existence of the ionosphere and discovered its region known as the Appleton layer; contributed to the development of radar; Nobel Prize, 1947.

Arago, Dominique François (1786–1853), French astronomer and physicist. Discovered the magnetic properties of nonferrous materials, and the production of magnetism by electricity.

Arber, Werner (1929–), Swiss molecular biologist. Determined the molecular mechanism of host-controlled restriction modification of bacterial viruses and discovered the restriction enzymes; Nobel Prize, 1978.

Archimedes (287–212 B.C.), Greek physicist and mathematician. Formulated Archimedes' principle; invented the compound pulley and Archimedes' screw.

Argand, Jean Robert (1768–1822), Swiss mathematician. Developed the Argand diagram.

Argelander, Friedrich Wilhelm August (1799–1875), German astronomer. Prepared a star catalog; introduced decimal division of stellar magnitudes.

Aristarchus of Samos (310–250 B.C.), Greek astronomer. Invented the hemispherical sundial; determined the movement of the Earth around the stationary Sun; added a correction factor of 1/1623 of a day to the length of the year.

Aristotle (384–322 B.C.), Greek philosopher. Exponent of the methodology and division of sciences; contributed to physics, astronomy, meteorology, psychology, and biology.

Arkwright, Richard (1732–1792), English inventor. Developed the first practical mechanized spinning frame, utilizing rollers.

Arrhenius, Svante August (1859–1927), Swedish physicist and chemist. Developed theory of electrolytic dissociation; investigated osmosis and viscosity of solutions; Nobel Prize, 1903.

Arsonval, Jacques Arsène d' (1851–1940), French physicist and physiologist. Pioneered in electrotherapy; invented d'Arsonval galvanometer.

Aston, Francis William (1877–1945), English physicist and chemist. Discovered isotopes in nonradioactive elements by using the mass spectrograph he invented; Nobel Prize, 1922.

Atwood, George (1746–1807), English mathematician. Invented the Atwood machine.

Audubon, John James (1785–1851), Haitian-born American ornithologist and artist. Made drawings and paintings of birds and animals.

Auger, Pierre Victor (1899–), French physicist. Discovered the Auger effect.

Avicenna (979–1037), Arab physician. Wrote the medical text *Canon Medicinae*.

Avogadro, Amedeo (1776–1856), Italian physicist. Formulated Avogadro's law.

Axelrod, Julius (1912–), American biochemist and pharmacologist. Showed that many drugs act by modifying storage of neurotransmitters at nerve terminals; made discoveries concerning metabolism, and mechanisms for formation and inactivation of norepinephrine; Nobel Prize, 1970.

Ayrton, William Edward (1847–1908), English physicist and electrical engineer. Invented the ammeter, voltmeter, and other electrical measuring instruments.

Babbage, Charles (1792–1851), English mathematician. Devised a primitive computer to calculate and print mathematical and astronomical tables.

Babcock, Stephen Moulton (1843–1931), American agricultural chemist. Pioneer in nutrition; devised the Babcock test to measure fat content in milk.

Babinet, Jacques (1794–1872), French physicist. Invented a polariscope and a goniometer.

Back, Ernst E. A. (1881–1959), German physicist. Developed improved spectrographs; made spectroscopic observations leading to Paschen-Back effect.

Badger, Richard McLean (1896–1974), American physical chemist and spectroscopist. Studied structures of polyatomic molecules; formulated Badger's rule concerning molecular bonds.

Baer, Karl Ernst von (1792–1876), Estonian embryologist. Discovered the mammalian ovum and the notochord; developed the theory of embryonic germ layers.

Baeyer, Johann Friedrich Wilhelm Adolf von (1835–1917), German chemist. Synthesized indigo and hydroaromatic compounds; Nobel Prize, 1905.

Baily, Francis (1774–1844), English astronomer. A founder of the Royal Astronomical Society; first observed phenomenon of Baily's beads.

Baire, René Louis (1874–1932), French mathe-

*This listing includes many of the individuals whose names appear in dictionary terms, as well as Nobel laureates.

matician. Contributed to theory of functions of real variables; introduced concept of Baire functions.

Balfour, Francis Maitland (1851–1882), English biologist. Founder of comparative embryology.

Balmer, Johann Jakob (1825–1898), Swiss physicist. Expressed the mathematical formula for frequencies of hydrogen lines in the visible spectrum.

Baltimore, David (1938–), American virologist. Investigated interaction between ribonucleic acid tumor viruses and genetic material; independently of H. M. Temin, discovered reverse transcriptase; Nobel Prize, 1975.

Banach, Stefan (1892–1945), Polish mathematician. Laid foundations of contemporary functional analysis; introduced concept of Banach space and discovered its fundamental properties.

Bang, Bernhard Laurits Frederik (1848–1932), Danish veterinarian. Discovered method of eradicating bovine tuberculosis; discovered *Brucella abortus*, the agent of contagious abortion (Bang's disease) and brucellosis.

Banting, Frederick Grant (1891–1941), Canadian physician. With J. J. R. Macleod and C. H. Best, discovered insulin and its role in diabetes; Nobel Prize, 1923.

Barany, Robert (1876–1936), Austrian physician. Developed new methods of diagnosing ear diseases; Nobel Prize, 1914.

Bardeen, John (1908–), American physicist. With L. N. Cooper and J. R. Schrieffer, formulated a theory of superconductivity; invented the transistor; Nobel Prize, 1956 and 1972.

Barkhausen, Heinrich Georg (1881–1956), German electronic engineer and physicist. Contributed to theory and application of electron tubes; with K. Kurz, developed Barkhausen-Kurz oscillator; discovered Barkhausen effect.

Barkla, Charles Glover (1877–1944), English physicist. Described characteristics of x-rays and other short-wave emissions of elements.

Barnard, Edward Emerson (1857–1923), American astronomer. Discovered 16 comets, the fifth satellite of Jupiter, and dark nebulae; contributed to celestial photography.

Barnett, Samuel Jackson (1873–1956), American physicist. Discovered Barnett effect and used it to measure the gyromagnetic ratio of ferromagnetic materials; gave experimental proof of existence of ionosphere.

Barr, Murray Llewellyn (1908–), Canadian anatomist. Discovered the Barr body on the X chromosome of the human female.

Bartholin, Kaspar (1655–1738), Danish physician. Discovered Bartholin's glands of the vagina and a sublingual duct.

Bartholin, Thomas (1616–1680), Danish physician. Discovered lymphatic glands; described the lymphatic system.

Bartlett, James Holly (1904–), American physicist. Introduced concept of Bartlett force; did research on nuclear shell model, electrochemical potentiostat, and restricted three-body problem.

Barton, Derek Harold Richard (1918–), British chemist. Developed and expanded concept of conformation to include large molecules with complex ring systems; Nobel Prize, 1969.

Basov, Nicolai Gennediyevich (1922–), Soviet physicist. Conducted fundamental studies in quantum electronics; with A. M. Prokhorov, developed quantum optical generators; Nobel Prize, 1964.

Bassham, James Alan (1922–), American chemist. Helped to elucidate basic photosynthetic carbon cycle.

Bates, Henry Walter (1825–1892), English naturalist. Discovered Batesian mimicry among butterflies and moths.

Baudot, Émile (1845–1903), French engineer. Invented an improved telegraph transmitter.

Baumé, Antoine (1728–1804), French chemist. Invented a graduated hydrometer which utilizes the Baumé scale.

Bayer, Johann (1572–1625), German astronomer. Charted 12 constellations; first to use Greek letters to designate the order of brightness of stars in a constellation.

Bayes, Thomas (1702–1761), English mathematician. Formulated a basis for statistical inference.

Bayliss, William Maddock (1860–1924), English physiologist. Did research on electrophysiology of heart action; discovered the hormone secretin.

Beadle, George Wells (1903–), American geneticist. With E. L. Tatum, proved that genes affect heredity by controlling cell chemistry; Nobel Prize, 1958.

Beattie, James Alexander (1895–1981), American chemist and physicist. Studied ionic theory and thermodynamics; with P. W. Bridgman, proposed Beattie and Bridgman equation for gases.

Beaufort, Francis (1774–1857), English hydrographer. Devised scale of wind velocity.

Beaumont, William (1785–1853), American physician. Did pioneering studies of digestion and gastric juices.

Béchamp, Pierre Jacques Antoine (1816–1908), French chemist. Discovered a method of preparing aniline.

Beckmann, Ernst Otto (1853–1923), German chemist. Discovered Beckmann molecular transformation; invented the Beckmann thermometer.

Becquerel, Antoine César (1788–1878), French physicist. Pioneer in electrochemistry; first to extract metals from ore by electrolysis.

Becquerel, Antoine Henri (1852–1908), French physicist. A discoverer of radioactivity in uranium.

Beebe, Charles William (1877–1962), American naturalist. Pioneer in deep-sea exploration; made ornithological collections.

Beer, August (1825–1863), German physicist. Discovered Beer's law of light absorption.

Behring, Emil Adolph von (1854–1917), German bacteriologist. Produced diphtheria and tetanus antitoxins; Nobel Prize, 1901.

Békésy, Georg von (1889–1972), Hungarian-born American physicist. Studied hearing processes, especially inner-ear mechanics; Nobel Prize, 1961.

Bell, Alexander Graham (1847–1922), Scottish-born American inventor. Invented the telephone, photophone, graphophone, and one of the earliest gramophones.

Bell, Charles (1774–1842), Scottish anatomist. Discovered that sensory and motor nerves are anatomically and functionally distinct.

Bellman, Richard Ernest (1920–), American mathematician. Research in analytic number theory, differential equations, stochastic processes, dynamic programming, and mathematical biosciences; discovered Bellman's principle of optimality.

Benacerraf, Baruj (1920–), American immunologist. Discovered immune-response (Ir) genes that control specific immune responses to thymus-dependent antiges; Nobel Prize, 1980.

Benioff, Hugo (1899–1968), American geophysicist. Investigated earthquakes, particularly through instrumental seismology.

Bentham, George (1800–1884), English botanist. With J. Hooker, wrote *Genera Plantarum*.

Berg, Paul (1926–), American biochemist. Investigated the biochemistry of deoxyribonucleic acid (DNA) and designed a technique for gene splicing; Nobel Prize, 1980.

Bergey, David Hendricks (1860–1937), American bacteriologist. Authority on classification of bacteria.

Bergius, Friedrich (1884–1949), Polish-born German chemist. Developed Bergius process for hydrogenation of coal to a petroleumlike oil; Nobel Prize, 1931.

Bergström, Sune Carl (1916–), Swedish biochemist and medical scientist. Studied the metabolism of unsaturated fatty acids and determined the chemical structure of prostaglandins. Nobel Prize, 1982.

Bernard, Claude (1813–1878), French physiologist. Studied digestion; discovered that glycogen is produced by the liver.

Bernoulli, Daniel (1700–1782), Swiss mathematician born in the Netherlands. Founder of mathematical physics; worked on hydrodynamics and differential equations; formulated the Bernoulli equation.

Bernoulli, Jacques or Jacob (1654–1705), Swiss mathematician. Contributed to mathematics of curves, calculus, and probability; developed the Bernoulli number.

Bernoulli, Jean or Johann (1667–1748), Swiss mathematician. A founder of calculus of variations; contributed to exponential calculus, complex numbers, geodesics, and trigonometry.

Berthelot, Pierre Eugène Marcellin (1827–1907), French chemist. Founder of thermochemistry; first to synthesize organic compounds; demonstrated nitrogen fixation.

Bertrand, Joseph Louis François (1822–1900). French mathematician. Contributed to analysis, differential geometry, and probability theory.

Berzelius, Jons Jakob (1779–1848), Swedish chemist. Discovered the elements cerium, selenium, thorium, and silicon; developed a system for classification and nomenclature of compounds.

Bessel, Friedrich Wilhelm (1784–1846), German astronomer and mathematician. Developed Bessel functions; determined parallax of the star 61 Cygni; postulated existence of Neptune and dark stars.

Bessemer, Henry (1813–1898), English engineer. Invented the Bessemer process, the first method for manufacturing steel on a large scale.

Best, Charles Herbert (1899–1978), Canadian physiologist and medical researcher. Associated with F. G. Banting and J. J. R Macleod in the discovery of insulin.

Bethe, Hans Albrecht (1906–), German-born American physicist. Formulated the theory of energy production in stars; research on nuclear physics; Nobel Prize, 1967.

Bhabha, Homi Jehangir (1909–1966), Indian physicist. With W. Heitler, developed theory of cascade showers of cosmic rays; observed slowing of decay rate of high-velocity mesons.

Bianchi, Luigi (1856–1928), Italian mathematician. Contributed to differential geometry and study of noneuclidean geometries; discovered Bianchi identity.

Bichat, Marie François Xavier (1771–1802), French anatomist and physiologist. Founder of animal histology; originated the term "tissues," and distinguished 21 types in his particular scheme.

Bienaymé, Irénée Jules (1796–1878), French mathematician. Studied calculus of probabilities and its application to financial science; with P. L. Chebyshev, discovered Bienaymé-Chebyshev inequality.

Billet, Felix (1808–1882), French physicist. Invented Billet split lens.

Binet, Alfred (1857–1911), French psychologist. Investigated development and measurement of intelligence.

Biot, Jean Baptiste (1774–1862), French mathematician and physicist. Discovered circular polarization of light; invented a polariscope; with D. Brewster, discovered biaxial crystals; helped formulate Biot-Savart law.

Bjerknes, Vilhelm Fremann Doren (1862–1951),

Norwegian physicist. Research on electric waves; originated the polar-front theory in meteorology.

Blackett, Patrick Maynard Stuart (1897–1974), English physicist. Built an improved cloud chamber used to photograph tracks of a nuclear disintegration and of a cosmic-ray shower; discovered the positron; Nobel Prize, 1948.

Bloch, Felix (1905–), Swiss-born American physicist. Discovered a technique for studying magnetism of atomic nuclei in normal matter; Nobel Prize, 1952.

Bloch, Konrad Emil (1912–), German-born American biochemist. Traced the transformations of fat and carbohydrate metabolites to cholesterol; Nobel Prize, 1964.

Bloembergen, Nicholaas (1920–), Netherlands-born American physicist. Contributed to development of maser; made extensive contributions to theoretical and experimental development of nonlinear optics; Nobel Prize, 1981.

Blumberg, Baruch Samuel (1925–), American physician and biologist. Research leading to a test for hepatitis viruses in blood and to an experimental hepatitis vaccine; Nobel Prize, 1976.

Boas, Franz (1858–1942), American anthropologist. Pioneered in physical anthropology; contributed to stratigraphic archeology in Mexico; emphasized importance of linguistic analysis.

Bobillier, Étienne (1798–1840), French mathematician and physicist. Contributed to geometry and statics; discovered Bobillier's law.

Bode, Johann Elert (1747–1826), German astronomer. Prepared a celestial atlas showing about 17,000 stars; formulated Bode's law.

Boerhaave, Hermann (1668–1738), Dutch physician. A great teacher at the University of Leyden; wrote the physiology textbook *Institutiones Medicae*.

Bohr, Aage (1922–), Danish physicist. With B. R. Mottelson, developed theory which unifies shell and liquid-drop models of the atomic nucleus, and which explains nonspherical nuclei; Nobel Prize, 1975.

Bohr, Niels (1885–1962), Danish physicist. Devised an atomic model; codeveloped the quantum theory, applying it to atomic structure in Bohr's theory; Nobel Prize, 1922.

Boltzmann, Ludwig Eduard (1844–1906), Austrian physicist. An authority on the kinetic theory of gases; demonstrated the Stefan-Boltzmann law of blackbody radiation, Boltzmann's law of energy, and the Boltzmann constant.

Bolyai, János (1802–1860), Hungarian mathematician. Independently of K. F. Gauss and N. I. Lobachevski, originated a system of noneuclidean geometry.

Bolzano, Bernard (1781–1848), Czechoslovakian philosopher, logican, and mathematician. Contributed to theory of real functions; proved Bolzano's theorem and Bolzano-Weierstrass theorem.

Boole, George (1815–1864), English mathematician and logician. Developed new system of mathematical logic, known as Boolean algebra.

Borda, Jean Charles (1733–1799), French physicist and mathematician. Introduced Borda mouthpiece; developed instruments for navigation, geodesy, and determination of weights and measures.

Bordet, Jules Jean Baptiste Vincent (1870–1961), Belgian physiologist. Made discoveries in immunology; with O. Gengou, developed the technique of the complement fixation reaction; Nobel Prize, 1919.

Borel, Félix Édouard Émile (1871–1956), French mathematician. Work in infinitesimal calculus and the calculus of probabilities.

Born, Max (1882–1970), German-born British theoretical physicist. Pioneered in the development of quantum mechanics; Nobel Prize, 1954.

Bosch, Carl (1874–1940), German chemist. Developed chemical high-pressure methods, and the Haber-Bosch process for ammonia synthesis; Nobel Prize, 1931.

Bose, Jagadis Chandra (1858–1937), Indian plant physiologist and physicist. Founded the Bose Research Institute in Calcutta; investigated photosynthesis, "nervous mechanism" of plants, and other plant subjects.

Bose, Satyendra Nath (1894–1974), Indian physicist. Originated Bose-Einstein statistics to describe photons.

Bothe, Walter (1891–1957), German physicist. Devised the coincidence method for the investigation of nuclear reactions and cosmic radiation; Nobel Prize, 1954.

Bouguer, Pierre (1698–1758), French geodesist, hydrographer, and physicist. Laid foundations of photometry; discovered Bouguer-Lambert law of light intensity.

Bourdon, Eugène (1808–1884), French inventor. Invented Bourdon pressure gage.

Boussinesq, Joseph Valentin (1842–1929), French mathematical physicist. Research in hydrodynamics; introduced Boussinesq approximation.

Bovet, Daniel (1907–), Swiss-born Italian pharmacologist. Research on synthetic compounds that inhibit the action of the vascular system and skeletal muscles; Nobel Prize, 1957.

Bowen, Norman Levi (1887–1956), Canadian-born American geologist. Studied physical chemistry of geological processes and phase equilibria of silicates; discovered significance of reaction principle in petrogenesis.

Boyle, Robert (1627–1691), British physicist and chemist. Conducted experiments on properties of the air pump; Boyle's law concerning gases is named for him; advanced the atomistic theory of matter.

Bradley, James (1693–1762), English astronomer. Discovered aberration of light due to the Earth's motion, and nutation of the Earth's axis; prepared astronomical tables and star catalogs.

Bragg, William Henry (1862–1942), English physicist. Codeveloper, with W. L. Bragg, of the x-ray spectrometer; used x-ray diffraction to determine crystal structure; Nobel Prize, 1915.

Bragg, William Lawrence (1890–1971), British physicist. With W. H. Bragg, developed x-ray analysis of the atomic arrangement in crystalline structures; Nobel Prize, 1915.

Brahe, Tycho or Tyge (1546–1601), Danish astronomer. Made painstaking observations of the planetary system; wrote *Astronomiae Instauratae Progymnasmata*.

Brattain, Walter Houser (1902–), American physicist. Investigated properties of semiconductors; research on surface properties of solids; Nobel Prize, 1956.

Braun, Karl Ferdinand (1850–1918), German physicist. Research on cathode rays and wireless telegraphy; Nobel Prize, 1909.

Bravais, Auguste (1811–1863), French physicist. Studied relationship between crystal form and structure; derived Bravais lattices.

Breit, Gregory (1899–1981), Russian-born American physicist. Research on quantum theory, quantum electrodynamics, hyperfine structure, and ionosphere.

Breuer, Josef (1842–1925), Austrian neurologist. Evolved abreaction method for treatment of neuroses.

Brewster, David (1781–1868), Scottish physicist. Formulated Brewster's law on polarization of light; codiscoverer, with J. B. Biot, of biaxial crystals.

Brianchon, Charles Julien (1783–1864), French mathematician. Proved Brianchon's theorem.

Bridgman, Percy Williams (1882–1961), American physicist. Worked in high-pressure physics and thermodynamics of liquids; Nobel Prize, 1946.

Briggs, Henry (1561–1631), English mathematician. Prepared logarithmic tables (later known as common logarithms); devised sophisticated interpolation techniques.

Bright, Richard (1789–1858), English physician. Made biochemical study of disease; researched Bright's disease of the kidneys.

Brillouin, Leon (1889–1969), French physicist. With G. Wentzel and H. A. Kramers, developed Wentzel-Kramers-Brillouin method; originated concept of Brillouin zones.

Brillouin, Louis Marcel (1854–1948), French physicist. Work on crystal structure, viscosity of liquids and gases, radiotelegraphy, and relativity.

Brinell, Johann August (1849–1925), Swedish engineer. Invented the Brinell machine to measure the hardness of alloys and metals in terms of the Brinell number.

Broglie, Louis Victor de (1892–), French physicist. Worked in nuclear physics; first to link wave and corpuscular theory; Nobel Prize, 1929.

Bromwich, Thomas John I'Anson (1875–1929), English mathematician. Showed how the Heaviside calculus could be developed in a manner acceptable to pure mathematicians through use of contour integrals.

Brönsted, Johannes Nicolaus (1879–1947), Danish chemist. Researched kinetic properties of ions, catalysis, and nitramide; formulated the Brönsted theory of acid-base reactions.

Brown, Herbert Charles (1912–), British-born American chemist. Developed methods for chemical synthesis of diborane and organoboranes; Nobel Prize, 1979.

Browning, John Moses (1855–1926), American inventor. Invented the Browning machine gun.

Brunauer, Stephen (1903–), Hungarian-born American chemist. Contributed to surface and colloid chemistry; with P. H. Emmet and E. Teller, developed Brunauer-Emmet-Teller equation for surface area determinations.

Brunel, Isambard Kingdom (1806–1859), English engineer. Constructed great bridges in England; designed important steamships.

Buchner, Eduard (1860–1917), German chemist. Studied alcoholic fermentation of sucrose; Nobel Prize, 1907.

Buckingham, Edgar (1867–1940), American physicist. Worked on thermodynamics and dimensional analysis; derived Buckingham's π theorem.

Buffon, Georges Louis Leclerc, Comte de (1707–1788), French naturalist. Compiled *Histoire Naturelle*, a monumental work on natural history.

Bullen, Keith Edward (1906–1976), Australian applied mathematician. Carried out mathematical studies of earthquake waves; with H. Jeffreys, prepared the Jeffreys-Bullen tables on seismic travel time.

Bunsen, Robert Wilhelm (1811–1899), German chemist. Discovered, with G. R. Kirchhoff, spectrum analysis; invented the Bunsen burner, Bunsen cell, and Bunsen ice calorimeter; formulated law of reciprocity with H. E. Roscoe.

Burbank, Luther (1849–1926), American horticulturist. Experimented on crossing and in-breeding of plant varieties.

Burnet, Frank Macfarlane (1899–), Australian immunologist. With P. B. Medawar, studied the body's tolerance of antigenic substances; Nobel Prize, 1960.

Butenandt, Adolph Friedrich Johann (1903–), German chemist. Researched sex hormones; Nobel Prize (declined), 1939.

Buys-Ballot, Christoph Hendrik Didericus (1817–1890), Dutch meteorologist. Devised a system of storm signals; formulated Buys-Ballot's law for determination of wind direction.

Cailletet, Louis Paul (1832–1913), French chemist. Researched liquefaction of gases; first to obtain liquid oxygen, hydrogen, nitrogen, and air.

Callendar, Hugh Longbourne (1863–1930), English physicist and engineer. Developed platinum resistance thermometer and continuous-flow calorimeter.

Callow, John Michael (1867–1940), English-born American mining engineer and metallurgist. Invented Callow flotation cell and Callow screen.

Calvin, Melvin (1911–), American chemist. With J. A. Bassham, traced the path of carbon in photosynthesis; Nobel Prize, 1961.

Cannizzaro, Stanislao (1826–1910), Italian chemist. Promulgated Avogadro's work as related to atomic weights; discovered Cannizzaro's reaction in organic chemistry.

Cantor, Georg (1845–1918), Russian-born German mathematician. Founded set theory; introduced fundamental concepts in topology; worked on theory and representations of real numbers.

Carathéodory, Constantin (1873–1950), German mathematician. Developed calculus of variations for curves with corners; introduced Carathéodory outer measure; gave mathematical formulation of second law of thermodynamics (Carathéodory's principle).

Cardano, Geronimo, or Jerome Cardan (1501–1576), Italian physician and mathematician. Wrote on algebra, medicine, and astronomy; invented the Cardan shaft.

Carnot, Nicolas Léonard Sadi (1796–1832), French physicist. Formulated Carnot's theorems in thermodynamics.

Carrel, Alexis (1873–1944), French surgeon and biologist. Worked on transplanting organs, suturing blood vessels, treating deep wounds, and prolonging tissue life; Nobel Prize, 1912.

Carver, George Washington (1864–1943), American botanist. Did research on industrial uses of the peanut.

Cassegrain, N. (17th century), French physician. Designed the Cassegrain reflecting telescope.

Cassini, Jean Dominique (1625–1712), Italian-born French astronomer. Director of the Paris Observatory; discovered four new satellites of Saturn and the Cassini division in Saturn's ring; conducted pendulum experiments related to the shape of the Earth.

Castigliano, Carlo Alberto (1847–1884), Italian structural engineer. Proved Castigliano's theorem.

Cauchy, Augustin Louis, Baron (1789–1857), French mathematician. Wrote extensively on wave propagation, calculus, and elasticity.

Cavendish, Henry (1731–1810), French physicist and chemist. Determined the density of the Earth and the composition of the atmosphere; studied properties of carbon dioxide and hydrogen.

Cayley, Arthur (1821–1895), English mathematician. Proposed the theory of matrices; developed the theory of invariants and covariants; worked on quantics and the theory of groups.

Celsius, Anders (1701–1744), Swedish astronomer. Constructed the thermometer using the Celsius (centigrade) scale.

Cerenkov, Pavel Alexeyevich (1904–), Soviet physicist. Discovered the Cerenkov effect of radiation; devised the Cerenkov counter for particle detection; Nobel Prize, 1958.

Cesalpino, Andrea (1519–1603), Italian physician and botanist. First to attempt to classify plants according to characteristics of fruit and seed in his *De Plantis*.

Cesàro, Ernesto (1859–1906), Italian mathematician. Formulated an intrinsic geometry; introduced the Cesàro summation.

Ceva, Giovanni (1647?–1734), Italian mathematician. Formulated a theorem on the concurrency of straight lines passing through the vertices of a triangle.

Chadwick, James (1891–1974), English physicist. Established experimentally the existence of the neutron; Nobel Prize, 1935.

Chain, Ernst Boris (1906–1979), German-born British biochemist. With H. W. Florey, worked on the chemical structure of penicillin and its first clinical trials; Nobel Prize, 1945.

Chamberlain, Owen (1920–), American physicist. With E. G. Segré, demonstrated the existence of the antiproton; Nobel Prize, 1959.

Chamberlin, Thomas Chrowder (1843–1928), American geologist. Studied the fundamental geology of the solar system.

Chandler, Seth Carlo (1846–1913), American astronomer. Discovered the Chandler wobble.

Chandrasekhar, Subrahmanyan (1910–), Indian astrophysicist. Developed a theory of white dwarf stars.

Chaplygin, Sergei Alekseevich (1869–1942), Russian physicist, engineer, and mathematician. Made contributions to fluid mechanics, particularly aerodynamics.

Chapman, Sydney (1888–1970), English mathematician and physicist. Discovered (independently of D. Enskog) gaseous thermal diffusion; studied the daily variations of the geomagnetic field and magnetic storms.

Chaptal, Jean Antoine Claude, Comte de Chanteloup (1756–1832), French chemist. Wrote on technical chemistry; introduced the metric system after the Revolution.

Charcot, Jean Martin (1825–1893), French neurologist. Director of the Salpetrière clinic, where he made systematic clinical studies of chronic nervous disorders, including cerebrospinal disease.

Charles, Jacques Alexandre César (1746–1823), French physicist, chemist, and inventor. Formulated Charles' law, relating gas volume to pressure.

Chebyshev, Pafnuti Lvovich (1821–1894), Russian mathematician. Research on convergence of Taylor series, prime numbers, probability theory, quadratic forms, and integral theory.

Chladini, Ernst Florenz Friedrich (1756–1827), German physicist. Discovered Chladini's figures and used them to study vibrations of solid plates.

Christoffel, Elwin Bruno (1829–1900), Swiss mathematician. Worked in higher analysis, geometry, mathematical physics, and geodesy.

Clairaut, Alexis Claude (1713–1765), French mathematician. Studied the shape of the Earth, evolving Clairaut's theorem; made astronomical calculations concerning Halley's comet.

Claisen, Ludwig (1851–1930), German organic chemist. Developed Claisen condensation; contributed to understanding of tautomerism; worked on rearrangement of allyl aryl ethers into phenols.

Clapeyron, Benoit Paul Émile (1799–1864), French engineer. Developed N. L. S. Carnot's concept of a universal function of temperature.

Clarke, Alexander Ross (1828–1914), British geodesist. Worked on the triangulation of the British Isles; proposed Clarke ellipsoids as geodetic standards.

Claude, Albert (1899–), American cytologist, born in Luxembourg. Pioneered in applying electron microscopy to cell studies and in using centrifuge to separate cell components; Nobel Prize, 1974.

Clausius, Rudolf Julius Emmanuel (1822–1888), German physicist. A founder of thermodynamics; worked out the Clausius-Clapeyron equation for the universal temperature function.

Clebsch, Rudolf Friedrich Alfred (1833–1872), German mathematician. Contributions to theory of invariants and algebraic geometry.

Cockcroft, John Douglas (1897–1967), English physicist. With E. T. S. Walton, split nuclei by bombarding them with accelerated protons.

Cohn, Ferdinand Julius (1828–1898), German botanist. A founder of bacteriology; did research in plant pathology; first to classify bacteria according to genus and species.

Collins, Samuel Cornette (1898–), American engineer. Invented Collins helium liquefier.

Compton, Arthur Holly (1892–1962), American physicist. Discovered the Compton effect of x-rays; studied cosmic rays; helped develop the atomic bomb; Nobel Prize, 1927.

Conant, James Bryant (1893–1978), American chemist. Researched free radicals, hemoglobin, and chlorophyll; contributed to atomic energy development.

Condon, Edward Uhler (1902–1974), American physicist. Contributed to the Franck-Condon principle, by extending and giving quantum-mechanical treatment to J. Franck's concept of nuclear motion of molecules in transition from one energy level to another.

Coolidge, William David (1873–1975), American physicist. Invented Coolidge tube; discovered method for making tungsten strong and ductile.

Cooper, Leon N. (1930–), American physicist. Showed that electrons could form Cooper pairs; with J. R. Schrieffer and J. Bardeen, formulated a theory of superconductivity; Nobel Prize, 1972.

Copernicus, Nicolaus (1473–1543), Polish (or Prussian) astronomer. Proposed the Copernican system, with the Sun as the center of planetary orbits.

Cori, Carl Ferdinand (1896–), and **Cori, Gerty Theresa Radnitz** (1896–1957), Czechoslovakian-born American biochemists. Discovered the enzymatic mechanism of glucose-glycogen interconversion and the effects of hormones on this mechanism; Nobel Prize, 1947.

Coriolis, Gaspard Gustave de (1792–1843), French physicist. Contributed to theoretical and applied mechanics; clarified and applied concepts of work and kinetic energy; derived Coriolis acceleration.

Cormack, Allan MacLeod (1924–), American physicst. Contributed to the development of computerized axial tomography; Nobel Prize, 1979.

Corner, George Washington (1889–1981), American medical biologist. Contributed to understanding of anatomical details of menstrual cycle and functions of estrogen and progesterone.

Cornforth, John Warcup (1917–), Australian-born British chemist. Investigated stereochemistry of enzyme-catalyzed reactions; Nobel Prize, 1975.

Cornu, Marie Alfred (1841–1902), French physicist. Used Cornu spiral for determination of intensities in interference phenomena.

Cottrell, Frederick Gardner (1877–1948), American chemist. Invented the Cottrell process for precipitation of particles from gas; researched nitrogen fixation, liquefaction of gases, and recovery of helium.

Coulomb, Charles Augustin de (1736–1806), French physicist. Formulated Coulomb's law of electric charges.

Cournand, André Frédéric (1895–), French-born American physician. Studied normal and abnormal human cardiocirculatory and pulmonary functions; Nobel Prize, 1956.

Crafts, James Mason (1839–1917), American chemist. With C. Friedel, discovered the Friedel-Crafts reaction, wherein anhydrous aluminum chloride acts as a catalyst.

Cramer, Gabriel (1704–1752), Swiss mathe-

matician. Contributed to Cramer's rule for solving linear equations.

Crick, Francis Harry Compton (1916–), English molecular biologist. With J. D. Watson, proposed a double-helix structure for the deoxyribonucleic acid molecule; Nobel Prize, 1962.

Cronin, James Watson (1931–), American physicist. Collaborated with V. L. Fitch on experiment showing that the principle of time-reversal invariance is violated in the decay of neutral *K* mesons; Nobel Prize, 1980.

Cronstedt, Axel Fredrik, Baron (1722–1765), Swedish mineralogist. Discovered nickel; developed a chemical classification system for minerals.

Crookes, William (1832–1919), English physicist and chemist. Invented Crookes tube to study electrical discharges in high vacuum, and a radiometer; discovered thallium.

Curie, Marie, born Marya Sklodowska (1867–1934), Polish physical chemist in France. Explored nature of radioactivity; codiscoverer of radium, and first to separate polonium; Nobel Prize, 1903 and 1911.

Curie, Pierre (1859–1906), French chemist and physicist. Codiscoverer of radium; formulated the Curie point, relating magnetic properties and temperature; discovered the piezoelectric effect; Nobel Prize, 1903.

Cushing, Harvey (1869–1939), American surgeon. Innovator in neurosurgical techniques; research on function and diseases of the pituitary gland.

Cuvier, Georges Léopold Chrétien Frédéric Dagobert, Baron (1769–1838), French naturalist. Made a detailed classification of the animal kingdom; wrote on comparative anatomy.

Daguerre, Louis Jacques Mandé (1787–1851), French inventor. Invented the daguerreotype photographic process.

Dale, Henry Hallett (1875–1968), British pharmacologist and physiologist. Isolated acetylcholine and recognized its effect to be similar to that brought about by parasympathetic nerves; Nobel Prize, 1936.

Dalén, Nils Gustaf (1869–1937), Swedish physicist. Invented automatic gas lighting for unsupervised lighthouses and railroad signals; Nobel Prize, 1912.

Dalitz, Richard Henry (1925–), Australian-born British theoretical physicist. Research on properties of mesons and baryons and nuclear interactions of the lambda hyperon; proposed models for elementary particles; introduced the Dalitz plot.

Dalton, John (1766–1844), English chemist and physicist. Proposed the atomic theory of chemical reactions; developed the law of partial pressures of gases; studied color-blindness.

Dam, Carl Peter Henrik (1895–1976), Danish biochemist and nutritionist. Discovered vitamin K and studied its role in human hemorrhagic disease; Nobel Prize, 1943.

Danckwerts, Peter Victor (1916–), British chemical engineer. Proposed the surface-renewal model of liquids.

Daniell, John Frederic (1790–1845), English physicist and chemist. Invented the Daniell cell.

Darwin, Charles Robert (1809–1882), English naturalist. Proposed far-reaching theory of evolution of species and theory of natural selection in his *Origin of Species*.

Dausset, Jean (1916–), French biologist and medical scientist. Studied antigens in human leukocytes and their role in transplants acceptance or rejections; Nobel Prize, 1980.

Davisson, Clinton Joseph (1881–1958), American physicist. Studied magnetism, radiant energy, and electricity; independent of G. P. Thomson, discovered electron diffraction by crystals; Nobel Prize, 1937.

Davy, Humphry (1778–1829), English chemist. Discovered potassium and sodium; invented the Davy safety lamp for use in coal mines; proposed theoretical explanations of electrolysis and voltaic action.

Debye, Peter Joseph William (1884–1966), American physical chemist born in the Netherlands. Worked on dipole moments and the diffraction of x-rays in gases; formulated Debye-Hückel theory on the behavior of strong electrolytes; Nobel Prize, 1936.

Dedekind, Julius Wilhelm Richard (1831–1916), German mathematician. Worked in number theory and analysis, particularly with algebraic integers, algebraic functions, and ideals; defined real numbers by Dedekind cuts.

de Duve, Christian René (1917–), Belgian biochemist and cytologist. Refined centrifuge technique for studying cell components; discovered lysosomes; Nobel Prize, 1974.

De Forest, Lee (1873–1961), American inventor. Pioneer in radio technology; invented audio amplifier and the four-electrode valve; incorporated the grid into the thermionic valve.

de Haas, Wander Johannes (1878–1960), Dutch physicist. Demonstrated the Einstein–de Haas effect; worked on production of extremely low temperatures by adiabatic demagnetization; with P. Van Alphen, discovered de Haas–Van Alphen effect.

Delbruck, Max (1906–1981), German-born American biologist. Pioneered in molecular biology; research on bacterial viruses; Nobel Prize, 1969.

Demoivre, Abraham (1667–1754), French-born English mathematician. Originated two theorems on expansions of trigonometrical expansions; proposed methods to approximate functions of large numbers, and the concept of the normal distribution curve.

De Morgan, Augustus (1806–1871), English mathematician. Wrote textbooks and treatises on arithmetic, algebra, and trigonometry; formulated the De Morgan theorem.

Desargues, Gérard (1593–1662), French mathematician. A founder of modern geometry; proposed the theory of involution and transversals.

Descartes, René (1596–1650), French mathematician. Originated cartesian, or coordinate, geometry.

de Sitter, Willem (1872–1934), Dutch astronomer. Worked on the application of Einstein's theory to the problems of the universe; computed the size of the universe.

De Vries, Hugo (1848–1935), Dutch botanist. Formulated the mutation theory of evolution.

Dewar, James (1842–1923), British chemist. Made pioneering studies of matter at low temperatures; first to liquefy hydrogen; invented the Dewar vacuum flask.

Dick, George Frederick (1881–1967), American physician and bacteriologist. Isolated scarlet fever streptococci, developed scarlet fever streptococcus antitoxin, and developed Dick test.

Dicke, Robert Henry (1916–), American physicist. Developed new relativistic theory of gravitation with C. Brans; investigated cosmic blackbody radiation; worked on development of radar.

Diels, Otto Paul Hermann (1876–1954), German chemist. Codiscoverer of the Diels-Alder reaction (diene synthesis); worked on sterol chemistry; discovered carbon suboxide; Nobel Prize, 1950.

Diesel, Rudolf (1858–1913), German inventor. Designed and built the diesel engine.

Diophantus of Alexandria (3d century), Greek mathematician. Known as the father of algebra; the first to use conventional algebraic notation.

Dirac, Paul Adrien Maurice (1902–), English physicist. Worked in quantum mechanics; his theory of negative-energy holes predicted existence of the positron; Nobel Prize, 1933.

Dirichlet, Peter Gustave Lejeuné (1805–1859), German mathematician. Applied higher analysis to the theory of numbers; work on definite integrals.

Dobzhansky, Theodosius (1900–1975), Russian-born American biologist. Elucidated the mechanisms of heredity and variation through studies of *Drosophila*.

Doisy, Edward Adelbert (1893–), American biochemist. Isolated pure crystalline compounds important to human health, such as sex hormones and vitamins; Nobel Prize, 1943.

Domagk, Gerhard (1895–1964), German biochemist. Discovered sulfamidocrysoidin, the first synthetic microbial of broad clinical usefulness. Nobel Prize (declined), 1939.

Donati, Giovanni Battista (1826–1873), Italian astronomer. Studied stellar spectra; discovered six comets.

Donnan, Frederick George (1870–1956), Irish chemist born in Ceylon. Research in chemical kinetics; originated the Donnan theory of membrane equilibrium.

Doppler, Christian Johann (1803–1853), Austrian physicist and mathematician. Formulated Doppler's principle, relating the frequency of wave motion to velocity; described the Doppler effect.

Draper, Henry (1837–1882), American scientist. Research in spectroscopy; the Draper catalog is named in his honor.

Drude, Paul Karl Ludwig (1863–1906), German physicist. Attempted to correlate and account for optical, electrical, thermal, and chemical properties of substances; developed theory of properties of metals based on free electrons treated as a gas.

Duane, William (1872–1935), American physicist and radiologist. Developed treatment of cancer by radioisotopes and x-rays; with F. L. Hunt, discovered Duane-Hunt law of x-rays.

Du Bois-Reymond, Emil (1818–1896), German physiologist. Pioneer work in electrical properties of living tissues, especially nerves.

DuBridge, Lee Alvin (1901–), American physicist. Developed Fowler-DuBridge theory of photoelectric emission.

Ducrey, Augusto (1860–1940), Italian dermatologist. Discovered *Hemophilus ducreyi*, the agent of chancroid.

Dufay, Charles François de Cisternay (1698–1739), French chemist. Discovered positive and negative types of electricity.

Dulbecco, Renato (1914–), Italian-born American virologist. Developed techniques for studying animal viruses; investigated interaction between deoxyribonucleic acid tumor viruses and genetic material; Nobel Prize, 1975.

Dulong, Pierre Louis (1785–1838), French chemist and physicist. With A. T. Petit, formulated the law of the constancy of atomic heats; developed the Dulong formula for heat value of fuels.

Dumas, Jean Baptiste André (1800–1884), French chemist. Research on organic compounds; determined many atomic weights.

Du Vigneaud, Vincent (1901–1978), American biochemist. Synthesized a polypeptide hormone, oxytocin; worked on other biologically important sulfur compounds; Nobel Prize, 1955.

Eccles, John Carew (1903–), Australian physiologist. Elucidated the action of nerve impulses across zones of close contact between nerve cells; Nobel Prize, 1963.

Eddington, Arthur Stanley (1882–1944), English astronomer and writer. Theoretical research on stellar movements and internal makeup of stars; wrote on theory of relativity.

Edelman, Gerald Maurice (1929–), American biochemist. Worked to determine chemical structure of immunoglobulins; Nobel Prize, 1972.

Edison, Thomas Alva (1847–1931), American electrician and inventor. Invented the gramophone, carbon transmitter for the telephone, incandescent electric lamp, moving pictures, and the diplex method of telegraphy.

Ehrenfest, Paul (1880–1933), Austrian-born Dutch theoretical physicist. Contributed to statistical mechanics and quantum mechanics; developed Ehrenfest's principle; proved Ehrenfest's theorem.

Ehrlich, Paul (1854–1915), German bacteriologist. Research in chemotherapy, notably the discovery of Salvarsan for treatment of syphilis; pioneered in the study of hematology and immunity; Nobel Prize, 1908.

Eigen, Manfred (1927–), German chemist. Devised relaxation techniques to study high-speed chemical reactions; Nobel Prize, 1967.

Eijkman, Christiaan (1858–1930), Dutch physician. Studied dietary deficiency disease, in particular beriberi; Nobel Prize, 1929.

Einstein, Albert (1879–1955), German-born American physicist. Proposed the theory of relativity; extended the application of quantum theory; Nobel Prize, 1921.

Einthoven, Willem (1860–1927), Dutch physiologist born in Java. Used the string galvanometer to record electrical activity of the heart, thereby inventing the electrocardiograph; Nobel Prize, 1924.

Elsasser, Walter Maurice (1904–), German-born American geophysicist. Formulated the dynamo theory of the Earth's permanent terrestrial magnetic field.

Elster, Johann Philipp Ludwig Julius (1854–1920), German experimental physicist. With H. F. Geitel, studied atmospheric electricity, radioactivity, and photoelectricity, and invented photocell.

Emmett, Paul Hugh (1900–), American chemist. Worked on catalysts for ammonia synthesis and the water-gas conversion reaction; with S. Brunauer and E. Teller, formulated Brunauer-Emmett-Teller equation for surface area determinations.

Encke, Johann Franz (1791–1865), German astronomer. Determined period of revolution of Encke's comet, discovered by J. L. Pons; measured the distance of the Sun from the Earth.

Enders, John Franklin (1897–), American microbiologist. With F. C. Robbins and T. H. Weller, discovered the capacity of poliomyelitis virus to grow in various tissue cultures; Nobel Prize, 1954.

Enskog, David (1884–1947), Swedish physicist. With S. Chapman, developed the Chapman-Enskog theory for solving the Boltzmann transport equation.

Eötvös, Roland, Baron (1848–1919), Hungarian physicist. Research on gravitation and terrestrial magnetism; formulated a law which relates surface tension to temperature of liquids; designed the Eötvös torsion balance.

Erasistratus (3d century B.C.), Greek physician and anatomist. Founder of physiology; distinguished between the cerebrum and cerebellum, and sensory and motor nerves.

Eratosthenes (3d century B.C.), Greek astronomer. Suggested an extra day in the calendar every fourth year; made a determination of the size of the Earth; measured obliquity of the ecliptic.

Erlanger, Joseph (1874–1965), American physiologist. With H. S. Gasser, created new methods for amplifying and recording electrical impulses in nerves; research on the function of the synapse; Nobel Prize, 1944.

Erlenmeyer, Richard August Carl Emil (1825–1909), German organic chemist. Research on synthesis and constitution of aliphatic compounds; introduced modern structural notation; invented Erlenmeyer flask.

Esaki, Leo (1925–), Japanese physicist. Discovered a new negative-resistance characteristic in semiconductor *pn* junctions, leading to the discovery of the tunnel, or Esaki, diode; Nobel Prize, 1973.

Euclid (ca. 330–ca. 275 B.C.), Greek mathematician. Wrote geometry textbooks; euclidean geometry is named after him.

Euler, Leonhard (1707–1783), Swiss mathematician. Contributed to algebraic series and differential and integral calculus; realized the significance of coefficients (Euler numbers) of certain trigonometrical expansions.

Euler-Chelpin, Hans Karl August Simon von (1873–1964), German-Swedish chemist. Research on enzyme action and fermentation of sugars; Nobel Prize, 1929.

Ewald, Paul Peter (1888–), German-born American physicist. Developed dynamic theory of x-ray interference in crystals.

Ewing, William Maurice (1906–1974), American geophysicist. Made fundamental contributions to seismology, geodesy, oceanography, and submarine geology.

Eyring, Henry (1901–1981), Mexican-born American chemist. Pioneered in the application of quantum and statistical mechanics to chemistry; conceived the theory of absolute reaction rates and the significant structures theory of liquids.

Fabricius, Hieronymus, or Girolamo Fabrizio (ca. 1533–1619), Italian anatomist. Made painstaking descriptions of valves in veins; did comparative research in animal embryology.

Fabry, Charles (1867–1945), French physicist. With A. Perot, invented Fabry-Perot interferometer; experimentally verified Doppler broadening and Doppler effect.

Fahrenheit, Gabriel Daniel (1686–1736), German physicist. Constructed thermometers; invented the Fahrenheit temperature scale.

Fallopio, Gabriele (1523–1562), Italian anatomist. Discovered Fallopian tubes; gave first clear description of organs of inner and middle ear.

Fanning, John Thomas (1837–1911), American civil engineer. Designed water works and water supply systems.

Faraday, Michael (1791–1867), English chemist and physicist. Discovered electromagnetic induction; formulated two laws of electrolysis; invented the dynamo.

Fechner, Gustav Theodor (1801–1887), German psychologist. Founded psychophysics; developed the Fechner law concerning intensity of sensation produced by a stimulus.

Fermat, Pierre de (1601–1665), French mathematician. Founder of the modern theory of numbers; originated Fermat's last theorem, and Fermat's principle in optics.

Fermi, Enrico (1901–1954), Italian-born American physicist. Research on producing radioactive isotopes by neutron bombardment; directed construction of the first atomic pile; Nobel Prize, 1938.

Feynman, Richard Phillips (1918–), American physicist. Proposed a theory to eliminate difficulties that had arisen in the study of the interaction of electrons, positrons, and radiation; Nobel Prize, 1965.

Fibiger, Johannes Andreas Grib (1867–1928), Danish pathologist. First to produce cancer experimentally; Nobel Prize, 1926.

Finsen, Niels Ryberg (1860–1904), Danish physician. Originated ultraviolet light therapy for certain diseases; Nobel Prize, 1903.

Fischer, Emil Hermann (1852–1919), German chemist. Synthesized many natural substances, including purines, D-glucose and other sugars, and the first nucleotide; studied polypeptides and proteins; Nobel Prize, 1902.

Fischer, Ernst Otto (1918–), German chemist. Studied how metals and organic molecules combine to form unique molecules with sandwichlike structures; Nobel Prize, 1973.

Fischer, Hans (1881–1945), German organic chemist. Investigated and synthesized pyrrole pigments; studied structure of chlorophylls; Nobel Prize, 1930.

Fisher, Ronald Aylmer (1890–1962), English geneticist and statistician. Developed statistical techniques for analysis of variance, and for use and validation of small samples; developed theory of the evolution of dominance.

Fitch, Val Logsdon (1923–), American physicist. Collaborated with J. W. Cronin on experiment showing that the principle of time-reversal invariance is violated in the decay of neutral K mesons; Nobel Prize, 1980.

FitzGerald, George Francis (1851–1901), Irish physicist. Proposed Lorentz-FitzGerald contraction, relating to a material moving through an electromagnetic field.

Fizeau, Armand Hippolyte Louis (1819–1896), French physicist. First to accurately measure the velocity of light; conducted experiments on the velocity of electricity, use of light wavelength to measure length, and measurement of diameter of stars through the method of interference.

Flamsteed, John (1646–1719), English astronomer. Made a trustworthy catalog of stars; invented conical projection in mapmaking.

Fleming, Alexander (1881–1955), British bacteriologist. Discovered lysozyme and penicillin; Nobel Prize, 1945.

Fleming, John Ambrose (1849–1945), English electrical engineer. Invented the thermionic valve; contributed to widespread application of electric lighting and heating.

Florey, Howard Walter (1898–1968), British pathologist born in Australia. Contributed, with E. B. Chain, to development of penicillin as a chemotherapeutic agent; Nobel Prize, 1945.

Flory, Paul John (1910–), American physical chemist. Developed analytic techniques to explore properties and molecular structures of long-chain molecules; Nobel Prize, 1974.

Fock (Fok), Vladimir Alexandrovitch (1898–1974), Soviet theoretical physicist. Contributions to quantum electrodynamics, quantum field theory, electromagnetic diffraction and propagation, and general relativity; developed Hartree-Fock approximation of wave functions.

Forbush, Scott Ellsworth (1904–), American geophysicist. Discovered the worldwide decrease in cosmic-ray intensity associated with some magnetic storms.

Forssmann, Werner Theodor Otto (1904–1979), German physician. Developed the technique of cardiac catheterization; Nobel Prize, 1956.

Foucault, Jean Bernard Léon (1819–1868), French physicist. Accurately determined the velocity of light; constructed the Foucault pendulum and the Foucault prism; determined experimentally the rotation of the Earth.

Fourier, Jean Baptiste Joseph, Baron (1768–1830), French geometrician and physicist. Proposed the Fourier series on arbitrary functions; formulated the law of heat propagation.

Fowler, Ralph Howard (1889–1944), English physicist. Applied statistical mechanics to matter at high temperatures and high pressures; explained structure of white dwarf stars; with E. A. Guggenheim, R. F. Peierls, and others, developed Ising model.

Franck, James (1882–1964), German physicist. With G. Hertz, studied energy transfer in collisions of molecules; formulated Franck-Condon

principle of transition from one energy state to another; Nobel Prize, 1925.

Frank, Ilya Mikhailovich (1908–), Soviet physicist. With I. Y. Tamm, proposed a theoretical interpretation of Cerenkov radiation; Nobel Prize, 1958.

Franklin, Benjamin (1706–1790), American physicist, oceanographer, meteorologist, and inventor. Formulated a theory of general electrical "action"; introduced principle of conservation of charge; showed that lightning is an electrical phenomenon; invented lighting rod.

Fraunhofer, Joseph von (1787–1826), German optician and physicist. First to study the dark lines in the solar spectrum (Fraunhofer lines); invented a heliometer; improved the spectroscope.

Fredholm, Eric Ivar (1866–1927), Swedish mathematician. Developed the theory of integral equations (Fredholm equations).

Frenet, Jean Frédéric (1816–1900), French mathematician. Helped to develop Frenet-Serret formulas.

Frenkel, Yakov Ilyich (1894–1954), Soviet physicist. Pioneered in modern atomic theory of solids; developed quantum-mechanical explanations for electron mean free path in metals, and for paramagnetism and ferromagnetism; postulated excitons, Frenkel excitons, and Frenkel defects.

Fresnel, Augustin Jean (1788–1827), French physicist. Investigated effects (Fresnel's fringes) due to the interference of light; developed a wave theory of light; originated Fresnel's reflection formula.

Freud, Sigmund (1856–1939), Austrian psychoanalyst. Founder of psychoanalysis, with emphasis on dream interpretation and free association; developed a theory of personality involving id, ego, and superego, and stressing importance of the libido.

Friedel, Charles (1832–1899), French chemist and mineralogist. With J. M. Crafts, described the Friedel-Crafts reaction; work on artificial production of minerals; studied crystals, ketones, and aldehydes.

Frobenius, Georg Ferdinand (1849–1917), German mathematician. Developed representation theory of finite groups and method for solving linear homogeneous ordinary differential equations.

Froude, William (1810–1879), English engineer. Discovered the Froude law of comparison, concerning the towing of an object in a liquid.

Fubini, Guido (1879–1943), Italian mathematician. Worked in algebra, analysis, and differential projective geometry; proved Fubini's theorem.

Fukui, Kenichi (1918–), Japanese chemist. Developed frontier orbital theory, a quantum-mechanical model useful in prediction of the combinative properties of molecules; Nobel Prize, 1981.

Gabor, Dennis (1900–1979), Hungarian-born British physicist and engineer. Invented holography; Nobel Prize, 1971.

Gajdusek, Daniel Carleton (1923–), American physician and virologist. Discovered causal virus and transmission mechanism of kuru; Nobel Prize, 1976.

Galen (2d century), Greek physician and medical writer. Wrote treatises long used as textbooks; experimented on animal nervous systems; made anatomical descriptions of structure and functions of body parts.

Galileo Galilei (1564–1642), Italian astronomer. First to use the telescope for observational purposes; made many discoveries related to the planets and the Sun; did theoretical work on classical physics.

Galois, Evariste (1811–1832), French mathematician. Developed Galois theory of polynomials.

Gamow, George (1904–1968), Russian-born American physicist. Made theoretical contributions to nuclear physics, astronomy, and biology; with E. Teller, formulated the selection rule for beta emission; proposed theoretically the genetic code.

Gasser, Herbert Spencer (1888–1963), American physiologist. With J. Erlanger, provided a new method for recording electrical impulses of nerves; studied functions of nerve fibers; Nobel Prize, 1944.

Gatterman, Friedrich August Ludwig (1860–1920), German chemist. Originated Gatterman-Koch synthesis of aldehydes; isolated and analyzed nitrogen trichloride; synthesized aromatic carboxylic acids, thionaphthene, and thioanilide.

Gauss, Karl Friedrich (1777–1855), German mathematician, astronomer, and physicist. Formulated the Gauss theorem in the mathematics of electricity; made many contributions to pure and applied mathematics; determined orbits of planets and comets from observational data.

Gay-Lussac, Joseph Louis (1778–1850), French chemist and physicist. Discovered the law of expansion of gases by heat, and the law of combining volumes of gases; studied chemistry of iodine and cyanogen.

Geiger, Hans Wilhelm (1882–1945), German physicist and inventor. Invented the Geiger counter to detect alpha particles; investigated properties of alpha particles, cosmic rays, and artificial radiation.

Geissler, Johann Heinrich Wilhelm (1815–1879), German instrument maker. Developed Geissler pump and Geissler tube.

Geitel, Hans Friedrich (1855–1923), German experimental physicist. With J. Elster, studied atmospheric electricity, radioactivity, and photoelectricity, and invented photocell.

Gell-Mann, Murray (1929–), American physicist. Proposed law of conservation of strangeness; used unitary symmetry to classify and explain elementary particles; postulated concept of quarks; Nobel Prize, 1969.

Gesner, Konrad von (1516–1565), Swiss naturalist. Wrote *Historia Animalium*, beginning zoology as a science.

Giaever, Ivar (1929–), Norwegian-born American physicist. Discovered that current-voltage characteristics of an electron tunneling across a thin insulating film separating two metals, one or both of which is in a superconducting state, can be used to obtain electron density of states of superconductors; Nobel Prize, 1973.

Giauque, William Francis (1895–1982), Canadian-born American chemist. Developed adiabatic demagnetization technique for production of extremely low temperatures; collaborated in discovery of isotopes of oxygen; Nobel Prize, 1949.

Gibbs, Josiah Willard (1839–1903), American mathematician and physicist. Made a mathematical treatment of chemical subjects, notably thermodynamics; worked on statistical mechanics, leading to the basis for the phase rule of heterogeneous equilibria.

Gilbert, Walter (1932–), American biochemist. Developed methods for determining nucleotide sequence (independently of F. Sanger), advancing the technology of DNA recombination; Nobel Prize, 1980.

Ginzburg, Vitaly Lazarevich (1916–), Soviet physicist. Developed Ginzburg-Landau and Ginzburg-London theories of superconductivity.

Giorgi, Giovanni (1871–1950), Italian electrical engineer, physicist, and mathematician. Developed the meter-kilogram-second-ampere system of units.

Glaser, Donald Arthur (1926–), American physicist. Invented the bubble chamber for detecting the paths of high-energy atomic particles; Nobel Prize, 1960.

Glashow, Sheldon Lee (1932–), American physicist. Contributed to development of theory uniting electromagnetism and weak nuclear interactions; postulated existence of charmed particles; Nobel Prize, 1979.

Glauber, Johann Rudolf (1604–1670), German chemist. Discovered Glauber's salt (sodium sulfate) and hydrochloric acid; conducted experiments on compounds of mercury, arsenic, and antimony.

Gmelin, Leopold (1788–1853), German chemist. Wrote *Handbuch der Chemie*, first systematic treatment of chemical knowledge; devised Gmelin's test for presence of bile pigments; studied cyanides.

Goldbach, Christian (1690–1764), German-born Russian mathematician. Research on number theory and analysis; proposed the Goldbach conjecture.

Goldhaber, Maurice (1911–), Austrian-born American physicist. With J. Chadwick, discovered photodisintegration and disintegration of light elements by slow neutrons; with L. Grodzins and A. W. Sunyar, discovered that neutrino has left-handed spin.

Golgi, Camillo (1844–1926), Italian physician. Pioneered in the study of histology of the nervous system; discovered the Golgi bodies; Nobel Prize, 1906.

Gordan, Paul Albert (1837–1912), German mathematician. Worked on the theory of invariants and on solutions of algebraic equations and their groups of substitutions.

Gordon, Walter (1893–1940), German-born Swedish physicist. Contributed to relativistic quantum theory; with O. B. Klein, originated the Klein-Gordon equation.

Gram, Hans Christian Joachim (1853–1938), Danish physician. Developed the Gram method for staining and differentiating bacteria.

Gram, Jorgen Pedersen (1850–1916), Danish mathematician. Worked in number theory and analysis; with E. Schmidt, originated Gram-Schmidt process for obtaining orthogonal set of vectors.

Granit, Ragnar Arthur (1900–), Finnish-born Swedish physiologist. Research on vision and on motor control by afferent neurons; Nobel Prize, 1967.

Grashof, Franz (1826–1893), German mechanical engineer. Applied mathematics and physics to engineering problems; derived fundamental equations in the theory of elasticity; introduced Grashof number.

Gray, Henry (1825–1861), English anatomist. Wrote *Anatomy of the Human Body*.

Green, George (1793–1841), English mathematician. Worked in analysis; derived Green's theorem and Green's identities, introduced Green's function.

Gregory, James (1638–1675), Scottish geometer. Provided first proof of the theorem of calculus; gave first description of the reflecting telescope; discovered the series from which π can be calculated.

Grignard, François Auguste Victor (1871–1935), French chemist. Discovered organomagnesium compounds, or Grignard reagents, useful in synthesis of organic and organometallic compounds; Nobel Prize, 1912.

Gruneisen, Eduard (1877–1949), German physicist. Formulated laws relating specific heat and other properties of solids.

Guillaume, Charles Édouard (1861–1938), Swiss-born French physicist. Studied nickel-steel alloys and invented Invar; Nobel Prize, 1920.

Guillemin, Ernst Adolph (1898–), American electrical engineer. Worked on network analysis and synthesis problems; invented Guillemin line; developed network to produce loran pulses.

Guillemin, Roger Charles Louis (1924–), French-born American physiologist. With A. V. Schally, isolated and analyzed peptide hormones secreted in hypothalmic region of brain which control anterior pituitary hormone secretion; Nobel Prize, 1977.

Gullstrand, Allvar (1862–1930), Swedish ophthalmologist. Discovered intracapsular accommodation of the eye lens; improved techniques for studying eye structure; Nobel Prize, 1911.

Gunn, John Battiscombe (1928–), Egyptian-born American physicist. Discovered Gunn effect and used it to develop Gunn oscillator.

Gunter, Edmund (1581–1626), English mathematician and astronomer. Invented Gunter's chain used in surveying, and the logarithmic scale (Gunter's scale) which is the principle of the slide rule.

Gutenberg, Johann (ca. 1397–1468), German inventor. Invented the movable-type printing press.

Haar, Alfred (1885–1933), Hungarian mathematician. Studied orthogonal systems of functions, complex functions, partial differential equations, and calculus of variations; introduced the Haar measure on groups.

Haber, Fritz (1868–1934), German chemist. Developed the Haber-Bosch process for synthesis of ammonia; made electrochemical studies; Nobel Prize, 1918.

Hadamard, Jacques (1865–1963), French mathematician. Proved theorem on the asymptotic behavior of the function giving the number of prime numbers less than a given number; introduced concept of "the problem correctly posed" in the solution of partial differential equations.

Haeckel, Ernst Heinrich (1834–1919), German biologist. Studied various invertebrates; classified animals as uni- and multicellular organisms; proposed the theory of recapitulation: ontogeny repeats phylogeny.

Hagen, Carl Ernst Bessel (1851–1923), German physicist. With H. Rubens, conducted experiments confirming Maxwell's electromagnetic theory of light, permitting determination of electrical conductivity of metals by optical measurements alone.

Hagen, Gotthilf Heinrich Ludwig (1797–1884), German hydraulic engineer. Discovered Hagen-Poiseuille law independently of J. L. M. Poiseuille; directed construction of dikes, harbor installations, and dune fortifications.

Hahn, Hans (1879–1934), Austrian mathematician. With S. Banach, proved the Hahn-Banach theorem of linear functionals.

Hahn, Otto (1879–1968), German chemist. With L. Meitner and F. Strassman, discovered that fission of heavy nuclei was possible by irradiation with neutrons; discovered protactinium with Meitner; Nobel Prize, 1944.

Hahnemann, Christian Friedrich Samuel (1775–1843), German physician. Founder of homeopathy.

Haldane, John Burdon Sanderson (1892–1964), British geneticist and physiologist. Pioneered in mathematical treatment of population genetics; studied respiration in humans; wrote about enzymes.

Haldane, John Scott (1860–1936), British physiologist. Research on respiration, particularly the effects of high and low atmospheric pressures.

Hale, George Ellery (1868–1938), American astronomer. Established the Mount Wilson and Mount Palomar observatories; proved existence of magnetic fields in sunspots; invented the spectroheliograph.

Hall, Charles Martin (1863–1914), American commercial chemist. Discovered Hall process for extracting aluminum.

Hall, Edwin Herbert (1855–1938), American physicist. Discovered Hall effect and conducted studies of this and other galvanomagnetic and thermomagnetic effects.

Halley, Edmond (1656–1742), English astronomer. Published a southern star catalog; computed orbits of 24 comets; discovered Halley's comet.

Hamel, Georg Karl Wilhelm (1877–1954), German mathematician. Research on analysis and applied mathematics; introduced Hamel basis of vectors.

Hamilton, William Rowan (1805–1865), Irish mathematician and mathematical physicist. Discovered quaternions; developed mathematical theories encompassing wave and particle optics and mechanics; introduced Hamilton's principle and a form of the Hamilton-Jacobi theory.

Hankel, Hermann (1839–1873), German mathematician. Studied complex and hypercomplex numbers, theory of functions, and Hankel functions; proved that no hypercomplex number system can satisfy all the laws of ordinary arithmetic.

Hansen, Armauer (1841–1912), Norwegian bacteriologist. Discovered the bacillus of leprosy, or Hansen's disease.

Harden, Arthur (1865–1940), English chemist. Research on enzymes and alcoholic fermentation; Nobel Prize, 1929.

Hardy, Godfrey Harold (1877–1947), English mathematician. With S. Ramanujan, discovered formula for number of ways of writing a positive integer as the sum of positive integers; proved that the Riemann zeta function has an infinite number of zeros with real part equal to 1/2.

Harker, David (1906–), American crystallographer. Completed development of Patterson-Harker method of x-ray diffraction analysis of crystal structure.

Hartley, Ralph Vinton Lyon (1888–), American electrical engineer. Invented Hartley oscillator; developed Hartley principle in information theory.

Hartline, Haldan Keffer (1903–1983), American biophysicist. Elucidated cellular electrical activity in the eye and optic nerve; Nobel Prize, 1967.

Hartmann, Johannes Franz (1865–1936), German astronomer. Derived Hartmann dispersion formula relating index of refraction and wavelengths; devised Hartmann test for telescope mirrors; gave first observational proof of interstellar matter.

Hartree, Douglas Rayner (1897–1958), English mathematician and mathematical physicist. Developed methods of numerical analysis which made it possible to apply Hartree method to calculation of atomic wave functions.

Harvey, William (1578–1657), English anatomist and physician. Described the true circulation of blood and the action of the heart.

Hassel, Odd (1897–1981), Norwegian chemist. Developed concept of conformation by studying three-dimensional structure of cyclohexane molecule, and explaining the orientation of attached atoms or functional groups; Nobel Prize, 1969.

Hausdorff, Felix (1868–1942), German mathematician. Founded and advanced general topology and the general theory of metric spaces.

Haüy, Réné Just, Abbé (1743–1822), French mineralogist. Formulated the geometrical law of crystallization; pioneer in the science of crystallography.

Havers, Clopton (1665–1702), English osteologist. Provided the first full discussion of Haversian lamellae and Haversian canals.

Haworth, Walter Norman (1883–1950), English chemist. Synthesized ascorbic acid; studied carbohydrates, including the structure of sugars; Nobel Prize, 1937.

Heaviside, Oliver (1850–1925), English physicist. Proposed the Heaviside layer in the upper atmosphere.

Hefner-Alteneck, Friedrich Franz von (1845–1904), German engineer. Invented Hefner candle as a standard of luminous intensity.

Heine, Heinrich Eduard (1821–1881), German mathematician. Formulated concept of uniform continuity.

Heisenberg, Werner (1901–1976), German physicist. Founder of quantum mechanics; studied structure of the atom and the Zeeman effect; formulated the principle of indeterminacy in nuclear physics; Nobel Prize, 1932.

Heitler, Watler Heinrich (1904–1981), German-born Swiss theoretical physicist. Developed Heitler-London covalence theory of chemical bonding.

Helmholtz, Hermann Ludwig Ferdinand von (1821–1894), German physicist, anatomist, and physiologist. Physiological research on the nervous system and the human eye and ear, and theoretical work on conservation of force in physics; invented the ophthalmoscope.

Hench, Philip Showalter (1896–1965), American physiologist. Discovered that ACTH and cortisone could be used to treat rheumatoid arthritis; Nobel Prize, 1950.

Henle, Friedrich Gustav Jacob (1809–1885), German pathologist and anatomist. Wrote *Handbuch der Rationellen Pathologie*, integrating the study of physiology and pathology; discovered looped portion of the kidney tubules, and the epithelium.

Henry, Joseph (1797–1878), American physicist. Studied electromagnetic induction, solar phenomena, meteorology, and acoustics.

Henry, William (1775–1836), English chemist and physician. Formulated Henry's law of solubility of gases in liquid.

Hermite, Charles (1822–1901), French mathematician. First to solve a fifth-degree equation; investigated e, the base of natural logarithms.

Hero of Alexandria (3d century or earlier), Greek mathematician. Wrote on the geometry of plane and solid figures, mechanics, and simple machines; showed that the angle of incidence equals the angle of reflection.

Héroult, Paul Louis Toussaint (1863–1914), French metallurgist. Designed the Héroult furnace for electric steel; developed the Héroult process for aluminum extraction.

Herschel, John Frederick William (1792–1871), English mathematician, physicist, and astronomer. Discovered many nebulae and clusters; pioneered in celestial photography.

Herschel William or Friedrich Wilhelm (1738–1822), German-born English astronomer. Discovered Uranus, two of its satellites, and two satellites of Saturn; discovered the Sun's intrinsic motion; proposed the concept of the form of the Milky Way.

Hershey, Alfred Day (1908–), American biologist. With M. Chase, experimented with bacteriophage, confirming earlier indications that the material basis of heredity is contained in nucleic acids; Nobel Prize, 1969.

Hertz, Gustav (1887–1975), German physicist. With J. Franck, studied effects of electron impacts on atoms; Nobel Prize, 1925.

Hertz, Heinrich Rudolph (1857–1894), German physicist. Discovered Hertzian waves in the ether; proved experimentally Maxwell's theories of electricity and magnetism.

Hertzsprung, Ejnar (1873–1967), Danish astronomer. Discovered method of spectroscopic parallax for measuring stellar distances; determined relation between color and luminosity of stars; with H. N. Russell, developed Hertzsprung-Russell diagram.

Herzberg, Gerhard (1904–), German-born Canadian physicist. Determined electronic structure and geometry of diatomic and polyatomic molecules, particularly free radicals; Nobel Prize, 1971.

Hess, Victor Franz (1883–1964), Austrian physicist. Studied alpha particles from radium; discovered cosmic rays; Nobel Prize, 1936.

Hess, Walter Rudolf (1881–1973), Swiss physiologist. Discovered the organizer function of the middle brain in coordinating activity of internal organs; developed technique of using electrodes to stimulate localized brain areas; Nobel Prize, 1949.

Hevelius or Hewel, Johannes (1611–1687), Danzig-born astronomer. Discovered four comets; charted surface of the Moon; cataloged numerous stars.

Hevesy, Georg von (1886–1966), Hungarian chemist. Experimented with radioisotope indication, leading to the technique of isotope tracing of biological and chemical processes; Nobel Prize, 1943.

Hevrosky, Jaroslav (1890–1967), Czechoslovakian physical chemist. Developed the technique of polarographic analysis; Nobel Prize, 1959.

Hewish, Antony (1924–), British astronomer. Pioneered in discovery of pulsars, by means of radio telescopes; Nobel Prize, 1974.

Heymans, Corneille (1892–1968), French-Belgian physiologist. Investigated the carotid sinus in connection with the mechanism of breathing; Nobel Prize, 1938.

Hilbert, David (1862–1943), German mathematician. Contributed to theory of numbers and theory of invariants; applied integral equations to physical problems.

Hill, Archibald Vivian (1886–1977), English physiologist. Worked on heat loss and oxygen consumption in muscle contraction; Nobel Prize, 1922.

Hinshelwood, Cyril Norman (1897–1967), British chemist. Elucidated chain reaction and chain branching mechanisms; Nobel Prize, 1956.

Hipparchus of Rhodes (fl. 130 B.C.), Greek astronomer. Calculated the inclination of the ecliptic and the precession of the equinoxes; invented trigonometry; made the first star catalog.

Hippocrates (460?–?377 B.C.), Greek physician. Known as the father of medicine; writings attributed to him contain clinical observations of diseases, descriptions of surgical practice, and the Hippocratic doctrine of the four humors.

Hittorf, Johann Wilhelm (1824–1914), German physicist. Described effects of Hittorf rays in vacuum tubes; studied electrolysis, and electrical discharge in rarefied gases with the Hittorf tube.

Hodgkin, Alan Lloyd (1914–), British biophysicist. With A. Huxley, devised a system of mathematical equations describing the nerve impulse; presented evidence for the sodium theory of nervous conduction; Nobel Prize, 1963.

Hodgkin, Dorothy Crowfoot (1910–), Egyptian-born British chemist. Determined the structure of the vitamin B_{12} molecule through x-ray crystallographic analysis; Nobel Prize, 1964.

Hodgkin, Thomas (1798–1866), English physician. First to describe Hodgkin's disease, a glandular disorder.

Hoffmann, Roald (1937–), Polish-born American chemist. Developed methods for predicting whether a chemical reaction is possible based on molecular orbital models; Nobel Prize, 1981.

Hofmann, August Wilhelm von (1818–1892), German chemist. Studied reactions of derivatives; developed the Hofmann reaction for preparing primary amines.

Hofmeister, Wilhelm Friedrich Benedict (1824–1877), German botanist. Did fundamental work on plant embryology; explained the alternating life cycles of mosses and ferns.

Hofstadter, Robert (1915–), American physicist. Investigated the properties and behavior of the proton and neutron; determined the size and shape of many nuclei; discovered the construction scheme of fundamental atomic nuclei; Nobel Prize, 1961.

Hölder, Otto Ludwig (1859–1937), German mathematician. Contributed to analysis and group theory; introduced Hölder condition; proved Hölder inequality and Jordan-Hölder theorem.

Holley, Robert William (1922–), American biochemist. With coworkers, made first determination of a nucleotide sequence of a nucleic acid; Nobel Prize, 1968.

Hooke, Robert (1635–1703), English inventor. Invented the compound microscope, wheel barometer, universal (Hooke's) joint, and the first reflecting telescope; formulated theories on light and on the motion of the Earth.

Hooker, Joseph Dalton (1817–1911), English botanist. With G. Bentham, wrote *Genera Plantarum;* prepared works on the flora of New Zealand, Antarctica, and India.

Hopkins, Frederick Gowland (1861–1947), English biochemist. Discovered the amino acid tryptophan and the tripeptide glutathione; did experimental work leading to the discovery of vitamins; Nobel Prize, 1929.

Houdry, Eugene J. (1892–1962), French-born American engineer. Devised catalytic method of producing oil.

Hounsfield, Godfrey Newbold (1919–), British electronics engineer. Invented computerized axial tomography; Nobel Prize, 1979.

Houssay, Bernardo Alberto (1887–1971), Argentine physiologist. Research on the functions and effects of the hypophysis, including its relationship to carbohydrate metabolism; Nobel Prize, 1947.

Howell, William Henry (1860–1945), American physiologist. Discovered heparin; isolated thrombin and thromboplastin; discovered Howell-Jolly bodies; proved that blood platelets are formed in lungs.

Hubble, Edwin Powell (1889–1953), American astronomer. Studied nebulae; formulated Hubble's law of extragalactic nebulae.

Hubel, David Hunter (1929–), American neurobiologist. Contributed to the study of the processing of visual information in the brain; Nobel Prize, 1981.

Hückel, Erich (1866–1980), German chemist. With P. J. W. Debye, formulated Debye-Hückel theory of strong electrolytes; devised theoretical explanation of electron properties of aromatic hydrocarbons.

Huggins, Charles Brenton (1901–). Canadian-born American surgeon and cancer researcher. Developed treatment of cancers using endocrinologic methods; Nobel Prize, 1966.

Hughes, David Edward (1831–1900), English-born American inventor. Invented the Hughes electromagnet, a printing telegraph, microphone, and induction balance.

Hugoniot, Pierre Henry (1851–1887), French physicist. Developed theory of shock waves.

Humboldt, Friedrich Heinrich Alexander, Baron von (1769–1859), German naturalist. Founder of physical geography; made scientific explorations of South America and Central Asia.

Hume-Rothery, William (1899–1968), English metallurgist and chemist. Discovered Hume-Rothery rule concerning electron compounds.

Hunt, Franklin Livingston (1883–), American physicist. Research on x-ray spectroscopy; with W. Duane, discovered and applied Duane-Hunt law.

Hurwitz, Adolf (1859–1919), German-born Swiss mathematician. Worked on modular functions, number theory, Riemann surfaces, complex function theory, and analytic number theory; formulated condition satisfied by Hurwitz polynomials.

Huxley, Andrew Fielding (1917–), British physiologist. With A. L. Hodgkin, discovered the ionic mechanism involved in excitation in the cell membrane of peripheral nerves; Nobel Prize, 1963.

Huygens, Christiaan (1629–1695), Dutch mathematician, physicist, and astronomer. Discovered Saturn's rings; contributed to dynamics and optics; proposed the wave theory of light.

Hylleraas, Egil Andersen (1898–1965), Norwegian physicist. Applied quantum theory to helium atom, negative hydrogen ion, and other atoms, molecules, and crystals; developed variational method and other methods for mathematical solution of quantum-mechanical problems.

Ingenhousz, Jan (1730–1799), Dutch physician and naturalist. Demonstrated the cycle of photosynthesis in plants.

Ising, Ernest (1900–), German-born American physicist. Introduced Ising model of ferromagnetic material; research in solid-state physics and ferromagnetism.

Itô, Kiyoshi (1915–), Japanese mathematician. Studied stochastic processes; introduced Itô's integral and Itô's formula.

Jacob, François (1920–), French biologist. Discovered episomes, a class of genetic elements; with J. Monod, proposed the concepts of messenger ribonucleic acid and of the operon; Nobel Prize, 1965.

Jacobi, Karl Gustav Jacob (1804–1851), German mathematician. Worked on elliptic functions and differential equations; developed the theory of determinants.

Jacquard, Joseph Marie (1752–1834), French inventor. Designed and built the Jacquard loom for figured weaving.

Jaeger, Frans Maurits (1877–1945), Dutch crystallographer and physical chemist. Measured physical properties of molten salts and silicates at extremely high temperatures.

James, William (1842–1910), American psychologist and writer. Coformulator of James-Lange theory that emotions are the perception of physiological changes.

Janet, Pierre Marie Félix (1859–1947), French psychologist. Studied hysteria, obsession, and neurosis; wrote a textbook on the theory of hysteria.

Jeans, James Hopwood (1877–1946), English physicist and astronomer. Worked in stellar dynamics; proposed the tidal theory of the origin of planets.

Jenner, Edward (1749–1823), English physician. Discovered vaccination.

Jensen, J. Hans D. (1906–1973), German physicist. With M. G. Mayer, formulated the nuclear shell model; Nobel Prize, 1963.

Joliot-Curie, Irène (1897–1956), French physicist. With M. Curie, discovered projection of atomic nuclei by neutrons; with J. F. Joliot-Curie, discovered artificial radiation; Nobel Prize, 1935.

Joliot-Curie, Jean Frédéric (1900–1958), French physicist. Wtih I. Joliot-Curie, produced an artificial radioactive substance by bombarding

boron with fast alpha particles; Nobel Prize, 1935.

Jordan, Camille (1838–1921), French mathematician. Discovered many fundamental results in group theory; gave a proof of the Jordan curve theorem (later shown to be incorrect).

Jordan, Pascual (1902–1980), German physicist. Contributed to formulation of quantum mechanics; introduced Jordan algebra in an attempt to generalize quantum mechanics.

Josephson, Brian David (1940–), British physicist. Predicted the Josephson effect concerning electron pairs; Nobel Prize, 1973.

Joukowski, Nikolai Jegorowitch (1847–1921), Russian applied mathematician and aerodynamicist. Helped to introduce concept of Kutta-Joukowski airfoil and to prove Kutta-Joukowski theorem.

Joule, James Prescott (1818–1889), English physicist. Formulated a mechanical theory of heat; demonstrated Joule-Thomson effect relating to the fall in temperature of a gas; first to estimate the velocity of a gas molecule.

Jung, Carl Gustav (1875–1961), Swiss psychologist and psychiatrist. Evolved a theory of complexes; founded the analytical school of psychoanalysis and psychotherapy.

Jussieu, Antoine Laurent de (1748–1836), French botanist. Wrote *Genera Plantarum*, the basis of modern natural botanical classification.

Kalman, Rudolf Emil (1930–), Hungarian-born American mathematician and electrical engineer. Worked on mathematical theory of control systems; developed the Kalman filter; introduced concepts of controllability and observability.

Kaluza, Theodor Franz Eduard (1885–1954), German mathematical physicist. Developed theory which attempted to unify gravitation and electromagnetism.

Kamerlingh Onnes, Heike (1853–1926), Dutch physicist. Research on cryogenics, critical phenomena, and low temperatures; discovered the phenomenon of superconductivity; Nobel Prize, 1913.

Kapitza, Pjotr Leonidovich (1894–), Russian physicist. Studied magnetism and low temperature; designed hydrogen and helium liquefaction plants; Nobel Prize, 1978.

Kapteyn, Jacobus Cornelius (1851–1922), Dutch astronomer. Studied the proper motion of stars; with P. J. van Rhijn, evolved a theory of the universe.

Karrer, Paul (1889–1971), Swiss chemist. Pioneering research on vitamins A and B_2 and on the flavins and carotenoids; Nobel Prize, 1937.

Kastler, Alfred (1902–), French physicist. Developed a double-resonance method to study energy levels of atoms in excited states; Nobel Prize, 1966.

Kater, Henry (1777–1835), English geodesist. Developed Kater's reversible pendulum to obtain accurate values of acceleration of gravity.

Katz, Bernard (1911–), German-born British physiologist. Made discoveries concerning mechanism for release of transmitter substances at nerve-muscle junction; Nobel Prize, 1970.

Keesom, Willem Hendrik (1876–1956), Dutch physicist. Worked in low-temperature physics; first to solidify helium; studied molecular structure of liquids and compressed gases.

Kekulé von Stradonitz, Friedrich August (1829–1896), German chemist. A founder of structural organic chemistry; made theoretical proposal of the structure of benzene.

Kelvin, William Thompson, 1st Baron (1824–1907), British mathematician and physicist. Invented the Kelvin balance; formulated Kelvin's laws concerning electric cables; contributed to thermodynamics.

Kendall, Edward Calvin (1886–1972), American biochemist. Chemical investigation of the adrenal cortex, leading to the isolation of crystalline cortical hormones, especially cortisone; Nobel Prize, 1950.

Kendrew, John Cowdery (1917–), British molecular biologist. First to successfully determine the structure of a protein; Nobel Prize, 1962.

Kennelly, Arthur Edwin (1861–1939), American electrical engineer. Discovered the ionized layer in the atmosphere, independently of O. Heaviside; proposed the theory of alternating currents.

Kepler, Johannes (1571–1630), German astronomer. Proposed Kepler's three laws of planetary motion; worked in optics.

Kerr, John (1824–1907), Scottish physicist. Discovered the Kerr magnetooptic effect.

Khorana, Har Gobind (1922–), Indian-born American biochemist. Synthesized complicated nucleic acids; proved that genetic code consists of nonoverlapping triplets of bases without gaps between triplets; Nobel Prize, 1968.

Kirchhoff, Gustav Robert (1824–1887), German physicist. With R. W. Bunsen, discovered method of spectrum analysis, formulated Kirchhoff 's law of electric currents and electromotive forces in a network.

Kirkwood, Daniel (1814–1895), American astronomer. Discovered Kirkwood gaps; studied nature, origin, and evolution of solar system, particularly role of asteroids, comets, meteors, and meteorites.

Kitasato, Shibasaburo (1852–1931), Japanese bacteriologist. Independently of A. E. J. Yersin, discovered the bacillus of bubonic plague; isolated bacilli of symptomatic anthrax, dysentery, and tetanus.

Klebs, Edwin (1834–1913), German pathologist. Described diphtheria (Klebs-Löffler) bacillus; studied bacteriology of malaria, anthrax, and tuberculosis.

Klein, Christian Felix (1849–1925), German mathematician. Contributed to function theory, noneuclidean geometry, group theory, and applied mathematics; introduced Klein bottle.

Klein, Oskar Benjamin (1894–1977), Swedish physicist. Codeveloper of Klein-Gordon equation, Klein-Nishina formula, and Klein-Rydberg method; proposed theory of overall structure of the universe.

Klug, Aaron (1926–), South African-born British biochemist. Developed crystallographic electron microscopy and elucidated biologically important nucleic acid–protein complexes; Nobel Prize, 1982.

Knudsen, Martin Hans Christian (1871–1949), Danish physicist and hydrographer. Studied flow and diffusion of gases at low pressure; developed Knudsen cell and Knudsen gage; developed methods to measure the properties of seawater.

Koch, Robert (1843–1910), German physician and bacteriologist. Studied cholera, tuberculosis, and bubonic plague; showed a specific bacillus to be the cause of anthrax; discovered the tubercle bacillus; Nobel Prize, 1905.

Kocher, Emil Theodor (1841–1917), Swiss surgeon. Studied the functions and malfunctions of the thyroid gland; Nobel Prize, 1909.

Kolbe, Adolf Wilhelm Hermann (1818–1884), German chemist. Contributed to the synthesis concept of compound formation, doing much to eliminate the division of chemistry into two branches: organic and inorganic.

Kolmogorov, Andrei Nikolaevich (1903–), Soviet mathematician. Formulated set-theoretic basis of probability theory.

Kornberg, Arthur (1918–), American biochemist. Discovered deoxyribonucleic acid polymerase, providing the first rational enzymatic mechanism for the replication of genetic material of the cell; Nobel Prize, 1959.

Kossel, Albrecht (1853–1927), German chemist. Investigated the chemistry of cells and of proteins; Nobel Prize, 1910.

Krafft-Ebing, Richard, Baron von (1840–1902), German neurologist. Authority on psychological disorders and their forensic implications; wrote *Psychopathia Sexualis*, a collection of case histories.

Kramers, Hendrik Anthony (1894–1952), Dutch physicist. Developed quantum theory of dispersion, establishing Kramers-Kronig relation; with G. Wentzel and L. Brillouin, developed Wentzel-Kramers-Brillouin method.

Krebs, Hans Adolf (1900–1981), German-born British biochemist. Elucidated metabolic pathways, including the tricarboxylic and cycle; Nobel Prize, 1953.

Krogh, Schack August Steenberg (1874–1949), Danish physiologist. Discovered the regulation of the vasomotor mechanism of capillaries; devised the nitrous oxide method for measuring human circulation; Nobel Prize, 1920.

Kronecker, Leopold (1823–1891), German mathematician. Contributed to theory of elliptical functions, algebra, and number theory, and attempted to unify these disciplines; attempted to base all mathematics on integers and finite processes.

Kuhn, Richard (1900–1967), German chemist. Research on the structures and synthesis of vitamins and carotenoids; Nobel Prize, 1938 (declined).

Kundt, August Adolph (1839–1894), German physicist. Used Kundt tube to determine speed of sound in gases; determined ratio of specific heats of monatomic gases; with W. K. Röntgen, demonstrated Faraday effect in gases.

Kusch, Polykarp (1911–), German-born American physicist. Precisely determined the magnetic moment of the electron; Nobel Prize, 1955.

Kutta, Wilhelm Martin (1867–1944), German applied mathematician. Helped introduce concept of Kutta-Joukowski airfoil, prove Kutta-Joukowski theorem, and develop Runge-Kutta method.

Lacaille, Nicolas Louis de (1713–1762), French astronomer and geodesist. Determined positions of nearly 10,000 stars in southern skies; measured lunar and solar parallax; showed that Earth has equatorial bulge.

Lagrange, Joseph Louis, Count (1736–1813), French geometer and astronomer. Invented the calculus of variations; studied the mathematics of sound; wrote *Mécanique Analytique*, concerning statics and dynamics.

Laguerre, Édmond Nicolas (1834–1886), French mathematician. Discovered Laguerre's differential equations and Laguerre polynomials.

Lamarck, Jean Baptiste Pierre Antoine de Monet, Chevalier de (1744–1829), French naturalist. Proposed theory that changes in animal and plant structure are caused by changes in environment; classified animals into vertebrates and invertebrates.

Lamb, Willis Eugene, Jr. (1913–), American physicist. Made precise atomic measurements leading to a new understanding of the theory of electron interactions and electromagnetic radiation; Nobel Prize, 1955.

Lambert, Johann Heinrich (1728–1777), German physicist. Formulated the Lambert theorem concerning the illumination of a surface.

Lamé, Gabriel (1795–1870), French mathematician, physicist, and engineer. Introduced

curvilinear coordinates and applied them to differential equations, elasticity, thermodynamics, and number theory.

Landau, Lev Davydovich (1908–1968), Soviet physicist. Made theoretical explanation of the nature and properties of liquid helium; investigated condensed matter; Nobel Prize, 1962.

Landé, Alfred (1888–1975), German-born American physicist. Introduced Landé *g* factor; discovered Landé interval rule and Landé Γ-permanence rule.

Landsteiner, Karl (1868–1943), Austrian-born American pathologist. Discovered human blood groups and factors M and N; with A. S. Weiner, discovered the Rh factor; Nobel Prize, 1930.

Lange, Carl Georg (1834–1900), Danish physician and psychologist. With W. James, proposed the James-Lange theory of emotion.

Langerhans, Paul (1847–1888), German pathologist and anatomist. Studied human and animal microscopical anatomy, particularly structures of skin and pancreas; discovered islets of Langerhans.

Langevin, Paul (1872–1946), French physicist. Developed quantitative theories of paramagnetism and diamagnetism; helped elucidate theory of relativity; contributed to development of sonar.

Langley, Samuel Pierpont (1834–1906), American astronomer and airplane pioneer. Studied infrared solar spectrum; constructed in 1896 the first mechanical heavier-than-air machine to fly.

Langmuir, Irving (1881–1957), American chemist. With G. N. Lewis, proposed the Lewis-Langmuir atomic theory; studied surface chemistry and thermionic emission; Nobel Prize, 1932.

Laplace, Pierre Simon, Marquis de (1749–1827), French astronomer and mathematician. Contributed to celestial mechanics, especially to the study of the Moon, Saturn, and Jupiter; formulated the theory of probability; discovered the Laplace differential equation.

Larmor, Joseph (1857–1942), British physicist. Developed electron theory which fused electromagnetic and optical concepts; introduced Larmor precession and derived Larmor formula.

Laue, Max Theodor Felix von (1879–1960), German physicist. Proposed the theory of x-ray diffraction by crystals; developed the Laue method of investigating crystal structure; Nobel Prize, 1914.

Laurent, Pierre Alphonse (1813–1854), French mathematician and physicist. Introduced Laurent series; research on wave theory of light.

Laveran, Charles Louis Alphonse (1845–1922), French physician. Discovered the malaria parasite; researched sleeping sickness; Nobel Prize, 1907.

Lavoisier, Antoine Laurent (1743–1794), French chemist. The founder of modern chemistry; studied combustion and respiration; published a table of the elements.

Lawrence, Ernest Orlando (1901–1958), American physicist. Discovery, development, and use of the cyclotron; Nobel Prize, 1939.

Lebesgue, Henry Léon (1875–1941), French mathematician. Developed theory of measure and integration; studied trigonometric series.

Le Chatelier, Henry Louis (1850–1936), French chemist and metallurgist. Research on cement chemistry, gas combustion, blast furnace reactions, chemical equilibria, alloy properties, and chemistry and metallurgy of iron and steel; formulated Le Chatelier's principle.

Leclanché, Georges (1839–1882), French chemist and electrician. Invented the Leclanché galvanic cell.

Lederberg, Joshua (1925–), American geneticist. With E. L. Tatum, discovered genetic recombination in bacteria and organization of genetic material; Nobel Prize, 1958.

Lee, Tsung-Dao (1926–), Chinese-born American physicist. With C. N. Yang disproved the parity principle; worked on statistical mechanics, astrophysics, nuclear and subnuclear physics, and field theory; Nobel Prize, 1957.

Legendre, Adrien Marie (1752–?1833), French mathematician. Worked on elliptic functions, the theory of numbers, and the method of least squares.

Leibniz, Gottfried Wilhelm, Baron von (1646–1716), German mathematician. Contributed to the development of differential calculus.

Leloir, Luis Federico (1906–), French-born Argentine biochemist. Discovered sugar nucleotides and their role in carbohydrate biosynthesis; Nobel Prize, 1970.

Lenard, Phillipp Eduard Anton (1862–1947), Hungarian-born German physicist. Studied cathode rays outside the discharge tube; worked on photoelectricity; Nobel Prize, 1905.

L'Enfant, Pierre Charles (1754–1825), French engineer. Designed Washington, DC.

Lennard-Jones, John Edward (1894–1954), English physicist and chemist. Proposed Lennard-Jones potential for interatomic forces; contributed to quantum theory of molecular structure and statistical mechanics of liquids, gases, and surfaces.

Lenz, Heinrich Friedrich Emil (1804–1865), German physicist. Formulated Lenz's law governing induced current.

Leverrier, Urbain Jean Joseph (1811–1877), French astronomer. Studied Mercury, Uranus, and Neptune; credited, with J. C. Adams in England, as discoverer of Neptune.

Levi-Civita, Tullio (1873–1941), Italian mathematician and mathematical physicist. With G. Ricci-Curbastro, developed tensor analysis; introduced concept of parallelism in curved spaces.

Lewis, Gilbert Newton (1875–1946), American chemist. Collaborated in developing the Lewis-Langmuir atomic theory; worked on the electronic theory of valency and chemical thermodynamics.

Leydig, Franz von (1821–1908), German histologist and anatomist. Founder of comparative histology; promoted use of microscope in anatomical study; described cells in testes believed to secrete male hormones.

l'Hospital (l'Hôpital), Guillaume François Antoine de, Marquis de Sainte-Mesme, Comte d'Entremont (1661–1704), French mathematician. Wrote first textbook on differential calculus, which gives l'Hospital's rule.

Libby, Willard Frank (1908–1980), American chemist. Developed the method of radiocarbon dating; Nobel Prize, 1960.

Lie, Marius Sophus (1842–1899), Norwegian mathematician. Originated the theory of tangential transformations.

Liebig, Justus, Baron von (1803–1873), German chemist. Discovered chloroform and chloral; founded agricultural chemistry; invented the Liebig condenser.

Linnaeus, Carolus, real name Carl von Linné, (1707–1778), Swedish botanist. Developed the Linnaean system of biological classification.

Liouville, Joseph (1809–1882), French mathematician. Proved existence of transcendental functions; developed concept of geodesic curvature; originated theory of doubly periodic functions.

Lipmann, Fritz Albert (1899–), German-born American biochemist. Formulated general rules for the biotechnology of energy transmission; discovered coenzyme A; Nobel Prize, 1953.

Lippmann, Gabriel (1845–1921), French physicist. Produced the first colored photograph of the light spectrum; invented the Lippmann capillary electrometer; Nobel Prize, 1908.

Lipscomb, William Nunn, Jr. (1919–), American physical chemist. Studied structure and bonding of boranes, providing insight into nature of chemical bonding; Nobel Prize, 1976.

Lissajous, Jules Antoine (1822–1880), French physicist. Invented the vibration microscope, involving Lissajous figures.

Lister, Joseph, 1st Baron (1827–1912), English surgeon. Introduced antiseptics to surgery; pioneered in bacteriology.

Littrow, Joseph Johann von (1781–1840), Austrian astronomer. Studied light refraction; worked on telescope construction.

Lloyd, Humphrey (1800–1881), Irish physicist. Discovered Lloyd's mirror interference; verified W. R. Hamilton's prediction of conical refraction.

Lobachevski, Nikola Ivanovich (1793–1856), Russian mathematician. Originated the first comprehensive system of noneuclidean geometry.

Loewi, Otto (1873–1961), German pharmacologist. Investigated nerve impulses; proved the role of acetylcholine in nerve impulse transmission; Nobel Prize, 1936.

Löffler, Friedrich August Johannes (1852–1915), German bacteriologist. Isolated the diphtheria (Klebs-Löffler) bacillus; developed protective serum against foot-and-mouth disease.

London, Fritz (1900–1954), German-born American physicist. Developed, with W. Heitler, theory of covalent bonding; with H. London, theory of superconductivity; and theory of superfluidity.

London, Heinz (1907–1970), German-born English physicist. Research on electrodynamic and thermodynamic behavior of superconductors and properties of superfluid helium.

Lorentz, Hendrik Antoon (1853–1928), Dutch physicist. Proposed the electron theory to explain electromagnetic properties of materials; proposed the Lorentz-Fitzgerald contraction and the Lorentz transformation, contributing to the theory of relativity; studied Zeeman effect; Nobel Prize, 1902.

Lorenz, Konrad Zacharias (1903–), Austrian zoologist. Pioneered in study of animal behavior patterns; discovered imprinting in birds; Nobel Prize, 1973.

Loschmidt, Johann Joseph (1821–1895), Austrian physicist and chemist, born in Bohemia. Worked on graphical and structural molecular formulas; attempted to estimate size of air molecules and number of air molecules per unit volume.

Lummer, Otto Richard (1860–1925), German physicist. Codeveloper of Lummer-Brodhun sight box and Lummer-Gehrcke plate; constructed an improved bolometer.

Luria, Salvador Edward (1912–), Italian-born American biologist. Devised fluctuation test to demonstrate and study spontaneous mutations in bacteria and viruses; Nobel Prize, 1969.

Lwoff, André Michael (1902–), French biologist. Explained the phenomenon of lysogeny in bacteria; Nobel Prize, 1965.

Lyapunov, Aleksandr Mikhailovich (1857–1918), Soviet mathematician and physicist. Determined in what cases linear approximations can be used to solve the problem of stability of a mechanical system with a finite number of degrees of freedom; proved existence of various figures of equilibrium for a rotating liquid.

Lyell, Charles (1797–1875), British geologist. Wrote *Principles of Geology*, refuting catastrophic theory of geological changes.

Lyman, Theodore (1874–1954), American physicist. Observed ultraviolet spectra; clarified nature of Lyman ghosts; discovered Lyman series.

Lynen, Feodor (1911–1979), German biochemist. Research on the formation of the cholesterol molecule; discovered chemistry of biotin; Nobel Prize, 1964.

Mach, Ernst (1838–1916), Austrian physicist. Research on supersonic flight, leading to Mach angle and Mach number; studied airflow over objects at high speeds.

Maclaurin, Colin (1698–1746), Scottish mathematician. Systematized and developed Newton's calculus; introduced Maclaurin series and Maclaurin-Cauchy test.

Macleod, John James Rickard (1876–1935), Scottish physiologist. Shared in discovery of insulin with F. G. Banting and C. H. Best; Nobel Prize, 1923.

McMillan, Edwin Mattison (1907–), American physicist. Discovered element 93 (neptunium), which led to the creation of element 94 (plutonium); conceived the theory of phase stability; Nobel Prize, 1951.

Magnus, Heinrich Gustav (1802–1872), German physicist and chemist. Made first quantitative analysis of blood gases; showed that arterial blood has higher oxygen content than venous blood; discovered Magnus effect.

Majorana, Ettore (1906–1938), Italian physicist. Studied properties of elementary particles; postulated Majorana force.

Maksutov, Dmitry Dmitrievich (1896–1964), Soviet physicist and astronomer. Developed general theory of aplanatic optical systems; developed Maksutov system.

Malpighi, Marcello (1628–1694), Italian anatomist. Discovered the capillaries; made microscopic studies in embryology; discovered the Malpighian layer of the epidermis and the Malpighian corpuscles in the kidney.

Malus, Étienne Louis (1775–1812), French engineer and physicist. Formulated Malus' cosine-squared law concerning polarized light and Malus' law of rays.

Mandelstam, Stanley (1928–), American physicist, born in South Africa. Research in theoretical physics of elementary particles; introduced Mandelstam plane and Mandelstam representation.

Marconi, Guglielmo, Marquis (1874–1937), Italian electrician and inventor. Developed commercial wireless telegraphy; Nobel Prize, 1909.

Mariotte, Edmé (?–1684), French physicist and physiologist. Discovered blind spot; studied circulation of sap in plants, collisions of bodies, properties of air, refraction and color of light, hydrostatics, hydraulics, and meteorology.

Mark, Herman Francis (1895–), Austrian-born American chemist. Elucidated molecular structures of natural and synthetic polymers; developed theory of polymerization; studied relation between structure and properties of macromolecular systems.

Markov, Andrei Andreevich (1856–1922), Russian mathematician. Formulated rigorous proofs of law of large numbers and central-limit theorem; introduced Markov chain.

Martin, Archer John Porter (1910–), English chemist. With R. L. M. Synge, developed partition chromatography; Nobel Prize, 1952.

Mathieu, Émile Leonard (1835–1890), French mathematician and physicist. Worked on solution of partial differential equations; research in celestial and analytical mechanics; studied Mathieu equation and introduced Mathieu functions.

Matthias, Bernd Teo (1919–1980), German-born American physicist. Tested metals and alloys for superconductivity; developed empirical rules to predict new superconducting materials.

Maupertuis, Pierre Louis Moreau de (1698–1759), French mathematician and astronomer. Discovered the principle of least action; mathematical writings on the properties of curves.

Maxwell, James Clerk (1831–1879), Scottish physicist. Formulated the electromagnetic theory of light and the Maxwell distribution of molecular velocities of gases; invented the Maxwell disk concerning color vision.

Mayer, Julius Robert von (1814–1878), German physicist. Discovered the principle of conservation of energy.

Mayer, Maria Goeppert (1906–1972), German-born American nuclear physicist. With J. H. D. Jensen, discovered nuclear shell structure; Nobel Prize, 1963.

Meckel, Johann Friedrich (1781–1833), German anatomist and embryologist. Gave first comprehensive description of birth defects; described Meckel's cartilage; discovered Meckel's diverticulum.

Medawar, Peter Brian (1915–) Brazilian-born British biologist and medical scientist. Discovered acquired immunological tolerance; Nobel Prize, 1960.

Meissner, Alexander (1883–1958), Austrian-born German radio engineer. Helped develop improved electrical insulators and continuous-wave transmission; invented Meissner oscillator.

Meissner, Walther (1882–1974), German physicist. Research in low-temperature physics; discovered Meissner effect.

Meitner, Lise (1878–1968), German physicist. With O. Hahn, discovered protactinium; found evidence of four other radioactive elements; with Hahn and F. Strassmann, accomplished fission of uranium.

Mendel, Gregor Johann (1822–1884), Austrian botanist. Formulated Mendel's laws of heredity, the foundation of genetics.

Mendeleev, Dmitri Ivanovich (1834–1907), Russian chemist. Formulated Mendeleev's periodic law and table of the elements; research on interatomic and intermolecular forces.

Menelaus of Alexandria (1st century A.D.), Greek mathematician and astronomer. Founded spherical trigonometry.

Mercator, Gerhardus, real name Gerhard Kremer (1512–1594), Flemish geographer. Created a chart of the world (Mercator projection); made surveying instruments.

Mercer, John (1791–1866), English chemist. Invented the mercerizing process for cotton.

Mersenne, Marin (1588–1648), French physicist. Showed that pitch is proportional to frequency and calculated frequencies of musical notes; discovered Mersenne's law for vibrating strings, and similar relations for wind and percussion instruments.

Messier, Charles (1730–1817), French astronomer. Credited with discovering 21 comets; compiled a catalog of nebulae.

Metchnikoff, Élie (1845–1916), Russian-born French zoologist and bacteriologist. Work on cholera and immunology; Nobel Prize, 1908.

Meusnier de la Place, Jean Baptiste Marie Charles (1754–1793), French mathematician, physicist, and chemist. Derived Meusnier's theorem of curvature of surface curve; with A. L. Lavoisier, did research on analysis and synthesis of water.

Meyerhof, Otto Fritz (1884–1951), German physiologist. Studied the glycogen–lactic acid cycle of muscles; Nobel Prize, 1923.

Michaelis, Leonor (1875–1949), German-born American biochemist. Developed theory of kinetics of enzyme-catalyzed reactions.

Michelson, Albert Abraham (1852–1931), American physicist. Experimented on the velocity of light with S. Newcomb; invented the Michelson interferometer; performed, with E. W. Morley, an experiment to determine the Earth's motion through the ether; Nobel Prize, 1907.

Mie, Gustav (1868–1957), German physicist. Carried out rigorous electrodynamic calculation of Mie scattering; attempted to formulate theory of matter.

Miller, William Hallowes (1801–1880), British crystallographer and mineralogist. Introduced Miller indices for identifying crystallographic planes.

Millikan, Robert Andrews (1868–1953), American physicist. Determined an accurate value for Planck's constant; originated the "oil drop" experiment to measure electronic charge; work on x-rays and cosmic rays; Nobel Prize, 1923.

Minkowski, Hermann (1864–1909), Russian-born German mathematician. Studied the mathematical basis of relativity, notably the concept of the space-time continuum.

Minot, George Richards (1885–1950), American physician. With W. P. Murphy, first to recognize the value of liver therapy for pernicious anemia; studied arthritis, cancer, and vitamin B deficiency; Nobel Prize, 1934.

Mitchell, Peter (1920–), British chemist. Explained how plant and animal cells store and transfer energy by creating protonic gradients in the oxidative and photosynthetic phosphorylation processes; Nobel Prize, 1978.

Möbius, August Ferdinand (1790–1868), German mathematician and astronomer. Founder of topology; developed the Möbius strip.

Mohl, Hugo von (1805–1872), German botanist. Worked on the anatomy and physiology of higher plant forms; discovered protoplasm.

Mohorovičić, Andrija (1857–1936), Yugoslav meteorologist and seismologist. Discovered Mohorovičić seismic discontinuity.

Mohr, Carl Friedrich (1806–1879), German chemist. Developed titration procedures, including use of Mohr's salt.

Mohr, Christian Otto (1835–1918), German civil engineer. Studied stresses and strains of bodies, and failure of materials; introduced Mohr's stress circle.

Mohs, Friedrich (1773–1839), German mineralogist. Developed Mohs scale of hardness.

Moissan, Ferdinand Frédéric Henri (1852–1907), French chemist. First to isolate fluorine; invented an electric furnace and used it to produce synthetic metal compounds and samples of less common metals; Nobel Prize, 1906.

Mollier, Richard (1863–1935), German physicist and engineer. Presented properties of thermodynamic media in form of charts and diagrams; introduced concept of enthalpy and Mollier diagram.

Moniz, Antonio Egas (1874–1955), Portuguese neurosurgeon. Developed cerebral angiography; introduced the prefrontal lobotomy; Nobel Prize, 1949.

Monod, Jacques (1910–1976), French biologist. With F. Jacob, proposed the concepts of messenger ribonucleic acid and of the operon; Nobel Prize, 1965.

Moody, Lewis Ferry (1880–1953), American hydraulic engineer. Made improvements in hydraulic turbines, pumps, and accessories.

Moore, Stanford (1913–1982), American biochemist. With W. H. Stein, developed technique for determining amino acid sequence in proteins, and applied it to ribonuclease; Nobel Prize, 1972.

Morgagni, Giovanni Battista (1682–1771), Italian anatomist. Founded pathological anatomy; first to describe liver cirrhosis.

Morgan, Thomas Hunt (1866–1945), American geneticist, embryologist, and zoologist. Proposed the chromosome theory of heredity; Nobel Prize, 1933.

Morley, Edward Williams (1838–1923), American chemist and physicist. Associated with A. A. Michelson in an experiment on ether drift; research on variations of atmospheric oxygen content.

Morse, Samuel Finley Breese (1791–1872), American inventor. Invented the receiving and sending instruments for the telegraph, and a code for sending messages.

Moseley, Henry Gwyn Jeffries (1887–1915),

English physicist. Discovered Moseley's law for frequency of x-ray spectral lines.

Mössbauer, Rudolf Ludwig (1929–), German physicist. Discovered the property of recoilless resonance absorption, the ability of some nuclei to emit and absorb gamma rays without energy loss; Nobel Prize, 1961.

Mossotti, Ottaviano Fabrizio (1791–1863), Italian physicist. Developed theory of dielectrics, from which he derived the Clausius-Mossotti equation.

Mott, Nevill Francis (1905–), British physicist. Applied quantum mechanics to study of charged particle scattering; with R. W. Gurney, developed Gurney-Mott theory of photographic process; introduced fundamental concepts elucidating electronic properties of disordered materials; Nobel Prize, 1977.

Mottelson, Ben Roy (1926–), American-born Danish physicist. With A. Bohr, developed theory which unifies shell and liquid-drop models of atomic nucleus, and which explains nonspherical nuclei; Nobel Prize, 1975.

Muller, Hermann Joseph (1890–1967), American geneticist. Studied genetic mutation rates under natural and artificial conditions; discovered the effect of x-rays on mutation rate; Nobel Prize, 1946.

Müller, Johannes Peter (1801–1858), German physiologist and anatomist. Proposed the principle of specific nerve energies, concerning stimuli to sense organs; discovered the Müllerian duct, an early embryonic structure.

Müller, Paul Hermann (1899–1965), Swiss chemist. Discovered the insecticidal properties of DDT; Nobel Prize, 1948.

Mulliken, Robert Sanderson (1896–), American chemist. Applied principles of quantum mechanics to study of chemical bonding; with F. Hund, systematized electronic states of molecules in terms of molecular orbitals; Nobel Prize, 1966.

Murchison, Roderick Impey (1792–1871), British geologist. Studied the order of rock formations in Great Britain; with A. Sedgwick, differentiated the Silurian and Devonian.

Murphy, William Parry (1892–), American physician. With G. R. Minot, first to suggest liver diet as a treatment for pernicious anemia; Nobel Prize, 1934.

Napier or Neper, John, Laird of Merchiston (1550–1617), Scottish mathematician. Invented the theory of logarithms and developed methods to compute them.

Nathans, Daniel (1928–), American biologist. Pioneered in the use of restriction enzymes to study the structure and functions of deoxyribonucleic acid (DNA) molecules; Nobel Prize, 1978.

Natta, Giulio (1903–1979), Italian chemist. Discovered stereospecific polymerization, making possible the production of new classes of macromolecules from inexpensive raw materials; Nobel Prize, 1963.

Navier, Claude Louis Marie Henri (1785–1836), French physicist and engineer. Studied analytical mechanics and its application to strength of materials, machines, and motion of solid and liquid bodies; formulated Navier-Stokes equations.

Néel, Louis Eugène Félix (1904–), French physicist. Proposed the theory of behavior of antiferromagnetic and other ferrimagnetic materials in which the crystal lattice is divided into one or more sublattices; Nobel Prize, 1970.

Nernst, Hermann Walther (1864–1941), German chemist. Proposed the heat theorem (third law of thermodynamics); determined the specific heat of solids at low temperatures; proposed the chain reaction theory in photochemistry; Nobel Prize, 1920.

Neumann, Carl Gottfried (1832–1925), German mathematician. Believed to be founder of logarithmic potentials; developed the potential theory.

Newcomb, Simon (1835–1909), American astronomer. With A. A. Michelson, determined the velocity of light; studied the motions of the Moon and planets.

Newton, Isaac (1642–1727), English mathematician. Proposed a dynamical theory of gravitation; discovered three basic laws of motion which are the foundation of practical mechanics; made discoveries in optics and mathematics.

Neyman, Jerzy (1894–1981), Russian-born American statistician. Developed methodology for making decisions based only on results of experiments or observations subject to chance.

Nicholson, Seth Barnes (1891–1963), American astronomer. Discovered four satellites of Jupiter; with E. Pettit, invented a thermocouple to measure surface temperature of planets.

Nicol, William (1763–1851), Scottish physicist. Invented the Nicol prism for investigating the polarization of light.

Nicolle, Charles Jules Henri (1866–1936), French physician. Discovered the louse to be the transmission vector of typhus; Nobel Prize, 1928.

Nirenberg, Marshall Warren (1927–), American biochemist. Pioneered in deciphering genetic code; Nobel Prize, 1968.

Nishina, Yoshio (1890–1951), Japanese physicist. Pioneer in study of cosmic rays; with O. B. Klein, originated the Klein-Nishina formula.

Nobel, Alfred Bernhard (1833–1896), Swedish chemist and engineer. Invented dynamite and a blasting gelatin containing nitroglycerin; established the annual Nobel prizes.

Noguchi, Hideyo (1876–1928), Japanese bacteriologist. First to produce pure cultures of syphilis spirochetes; discovered the parasite of yellow fever.

Norrish, Ronald George Wreyford (1897–1978), British physical chemist. With G. Porter and colleagues, developed methods of flash photolysis and kinetic spectroscopy for the study of very fast reactions; Nobel Prize, 1967.

Northrop, John Howard (1891–), American biochemist. Isolated several enzymes and proved them to be proteins; isolated the first bacterial virus; established the chemical nature of enzymes and viruses; Nobel Prize, 1946.

Nusselt, Ernst Kraft Wilhelm (1882–1957), German mechanical engineer and physicist. Used dimensional analysis to derive functional form of solutions to equations for heat flux in a flowing fluid.

Nyquist, Harry (1889–1976), Swedish-born American physicist and engineer. Discovered conditions necessary to keep feedback control circuits stable; determined Nyquist rate for communications channels.

Ochoa, Severo (1905–), Spanish-born American biochemist. Discovered a bacterial enzyme that synthesizes ribonucleic acid from nucleoside diphosphates; first to synthesize a ribonucleic acid; Nobel Prize, 1959.

Oersted, Hans Christian (1777–1851), Danish physicist, chemist, and electromagnetist. Discovered a fundamental principle of electromagnetism: a magnetic needle turns at right angles to an electric current.

Ohm, Georg Simon (1787–1854), German physicist. Discovered Ohm's law relating electrical resistance to voltage and current.

Olbers, Heinrich Wilhelm Matthias (1758–1840), German astronomer. Devised new method for computing cometary orbits; proposed Olbers' paradox.

Onsager, Lars (1903–1976), Norwegian-born American chemist. Laid the foundation of irreversible thermodynamics; contributed to theories of dielectrics, electrolytes, and cooperative phenomena; Nobel Prize, 1968.

Oort, Jan Hendrik (1900–), Dutch astronomer. Research on the structure and dynamics of the galactic system; investigated the origin of comets.

Oppenheimer, J. Robert (1904–1967), American physicist. Research on nuclear disintegration, quantum theory, cosmic rays, and relativity; directed production of the atomic bomb.

Orr, John Boyd, Baron (1880–1971), Scottish physiologist and nutritionist. Work on animal nutrition; pioneer in science of human nutrition; Nobel Peace Prize, 1949.

Ostwald, Friedrich Wilhelm (1853–1932), German chemist born in Latvia. Researches on affinity and mass action; discovered the Ostwald dilution law; worked on the catalytic oxidation of ammonia; Nobel Prize, 1909.

Otto, Nikolaus August (1832–1891), German inventor. Built the first four-stroke internal combustion engine.

Paget, James (1814–1899), English surgeon and pathologist. Studied pathology of tumors and bone and joint diseases; described osteitis deformans (Paget's disease).

Palade, George Emil (1912–), Rumanian-born American cytologist. Applied electron microscope and centrifuge techniques to study of ultrastructure of cells; discovered ribosomes; Nobel Prize, 1974.

Papanicolaou, George Nicholas (1883–1962), Greek-born American cytologist and anatomist. Developed the Papanicolaou test for diagnosis of uterine cervical and endometrial cancer.

Pappus, Alexandrinus (ca. 3d–4th century), Greek mathematician. Wrote *Mathematical Collection*, an account of Greek geometry; formulated Pappus' theorems.

Paracelsus, Philippus Aureolus, real name Theophrastus Bombastus von Hohenheim (1493–1541), Swiss physician. Emphasized use of chemicals in medicine; advocated that diseases are specific and require specific remedies.

Paré, Ambroise (1509–1590), French surgeon. Advocated the treatment of wounds by tying arteries with ligatures rather than by cauterization; proposed improvements in operating methods.

Parkinson, James (1755–1824), English physician and paleontologist. Described parkinsonism.

Parseval des Chenes, Marc Antoine (1755–1836), French mathematician. Introduced an equation from which the theorem now known as Parseval's theorem is derived.

Pascal, Blaise (1623–1662), French mathematician and physicist. Contributed to the geometry of conics; formulated Pascal's law, relating to the pressure of a liquid at rest; applied Pascal's triangle to the calculation of probabilities.

Paschen, Louis Carl Heinrich Friedrich (1865–1947), German physicist. Established Paschen's law; with E. Back, discovered Paschen-Back effect; verified predictions of relativistic fine structure made by Bohr-Sommerfeld theory.

Pasteur, Louis (1822–1895), French biologist. Founder of microbiology; discovered the role of bacteria in fermentation; discovered anaerobic bacteria; developed the pasteurization process; demonstrated the efficacy of vaccination, especially for rabies.

Patterson, Arthur Lindo (1902–1966), New Zealand–born American physicist and crystallographer. Developed Patterson-Harker method of x-ray diffraction analysis of crystal structure.

Pauli, Wolfgang (1900–1958), Austrian-born American physicist. Worked on quantum theory; formulated the Pauli exclusion principle; contributed to matrix mechanics; Nobel Prize, 1945.

Pauling, Linus Carl (1901–), American chemist. Applied quantum theory to chemistry; research on molecular structure and chemical

bonds; contributed to electrochemical theory of valency; Nobel Prize, 1954; Nobel Peace Prize, 1963.

Pavlov, Ivan Petrovich (1849–1936), Russian pathologist. Discovered the nerve fibers affecting heart action and the secretory nerves of the pancreas; research on the physiology of digestive glands; studied conditioned reflexes; Nobel Prize, 1904.

Peano, Giuseppe (1858–1932), Italian mathematician. Pioneer in symbolic logic and foundations of mathematics; promoted axiomatic method in mathematics; formulated postulates for natural numbers.

Pearl, Raymond (1879–1940), American biologist and statistician. Applied statistics to the study of population changes; introduced logistic curve describing population growth.

Pearson, Karl (1857–1936), English applied mathematician, statistician, and biometrician. Pioneered in application of statistics to biology; introduced chi-square test.

Peierls, Rudolf Ernst (1907–), German-born British physicist. Developed theory of heat conduction in nonmetallic crystals; with O. R. Frisch, calculated critical mass of uranium-235.

Peirce, Charles Santiago Sanders (1839–1914), American mathematician, logician, and physicist. Laid foundation for logical analysis of mathematics; contributed to probability theory.

Pelletier, Pierre Joseph (1788–1842), French chemist. Discovered quinine, strychnine, and other alkaloids.

Peltier, Jean Charles Athanase (1785–1845), French physicist. Discovered the Peltier effect in thermoelectricity.

Penzias, Arno A. (1933–), American astrophysicist. With R. W. Wilson, discovered cosmic background radiation, confirming the big bang theory of the origin of the universe; Nobel Prize, 1978.

Pérot, Jean Baptiste Gaspard Gustav Alfred (1863–1925), French physicist. With C. Fabry, developed Fabry-Pérot interferometer.

Perrin, Jean Baptiste (1870–1942), French physicist. Research on the particle nature of cathode rays; found values for Avogadro's number, thereby proving the existence of molecules; Nobel Prize, 1926.

Perutz, Max Ferdinand (1914–) Austrian-born British crystallographer and molecular biologist. Worked on the structure of hemoglobin; introduced the method of isomorphous replacement with heavy atoms into protein crystallography; Nobel Prize, 1962.

Petit, Alexis Thérèse (1791–1820), French physicist. With P. L. Dulong, formulated the law of constancy of atomic heats; devised methods for determining thermal expansion and specific heats of solids.

Pettit, Edison (1890–1962), American astronomer. Studied the Sun and formulated laws alleged to govern the movement of prominences; constructed the interference polarizing monochromator; with S. B. Nicholson, devised a sensitive thermocouple to measure the surface temperatures of planets.

Pfaff, Johann Friedrich (1765–1825), German mathematician. Developed theory of Pfaffian differential equations, which is basic to general solution of partial differential equations.

Pfeiffer, Richard Friedrich Johann (1858–1945), German bacteriologist. Discovered Pfeiffer's bacillus in influenza; described Pfeiffer's reaction for determination of cholera.

Piaget, Jean (1896–1980), Swiss psychologist. Elucidated development of cognitive functions in the child.

Picard, Charles Émile (1856–1941), French mathematician. Formulated Picard's theorem relating to functions.

Piccard, Auguste (1884–1962), Swiss physicist. Conducted a data-collecting exploration of the stratosphere in an airtight gondola of a balloon; constructed and tested a bathysphere for deep-sea exploration.

Pickering, Edward Charles (1846–1919), American astronomer. Invented the meridian photometer; pioneered in stellar spectroscopy.

Pierce, George Washington (1872–1956), American physicist and electronic engineer. Developed theoretical basis of electrical communications; developed Pierce oscillator; with A. E. Kennelly, discovered concept of motional impedance.

Pitzer, Kenneth Sanborn (1914–), American chemist. Pioneered in the development of useful approximations which made possible the calculation of chemical thermodynamic properties of broad classes of chemical substances.

Planck, Max Karl Ernst Ludwig (1858–1947), German physicist. Presented the quantum theory; introduced Planck's constant, or quantum of action.

Planté, Gaston (1834–1889), French physicist. Constructed a storage battery, the first primitive accumulator.

Poggendorff, Johann Christian (1796–1877), German physicist. Introduced the small mirror on a suspended system to magnify small deflections of a light beam; invented the galvanometer.

Poincaré, Jules Henri (1854–1912), French mathematician. Worked on the theory of functions, on differential equations, and on the theory of orbits in astronomy.

Poinsot, Louis (1777–1859), French mathematician. Originated theory of couples.

Poiseuille, Jean Léonard Marie (1797–1869), French physiologist and physicist. Studied physiology of arterial circulation; invented improved methods for measuring blood pressure; discovered Hagen-Poiseuille law independently of G. H. L. Hagen.

Poisson, Siméon Denis (1781–1840), French mathematician. Worked on mathematical physics; contributed to the wave theory of light; formulated the Poisson ratio concerning the elasticity of materials.

Pomeranchuk, Isaak Yakolevich (1913–1966), Soviet physicist. Showed that energy of cosmic-ray electrons reaching the atmosphere is limited by their radiation in Earth's magnetic field; proved the Pomeranchuk theorem for scattering cross sections.

Pons, Jean Louis (1761–1831), French astronomer. Discovered 37 comets, including Encke's comet.

Porro, Ignazio (1801–1875), Italian topographer, geodesist, and physicist. Invented optical surveying instruments, Porro prism erecting system, and modern prism binoculars.

Porter, George (1920–), British chemist. With R. G. W. Norrish, developed the technique of flash photolysis to initiate and record very fast chemical reactions; Nobel Prize, 1967.

Porter, Rodney Robert (1917–), British biochemist. Research to determine chemical structure of immunoglobulins; Nobel Prize, 1972.

Powell, Cecil Frank (1903–1969), British physicist. Made practical the use of photographic emulsions in nuclear research; with G. P. S. Occhialini and others, discovered and investigated production of pions from cosmic radiation in the Earth's atmosphere; Nobel Prize, 1950.

Poynting, John Henry (1852–1914), English physicist. Determined the constant of gravitation and explained why a comet's tail points away from the Sun.

Prandtl, Ludwig (1875–1953), German physicist. Contributed to fluid mechanics, particularly aerodynamics; introduced concept of boundary layer.

Pregl, Fritz (1869–1930), Austrian chemist. Developed microchemical methods of analysis; Nobel Prize, 1923.

Prelog, Vladimir (1906–), Yugoslavian-born Swiss chemist. Investigated stereochemistry of organic molecules and reactions; Nobel Prize, 1975.

Prevost, Pierre (1751–1839), Swiss physicist. Developed theory of exchanges, explaining nature of heat.

Priestley, Joseph (1733–1804), English chemist and physicist. Discovered oxygen, ammonia, oxides of nitrogen, hydrochloric acid gas, nitrogen, carbon monoxide, and sulfur dioxide.

Prigogine, Ilya (1917–), Soviet-born Belgian chemist. Contributed to nonequilibrium thermodynamics, particularly the theory of dissipative structures; Nobel Prize, 1977.

Prokhorov, Aleksandr Mikhailovich (1916–), Soviet physicist. With N. G. Basov, devised a new method for amplifying electromagnetic radiation; Nobel Prize, 1964.

Prout, William (1785–1850), English physician and chemist. Formulated Prout's hypothesis concerning atomic weights.

Ptolemy (2d century), Greco-Egyptian astronomer, geographer, and geometer at Alexandria. Proposed the Ptolemaic system, with the Earth as the center of the universe.

Pupin, Michael (1858–1935), Yugoslavian-born American physicist and electrical engineer. Developed inductance coils for telephone lines; contributed to x-ray fluoroscopy, design of radio transmitters, and network theory.

Purcell, Edward Mills (1912–), American physicist. Developed the method of nuclear resonance absorption; Nobel Prize, 1952.

Purkinje, Johannes Evangelista (1787–1869), Czech physiologist. Discovered the Purkinje effect in eye physiology and Purkinje cells in the cerebral cortex.

Pythagoras (6th century B.C.), Greek mathematician. Originated a system of geometry, including the Pythagorean theorem.

Quételet, Lambert Adolphe Jacques (1796–1874), Belgian statistician. Did pioneer work on statistics; applied the calculus of probabilities to sociological studies.

Rabi, Isidor Isaac (1898–), Austrian-born American physicist. Research on neutrons, magnetism, quantum mechanics, and nuclear physics; Nobel Prize, 1944.

Rainwater, Leo James (1917–), American physicist. Suggested that shell-model potentials of certain atomic nuclei are not spherical but are deformed into spheroids, and proposed mechanism for this distortion; Nobel Prize, 1975.

Raman, Chandrasekhara Venkata (1888–1970), Indian physicist. Research on diffraction and oscillation; discovered the Raman effect; Nobel Prize, 1930.

Ramón y Cajal, Santiago (1852–1934), Spanish histologist. Isolated the neuron and made discoveries concerning nerve cells in gray matter and the spinal cord; Nobel Prize, 1906.

Ramsay, William (1852–1916), British chemist. With J. W. S. Rayleigh, discovered argon; with M. W. Travers, discovered neon, krypton, and xenon; Nobel Prize, 1904.

Ramsden, Jesse (1735–1800), English mathematical-instrument maker. Invented an eyepiece containing cross-wires as a measuring scale; introduced equatorial mounting for telescopes.

Rankine, William John Macquorn (1820–1872), Scottish civil engineer. Contributed to thermodynamics and theories of elasticity and waves; wrote textbooks on the steam engine and civil engineering.

Raoult, François Marie (1830–1901), French chemist. Formulated Raoult's law concerning vapor pressure of a solution.

Rathke, Martin Heinrich (1793–1860), German biologist. Discovered gill slits and gill arches in embryo birds and mammals, and Rathke's pocket in developing vertebrates.

Ray or Wray, John (1627?–1705), English naturalist. Identified the difference between mono- and dicotyledons; arranged plants according to their natural form, the foundation of the natural system of classification.

Rayleigh, John William Strutt, 3d Baron (1842–1919), English physicist. Worked on the theory of sound and on physical optics; with W. Ramsay, discovered argon; Nobel Prize, 1904.

Réaumur, René Antoine Ferchault de (1683–1757), French entomologist. Worked in biology and metallurgy; invented the Réaumur thermometer scale.

Regge, Tullio (1931–), Italian physicist. Played a role in introducing the idea of complex angular momenta into elementary particle physics.

Regiomontanus, real name Johann Müller (1436–1476), German astronomer. Erected the first European observatory, in 1471 in Nürnberg; produced mathematical tables.

Reichstein, Tadeus (1897–), Polish-born Swiss organic chemist. Isolated about 30 of the 40 substances produced by the adrenal cortex; synthesized and described the structure and properties of many of these substances; Nobel Prize, 1950.

Reynolds, Osborne (1842–1912), British engineer and physicist. Demonstrated streamline and turbulent flow in pipes, and showed that transition between them occurs at a critical velocity determined by Reynolds' number; introduced Reynolds' analogy.

Riccati, Jacopo Francesco (1676–1754), Italian mathematician. Research on analysis, particularly differential equations, and geometry.

Ricci-Curbastro, Gregorio (1853–1925), Italian mathematician and mathematical physicist. Developed theory of tensor analysis, providing mathematical foundation for general relativity.

Richards, Dickinson Woodruff (1895–1973), American physician. With A. F. Cournand, utilized the technique of cardiac catheterization and proved its value as a diagnostic tool; Nobel Prize, 1956.

Richards, Theodore William (1868–1928), American chemist. Worked on atomic weights; experimentally confirmed the existence of isotopes of lead from uranium and thorium; Nobel Prize, 1914.

Richardson, Owen Willans (1879–1959), English physicist. Studied the emission of electricity from hot bodies and the electron theory of matter; Nobel Prize, 1928.

Richet, Charles Robert (1850–1935), French physiologist. Studied serum therapy and discovered anaphylaxis; Nobel Prize, 1913.

Richter, Burton (1931–), American physicist. Independently of S. C. C. Ting, discovered a new heavy elementary particle, which he named the psi particle; Nobel Prize, 1976.

Richter, Jeremias Benjamin (1762–1807), German chemist. Discovered the law of equivalent proportions.

Riemann, Georg Friedrich Bernhard (1826–1866), German mathematician. Originated Riemannian geometry, a noneuclidean system.

Riesz, Frigyes (Frederic) (1880–1956), Hungarian mathematician. Research on abstract and general theories related to mathematical analysis, particularly functional analysis; independently of E. Fischer, discovered Riesz-Fischer theorem.

Righi, Augusto (1850–1920), Italian physicist. Discovered magnetic hysteresis and Righi-Leduc effect, independently of S. A. Leduc; demonstrated that microwaves have all properties characteristic of light waves.

Ritchey, George Wills (1864–1945), American astronomer. Made important astronomical observations, particularly on the Andromeda nebula; with H. Chretien, developed Ritchey-Chretien optics.

Ritz, Walter (1878–1909), Swiss-born German physicist. Introduced Ritz combination principle; developed Ritz method for numerical solution of boundary-value problems.

Robbins, Frederick Chapman (1916–), American microbiologist. Discovered that poliomyelitis virus can be grown in various human tissue cultures; Nobel Prize, 1954.

Robinson, Robert (1886–1975), English chemist. Worked on plant pigments, alkaloids, and phenanthrene derivatives; Nobel Prize, 1947.

Roche, Edouard Adelbert (1820–1883), French physicist, mathematician, and meteorologist. Studied the internal structure and free-surface form of celestial bodies; applied results to study of cosmogonic hypotheses.

Rolle, Michel (1652–1719), French mathematician. Worked on Diophantine analysis and algebra of equations.

Röntgen, Wilhelm Konrad (1845–1923), German physicist. Discovered x-rays; Nobel Prize, 1901.

Roscoe, Henry Enfield (1833–1915), English chemist. With R. W. Bunsen, evolved the law of reciprocity and invented the actinometer; first to isolate metallic vanadium.

Ross, Ronald (1857–1932), British physician. Proved that malaria is transmitted by the female *Anopheles* mosquito; Nobel Prize, 1902.

Rossby, Carl Gustaf Arvid (1898–1957), Swedish-born American meteorologist. Formulated theories of large-scale air movements; derived the Rossby formula, relating speed of propagation of perturbations to airflow and wavelengths of perturbations; devised the Rossby diagram, used to plot air mass properties.

Rous, Francis Peyton (1879–1970), American physician and virologist. Produced cancer in chickens by inoculating them with filterable virus procured from tissue of chickens with tumors; Nobel Prize, 1966.

Routh, Edward John (1831–1907), British mathematical physicist. Made contributions to classical mechanics, including procedure for eliminating cyclic coordinates from equations of motion.

Roux, Pierre Paul Emile (1853–1933), French physician and bacteriologist. Helped develop modern serum therapeutics, especially concerning diphtheria.

Rowland, Henry Augustus (1848–1901), American physicist. Developed the Rowland grating in spectroscopy; studied electromagnetism and heat.

Rubens, Heinrich (1865–1922), German physicist. With E. B. Hagen, conducted electromagnetic experiments; built new types of galvanometer and bolometer.

Rumford, Benjamin Thompson, Count (1753–1814), British physicist. Carried out research on heat.

Runge, Carl David Tolme (1856–1927), German mathematician and physicist. Research on theoretical and experimental spectroscopy, particularly data reduction and development of series formulas; developed methods for numerical and graphical computation, including Runge-Kutta method.

Russell, Bertrand Arthur William (1872–1970), English mathematician and philosopher. With A. N. Whitehead, pioneered in study of mathematical logic.

Russell, Henry Norris (1877–1957), American astronomer and physicist. Analyzed eclipsing binary stars; with E. Hertzsprung, introduced Hertzsprung-Russell diagram; determined abundance of chemical elements in solar atmosphere; with F. A. Saunders, devised theory of Russell-Saunders coupling.

Rutherford, Ernest, 1st Baron (1871–1937), British physicist. Discovered alpha, beta, and gamma rays; suggested the divisible nuclear atom; effected the transmutation of an atom; Nobel Prize, 1908.

Ružička, Leopold (1887–1976), Swiss chemist born in Croatia. Research on many-membered rings and higher terpenes (including male sex hormones); Nobel Prize, 1939.

Rydberg, Johannes Robert (1854–1919), Swedish physicist. Developed a formula for series of spectral lines, involving Rydberg's constant.

Ryle, Martin (1918–), British astronomer. Devised aperture synthesis method in radiotelescopy; designed equipment and made observations in radio astronomy; Nobel Prize, 1974.

Sabatier, Paul (1854–1941), French chemist. Discovered, with J. B. Senderens, the process for catalytic hydrogenation of oils to solid fat; Nobel Prize, 1912.

Sabin, Albert Bruce (1906–), Polish-born American physician and virologist. Studied nature, mode of transmission, and epidemiology of human poliomyelitis; developed oral polio virus vaccine.

Sabine, Edward (1788–1883), British physicist and astronomer. Headed a magnetic survey of the world which discovered a connection between sunspots and terrestrial magnetic disturbances.

Sabine, Wallace Clement Ware (1868–1919), American physicist. Pioneered in architectural acoustics; discovered law determining reverberation time in acoustics.

Sachs, Julius von (1832–1897), German botanist. Studied the connection between sunlight and chlorophyll; worked on heliotropism and geotropism.

Saha, Meghnad (1894–1956), Indian physicist. Developed theory for degree of ionization of hot gases, a basic component of modern astrophysics.

Salam, Abdus (1926–), Pakistani physicist. Independently of S. Weinberg, developed theory uniting two of the basic forces of nature, electromagnetism and the weak nuclear interactions; Nobel Prize, 1979.

Salk, Jonas Edward (1914–), American physician. Produced killed-virus vaccine effective in preventing poliomyelitis.

Salpeter, Edwin Ernest (1924–), Austrian-born American physicist. Research in quantum theory of atoms, quantum electrodynamics, nuclear theory, energy production of stars, and theoretical astrophysics; with H. A. Bethe, introduced Bethe-Salpeter equation.

Samuelsson, Bengt Ingemar (1934–), Swedish biochemist and medical scientist. Studied prostaglandin metabolism and the formation of prostaglandin from arachidonic acid; Nobel Prize, 1982.

Sanctorius, Sanctorius (1561–1636), Italian physician. Invented the clinical thermometer; experimented with metabolism.

Sanger, Frederick (1918–), English chemist. Determined the exact order of amino acids in insulin; first to establish amino acid sequence for a protein; developed methods for determining nucleotide sequences (independently of W. Gilbert), advancing the technology of DNA recombination; Nobel Prizes, 1958 and 1980.

Savart, Félix (1791–1841), French physicist. Helped formulate the Biot-Savart law in electromagnetism.

Schally, Andrew Victor (1926–), Polish-born

American physiologist. With R. Guillemin, isolated and analyzed peptide hormones which are secreted in hypothalmic region of brain which control anterior pituitary hormone secretion; Nobel Prize, 1977.

Schawlow, Arthur Leonard (1921–), American physicist. Contributed to invention of laser; made numerous contributions to laser spectroscopy, particularly the development of Doppler-free spectroscopy; Nobel Prize, 1981.

Scheele, Karl Wilhelm (1742–1786), Swedish chemist. Made many discoveries, including oxygen (independently of J. Priestley), chlorine, and glycerin; synthesized many organic acids.

Schiaparelli, Giovanni Virginio (1835–1910), Italian astronomer. Discovered the connection between comets and meteorites, and the "canals" of Mars.

Schiff, Hugo Josef (1834–1915), German-born Italian organic chemist. Discovered Schiff bases; devised Schiff test; devised an improved nitrometer.

Schmidt, Bernhard Voldemar (1879–1935), Estonian-born German astronomer. Invented Schmidt system for astronomical telescopes.

Schmidt, Erhard (1876–1959), German mathematician. Extended D. Hilbert's work on integral equations; formalized and developed concept of Hilbert space.

Schoenflies, Arthur Moritz (1853–1928), German mathematician and crystallographer. Classified the 230 crystallographic space groups.

Schottky, Walter (1886–1976), Swiss-born German physicist. Discovered Schottky effect; invented screen grid and tetrode; developed Schottky theory of semiconductor-metal junctions.

Schrieffer, John Robert (1931–), American physicist. With J. Bardeen and L. N. Cooper, formulated a theory of superconductivity; Nobel Prize, 1972.

Schrödinger, Erwin (1887–1961), German physicist. Proposed concept of atomic structure based on wave mechanics; contributed to quantum theory and color theory; Nobel Prize, 1933.

Schur, Issai (1875–1941), Russian-born German mathematician. Contributed to representation theory of groups; research on group theory, matrices, algebraic equations, and number theory.

Schwarz, Hermann Amandus (1843–1921), German mathematician. Introduced Schwarz-reflection principle and Schwarz's lemma while proving the Riemann mapping theorem.

Schwarzschild, Karl (1873–1916), German astronomer. Developed photographic methods for measuring brightness of stars; discovered Schwarzschild solution of equations of general relativity.

Schwinger, Julian Seymour (1918–), American physicist. Made fundamental contributions to the quantum theory of radiation; worked out the mathematical formalism of interaction between charged particles and an electromagnetic field; Nobel Prize, 1965.

Seaborg, Glenn Theodore (1912–), American chemist. Synthesized and identified eight transuranium elements and over a hundred isotopes; Nobel Prize, 1951.

Secchi, Pietro Angelo (1818–1878), Italian astronomer. Originated the spectroscopic survey of the heavens; made the first classification of stars according to spectral type.

Sedgwick, Adam (1785–1873), English geologist. With R. I. Murchison, established the Devonian system.

Seebeck, Thomas Johann (1770–1831), German physicist. Investigated thermoelectricity and invented the thermocouple.

Segrè, Emilio Gino (1905–), Italian-born American physicist. Codiscovered the elements technetium, astatine, and plutonium, slow neutrons, and the antiproton; Nobel Prize, 1959.

Seidel, Philipp Ludwig von (1821–1896), German astronomer and mathematician. Developed theory of aberrations; made first accurate photometric measurements of stars and planets, and evaluated them with probability theory.

Semenov, Nikolai Nikolaevich (1896–), Soviet chemist. Elucidated the mechanisms of chemical reactions, especially the chain mechanism; Nobel Prize, 1956.

Senderens, Jean Baptiste (1856–1937), French chemist. With P. Sabatier, discovered hydrolysis of oils by catalysis.

Serber, Robert (1909–), American physicist. Laid foundations of orbit theory of high-energy particle accelerators; introduced Serber potential to describe nuclear forces.

Serret, Joseph Alfred (1819–1885), French mathematician and astronomer. Helped develop Frenet-Serret formulas in the theory of space curves.

Servetus, Michael (1511–1553), Spanish physician. Discovered the pulmonary circulation and the purification of the blood by the lungs.

Shannon, Claude Elwood (1916–), American mathematician. Developed mathematical theory of communication, making use of analogy between concepts of entropy and information.

Shapley, Harlow (1885–1972), American astronomer. Worked on a theory to explain cepheid variables; made an estimate of the size of the universe; provided a description of the universe's form of construction.

Sherrington, Charles Scott (1861–1952), English physiologist. Studied the neuron and its function and other aspects of the nervous system; Nobel Prize, 1932.

Shockley, William (1910–), English-born American physicist. Discovered the transistor effect for electronic amplification by means of solid-state semiconductors; Nobel Prize, 1956.

Shubnikov, Aleksei Vasilevich (1887–1970), Soviet crystallographer. Classified Shubnikov groups; developed techniques for growing crystals, including synthetic rubies used in lasers.

Siegbahn, Kai Manne Börje (1918–), Swedish physicist. Pioneered the development of high-resolution electron spectroscopy; Nobel Prize, 1981.

Siegbahn, Karl Manne Georg (1886–1978), Swedish physicist. Studied x-ray spectroscopy, in which he discovered the M series; Nobel Prize, 1924.

Siemens, Ernst Werner von (1816–1892), German engineer and electrician. Developed telegraphy and the self-acting dynamo.

Siemens, William or Karl Wilhelm (1823–1883), German inventor in London. Made many inventions, including a differential governor, bathometer, dynamometer, and electric furnace.

Simpson, Thomas (1710–1761), English mathematician. Formulated the Simpson rule for finding the area of a figure, given only a limited number of data.

Slater, John Clarke (1900–1976), American physicist. Introduced Slater determinant describing many-electron systems; developed theory of magnetrons.

Smith, Hamilton Othanel (1931–), American geneticist. Isolated a restriction enzyme that cleaves deoxyribonucleic acid (DNA) molecules at a specific site; Nobel Prize, 1978.

Smith, Robert (1689–1768), English physicist. Developed a particulate theory of light; developed geometric propositions for computing properties of optical systems; derived a special case of the Smith-Helmholtz law.

Snell, George Davis (1903–), American immunogeneticist. Demonstrated the x-ray induction of mutational changes in a mammal; contributed to the study of immunological systems and to the development of transplant immunology; Nobel Prize, 1980.

Snell, Willebrod van Roijen (1591–1626), Dutch mathematician. Formulated Snell laws concerning angles of incidence and refraction; conceived the idea of measuring the Earth by triangulation.

Soddy, Frederick (1877–1956), English chemist. With E. Rutherford, developed theory of atomic disintegration of radioactive substances; research on isotopes; Nobel Prize, 1921.

Solvay, Ernest (1838–1922), Belgian industrial chemist. Developed the Solvay process for production of sodium carbonate.

Sommerfeld, Arnold (1868–1951), German physicist. Developed quantum theory, especially in its application to spectral lines and the Bohr atomic model.

Sörensen, Sören Peter Lauritz (1868–1939), Danish biochemist. Did pioneer work on hydrogen ion concentration; invented the symbol pH.

Spemann, Hans (1869–1941), German zoologist. Studied embryonic development and discovered the organizer function of certain tissues; Nobel Prize, 1935.

Sperry, Roger Wolcott (1913–), American neuroscientist. Discovered the functional split between the left and right hemispheres of the brain; Nobel Prize, 1981.

Stanley, Wendell Meredith (1904–1971), American biochemist. Discovered that a virus is a nucleoprotein and can be crystallized; Nobel Prize, 1946.

Stanton, Thomas Ernest (1865–1931), English engineer. Studied surface friction of fluids; built wind tunnel for wind velocity investigations; studied strength of materials, heat transmission, and lubrication.

Stark, Johannes (1874–1957), German physicist. Studied radiation and atomic theory; discovered the Stark effect on spectrum lines and the Doppler effect in canal rays; Nobel Prize, 1919.

Staudinger, Hermann (1881–1965), German chemist. Conceived and elaborated the explanation of the phenomenon of polymerization; Nobel Prize, 1953.

Steenrod, Norman Earl (1910–1971), American mathematician. Worked in topology; introduced Steenrod algebra.

Stefan, Josef (1835–1893), Austrian physicist. Originated Stefan's (or Stefan-Boltzmann) law of blackbody radiation; proposed theory of diffusion of gases; studied gas conductivity.

Stein, William Howard (1911–1980), American biochemist. With S. Moore, developed technique for determining amino acid sequence in proteins, and applied it to ribonuclease; Nobel Prize, 1972.

Steinmetz, Charles Proteus (1865–1923), German-born American electrical engineer. Developed complex number technique for analyzing alternating-current circuits; made numerous electrical inventions; applied mathematical methods to solution of electrical engineering problems.

Stern, Otto (1888–1969), German-born American physicist. Developed the molecular beam method and used it to prove directly the existence of the magnetic moment of atoms and nuclei and to measure their magnitudes; Nobel Prize, 1943.

Stieltjes, Thomas Jan (1856–1894), Dutch-born French mathematician. Developed analytic theory of continued fractions, and Stieltjes integral as a tool for their study.

Stirling, James (1692–1770), British mathematician. Discovered Stirling's formula and Stirling's interpolation formula.

Stokes, George Gabriel (1819–1903), British mathematician and physicist. Originated the idea of determining the chemical composition of the Sun and stars from their spectra; studied double refraction and electromagnetic waves.

Stone, Marshall Harvey (1903–), American mathematician. Studied structural aspects of mathematical situations having origins in classic problems of analysis, geometry, and logic.

Störmer, Carl Fredrik Mülertz (1874–1957), Norwegian mathematician and geophysicist. Studied atmospheric phenomena; discovered the Störmer cone concerning cosmic rays.

Strassman, Fritz (1902–1980), German chemist. With O. Hahn and L. Meitner, discovered nuclear fission; research on uranium and thorium isotopes.

Struve, Friedrich Georg Wilhelm von (1793–1864), German-born Russian astronomer. Authority on double stars and nebulae; one of the first to measure a stellar parallax.

Struve, Otto Wilhelm von (1819–1905), Russian astronomer. Discovered some 500 new double stars; calculated the constant of precession.

Sturgeon, William (1783–1850), English electrician and inventor. Constructed the first useful electromagnet and the first moving-coil galvanometer.

Sturm, Jacques Charles François (1803–1855), French mathematician. Formulated the Sturm theorems, concerning real roots of an equation.

Suhl, Harry (1922–), German-born American physicist. Discovered Suhl effect; invented Suhl amplifier; studied resonance in magnetic materials, superconductivity, and general theory of magnetism.

Sumner, James Batcheller (1887–1955), American biochemist. First to isolate an enzyme in pure, crystalline form and characterize it as a protein; Nobel Prize, 1946.

Sutherland, Earl Wilbur, Jr. (1915–1974), American physiologist. Uncovered intermediary role of cyclic adenylic acid in the mechanism of hormone control over human metabolic activities; Nobel Prize, 1971.

Svedberg, Theodor (1884–1971), Swedish chemist. An authority on colloid chemistry (dispersed phase); developed a centrifuge for colloidal particles and protein molecules; Nobel Prize, 1926.

Sydenham, Thomas (1624–1689), English physician. Gave classic descriptions of gout, venereal disease, fevers, hysteria, and Sydenham's chorea.

Synge, Richard Laurence Millington (1914–), English chemist. Developed partition chromatography with A. J. P. Martin; Nobel Prize, 1952.

Szent-Györgyi, Albert von Nagyrapolt (1893–), Hungarian biochemist. Isolated vitamin C; research on combustion processes in plant and animal tissues, muscular contraction, and cell division; Nobel Prize, 1937.

Talbot, William Henry Fox (1800–1877), English inventor and mathematician. Invented the calotype photographic process.

Tamm, Igor Yevgenevich (1895–1971), Soviet physicist. With I. M. Frank, formulated the mathematical theory explaining the physical origin and properties of Cerenkov radiation; Nobel Prize, 1958.

Tatum, Edward Lawrie (1909–1975), American biochemist and geneticist. Researched the relation of genes to biochemical reactions in bacterial, yeast, and mold cells; with G. W. Beadle, discovered the phenomenon of genetic recombination in bacteria; Nobel Prize, 1958.

Taylor, Brook (1685–1731), English mathematician. Formulated Taylor's theorem and worked on mathematics of physical problems.

Teisserenc de Bort, Léon Philippe (1855–1913), French meteorologist. Discovered the stratosphere.

Teller, Edward (1908–), Hungarian-born American physicist. With associates, developed the concept which led to the construction of the first hydrogen bomb; with G. Gamow, proposed the Gamow-Teller interaction and Gamow-Teller selection rules.

Temin, Howard Martin (1934–), American virologist. Proposed that genetic information is transferred from ribonucleic acid tumor viruses to deoxyribonucleic acid; independently of D. Baltimore, discovered reverse transcriptase; Nobel Prize, 1975.

Tesla, Nikola (1856–1943), American inventor born in Yugoslavia. Invented a high-frequency electric coil; improved design of dynamos, transformers, and electric bulbs.

Thales (ca. 640–ca. 546 B.C.), Greek mathematician and astronomer. First to scientifically predict an eclipse of the Sun; discovered static electricity; credited with formulating several theorems.

Theiler, Max (1899–1972), South African physician and virologist. Developed a vaccine to prevent human yellow fever; Nobel Prize, 1951.

Theorell, Axel Hugo Teodor (1903–1982), Swedish biochemist. Made discoveries concerning the nature and mode of action of oxidative enzymes; Nobel Prize, 1955.

Thiele, F. K. Johannes (1865–1918), German chemist. Research on nitrogen compounds and the theory of unsaturated organic molecules.

Thomas, Llewellyn Hilleth (1903–), English-born American physicist. Discovered Thomas precession; with E. Fermi, developed Thomas-Fermi atomic model; developed basic theory for Thomas cyclotron.

Thomson, George Paget (1892–1975), English physicist. Discovered, independently of C. J. Davisson, the diffraction of electrons by crystals; Nobel Prize, 1937.

Thomson, Joseph John (1856–1940), English physicist. Discovered that cathode rays consist of negatively charged particles, or electrons; Nobel Prize, 1906.

Tinbergen, Nikolaas (1907–), Dutch-born British zoologist. Pioneered in study of social behavior of animals and their responses to complex stimuli; conducted experimental studies of the effects of selection pressures and evolutionary response to them; Nobel Prize, 1973.

Ting, Samuel C. C. (1936–), American physicist. Independently of B. Richter, discovered a new heavy elementary particle, which he named the J particle; Nobel Prize, 1976.

Tiselius, Arne Wilhelm Kaurin (1902–1971), Swedish biochemist. Research on electrophoresis and absorption analysis; made discoveries concerning the complex nature of serum proteins; Nobel Prize, 1948.

Todd of Trumpington, Alexander Robertus Todd, Baron (1907–), British chemist. Worked on the structure and synthesis of nucleosides, nucleotides, and nucleotide coenzymes, and the related problem of phosphorylation; Nobel Prize, 1957.

Tomonaga, Sin-itiro (1906–1979), Japanese physicist. Showed the modern theory of quantum electrodynamics to be quantitatively consistent with observed physical phenomena; Nobel Prize, 1965.

Torricelli, Evangelista (1608–1647), Italian physicist. Invented the mercury barometer.

Townes, Charles Hard (1915–), American physicist. Invented the maser; Nobel Prize, 1964.

Townsend, John Sealy Edward (1868–1957), British physicist. Developed collision theory of ionization of gases in an electric field.

Travers, Morris William (1872–1961), English chemist. Discovered, with W. Ramsay, krypton, xenon, and neon; investigated low-temperature phenomena.

Turing, Alan Mathison (1912–1954), English mathematician. Developed concept of Turing machine; research on mathematical logic, group theory, and computer technology.

Tychonoff (Tikhonov), Andrei Nikolaevich (1906–), Soviet mathematician and geophysicist. Proved Tychonoff theorem in topology and introduced concept of Tychonoff space.

Tyndall, John (1820–1893), British physicist. Studied temperature waves in metals and diathermancy of gases; discovered the effect of atmospheric density on sound transmission.

Urey, Harold Clayton (1893–1981), American chemist. Isolated heavy water and thus discovered the heavy isotope of hydrogen; Nobel Prize, 1934.

Urysohn, Pavel Samuilovich (1898–1924), Soviet mathematician. Proved Urysohn's lemma in topology.

Van Allen, James Alfred (1914–), American physicist. Discovered that the Earth is circled by two high-energy radiation belts, leading to major revisions in concepts of the Earth's atmosphere and magnetic field.

Van de Graaff, Robert Jemison (1901–1967), American physicist. Contributed to the development of the direct particle accelerator and invented the electrostatic belt generator.

Vandermonde, Alexandre Théophile (1735–1796), French mathematician. Gave first logical exposition of theory of determinants; developed methods to test solvability of algebraic equations.

van der Waals, Johannes Diderik (1837–1923), Dutch physicist. Formulated van der Waals equation; investigated van der Waals forces, concerning intermolecular attraction; Nobel Prize, 1910.

Vane, John Robert (1927–), English pharmacologist. Discovered prostaglandin X (prostacyclin) and the role of aspirinlike drugs as blocking agents in the prostaglandin synthesis; Nobel Prize, 1982.

van Rhijn, Pieter Johannes (1886–1960), Dutch astrophysicist. With J. C. Kapetyn, evolved a theory of the universe.

van't Hoff, Jacobus Hendricus (1852–1911), Dutch chemist. Pioneered in the study of stereochemistry; studied reaction rates, thermodynamics applied to chemistry, and the theory of dilute solutions; Nobel Prize, 1901.

Van Vleck, Jan Hasbrouck (1899–1980), American mathematical physicist. Pioneer in the development of the modern quantum-mechanical theory of magnetism; Nobel Prize, 1977.

Vauquelin, Louis Nicolas (1763–1829), French chemist. Discovered chromium and its compounds and beryllium compounds.

Vega, George, Baron von (1756–1802), Austrian mathematician. Prepared logarithmic tables.

Verdet, Marcel Émile (1824–1866), French physicist. Determined dependence of Faraday effect on magnetic field strength, wavelength of the light, and index of refraction of the material.

Vernier, Pierre (1580–1637), French technician. Invented the Vernier scale.

Vesalius, Andreas (1514–1564), Belgian anatomist in Italy. Known as the father of modern anatomy; corrected many of Galen's mistaken doctrines.

Viète, François, or Fransiscus Vieta (1540–1603), French mathematician. Worked on the solution of equations up to the fourth degree and laid the foundation of modern algebra.

Virtanen, Artturi Ilmari (1895–1973), Finnish biochemist. Research on problems of human nutrition and agriculture; investigated acidity (pH) and biological nitrogen fixation; Nobel Prize, 1945.

Vogel, Hermann Wilhelm (1834–1898), German photochemist. Invented the orthochromatic photographic plate and designed a photometer.

Voigt, Woldemar (1850–1919), German physicist. Introduced transformation equations (later known as Lorentz transformations).

Volta, Alessandro, Count (1745–1827), Italian physicist. Invented the voltaic pile; developed the theory of current electricity.

Volterra, Vito (1860–1940), Italian mathematician. Developed method of solving Volterra equations; pioneered in developing functional analysis.

Von Braun, Wernher (1912–1977), German-born American rocket engineer. Directed development of the German V-2 and Wassefall missiles; instrumental in launch of *Explorer 1*, first American artificial satellite; supervised development of Saturn rockets for the Apollo program.

Von Euler, Ulf Svante (1905–), Swedish physiologist. Identified norepinephrine as neurotransmitter of sympathetic nervous system; isolated and characterized norepinephrine storage granules in nerves; Nobel Prize, 1970.

von Frisch, Karl (1886–), Austrian zoologist. Discovered means by which bees communicate information about the distance and direction of food; Nobel Prize, 1973.

Von Kármán, Theodore (1881–1963), American aerodynamicist. Theoretical contributions to aerodynamics; formulated Von Kármán's theory of vortex streets, an early step in the mathematical treatment of turbulent motion.

von Weizsacker, Carl Friedrich (1912–), German physicist. Helped develop method for calculating bremsstrahlung in high-energy collisions; developed a theory of origin of solar system.

Wagner von Jauregg (Wagner-Jauregg), Julius (1857–1940), Austrian psychiatrist. Developed use of malarial infection to treat general paresis; Nobel Prize, 1927.

Waksman, Selman Abraham (1888–1973), Russian-born American bacteriologist. Isolated the antibiotic streptomycin; Nobel Prize, 1952.

Wald, George (1906–), American biologist and biochemist. Discovered the role of vitamin A in vision; Nobel Prize, 1967.

Wallace, Alfred Russel (1823–1913), English naturalist. Originated, independently of C. Darwin, theory of natural selection; postulated Wallace's line regarding geographical distribution of animals.

Wallach, Otto (1847–1931), German chemist. Research on essential oils and the terpenes; Nobel Prize, 1910.

Wallis, John (1616–1703), English mathematician. Worked on algebraic curves, interpolation, evaluation of integrals, infinite series, mechanics, and algebra; derived Wallis product and Wallis formulas.

Walton, Ernest Thomas Sinton (1903–), British physicist. With J. D. Cockcroft, devised high-voltage apparatus capable of producing fast atomic particles with energies up to 700,000 electron volts; showed the capability of these particles to disintegrate many light elements; Nobel Prize, 1951.

Wannier, Gregory Hugh (1911–), Swiss-born American physicist. Developed harmonization of localized and nonlocalized descriptions of electrons in solids.

Warburg, Otto Heinrich (1883–1970), German physiologist. Worked on chemistry of respiration and on cancer; Nobel Prize, 1931.

Wassermann, August von (1866–1925), German physician. Discovered the Wassermann test for the detection of syphilis.

Watson, James Dewey (1928–), American biochemist. With F. H. C. Crick, determined the double-helix structure of deoxyribonucleic acid; Nobel Prize, 1962.

Watson, John Broadus (1878–1958), American psychologist. Founded the behaviorist school of psychology.

Watt, James (1736–1819), Scottish inventor. Improved the steam engine, making it a commercial success.

Weber, Ernst Heinrich (1795–1878), German anatomist and physiologist. Discovered Weberian apparatus; applied hydrodynamics to study of blood circulation; discovered inhibitory power of vagus nerve; proposed Weber's law of stimuli.

Weber, Heinrich (1842–1913), German mathematician. Introduced Weber differential equation; demonstrated Abel theorem in its most general form; proved that absolute Abelian fields are cyclotomic.

Weber, Wilhelm Eduard (1804–1891), German physicist. Devised instruments for measurement of electrical and magnetic quantities; formulated absolute electrical and magnetic units.

Wegener, Alfred Lothar (1880–1930), German geologist. Presented the idea of continental drift.

Weierstrass, Karl Theodor (1815–1897), German mathematician. Worked on the theory of functions and on the calculus of variations.

Weil, Adolf (1848–1916), German physician. Gave classic description of Weil's disease.

Weinberg, Steven (1933–), American physicist. Independently of A. Salam, developed theory uniting two of the basic forces of nature, electromagnetism and the weak nuclear interactions; Nobel Prize, 1979.

Weismann, August (1834–1914), German biologist. Contributed to the theory of heredity, which he attributed to variations in "germplasm."

Weiss, Pierre (1865–1940), French physicist. Developed phenomenological theory of ferromagnetism.

Weller, Thomas Huckle (1915–), American virologist and parasitologist. Isolated the virus of chicken pox and herpes zoster and proved the common etiology of the two diseases; first to propagate German measles virus; Nobel Prize, 1954.

Wentzel, Gregor (1898–1978), German-born American physicist. Helped develop Wentzel-Kramers-Brillouin method; research on theory of atomic spectra, wave mechanics, quantum electrodynamics, meson field theories, and statistical mechanics of many-body problems, especially superconductivity.

Werner, Alfred (1866–1919), Swiss chemist. Formulated the coordination theory of valency; Nobel Prize, 1913.

Weyl, Hermann (1885–1955), German-born American mathematician and mathematical physicist. Basic research on group representations and Riemann surfaces.

Wheatstone, Charles (1802–1875), English physicist and inventor. Conducted experiments on sound; invented Wheatstone's bridge, an instrument for comparing electrical resistances.

Wheeler, John Archibald (1911–), American physicist. Introduced the concepts of the scattering matrix and resonating group structure into nuclear physics; with N. Bohr, elucidated the mechanism of nuclear fission and predicted the fissibility of plutonium.

Whipple, George Hoyt (1878–1976), American pathologist. Studied anemia and liver treatment; Nobel Prize, 1934.

Whitehead, Alfred North (1861–1947), English mathematician, physicist, and philosopher. With B. Russell, pioneered in mathematical logic and foundations of mathematics.

Whittaker, Edmund Taylor (1873–1956), British mathematician and physicist. Studied special functions of mathematical physics and equations satisfied by them, particularly Whittaker's differential equation; found general integral representation for harmonic functions; made major contributions to analytical dynamics.

Wiedemann, Gustave Heinrich (1826–1899), German physicist and physical chemist. With R. Franz, discovered Wiedemann-Franz law of thermal conductivity of metals; discovered Wiedemann effect.

Wieland, Heinrich (1877–1957), German chemist. Studied bile acids, chlorophyll, and hemoglobin; Nobel Prize, 1927.

Wien, Wilhelm (1864–1928), German physicist. Formulated the two Wien laws pertaining to radiation from blackbodies; Nobel Prize, 1911.

Wiener, Norbert (1894–1964), American mathematician. Formulated a mathematical theory of Brownian motion; founded science of cybernetics.

Wiesel, Torsten Nils (1924–), Swedish physiologist. Contributed to the study of the processing of visual information in the brain; Nobel Prize, 1981.

Wigner, Eugene Paul (1902–), Hungarian-born American mathematical physicist. With G. Breit, worked out the Breit-Wigner formula for resonant nuclear reactions; proposed the Wigner theorem of conservation of the angular momentum of electron spin; Nobel Prize, 1963.

Wilkins, Maurice Hugh Frederick (1916–), English biophysicist born in New Zealand. Made x-ray diffraction studies that contributed to the structural determination of deoxyribonucleic acid; Nobel Prize, 1962.

Wilkinson, Geoffrey (1921–), British chemist. Research to determine how metals and organic molecules combine to form unique molecules which have sandwichlike structures; Nobel Prize, 1973.

Williamson, William Crawford (1816–1895), English naturalist. Laid the foundation for paleobotany and showed the importance of plant life forms in coal.

Willstätter, Richard (1872–1942), German chemist. Worked on plant pigments; investigated alkaloids and their derivatives; Nobel Prize, 1915.

Wilson, Charles Thomson Rees (1869–1959), British physicist. Worked on ionization; originated the cloud chamber method of studying ionized particles; Nobel Prize, 1927.

Wilson, Kenneth Geddes (1936–), American physicist. Used renormalization group theory to analyze critical phenomena in the behavior of matter at phase transitions; Nobel Prize, 1982.

Wilson, Robert Woodrow (1936–), American astrophysicist. With A. A. Penzias, discovered cosmic background radiation, confirming the big bang theory of the origin of the universe; Nobel Prize, 1978.

Windaus, Adolf (1876–1959), German chemist. Worked on sterols; discovered that ultraviolet light activates ergosterol and gives vitamin D_2; Nobel Prize, 1928.

Wittig, Georg (1897–), German chemist. Work on the linking of carbon and phosphorus (Wittig reaction) made it possible to synthesize new types of compounds, including metal–organic complex compounds; Nobel Prize, 1979.

Wöhler, Friedrich (1800–1882), German chemist. First to synthesize an organic compound, urea.

Wolf, Maximilian Franz Joseph Cornelius (1863–1932), German astronomer. Invented the photographic method of discovering asteroids.

Wollaston, William Hyde (1766–1828), English chemist and physicist. Discovered the lines in the solar spectrum; discovered palladium and rhodium; invented the Wollaston lens.

Woodward, Robert Burns (1917–1979), American chemist. Contributed to the development of total synthesis of complex natural products, and structural determination of several complex nat-

ural molecules, later confirmed by total synthesis; Nobel Prize, 1965.

Wright, Almroth Edward (1861–1947), British physician and pathologist. Studied parasitic disease; introduced inoculation against typhoid.

Wright, Wilbur (1867–1912) and **Orville** (1871–1948), American pioneers in aviation. Built the first successful airplane, which each flew at Kitty Hawk, NC, on Dec. 17, 1903.

Wundt, Wilhelm Max (1832–1920), German physiologist and psychologist. Founded the first laboratory for experimental psychology.

Wurtz, Charles Adolphe (1817–1884), French chemist. Discovered methyl and ethyl amines; evolved the Wurtz reaction for synthesis of hydrocarbons.

Yalow, Rosalyn Sussman (1921–), American medical physicist. Developed a radioimmunoassay technique to detect and measure minute levels of substances such as hormones in the body; Nobel Prize, 1977.

Yang, Chen Ning (1922–), Chinese-born American physicist. With T. Lee, disproved the law of conservation of parity for weak interactions; Nobel Prize, 1957.

Yersin, Alexandre Émile Jean (1863–1943), Swiss bacteriologist. Discovered the bubonic plague bacillus in Hong Kong, working independently of S. Kitasato, and developed a serum for it.

Young, Thomas (1773–1829), English physicist and physician. Discovered the effect of the ciliary muscle on the shape of the eye lens (the mechanism of accommodation).

Yukawa, Hideki (1907–1981), Japanese physicist. Postulated the existence of a new fundamental particle, the meson; Nobel Prize, 1949.

Zeeman, Pieter (1865–1943), Dutch physicist. Discovered the Zeeman effect in magnetooptics; Nobel Prize, 1902.

Zener, Clarence Melvin (1905–), American physicist. Proposed mechanism of Zener breakdown.

Zeno of Elea (ca. 490–425 B.C.), Greek philosopher and mathematician. Formulated a group of paradoxes, important for their stimulation of philosophical and mathematical thought, which appear to deny the possibility of motion.

Zernike, Fritz (1888–1966), Dutch physicist. Developed the phase-contrast microscope, making possible the first microscopic examination of the internal structure of living cells; Nobel Prize, 1953.

Ziegler, Karl (1898–1973), German organic chemist. Developed a low-pressure process for production of polyethylene; Nobel Prize, 1963.

Zinsser, Hans (1878–1940), American bacteriologist. Developed methods of immunization against typhus.

Zsigmondy, Richard (1865–1929), German chemist. Studied colloidal solutions; introduced the ultramicroscope; Nobel Prize, 1925.
